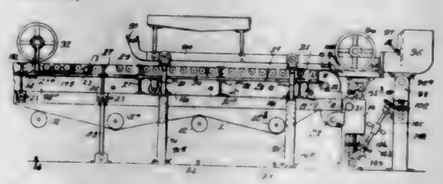
# REISSUES

## DECEMBER 1, 1925.

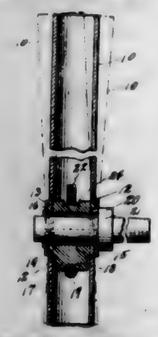
16,218. PAPER-MAKING MACHINE. JAMES K. DARBY, Dayton, Ohio, assignor to The Bagley and Sewall Company, Watertown, N. Y., a Corporation of New York. Filed July 3, 1924. Serial No. 724,128. Original No. 1,436,240, dated Nov. 21, 1922, Serial No. 211,138, filed Jan. 10, 1918. 23 Claims. (Cl. 92—44.)



1. The combination with a paper making machine, of means for dividing said machine, dropping one portion thereof and sliding the same under the other portion thereof substantially as shown and described.

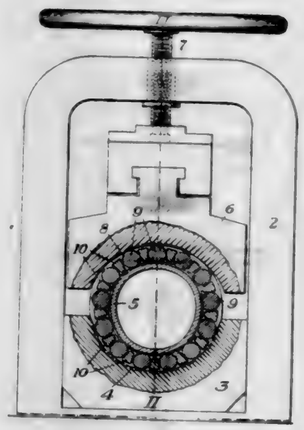
23. The method of stringing a wire on a paper making machine which comprises moving the upper couch roll away from the breast end of the machine, moving one portion of the machine with respect to the other, extending the wire to be restrung in the form of an extended loop over said machine, and finally moving the movable portion of said machine back to its normal position, and moving said upper couch roll towards the breast end of the machine to a distance sufficient to impart the necessary tension to said wire.

16,219. SELF-ALIGNING PITMAN BEARING BOX. VALORIS L. FORSYTH, Fort Worth, Tex. Filed Oct. 5, 1925. Serial No. 60,682. Original No. 1,538,318, dated May 19, 1925, Serial No. 716,981, filed May 31, 1924. 6 Claims. (Cl. 308—68.)



4. The combination with a pitman having an opening therethrough, of a wrist pin box extending through said opening, a fulcrum support for the lower portion of the box on which said box is mounted to rock, and means for confining said box on its fulcrum support and holding it in position in the pitman.

16,220. METHOD AND APPARATUS FOR ROUNDING ARTICLES. GEORGE E. MIRFIELD, Youngstown, Ohio. Filed Oct. 29, 1925. Serial No. 65,690. Original No. 1,548,731, dated Aug. 4, 1925, Serial No. 574,185, filed July 11, 1922. 21 Claims. (Cl. 153—54.)



1. In the method of rounding circular objects, the steps consisting of supporting an object at a plurality of spaced points, producing relative movement between the object and the points of support, moving the points about the axis of the object, and progressively varying the operating pressure of successive points of support, substantially as described.

# DESIGNS

## DECEMBER 1, 1925.

68,885. WALL-DECORATING FABRIC OR SIMILAR ARTICLE. ARTHUR W. ANKENY, Indiana, Pa. Filed Sept. 5, 1924. Serial No. 10,686. Term of patent 7 years.

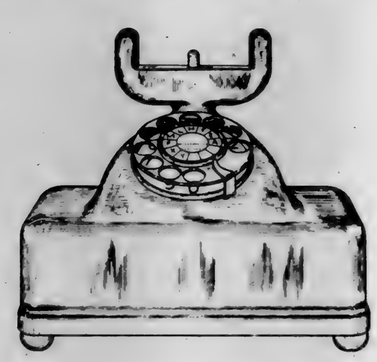
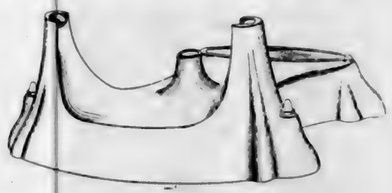
68,929. COMBINED RINGER BOX AND TELEPHONE DESK STAND. HERBERT F. OBERGFELL, River Forest, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1925. Serial No. 15,081. Term of patent 14 years.



The ornamental design for a combined ringer box and telephone desk stand, as shown.

68,930. SCALE BASE. ORWELL C. REEVES, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Jan. 28, 1925. Serial No. 12,172. Term of patent 14 years.



The ornamental design for a scale base as shown.

---

68,931. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 19, 1925. Serial No. 13,486. Term of patent 7 years.

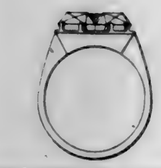
The ornamental design for a ring, as shown.

---

68,932. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed May 19, 1925. Serial No. 13,487. Term of patent 7 years.

The ornamental design for a ring, as shown.

68,933. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 13,711. Term of patent 7 years.



The ornamental design for a ring, as shown.

---

68,934. GEM-SET RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 13,712. Term of patent 7 years.

The ornamental design for a gem-set ring, as shown.

---

68,935. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 13,713. Term of patent 7 years.

The ornamental design for a ring, as shown.

68,936. GEM-SET RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed June 9, 1925. Serial No. 13,714. Term of patent 7 years.

The ornamental design for a gem-set ring, as shown.

---

68,937. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed July 16, 1925. Serial No. 14,112. Term of patent 7 years.

The ornamental design for a ring, as shown.

68,938. RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 14,164. Term of patent 7 years.

The ornamental design for a ring, as shown.

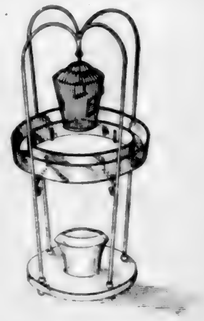
68,939. GEM-SET RING. MEYER L. ROBBINS, New York, N. Y., assignor to Untermeyer Robbins & Co., New York, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 14,165. Term of patent 7 years.

The ornamental design for a gem-set ring, as shown.

68,940. RIBBON FABRIC. ALBERT JOHN SCHOLTES, Mobile, Ala. Filed July 7, 1923. Serial No. 6,729. Term of patent 7 years.

The ornamental design for ribbon fabric, as shown.

68,941. STAND. SAM SCHWARTZ, Memphis, Tenn. Filed July 29, 1925. Serial No. 14,259. Term of patent 3½ years.

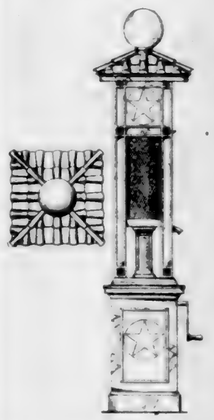


The ornamental design for a stand, as shown.

68,942. CAP FOR AN ELECTRICAL DEVICE. SAMUEL P. WILLIAMS, Hartford, Conn., assignor to The Hart & Hegeman Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 23, 1923. Serial No. 5,245. Term of patent 14 years.

The ornamental design for a cap for an electrical device, substantially as shown.

68,943. GASOLINE-PUMP CASING. CHARLES E. WOODBRIDGE, Brooklyn, N. Y., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Oct. 22, 1924. Serial No. 11,144. Term of patent 14 years.

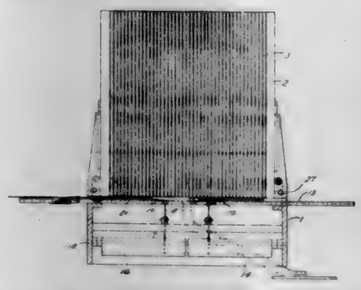


The ornamental design for a gasoline pump casing, as shown.

# PATENTS

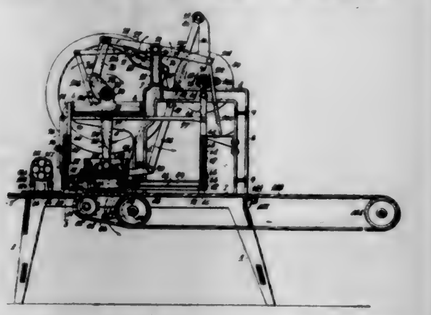
## GRANTED DECEMBER 1, 1925.

1,563,313. MANUALLY-OPERATED TYPE-COMPOSING MACHINE. ANNE SOPHIA ADAMS, Birmingham, England. Filed July 21, 1923. Serial No. 653,044. 7 Claims. (Cl. 276—16.)



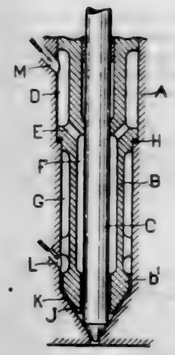
1. A manually operated type composing machine having in combination a magazine for holding the type, pivoted retention members each having at its lower end a foot piece normally engaging under the lowermost type and at the upper end a beak bearing against a shoulder or projection of a spring blade, such that by tripping the retention member, the lowermost type are released meanwhile that the type next above are retained, a transfer duct for receiving the released type from the magazine, a reciprocating impeller adapted to traverse along said transfer duct and operating keys connected with the impellers.

1,563,314. TORTILLA-FORMING MACHINE. IGNACIO M. ATANAY, Los Angeles, Calif. Filed June 3, 1925. Serial No. 34,695. 52 Claims. (Cl. 107—15.)



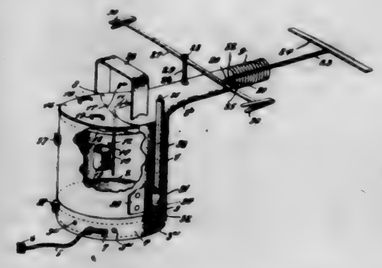
1. A machine of the character described comprising a framing including a bed onto which tortilla boards are placed, a dough blank depositing means, means for pressing the dough blanks into tortilla shape, devices for feeding the board along the bed from a position beneath the depositing means to position beneath the forming means and a conveyor associated with said forming means to remove the boards and their contents from the forming means after the pressing action has been completed, an elastic apron, an elastic apron carrier and means to operate said carrier to project and retract said apron to and from position beneath said pressing means for the purposes described.

1,563,315. FUEL-INJECTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. OTTO ALT and CURT HELSIG, Kiel, Germany, assignors to Fried. Krupp Aktiengesellschaft Germaniawerft, Kiel-Gaarden, Germany. Filed Mar. 27, 1922. Serial No. 547,323. 7 Claims. (Cl. 123—33.)



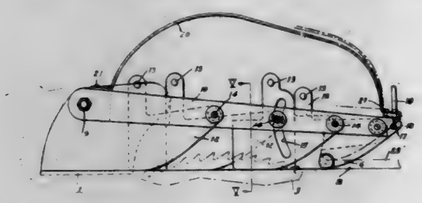
1. In a fuel injector for internal combustion engines, a fuel chamber, a fuel inlet and an injecting air inlet communicating with said chamber, and means whereby air is trapped in said chamber by the fuel charge and compressed in dependence upon the pressure of the injecting air, the charge being expelled from said chamber under the expansive force of said air upon the operation of the injector.

1,563,316. INHALATION KETTLE. ERIE MURIEL ANSCOMBE, Cleveland, Ohio. Filed Aug. 18, 1920. Serial No. 404,305. 9 Claims. (Cl. 128—192.)



1. An inhalation kettle comprising a receptacle having a laterally extending exit spout, and means for supporting an overlying covering, said means including a supporting bar supported on and carried by the spout and extending lengthwise thereof, said supporting bar carrying a bar located in advance of the exit of said spout, the ends of the latter bar being on opposite sides of the spout.

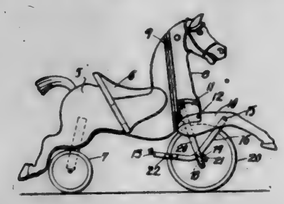
1,563,317. SAW GUARD. CARL B. AUEL, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 22, 1923. Serial No. 664,241. 3 Claims. (Cl. 143—159.)



1. A saw guard comprising a plurality of pivotal arms, the inner one of which is provided with a guide nose and the outer ones having wing plates pivotally mounted thereon, said outer arms being in co-operative engagement with the said inner arm.

---

1,563,318. GALLOPING TRICYCLE HORSE. FRANCIS GODFREY BAKER, New York, N. Y. Filed Feb. 21, 1925. Serial No. 10,904. 9 Claims. (Cl. 208—42.)



1. A toy of the class described comprising a wheel supported sectional body having a front drive wheel, a crank shaft cooperating with the drive wheel, means connecting the crank shaft with the front of the body and foot operated means for actuating said crank shaft to rock the said body.

---

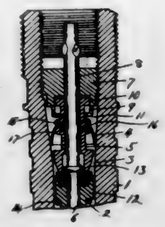
1,563,319. PUMP. BERTRAM P. BATES, Chicago, Ill. Filed Oct. 24, 1924. Serial No. 745,552. 3 Claims. (Cl. 103—203.)

1. In a pump having inlet and outlet valves, a piston provided with a pocket in which liquid is retained for priming purposes in case the liquid in the pump chamber should leak away when the pump is not running, said pocket being so arranged that the liquid retained in it will be discharged therefrom when the pump is started.

---

1,563,320. TIRE VALVE. CHARLES W. BECK, Toledo, Ohio, assignor to The Beck Frost Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed May 24, 1922, Serial No. 563,406. Divided and this application filed Feb. 11, 1924. Serial No. 692,112. 2 Claims. (Cl. 152—12.)

1. In a valve for pneumatic tires, the combination with a tubular shell having a tapered internal seat portion, a stem extending longitudinally of the shell, a sleeve slidably mounted on the stem having shoulders spaced longitudinally thereof, and a plug surrounding the stem in the shell having means for limiting the sliding movement of the sleeve, of a washer surrounding the sleeve



between said shoulders having a flared portion engageable with the tapered portion of the shell to form an air tight seal.

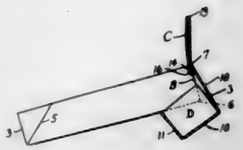
---

1,563,321. SPIRIT-LEVEL GLASS. GEORGE Q. BEDORTHA, Windsor, Conn. Filed Sept. 6, 1921. Serial No. 498,660. 2 Claims. (Cl. 33—211.)

1. A spirit level glass comprising a sealed tube containing a colored fluorescent liquid and an air bubble, said tube being made of transparent glass having selective absorption of ultra-violet and violet light rays.

---

1,563,322. PAPER FOLDING BOX. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Nov. 24, 1923. Serial No. 676,693. 4 Claims. (Cl. 206—44.)



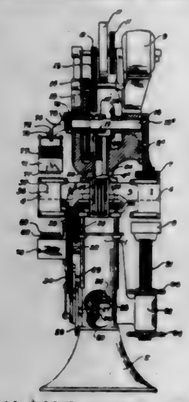
1. A paper folding box formed of an integral blank slotted and scored for folding and including opposite portions adapted to form the top and bottom of the box respectively, joined one to the other by an intermediate portion adapted to form an end of the box, slotted side portions outwardly adjacent said intermediate portions one slot being inverse to the other and adapted to overlap and to be joined one to the other outwardly of said intermediate portion, as the box is set up, by means of said slots.

---

1,563,323. PAPER-BOX-MAKING MACHINE AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Nov. 18, 1924. Serial No. 750,646. 17 Claims. (Cl. 93—49.)

1. A box making machine including in combination, a rotatable work table, a plurality of work supporting units arranged on said table and operable in a plane and through a cycle of operations common to all of said units, each unit comprising a member adapted to have a box blank positioned thereon with portions of the blank extended from opposite ends thereof, instrumentalities

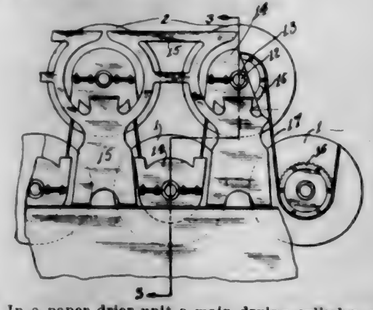
arranged in different planes along the path of rotation of said units comprising means acting to fold certain of said opposite extended portions, means acting to deposit



adhesive on said folded portions, and means acting to fold other of said opposite extended portions over the portions first folded to effect an adhesive joint.

---

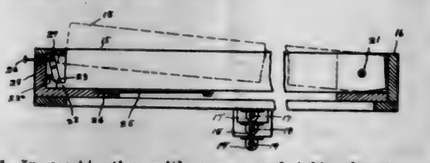
1,563,324. CHAIN DRIVE FOR DRYING CYLINDERS. EARL ELWIN BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis. Filed Dec. 15, 1923. Serial No. 680,823. 8 Claims. (Cl. 34—48.)



4. In a paper drier unit a main drying cylinder, means connected therewith for rotating the same, a plurality of secondary cylinders, a hub flange formed on one end of each said secondary cylinders and on said main cylinder, a continuous chain engaging said sprockets to cause the drive from said main cylinder to be imparted to the secondary cylinders, and means for adjusting the tension of said chain.

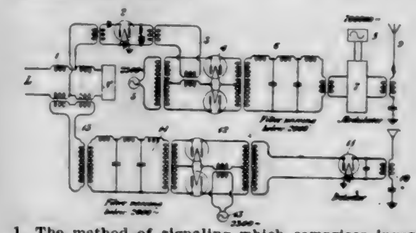
---

1,563,325. SAW-TABLE GUIDE. FRANK BIELASKI, Detroit, Mich. Filed Apr. 20, 1925. Serial No. 24,561. 4 Claims. (Cl. 143—174.)



1. In combination with a saw and table therefor, a guide bar mounted in said table and hinged at one end, a spring adapted to lift said bar about said hinge, means for retaining said bar in lowered position, means for releasing said retaining means, and a stop for limiting the upward movement of the bar.

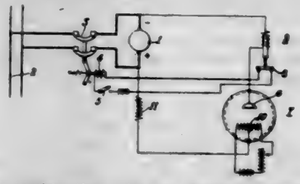
1,563,326. SECRET-COMMUNICATION SYSTEM. RALPH BOWN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 8, 1921. Serial No. 513,744. 2 Claims. (Cl. 179—1.)



1. The method of signaling which comprises inverting the speech band, modulating a carrier wave in accordance with said inverted speech band to produce a carrier component and side band, causing said carrier component and side band to vary together in the frequency scale in an arbitrary manner, transmitting said varying carrier component and side band to a distant station, beating together said arbitrarily varying carrier component and side band to produce a band of frequencies invariable in the frequency scale and corresponding to said inverted speech band, and reinverting said invariable band of difference frequencies to produce said original speech band.

---

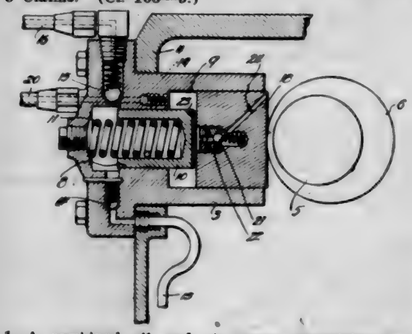
1,563,327. RELAY SYSTEM. QUINCY A. BRACKETT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 20, 1921. Serial No. 438,670. 12 Claims. (Cl. 175—294.)



6. The combination with an electrical apparatus, of a unidirectional-current device connected thereto for controlling the apparatus in accordance with the polarity thereof.

---

1,563,328. COMBINED OIL AND VACUUM PUMP. CLIFFORD C. BRADBURY, Oak Park, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed Oct. 31, 1921. Serial No. 511,871. 5 Claims. (Cl. 103—9.)

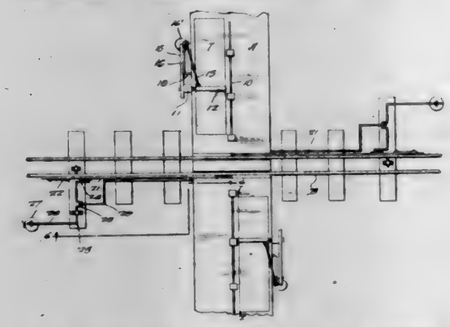


1. A combined oil and air pump comprising an oil cylinder, an air cylinder, pistons mounted in the respective cylinders, there being a sufficient space between the

oil piston and its cylinder for the passage of a small amount of oil, passage means for said small amount of oil to the air cylinder, whereby the latter is lubricated, and a reservoir into which the excess oil passes from said air cylinder.

---

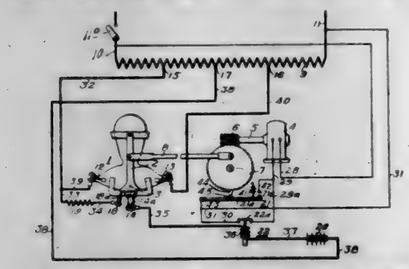
1,563,329. RAILROAD-CROSSING GATE. CLAUDE BRADSHAW, Portsmouth, Va., assignor of one-third to Alvie E. Harmon and one-third to Sands T. Gunn, both of Portsmouth, Va. Filed May 28, 1925. Serial No. 32,442. 9 Claims. (Cl. 246—293.)



2. In combination, a railroad crossing including a roadway and a track crossing the roadway, a gate associated with the roadway, means normally holding the gate in a closed position, a vehicle operated apparatus for opening the gate, a locking member normally out of engagement with the apparatus, a pair of train operated mechanisms for moving the locking member in engagement with the apparatus for preventing a vehicle from operating the gate to an open position, one mechanism being disposed to each side of the roadway, and means between the mechanisms whereby the operation of one causes the other to become ineffective.

---

1,563,330. MERCURY-RECTIFIER STARTING DEVICE. EDGAR W. BREISCH, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,251. 8 Claims. (Cl. 176—48.)

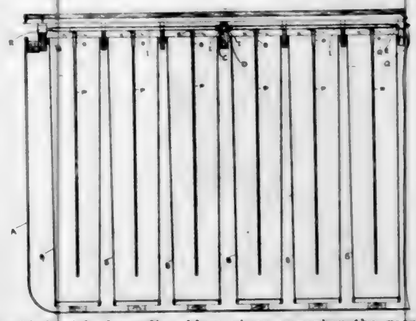


1. The combination with a vapor rectifier adapted to be started by tilting, of a rotating electric starting motor therefor, and means for translating the continuous rotary movement of said motor into a tilting movement of said rectifier.

---

1,563,331. AIR SYSTEM FOR ICE-FREEZING PLANTS. GEORGE B. BRIGHT, Detroit, Mich., assignor to Detroit Ice Machine Co., Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1922. Serial No. 583,335. 4 Claims. (Cl. 62—159.)

1. The combination with a brine tank and transversely arranged rows of ice cans removably inserted therein, of an air supply conduit extending longitudinally of said tank, fittings in said conduit registering with the respective transverse rows of cans, inwardly opening valves controlling outlets in said fittings, a header having one end adapted for engaging each fitting, said header extending transversely over the row of cans and



provided with depending blow pipes engaging the respective cans, and a resilient bearing for the opposite end of said header exerting sufficient pressure thereon to open the valve and establish air communication with the header.

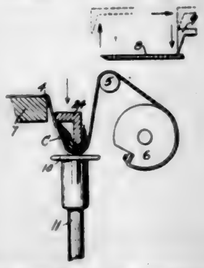
---

1,563,332. ADAPTER FOR SHEEP SHEARS. FRANCIS G. BRISTOW, Sydney, Australia. Filed Nov. 1, 1924. Serial No. 747,170. 8 Claims. (Cl. 30—1.)

1. In combination with a comb and fixed cutter of a sheep shear and the like, a detachable prolongation for a tooth of the comb, consisting of a sheath having at the forward end a pocket for engaging the end of the comb tooth and at the rear end a tooth projecting upwardly with respect to the bottom web of the sheath, the comb plate having an aperture back of the base or root of the comb tooth positioned for engagement by said tooth of the sheath to retain the latter against movement in the direction for disengaging the sheath pocket from the tooth end.

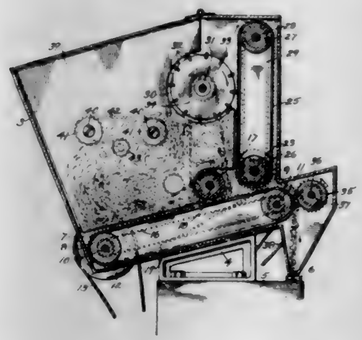
---

1,563,333. CIGAR-BUNCH-CHARGE FORMER. WILHELM B. BRONANDER, Montclair, N. J., assignor to International Cigar Machinery Company, a Corporation of New Jersey. Filed Mar. 15, 1924. Serial No. 699,488. 8 Claims. (Cl. 131—39.)



1. In a cigar machine, the combination with bunch-rolling mechanism including an element receiving a charge of filler in substantially flat form, of means acting on the charge at one side of its center to fan out and convert it into arcuate form before bunch rolling begins, said element being in the form of a chain belt, and said means acting on the charge during the formation of the belt loop.

1,563,334. CIGARETTE-MACHINE AUTOMATIC FEED. WILHELM B. BRONANDER, Montclair, N. J., assignor to American Machine & Foundry Company, a Corporation of New Jersey. Filed Feb. 12, 1925. Serial No. 8,727. 16 Claims. (Cl. 131—39.)



1. The combination with a housing for confining a mass of cigarette tobacco, of automatic mechanism for disentangling tobacco from said mass and feeding it to a cigarette machine, and automatic means for maintaining within the range of action of said mechanism a substantially constant part of said mass.

---

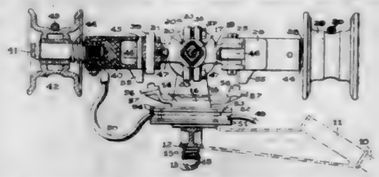
1,563,335. SPRING SUSPENSION FOR MOTOR VEHICLES. CHARLES H. BUCKLER, Camden, N. J. Filed Feb. 4, 1922. Serial No. 534,191. 9 Claims. (Cl. 267—20.)

1. In a motor vehicle the combination with the chassis frame thereof and axle, of resilient suspending means for connecting the chassis frame with the axle, said suspending means comprising a casing extending longitudinally beneath the chassis and forwardly and rearwardly of the axle, arms pivotally mounted on opposite sides of the axle and extending forwardly and rearwardly therefrom toward the opposite ends of the casing and having their outer ends pivotally connected with the casing, the means for pivotally mounting the outer end of one arm consisting of a block slidably mounted in the casing and having pivot means extending externally of the casing and engaged with the arms, means being provided in said casing for yieldably resisting sliding of the block in one direction and means being provided in the casing for yieldably resisting sliding of the block in an opposite direction.

---

1,563,336. TROLLEY. LELAND F. BURNHAM, Pittsburgh, Pa., assignor to R. D. Nuttall Company, a Corporation of Pennsylvania. Filed Jan. 13, 1922. Serial No. 529,046. 6 Claims. (Cl. 191—57.)

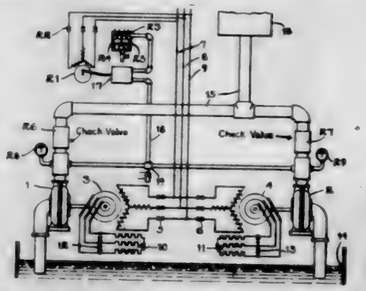
1. The combination with a trolley pole, of a pair of current collectors supported thereby in transversely spaced relation and each mounted for independent movement about a vertical axis, and means for providing



pivotal movement of said collectors on their common transverse axis.

---

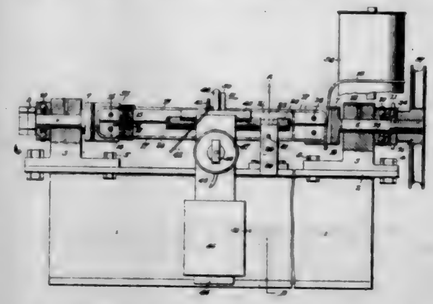
1,563,337. SYSTEM OF CONTROL. JAMES CAPUTO, Girard, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1923. Serial No. 610,950. 13 Claims. (Cl. 103—25.)



1. The combination with a plurality of main pumps and a priming pump therefor, of means rendered operative by the priming pump for controlling one of the main pumps, and means controlled by said main pump for controlling another of said main pumps.

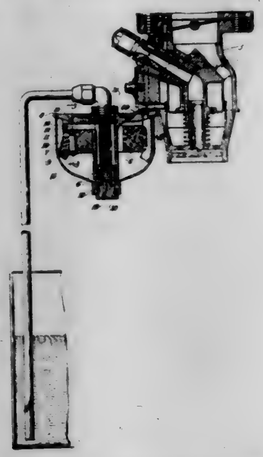
---

1,563,338. CARPET-MANUFACTURING MACHINE. MARCELINO CARRANZA, Buenos Aires, Argentina. Filed July 17, 1924. Serial No. 726,607. 18 Claims. (Cl. 28—1.)



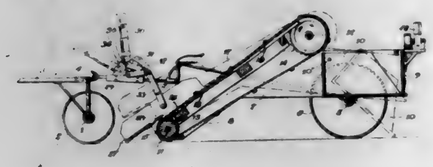
9. A tufted cord making machine comprising a base member; a pair of head pieces mounted on said base; a shaft for each head piece; a rod mounted in said head pieces; a guide for a thread mounted on said rod and adjusted to be controlled thereby; a pair of bars adapted to be inserted in said shafts and to receive a cord; means for rotating said bars and moving said guide so that said guide may direct the thread around said bars and cord; and a plurality of discs on said bars in order to prevent the bars from spreading due to centrifugal force.

1,563,339. CARBURETOR. MILFORD G. CHANDLER, Chicago, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed Oct. 14, 1922. Serial No. 594,523. 6 Claims. (Cl. 137—104.)



1. In a carburetor, the combination with an induction passage of a float chamber comprising a bowl for supplying fuel to said induction passage, a hollow column extending downwardly from the cover of said float chamber, a member adapted to be attached to the bottom of the hollow column and having an abutment thereon for holding the bowl against the cover, a plug carried by said member, a tubular screen extending upwardly within the hollow column and carried by said plug, a valve control opening in communication with the hollow column outside the said screen, a valve for controlling said opening, a pivoted float for controlling said valve, and a fuel delivery connection through the said float chamber cover delivering inside the said tubular screen.

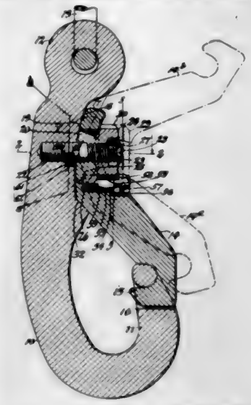
1,563,340. STONE PICKER. CARL CHRISTENSON, Iola, Wis. Filed May 16, 1923. Serial No. 639,418. 1 Claim. (Cl. 55—17.)



A stone picker, including front and rear axles, a frame mounted on the rear axle, a vertically extending member closing the rear end of the frame, a receptacle pivotally mounted on the rear axle, said receptacle being open at its rear end and adapted to be closed by the vertically extending member when in horizontal position, a conveyor and screen carried by the frame, and means for operating the conveyor whereby stones may be carried to the receptacle.

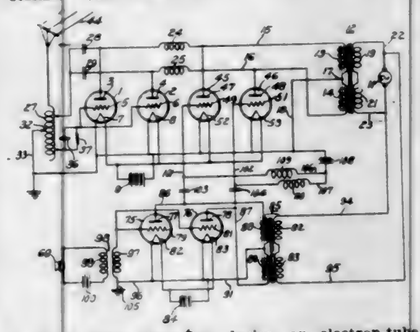
1,563,341. HOISTING HOOK. JOHN CLARK, Buffalo, N. Y. Filed Sept. 15, 1925. Serial No. 56,431. 8 Claims. (Cl. 24—24.)

1. A hoisting hook having a shank and a beak, a clamping bolt arranged on the front side of said shank, a keeper movable into and out of a position across the mouth of said hook and pivotally mounted at its upper end on said bolt and adapted to engage and disengage



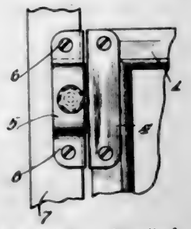
its lower end with said beak, a screw nut working on the thread of said bolt, and locking means for preventing said screw nut from turning backwardly.

1,563,342. SIGNALING SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 1, 1922. Serial No. 548,679. 14 Claims. (Cl. 179—171.)



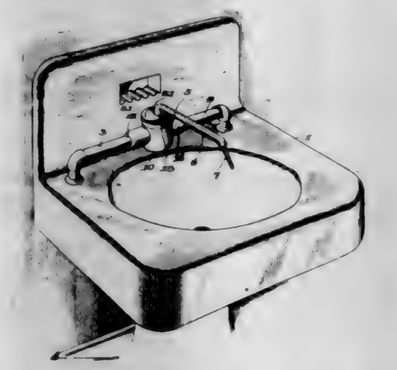
1. In a radio signaling device, an electron-tube oscillator, a source of periodic current supplying said oscillator, and means whereby the current supplied to said oscillator is maintained substantially constant, said means including a transformer having large inductive reactance.

1,563,343. WINDSHIELD HINGE. HIRAM W. COOLEY, Chicago, Ill., assignor to William R. Moss, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,577. 2 Claims. (Cl. 296—92.)



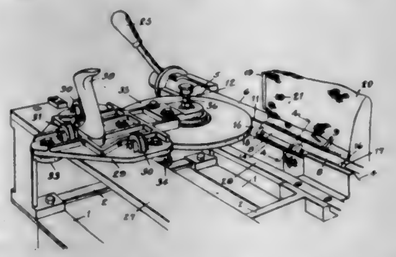
2. In a device of the class described, a frame having a recess, a socket mounted in said recess and having channel like extensions secured to said frame, a yielding detent supported in the wall of said socket, and a trunnion rotatable in said socket and having a channel member adapted for receiving a member, said trunnion having depressions engageable by said detent.

1,563,344. COMBINED HOT AND COLD WATER FAUCET. EDWARD L. CORBETT, New York, N. Y. Filed Aug. 25, 1925. Serial No. 52,313. 5 Claims. (Cl. 251—106.)



1. A sanitary water fixture comprising a hot and cold water inlet, a valve for regulating the amount of hot and cold water passing through the same, an outlet pipe for the fixture and a handle extending directly in the flow of water from the outlet pipe to thereby constantly cleanse the same while the fixture is turned on.

1,563,345. MACHINE FOR SETTING OR APPLYING BELT FASTENERS AND THE LIKE. JAMES K. DIAMOND, Grand Rapids, Mich., assignor to Clipper Belt Lacer Company, Grand Rapids, Mich. Filed Mar. 30, 1925. Serial No. 19,480. 22 Claims. (Cl. 1—50.)



20. In a structure of the class described, the combination of an anvil jaw member having fastener holding means operatively associated therewith, and a reciprocatingly mounted driven rotating closing jaw coacting with said anvil jaw member.

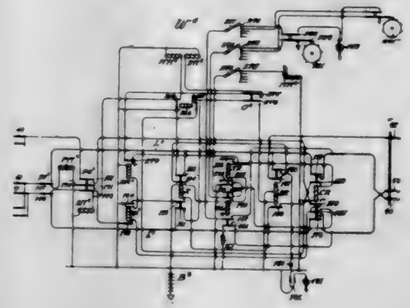
1,563,346. COMPOSITION OF STYPTICS. CHARLES RAYMOND DOWNS, New Haven, Conn. Filed Aug. 12, 1924. Serial No. 731,636. 4 Claims. (Cl. 167—9.)

1. A styptic mixture containing phthalyl peroxide.

2. A styptic mixture containing phthalyl peroxide and phthalic acid.

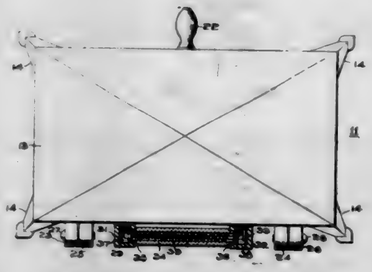
3. A styptic mixture containing phthalyl peroxide, phthalic acid and a filler.

1,563,347. AUTOMATIC TELEPHONE SYSTEM. ALFRED H. DYSON, Montclair, N. J., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 19, 1907, Serial No. 389,180, Patent No. 1,257,283, dated Feb. 19, 1918. Divided and this application filed Mar. 2, 1917. Serial No. 152,045. 52 Claims. (Cl. 179—17.)



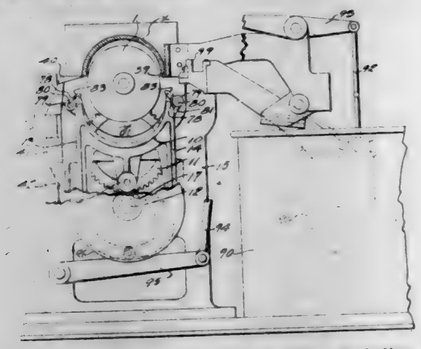
1. In a telephone system, a party-line, a plurality of substations on said line, means for automatically predetermining a code signal, means for signaling said stations according to said predetermined code and automatic means to insure that the code is always applied to the line at the beginning.

1,563,348. ELECTRICALLY-HEATED DEVICE. KARL EHRGOTT, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,828. 3 Claims. (Cl. 219—19.)



1. In a waffle iron, the combination with a pair of cooperating electrically heated casings, and a plurality of hinges operatively connecting said casings, of hollow lug members extending from said casings and having their outer end portions alined with the axis of said hinges, a tubular connecting member extending between and supported by said lugs, and a flexible conductor located in and extending through said lugs and tubular member for electrically connecting the heating elements in said casings.

1,563,349. STEREOTYPE-PLATE-CASTING MACHINE. WILLIAM EVENSEN, Chicago, Ill., assignor to Goss Printing Press Company, a Corporation of Illinois. Original application filed Feb. 17, 1921, Serial No. 445,781. Divided and this application filed Nov. 15, 1921. Serial No. 515,306. 27 Claims. (Cl. 22—2.)



1. A stereotype plate casting machine including in combination a rotatable core, one diameter of which is greater than the other, a cooperating concave casting member, and an end plate for the casting chamber mounted separately from the core and concave casting member.

---

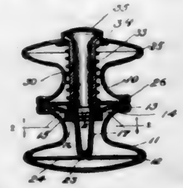
1,563,350. SEPARABLE CUFF BUTTON. WALTER E. FIELD and FRED C. STOWE, Providence, R. I., assignors to Harry D. Hedison, doing business as Hedison Mfg. Co., Providence, R. I. Filed July 14, 1925. Serial No. 43,526. 6 Claims. (Cl. 24—110.)

1. A separable cuff button comprising stud and socket members, each having inner and outer heads, a protuberance on the stud member to enter an opening in the socket member, a latch member having arms with portions extending laterally out through openings in said protuberance to releasably engage a portion of the socket member, and a separate resilient push piece having side arms embracing said latch arms and contractible by an axle movement upon engagement with a fixed portion of the button to act upon and withdraw the latch to release the button members.

---

1,563,351. SEPARABLE CUFF BUTTON. WALTER E. FIELD and FRED C. STOWE, Providence, R. I., assignors to Harry D. Hedison, doing business as Hedison Mfg. Co., Providence, R. I. Filed July 15, 1925. Serial No. 43,739. 6 Claims. (Cl. 24—110.)

1. A separable cuff button comprising two button parts, each having inner and outer heads, a latch member in one button part arranged to snap laterally into engagement with portions of the other button part, an axially movable latch-engaging push member in the other of said button parts, one of said members having a surface inclined to the axis and in engagement with the



other of said members, whereby an axial movement of the push member causes a lateral releasing movement of the latch member to permit the separation of the button parts.

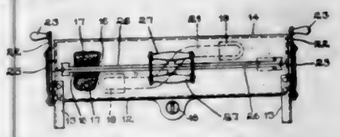
---

1,563,352. POWDER RECEPTACLE FOR HANDLES. CHARLES O. FISHER, Wellsville, Kans. Filed Dec. 16, 1924. Serial No. 756,373. 3 Claims. (Cl. 273—73.)

3. In an article of the character described, a handle provided with a receptacle having an inlet at one end of said handle and an outlet leading out of the handle at a suitable distance from said inlet, a removable cap member for closing said inlet, and a cap pivotally mounted upon the handle for normally closing said outlet.

---

1,563,353. ELECTRIC COOKY BAKER. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Aug. 22, 1922. Serial No. 583,601. 7 Claims. (Cl. 219—19.)

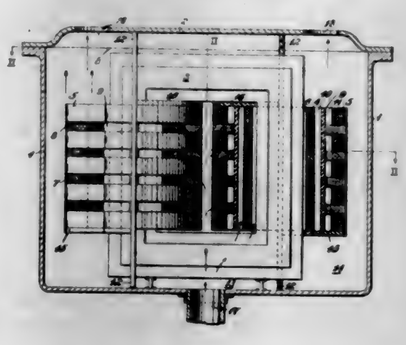


2. In an electrical cooking device, in combination, a lower casing, an upper casing movable relatively to said lower casing, electric-heating elements in each of said casings, a baking surface operatively secured to said upper casing, and a plurality of baking surfaces to be removably and alternately operatively associated with the lower of said casings, all of said baking surfaces having substantially the same surface configuration.

---

1,563,354. TRANSFORMER-COOLING SYSTEM. CHARLES LE G. FORTESCUE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 17, 1920. Serial No. 404,205. 5 Claims. (Cl. 175—361.)

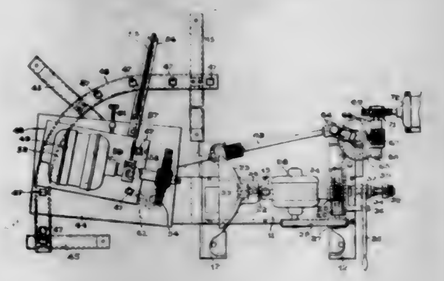
1. A transformer comprising a casing having a plurality of compartments therein, one of which is centrally disposed relative to the others, coils mounted within said casing and extending into adjacent compartments, the coils being disposed to form passageways



for permitting circulation of a cooling medium between said coils from the central compartment in divergent directions to adjacent compartments.

---

1,563,355. REFLECTOR-POLISHING MACHINE. JOHN C. FOX, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 7, 1923. Serial No. 679,072. 2 Claims. (Cl. 51—33.)

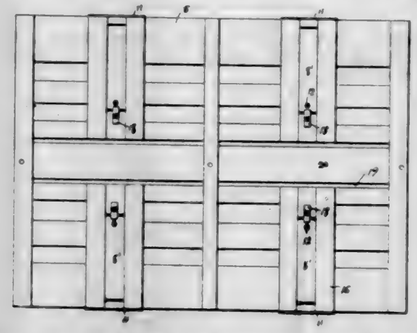


1. In a reflector-polishing machine, in combination, a base, a rotatable chuck for holding a concave reflector the inner surface of which is to be polished, adjustably mounted on said base, a base plate having a pivotal mounting on said chuck base, a motor-supporting plate pivotally mounted on said base plate, a motor mounted on said motor-supporting plate, a circular brush on said motor, means on said chuck-base for moving said chuck toward said brush, and means operatively associated with said chuck-base for causing oscillatory movement of said base-plate, motor and brush around said pivotal mounting.

---

1,563,356. COLLAPSIBLE CRATE. CHARLEY MELLVILL FRANKLIN, Griswold, Iowa. Filed Oct. 3, 1924. Serial No. 741,483. 2 Claims. (Cl. 217—47.)

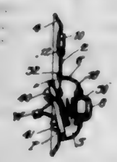
1. A knocked down crate comprising a bottom section, hinged sections carried by the bottom section and capable of being arranged in a horizontal or vertical position, a top section, guides carried thereby, hinged posts carried by the bottom section and slidably received in the guides, the posts being adapted to be arranged in a horizontal position on the top section when the crate is collapsed, and latch elements engageable with the



posts when the latter are arranged in such position whereby to hold all the parts against movement with respect to each other.

---

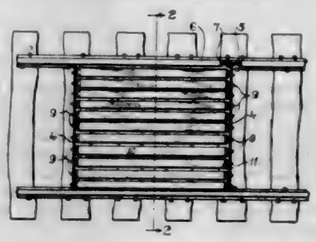
1,563,357. PRESS BUTTON. ARTHUR C. GAYNOR, Stratford, Conn. Filed Dec. 22, 1922. Serial No. 608,443. 13 Claims. (Cl. 200—159.)



7. A device of the type described which comprises, a dome shaped push button mounting member, a pair of contacts within said dome member insulated from each other, and a push button having an inner metallic shell normally insulated from said contacts and adapted to contact with and bridge said contacts, an intermediate insulating layer and an outer shell.

---

1,563,358. CATTLE GUARD. JOSEPH GIBSON, Diamond City, Alberta, Canada. Filed Dec. 27, 1923. Serial No. 683,007. 2 Claims. (Cl. 256—16.)

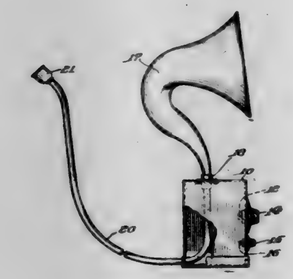


1. The combination with railroad tracks or the like, of a device of the character described comprising a pair of spaced supporting members disposed transversely of the tracks, having perforated, offset ends disposed at right angles to the body portion and lying parallel with said rails; securing means adapted to pass through the perforations in said ends and registering apertures in said rails; said supporting members each having a regular and corresponding, longitudinal series of perforations; a plurality of rollers disposed parallel to

said tracks; spindles mounted in the ends thereof adapted to be rotatably carried by the porforations in said transverse supports and sleeves received by the ends of said rollers.

---

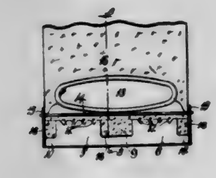
1,563,359. TOY RADIO. DORON GREEN, Bristol, Pa. Filed Mar. 7, 1925. Serial No. 13,818. 2 Claims. (Cl. 46—46.)



2. A toy comprising in combination a cabinet having dials thereon to simulate in appearance a radio receiving set, a sound amplifier associated with said cabinet, and a tube passing into said cabinet at a point concealed from the front of said cabinet and communicating with said amplifier, said tube leading to a point remote from said cabinet.

---

1,563,360. BUCKLE. WILLIAM E. HATHEWAY, Bridgeport, Conn. Filed Nov. 22, 1923. Serial No. 676,218. 1 Claim. (Cl. 24—191.)

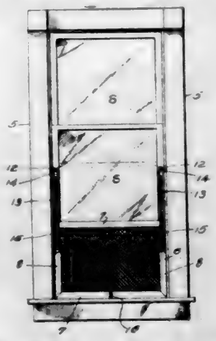


A buckle construction comprising a frame and a lever journaled thereto, said frame having a floor, webbing clamping sections pierced from the floor and forming teeth on the edge of the opening in the floor and at the point of severance of said sections, said sections partially divided to give flexibility thereto, said teeth elevated above the floor to be engaged by the webbing, and such engagement maintained by the flexible nature of the partially divided sections.

---

1,563,361. WINDOW SCREEN. MILLARD F. HENNING, Oakland, Calif. Filed Feb. 4, 1924. Serial No. 690,676. 3 Claims. (Cl. 156—14.)

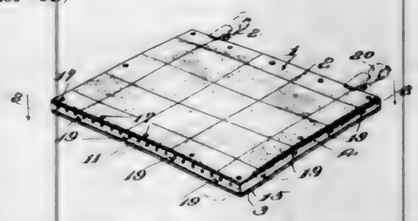
1. The combination with a window frame, window sashes and a screen, of screen holders comprising a pair of elongated plates offset at one end and detachably secured at such end to the window sashes, cooperating means carried by said plates and the screen for slidably maintaining the screen relatively to the sash, and cooperating latch means carried by an end rail of the



screen and the window frame whereby the sashes may be raised or lowered to provide openings to be guarded by the screen.

---

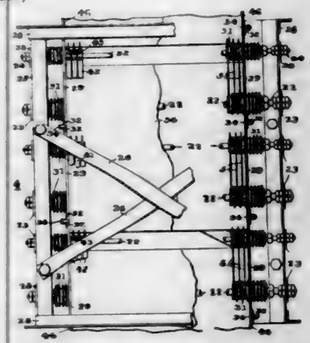
1,563,362. DEVELOPING HOLDER FOR X-RAY FILMS. JUAN RAFAEL HERRADORA, Holtsville, N. Y. Filed Apr. 29, 1924. Serial No. 709,832. 13 Claims. (Cl. 250—34.)



1. A film holder comprising a paper enclosure having a number of spaced walls forming side walls having openings arranged in staggered relation whereby a developing fluid may pass to the enclosure and at the same time preventing light from entering the enclosure.

---

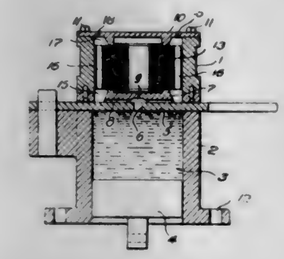
1,563,363. RESISTOR. LLOYD J. HIBBARD, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 22, 1921. Serial No. 486,869. 8 Claims. (Cl. 219—39.)



3. The combination with a plurality of resistors each of said resistors having an enlarged end portion provided with a plurality of slots, of means comprising a plurality of rods for mounting said resistors in side-by-side relation, a frame for supporting said rods in parallel relation and a plurality of relatively flat members adapted to be positioned near the ends of said resistors by said slots.

---

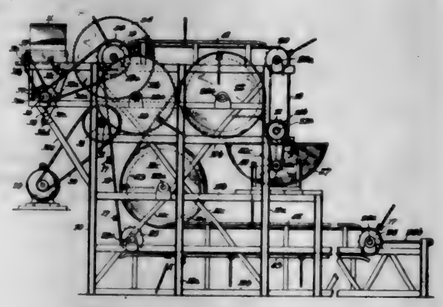
1,563,364. APPARATUS FOR DIE CASTING. SAMUEL C. HOBY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 13, 1923. Serial No. 651,221. 5 Claims. (Cl. 22—134.)



1. A pressure casting device comprising a mold, a reservoir associated therewith, a baffle wall intermediate said mold and reservoir having radial communicating ports and means for emptying the contents of the reservoir through said ports.

---

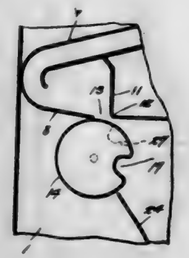
1,563,365. MACHINE FOR COATING ARC-WELDING ELECTRODES. CHARLES H. HOLLUP, Milwaukee, Wis., assignor to C. H. Hollup Corporation, a Corporation of Illinois. Filed July 9, 1920. Serial No. 394,931. 6 Claims. (Cl. 198—24.)



1. In apparatus of the class described, a hopper adapted to receive a plurality of elongated articles of substantially the same shape, said hopper being provided with a plurality of outlets, a stationary plate beneath said hopper provided with a groove corresponding to each of said outlets, means for feeding said articles through said outlets and into said grooves, an endless conveyer, gripping means carried thereby, a transfer table provided with longitudinal grooves in alinement with the grooves of said stationary plate, said table being pivotally mounted at one end adjacent said stationary plate and terminating at its other end adjacent said conveyer, a movable element, and push rods carried thereby adapted to enter the grooves of said stationary plate upon movement of said element in one direction to thereby push said articles from the grooves of said stationary plate into the grooves of said transfer table to a position to be received by said gripping means.

---

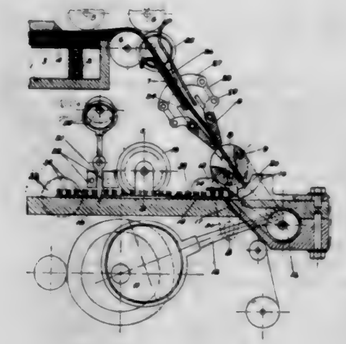
1,563,366. VENDING MACHINE. IRVING C. HONEGGER, San Antonio, Tex. Filed June 1 1923. Serial No. 642,838. 1 Claim. (Cl. 194—2.)



In a vending machine the combination with a freely rotatable cylinder having a longitudinal article receiving recess in its periphery, and a container closed at its lower end by the cylinder for feeding articles successively to the recess, of a counterbalanced member movable with the cylinder and having a tray at one end and an adjustable weight at its other end, said cylinder being rotatable to an intermediate position against the action of the weight when subjected to the weight of an article in the recess, and means for directing an object by gravity against the tray to rotate the cylinder past its intermediate position and release the article carried by the cylinder.

---

1,563,367. METHOD OF MANUFACTURING ARTICLES OF BRUSHLIKE NATURE. JOHAN ARTHUR HULTQVIST, Norrkoping, Sweden. Filed Dec. 18, 1922. Serial No. 607,686. 4 Claims. (Cl. 300—21.)



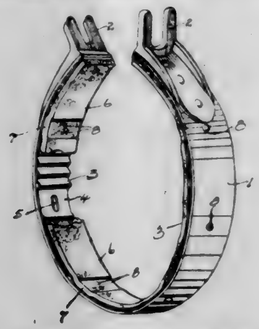
1. The method of manufacturing articles of brush like nature comprising the feeding of a plastic mass into sheet form, the movement forward of said sheet, and the forwardly feeding and insertion of a plurality of distinct bundles of fibres in said plastic material in its plastic state at the point where it is being fed.

---

1,563,368. BRAKE BAND FOR MOTOR VEHICLES. ROBERT H. HUTCHINSON, Dallas, Tex. Filed Aug. 7, 1923. Serial No. 656,296. 5 Claims. (Cl. 188—250.)

3. A brake band liner comprising a contracting band, a corrugated spring arranged against the inner side of the band, a friction strip arranged against the inner side of the spring and conforming to the inner surface thereof, the inwardly bowed portions of the spring being

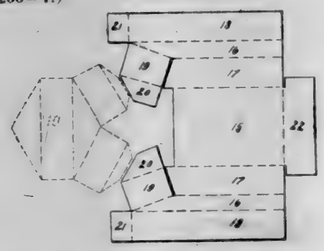
adapted to engage said friction strip against a drum and arranged to gradually flatten the strip on the drum as the pressure increases to increase the surface area of con-



tact, the corrugations of the spring being adapted to equalize pressure thereof through the spring to uniformly bind the friction strip on the drum.

---

1,563,369. BOX INSERT. AMOS W. HUIETT, Reading, Pa. Filed Dec. 7, 1921. Serial No. 520,514. 1 Claim. (Cl. 206—7.)

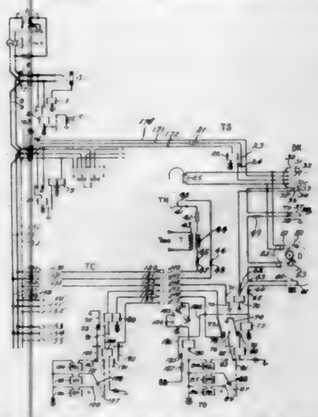


A blank for forming a box insert comprising a substantially rectangular body portion having a single free edge and provided at its opposite sides with foldable wings of greater length than the body portion, each wing having a straight side edge and one straight end edge, the other end edge of each wing being cut to provide an outwardly extending flap, and an inclined combined tongue and tab, the combined tongues and tabs of the two wings converging toward each other and extending inwardly beyond the inner fold lines of the wings so that the tabs lie just beyond the free edge of the body portion, and a substantially rectangular end flap integral with one end of the body portion and of slightly greater length than the width of the body portion, each of said wings being adapted to be folded to form side members of inverted U shape in cross section, each tongue being adapted to be folded to form an inclined vertical wall of its associated side member and the tab of that tongue being adapted to occupy said side member, each of said flaps being also adapted to be bent within the side member with which it is associated and to abut against the folded tongue.

---

1,563,370. TESTING SET FOR TELEPHONE SYSTEMS. EMIL JACOBSEN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 11, 1923. Serial No. 631,418. 13 Claims. (Cl. 179—175.)

1. In a signaling system, a plurality of sets of conductors, a test operator's set, means controlled by the test operator for connecting said test set to any set of conductors, automatic switching apparatus associated with said test set having access to multiples of said conductors, an impulse sender for controlling said apparatus to connect with said multiples,



a source of signaling current, means for connecting the same to the selected conductors, and a device associated with said test set responsive to said signaling current.

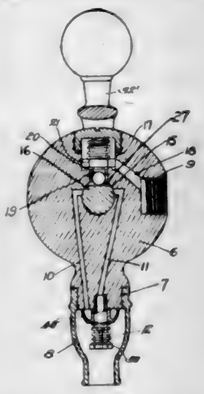
---

1,563,371. IDENTIFYING TAG. HOWARD B. JONES, Evanston, Ill. Filed Jan. 2, 1925. Serial No. 146. 2 Claims. (Cl. 40—2.)

1. An identifying tag for relatively long and slender articles of the kind specified comprising a piece of relatively long and narrow, thin and flexible sheet material having a plurality of perforations therein substantially aligned in the longitudinal direction of the tag through which the article to be identified may be threaded so as to lie to a substantially large extent along the rear surface of the tag, there being a pair of such perforations in one end portion of the tag and in other such perforation near the other end portion thereof, the tag having identifying data on its front surface.

---

1,563,372. DRAFT ARM FOR SODA FOUNTAINS. JAMES KANTOR, Chicago, Ill. Filed Sept. 20, 1922. Serial No. 589,330. 10 Claims. (Cl. 225—25.)



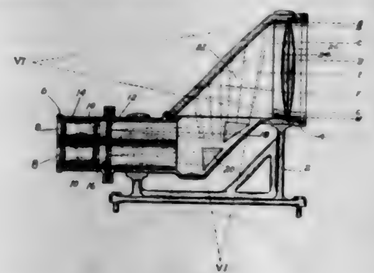
1. In a device of the class described a head having a chamber therein, a pair of passages opening from opposite sides of said chamber respectively, a supply passage

communicating with said chamber, the three passages being arranged intermediate the ends of the chamber, a turning plug in the chamber having a cut-away portion adapted to place either of the first mentioned passages in communication with the supply passage and a valve in the supply passage normally closed but opened by the turning plug when the latter is turned to place the supply passage in communication with either of the other of said passages.

10. In a device of the class described, a head, a transverse bore in the head, a turning plug in the bore, outlet passages controlled by the turning plug, a handle for operating the turning plug and means for returning the handle to intermediate position when displaced to either side thereof comprising an arm on the turning plug, a pin on said head and a spring coiled about said turning plug and having its respective opposite ends on opposite sides of said pin and arm.

---

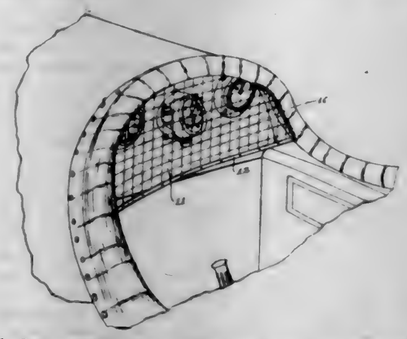
1,563,373. RANGE FINDER. ROBERT KAUCH, Dayton, Ohio. Filed Dec. 14, 1922. Serial No. 607,004. 5 Claims. (Cl. 88—2.2).



1. In an optical system, an objective lens, a prism to deflect the rays of light passing through said objective lens through ninety degrees, and a series of prisms placed between said first mentioned prism and the focus of said objective lens in such manner that the images of objects at predetermined distances are all focused in the same plate.

---

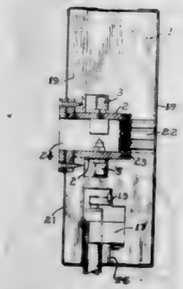
1,563,374. PROTECTION SCREEN FOR AIRPLANE COCKPITS. NORMAN L. KEARNEY, Dayton, Ohio. Filed Apr. 8, 1924. Serial No. 705,006. 5 Claims. (Cl. 244—30.)



1. In a vehicle, the combination with the instrument and control board in front of operator which constitutes a hazard because liable to impact in the event of a crash, of a protective screen to prevent such impact spaced sufficiently from said board to permit free access thereto for manual manipulation or adjustment thereof.

---

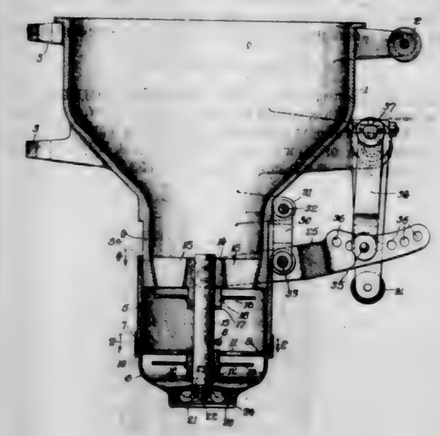
1,563,375. GLOW-DISCHARGE TRANSMITTER CASING. LOUIS F. KINDERMANN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,052. 6 Claims. (Cl. 179—121.)



1. A glow discharge transmitter case comprising a body of insulating material recessed to provide chambers for the various elements of a glow discharge transmitter, and a metallic shield, and said body and shield being perforated for the entrance of sound wave disturbances.

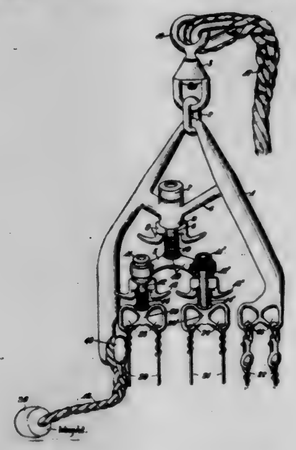
---

1,563,376. DOUGHNUT FORMER. ROY D. KING, Chicago, Ill.; Anna G. King administratrix of said Roy D. King, deceased. Filed Feb. 1, 1922. Serial No. 533,220. 15 Claims. (Cl. 107—14.)



1. A doughnut former having, in combination, a reciprocatory cylinder, a stationary valved head for one end of the cylinder, a ported head fixed to the other end of the cylinder, a check valve for the second head, a stem fixed to the stationary head and extending axially of the cylinder and through the second head, an annular forming element fixed to the outer end of the stem, a shell fixed to the last mentioned end of the cylinder, said shell having an outlet adapted to snugly surround the annular forming element, and means to reciprocate the cylinder and shell to carry the latter into and out of engagement with the stationary forming element.

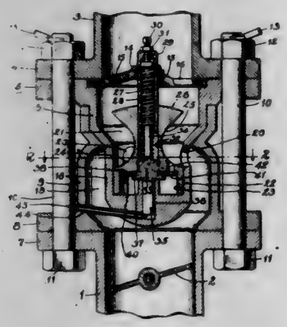
1,563,377. PULLING AND TRANSPOSING MECHANISM FOR LINE WIRES. CHARLES H. KLEIN, Jersey City, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 15, 1919. Serial No. 330,898. 12 Claims. (Cl. 175—376.)



1. In an arrangement for transposably connecting a plurality of wires to a yoke connected with a pulling line, the combination with a pair of wires of means for attaching the said wires to a yoke, the said attaching means comprising a rotatable mechanism including a slotted spindle and spacing arms, whereby the wires of the pair may be transposed, and locking means consisting of a trigger guided by the slot in the said spindle and a spring co-operating with the said trigger whereby the said mechanism may be securely held in a fixed position.

---

1,563,378. GOVERNOR FOR INTERNAL-COMBUSTION MOTORS. EDWARD KNAUSS, Florin, Calif., assignor to K. P. Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,234. 8 Claims. (Cl. 137—153.)



7. A governor for internal combustion motors comprising in combination an induction duct, a main throttle valve therein, a supplementary throttle valve located downstream from said main throttle valve and means actuated by the differential between the pressure in said duct downstream from said supplementary throttle valve and atmospheric pressure for moving said supplementary throttle valve toward its closed position.

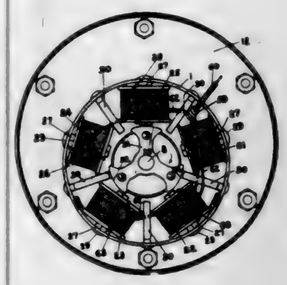
1,563,379. SAFETY FIRECRACKER. KOBY KOHN, New York, N. Y. Filed Dec. 22, 1924. Serial No. 757,561. 14 Claims. (Cl. 102—22.)

9. In a safety firecracker, in combination, a disruptable tube, an explosive confined near one end of said tube, a weakened wall in said tube between said explosive and the opposite end of said tube, a partition in said tube between said weakened wall and said opposite end, said tube being provided with a gas vent between said partition and weakened wall, said gas vent serving to weaken said wall.

10. In a safety firecracker, in combination, a disruptable tube, a closure near one end of said tube, a fuse through said closure, a partition spaced from said closure, explosive material between said closure and partition, a second partition in said tube, said tube being provided with a weakened wall between said partitions for the purpose described.

---

1,563,380. ELECTRIC-MOTOR MECHANISM. GEORGE R. KUNKLE, Elyria, Ohio. Filed May 14, 1923. Serial No. 638,811. 12 Claims. (Cl. 172—36.)



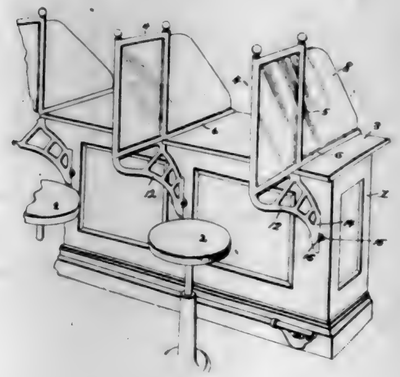
2. In an electric motor, a three-pole rotatable armature therefor, a five-pole field, a magnet winding for each field pole piece, an electric circuit for each said magnet winding, means adapted during rotation of the said armature to close the circuit of each said winding three times during one armature revolution, the periods of closure of the different magnet circuits being so timed that at all times two of said circuits will be closed, and that for shorter periods three of said magnet circuits will be closed.

---

1,563,381. LUNCH-COUNTER PARTITION. CLINTON O. LARMORE, Baltimore, Md. Filed Apr. 4, 1925. Serial No. 20,748. 1 Claim. (Cl. 211—12.)

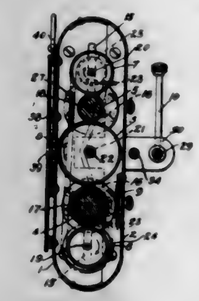
Means for dividing a counter into stalls or compartments, comprising a substantially rectangular frame whose inner upright is slotted, and whose upper, lower and outer members are grooved in a line with the slot, the lower member of the frame being extended rearwardly from the slotted member thereof and having means for securing the same on the top of the counter, a removable panel designed to be received through the slot and in the grooves of the frame, means for removably securing the panel in the frame, a bracket integrally formed with and projecting downwardly from the outer

portion of the lower member of the frame, said bracket having its inner edge notched to receive therein the projecting ledge of the top of the counter and laterally extending brackets on the inner straight end of the bracket for contacting with the outer face of the counter and for receiving therethrough securing means.



---

1,563,382. GRAPHIC RECORDING DEVICE. JOSEPH W. LEGG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1923. Serial No. 610,954. 11 Claims. (Cl. 242—55.)

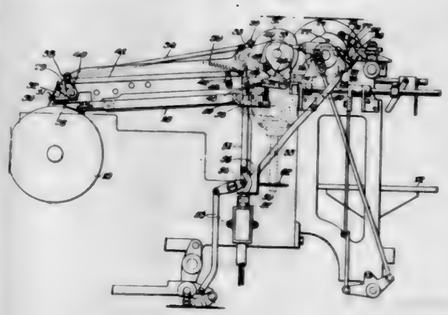


2. A graphic-recording device comprising a rotatable drive member, record-chart feed and take-up rollers for rolling operative connection thereto, an idler roller for similar operative connection to each of said chart rollers and means operatively connecting said idler rollers tending to assist the rotation of the one and to retard the rotation of the other.

---

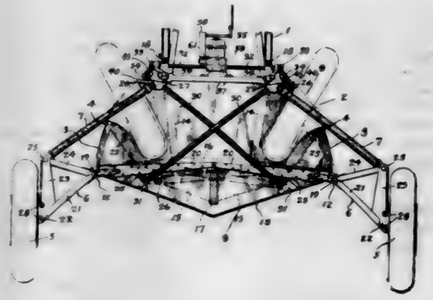
1,563,383. PRINTING PRESS. EDWARD R. LINEBAUGH, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 30, 1923. Serial No. 671,638. 2 Claims. (Cl. 271—56.)

1. In a printing press having stop mechanism under the control of a traveling sheet and including a movable stop-actuating member, and having also pneumatic sheet forwarding means, and means, including a rotary star wheel, to render alternate actuations of said forwarding means inoperative, a cam operative with said star wheel, and means intermittently movable by said cam to shift the said stop-actuating member into idle and active positions in timed relation to the alternate actuations of the forwarding means.



---

1,563,384. RETRACTABLE LANDING GEAR. GROVER C. LOENING, New York, N. Y. Filed Feb. 16, 1925. Serial No. 9,387. 15 Claims. (Cl. 244—2.)



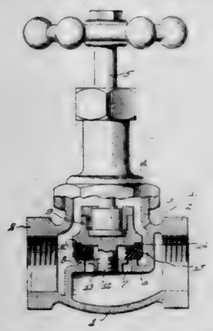
3. In a flying machine, a supporting structure, a retractable landing gear, a nut traveler to which said landing gear is connected, a rotary operating screw shaft for said nut traveler, a bearing for the screw shaft, a bracket on the supporting structure in which said bearing is laterally movable, an abutment on the supporting structure to receive lateral thrust of the nut traveler on landing, and a spring pressing the bearing, shaft and nut away from the abutment.

---

1,563,385. VALVE. BRYCE W. MCCLYMONT, Walkerville, Ontario, Canada, and SETH J. NORTH, Detroit, Mich. Filed May 22, 1925. Serial No. 32,003. 3 Claims. (Cl. 251—27.)

3. The combination with a valve having a valve seat and an adjustable stem, of a holder carried by said stem and provided with an annular boss and a concentric stud, a detachable retaining member on said holder and flush with the outer walls thereof, said retaining member having an annular flange about the boss of said holder,

a packing disk seated in said retaining member and on the boss of said holder and adapted for engagement with the valve seat of said valve, said packing disk having an



opening providing clearance for said stud, and a nut on said stud against said packing disk and closing the opening of said packing disk.

---

1,563,386. CATENARY SYSTEM. PATRICK A. MCGEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,593. 10 Claims. (Cl. 191—41.)

1. In a trolley system, the combination with a plurality of trolley conductors for supplying current to a contact device, of means for consecutively suspending one of said conductors from another in substantially the same plane whereby said conductors alternately become messenger wires, a supply conductor and means for attaching said supply conductor to said conductors at points at which said conductors function as messenger wires.

---

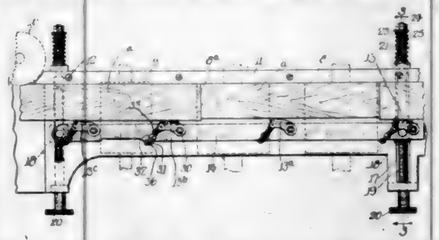
1,563,387. COAL ELEVATING AND CONVEYING APPARATUS. RODERICK MACEACHEN, Washington, D. C. Filed Aug. 7, 1923. Serial No. 656,188. 12 Claims. (Cl. 198—11.)

1. In a device of the class described, a coal elevator, supporting means on which said elevator is slidably mounted, chains attached to said elevator, sprockets over which said chains travel, and power-controlled means for driving the sprockets to slide the elevator rearwardly.

---

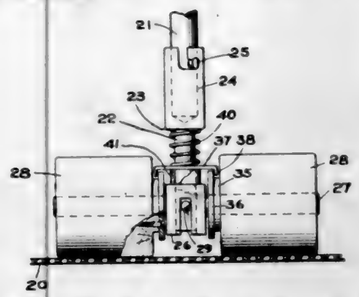
1,563,388. WORK-GUIDING MEANS FOR MOLDING MACHINES AND THE LIKE. CARL LAWRENCE MATTISON and WILLIAM O. VIVARTTAS, Rockford, Ill., assignors to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 24, 1924. Serial No. 701,276. 7 Claims. (Cl. 144—243.)

1. In a woodworking machine, the combination of a work table, a stationary guide member for the work on said table, a plurality of independent spring pressed guide shoes, a carrier bar adapted to support said shoes so as to engage the side of the work opposite the stationary guide member, and means for supporting said carrier bar comprising a rod slidable transversely below the table, a nut screw-threaded on said rod and having said carrier bar secured thereto, and spring means tending to move said rod in a direction to hold the guide shoes in engagement with the work.



---

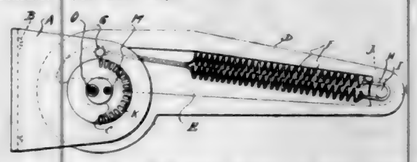
1,563,389. FOOD-TREATING APPARATUS. FRANK R. MILLER, Troy, Ohio, assignor to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Oct. 22, 1924. Serial No. 745,261. 9 Claims. (Cl. 146—175.)



1. In an apparatus for treating foodstuffs, a shaft member, a roller member pivotally supported thereon, and means for retaining the roller on said shaft, said means comprising an annular flange carried by one of said members and a yielding hook member carried by the other member and adapted to cooperate with said flange.

---

1,563,390. WINDOW-CONTROLLING DEVICE. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed June 19, 1920. Serial No. 390,055. 7 Claims. (Cl. 268—4.)

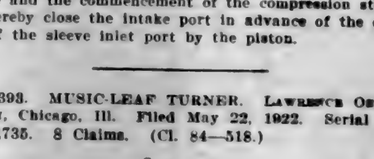


1. In a window operating device, a unit assembly comprising a lifter arm, a bracket forming a pivotal support for said arm, a counterbalance spring extending from said arm to said bracket and acting upon said arm in the various positions thereof with approximate uniformity, and means for locking the arm to the bracket in various positions of adjustment.

---

1,563,391. WINDOW-CONTROLLING DEVICE. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed June 19, 1920. Serial No. 390,056. 41 Claims. (Cl. 268—4.)

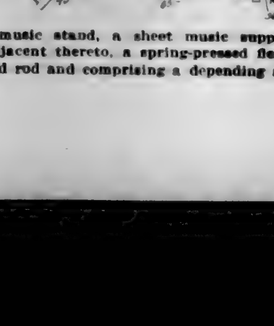
26. In a device of the character described, the combination with a window actuating means, of a substantially uniform counterbalancing means therefor, locking means actuated by said counterbalancing means



for retaining the window actuating means in different positions of adjustment, and a single support for all of said means whereby they may be installed as a unit.

---

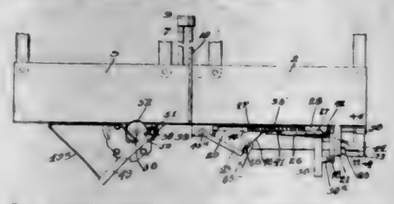
1,563,392. INTERNAL-COMBUSTION ENGINE. ALDEN E. OSBORN, New York, N. Y. Filed Feb. 25, 1920, Serial No. 361,293. Renewed Aug. 12, 1925. 4 Claims. (Cl. 123—75.)



1. In an internal combustion engine, the combination with a cylinder and a piston operating therein, said cylinder having an exhaust port near the inner end of the piston stroke and an intake port near the outer end of the piston stroke, of a reciprocating sleeve valve surrounding the piston and controlling the exhaust port and provided with an inlet port for registry with the intake port and connections from the piston for advancing the sleeve valve to carry the inlet port therein outward beyond the head of the piston during the power and exhaust strokes of the piston and to carry said inlet port inward within the stroke of the head of the piston and over the cylinder intake port between the end of the intake stroke and the commencement of the compression stroke to thereby close the intake port in advance of the closing of the sleeve inlet port by the piston.

---

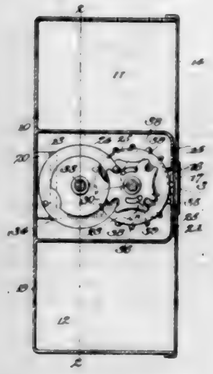
1,563,393. MUSIC-LEAF TURNER. LAWRENCE OSTERMAN, Chicago, Ill. Filed May 22, 1922. Serial No. 562,735. 8 Claims. (Cl. 84—518.)



1. In a music stand, a sheet music support, a rod mounted adjacent thereto, a spring-pressed flexor mounted upon said rod and comprising a depending arm having a lug thereon, and a foot operated slidable member having a spring pressed dog adapted for engaging said arm and elevating the same to longitudinal position and then engaging said lug for shifting said flexible longitudinally.

---

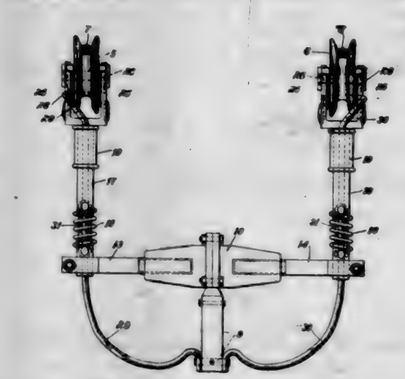
1,563,394. MOTION-PICTURE APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed May 25, 1923. Serial No. 641,482. 6 Claims. (Cl. 88—16.)



1. A motion picture apparatus for use with film having a plurality of series of images of which the images of one series are arranged in alternation with the images of the other series, comprising means operable for intermittently moving the film in one or the opposite direction to expose respectively the consecutive images of one or the other image series and mechanism for causing said means to function for exposing one image series when the means is operated in one direction and for exposing the other image series when the means is operated in the opposite direction.

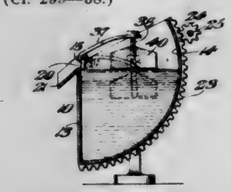
---

1,563,395. TROLLEY POLE. THOMAS S. PERKINS, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 9, 1921. Serial No. 513,878. 4 Claims. (Cl. 191—57.)



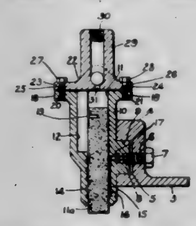
1. The combination with a trolley pole of a yielding element supported at the outer end thereof, a current collector supported by the said element and a supplemental yielding device for opposing movement of the said element in one direction.

**1,563,396. LIQUID-FEED RECEPTACLE.** GEORGE E. PETERSEN, Bristol, Pa., assignor to William H. Grundy Company, Inc., Bristol, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1924. Serial No. 700,903. 9 Claims. (Cl. 299—58.)



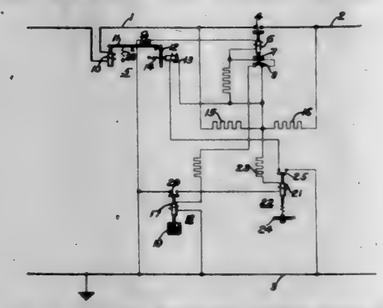
1. In a liquid feed mechanism, a receptacle mounted for tilting movement and having a discharge outlet, means for maintaining a constant liquid level area for all tilted positions of said receptacle, and means for tilting said receptacle to cause liquid to flow from said outlet.

**1,563,397. PNEUMATIC BRUSH HOLDER.** RAWDON EVANS RAMBO, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 8, 1924. Serial No. 704,987. 5 Claims. (Cl. 171—324.)



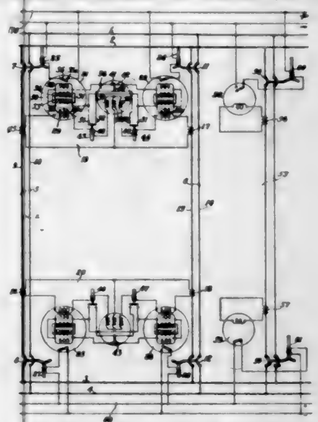
1. A current-collecting device comprising a brush holder having a brush-holding pressure chamber, means for applying fluid pressure to the head of said chamber, and a brush slidably fitting in said chamber and operating as a piston actuated by said fluid pressure, said device comprising transversely extending fluid pockets between said brush and the side wall of said chamber for limiting the escape of fluid.

**1,563,398. AUTOMATIC RECLOSING CIRCUIT INTERRUPTER.** MAURICE E. REAGAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,184. 3 Claims. (Cl. 175—294.)



1. In an electrical distribution system having a common return conductor, the combination with a circuit-controlling device provided with an operating coil for connecting the two circuit section conductors of the system, of two resistors connected between the circuit sections, means for normally connecting the operating coil between the midpoint of the resistors and the common return conductor comprising a resistor and a switch controlled by an overload device, means for latching the switch in open position after its operation, a voltage relay for effecting the release of said switch when the average potential of the two circuit sections attains a predetermined value, and a time-element relay for controlling the energization of the voltage relay.

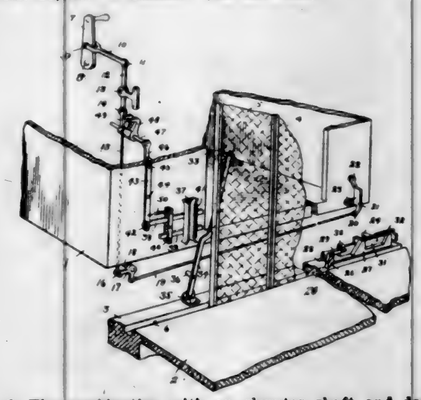
**1,563,399. ELECTRICAL PROTECTIVE DEVICE.** FORREST E. RICKETTS, Catonsville, Md. Filed Sept. 24, 1920. Serial No. 412,546. 21 Claims. (Cl. 175—294.)



1. In an electrical system of distribution, the combination with parallel-connected feeder conductors, of means having a time element and responsive to the current traversing the conductors and means for reducing the time element of the current responsive means comprising means responsive to an unbalance in the current traversing the parallel conductors.

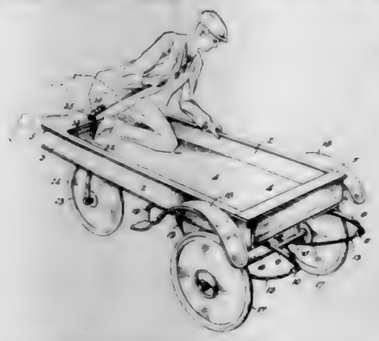
20. The combination with a circuit and an induction relay connected thereto having normally a definite-time characteristic when current in excess of a predetermined value traverse said circuit, of means or altering said characteristic under predetermined conditions in the circuit.

**1,563,400. ELEVATOR SAFETY DEVICE.** MORTIMER M. ROBB, Duluth, Minn. Filed Mar. 7, 1925. Serial No. 13,729. 2 Claims. (Cl. 187—49.)



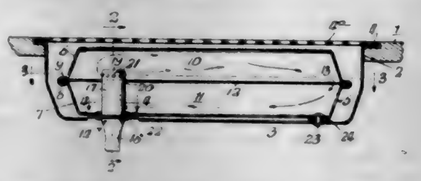
1. The combination with an elevator shaft and doors therefor, said elevator having a control lever therein and means operable by the movement of the elevator for locking or unlocking the doors of the shaft, of means carried by the elevator for cooperative engagement with operating means carried by one of the doors.

**1,563,401. WAGON.** ERNEST N. ROUSSEAU, Detroit, Mich. Filed Mar. 20, 1923. Serial No. 628,456. 1 Claim. (Cl. 280—87.5.)



A scooter wagon comprising a body tapering inwardly from one end thereof to the opposite end of said body, rails on said body, two wheels supporting the wide end of said body, a cleat fixedly secured to the underside of the narrow end of said body, a steering wheel supported fork engaging said cleat, a steering post extending through said cleat, body and one of the rails thereof and supported from said steering wheel fork, and a steering tongue pivotally connected to the upper end of said steering post and swingable laterally and vertically relative to said body and capable of extending over said body so as to be moved by one hand of an operator kneeling on one leg in said body and propelling the wagon with the other leg.

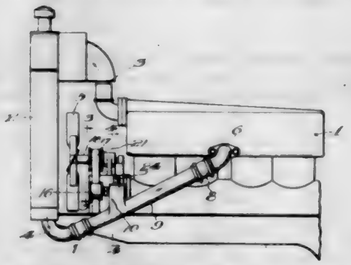
**1,563,402. MOTOR-CAR HEATER.** ELMER RYDER, Berwyn, Ill. Filed Mar. 13, 1924. Serial No. 699,079. 4 Claims. (Cl. 257—136.)



1. An automobile heater comprising a hollow heating chamber, said chamber being formed of two sheet metal sections, one of said sections having a marginal extension bent over and clamped against a marginal extension of the other section to secure the two sections together, a partition plate having its marginal portions secured between the marginal portions of the two sections and spaced from the top and bottom walls of the heating chamber to divide said chamber into two compartments, an exhaust inlet communicating with one of said compartments, an outlet communicating with the other compartment, and means in the said partition plate permitting communication between the two compartments.

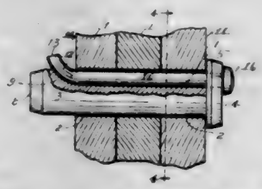
**1,563,403. WATER CIRCULATOR FOR MOTOR VEHICLES.** ELMER RYDER, Berwyn, Ill. Filed Oct. 6, 1924. Serial No. 742,037. 3 Claims. (Cl. 123—175.)

1. The combination with the outlet fitting of a motor vehicle radiator and the inlet fitting of the water jacket of the motor, of a metal pipe interposed between said fittings and flexibly connected therewith by hose sections, a water circulator combined with said pipe and having a driving pulley for actuation by the motor, and a lug



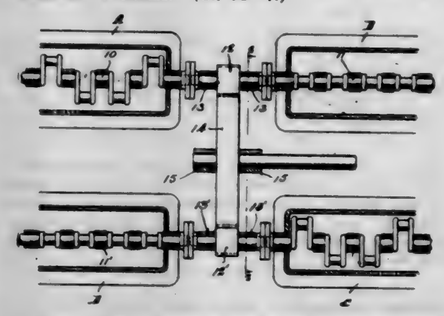
carried by said pipe and engaging the motor casing for holding the pipe against turning under the driving torque of the pulley during the operation of the circulator.

**1,563,404. PIVOT PIN.** HENRY F. SCHULTE, Grand Rapids, Mich. Filed Feb. 13, 1924. Serial No. 692,528. 1 Claim. (Cl. 85—4.)



In combination with a member having an opening therethrough, a device of the character described freely turnable in said opening and comprising; a bolt thrust endwise through said opening and provided with a groove extending in the bolt's longitudinal direction and having an open end at one end of the bolt and having its bottom in the bolt, said bottom being inclined outwardly adjacent the other end of the bolt; a bendable rod thrust endwise into the groove's open end adjacent one side of said member and driven along the groove to a position in which its inner end portion is bent outwardly by engaging the groove's inclined bottom and its inner extremity projects from the groove beyond the opposite side of said member.

**1,563,405. POWER PLANT.** JACOB SCHLUMBERGER, Milwaukee, Wis. Filed Dec. 13, 1922. Serial No. 606,668. 6 Claims. (Cl. 74—7.)

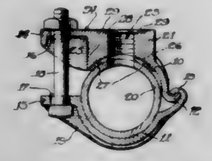


1. In a multiple engine power plant the combination of a driven gear, a plurality of engines disposed at opposite sides of the axis of said gear, each engine comprising a complete operating unit having a crank shaft,

and driving connections including gears between said engine crank shafts and driven gear cooperating to produce a turning moment on said driven gear substantially without bearing reactions on said driven gear.

---

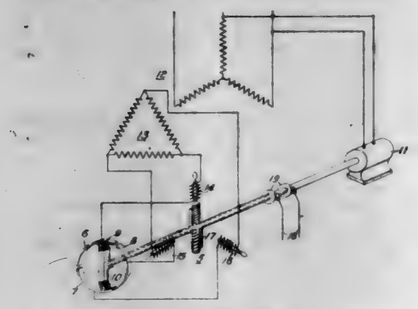
1,563,406. BRANCH-PIPE CONNECTION DEVICE. MORTIMER B. SKINNER, Wilmette, Ill. Filed Mar. 2, 1923. Serial No. 622,237. 1 Claim. (Cl. 285—108.)



A branch-pipe connection device of the character described comprising a pair of complemental body members having an interlocking connection with each other at one side of the device adapted to provide for swinging movement of the members toward and away from each other, said members respectively being formed to encompass a pipe to a materially large extent and one thereof being materially thick where it normally overlies such pipe, the side portion of the device opposite said connection being provided with means for drawing the members toward each other, said means including two opposed extensions, one thereof being on each of said members, and a bolt associated with said extension for drawing them toward each other, said materially thick portion having a hole therethrough adapted to accommodate a branch pipe directed toward a pipe normally held between said body members, the extension on one of said members having a nut-engaging surface substantially level with the outer surafce of said materially thick part whereby the nut is free to ben engaged by a wrench.

---

1,563,407. MECHANICAL RECTIFYING SYSTEM. JOSEPH SLEPIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 25, 1919. Serial No. 326,318. 8 Claims. (Cl. 175—364.)



5. In a rectifying system, a source of polyphase electromotive force, a rectifying commutator having one sector for each phase and a series-connected generator system dependent upon current flow in said rectifying system of impress electromotive forces on the retifying commutator sectors.

---

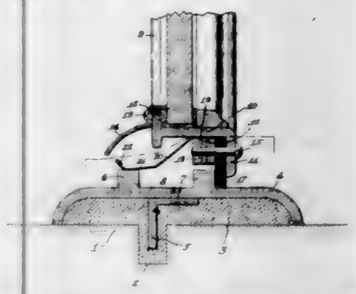
1,563,408. FOUNTAIN MARKING PENCIL OR PEN. THOMAS G. SUTHERLAND, Chicago, Ill. Filed Aug. 20, 1924. Serial No. 733,069. 4 Claims. (Cl. 120—43.)

1. A marking device of the class described comprising a reservoir, a ball member, means comprising a spring pressed member having a recess, and an aperture therethrough communicating with said recess, said recessed

member having slots and contacting with the surface of said ball between said slots at the edge of said recess for distributing the marking fluid over said ball.

---

1,563,409. DOORSILL AND WEATHER STRIP. THOMAS E. WALKER, Detroit, Mich., assignor to Crittall Casement Window Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 21, 1925. Serial No. 51,555. 6 Claims. (Cl. 20—66.)



1. The combination of a door having a depending flange, a retaining strip under said door and secured to the door flange, a resilient metallic weather strip attached to said retaining strip and adapted to engage a sill, a yieldable weather strip mounted between said retaining strip and the door flange and adapted to engage the sill, and a weather bar carried by said door and overhanging said resilient metallic weather strip.

---

1,563,410. INCORPORATION OF RUBBER IN NON-AQUEOUS MATERIALS. JOHN MORRIS WEISS, New York, N. Y. Filed Dec. 18, 1923. Serial No. 681,409. 14 Claims. (Cl. 106—23.)

1. The method of incorporating rubber in non-aqueous liquids having boiling points of at least 110° C. which comprises the addition of a colloidal aqueous solution of rubber to the non-aqueous liquid at a temperature from 110° C. to 150° C.

---

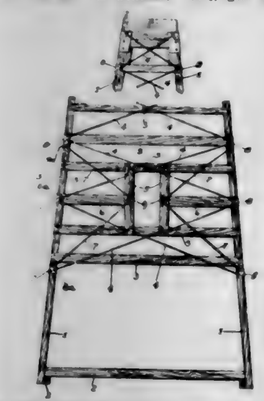
1,563,411. IGNITION AND LIGHTING SWITCH. ALFRED H. WEISS, Wilmette, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,675. 7 Claims. (Cl. 200—7.)

1. A device of the character described including a mounting plate provided with an arifice, a rotatable contact control member supported by said mounting plate, a spring member adapted to fit into said orifice and secured to said mounting plate, a second spring member

for cooperation with said rotatable contact control member and adapted to fit in said orifice, and means for securing said second spring member to said first spring member.

---

1,563,412. WELL-DRILLING DERRICK. DALLAS D. WERTZBERGER, Tulsa, Okla. Filed Nov. 16, 1923. Serial No. 675,043. 2 Claims. (Cl. 20—0.5.)



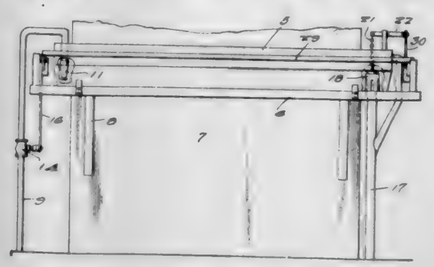
1. A tie rod anchoring lug for a well drilling derrick comprising an angular casting having right angled flanges adapted for attachment to the corner of the derrick, each flange terminating in an apertured abutment for receiving the ends of tie rods, and nut anchoring pockets behind said abutments for receiving the tie rod nuts.

---

1,563,413. BEVERAGE MIXER. HERBERT H. WHITCOMB, Arlington, Mass., assignor to M. W. CARR & Company, Inc., a Corporation of Massachusetts. Filed Mar. 19, 1925. Serial No. 16,651. 3 Claims. (Cl. 146—3.)

1. In a device of the character specified the combination of a container provided with a base having an inset portion, a juice extractor adapted to fit over the mouth of said container, and means whereby said juice extractor may be removably supported within said inset portion of said base.

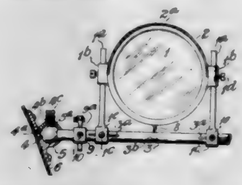
1,563,414. POULTRY DRINKING FOUNTAIN. PAUL WIERDSMA, Petaluma, Calif. Filed Sept. 9, 1925. Serial No. 55,279. 3 Claims. (Cl. 119—76.)



1. In combination, a trough, a pair of levers pivotally mounted at the ends of the trough, a perch connecting corresponding ends of the levers, a drain associated with the trough, a valve associated with the drain, weights on the levers, means for operating the valve, said means being controlled by one of said levers so that said valve is normally held open, a water supply pipe leading into the trough, a valve associated with the water supply pipe, means for controlling said valve operable by the other lever to be normally closed.

---

1,563,415. CAR-HEADLIGHT ANTIDAZZLE DEVICE. JAMES FREDERICK WILSON, Shepparton, Victoria, Australia. Filed July 23, 1924. Serial No. 727,748. 1 Claim. (Cl. 240—61.)



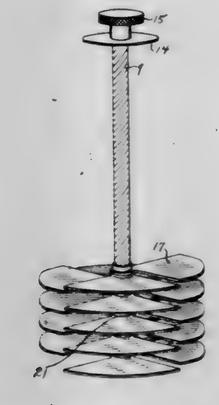
A headlight supporting and tilting assemblage for automobiles comprising a pair of socket members attachable to the front fenders of an automobile, a shaft terminating in ball shaped extremities adapted to be received in said socket members, a pair of posts fixed to and projecting laterally from the shaft adjacent each end thereof, a headlight positioned between and carried by the posts of each pair, a crank arm fixed to the shaft adjacent one of said socket members, a bracket attachable to one of the side members of the chassis at a point below and rearwardly of said shaft, a bell-crank pivoted to said bracket, a link connecting one arm of the bell-crank to the arm on said shaft, a guide bracket attachable to the aforementioned side member of the chassis rearwardly of the first mentioned bracket, a rod slidable through said guide bracket and attached at one end to the other arm of the bell-crank, abutments carried by the rod at opposite sides of the guide bracket, springs confined between opposite sides of the guide bracket and said abutment and an operating element connected with said rod for imparting sliding movement thereto.

---

1,563,416. VARIABLE CONDENSER. HENRY M. WOLFSON, New York, N. Y. Filed June 19, 1922. Serial No. 569,272. 4 Claims. (Cl. 250—41.)

1. A condenser having a plurality of helically arranged and stationary plates and a plurality of movable plates arranged in like helical arrangement, and means for rotating and vertically moving said movable plates adapted to successively introduce them between said stationary plates.

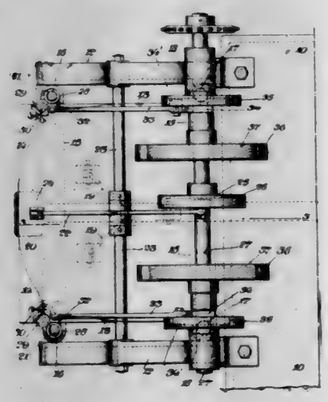
3. In a condenser, a threaded shaft having an extension threaded at its bottom, a series of plates each having a recess and each having a tongue engaging the recess of the adjacent plate, each said plate having an



orifice whereby it can be mounted on said extension, spacing sleeves mounted on said extension between said plates which are mounted on said extension, and a nut adapted to clamp said plates and spacing members together.

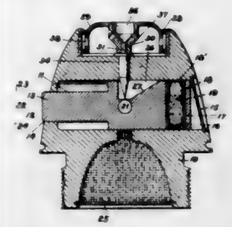
---

1,563,417. SHEET-FEEDING MECHANISM. JACOB P. WRIGHT, Barberton, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 19, 1923. Serial No. 663,534. 6 Claims. (Cl. 271—22.)



1. In sheet feeding mechanism, the combination with a support for a stack of sheets, a gripper for a corner of the stack, and means whereby relative movement between the support and the stack is effected to compensate for the removal of successive sheets from the stack, of means whereby relative movement of the support and gripper is effected to release the stack from the action of the gripper, means for pushing the corner of the sheet adjacent the gripper in an angular horizontal direction to shift the corner away from the gripper, and means for bodily removing the said sheet flatwise from the stack.

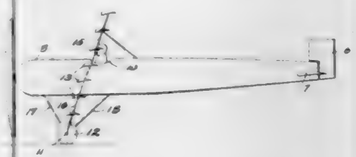
1,563,418. FUSE. ARTHUR ADELMAN, Chesaning, Mich. Filed Oct. 9, 1924. Serial No. 742,669. 7 Claims. (Cl. 19239.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



1. A fuse including a fuse body, said body formed with a transverse passage and an aperture in communication with said passage, a bolt slidably mounted in the passage and adapted to extend through the aperture in the body, a firing element disposed in one end of the bolt, said bolt formed with a central notch inclined towards the firing element, means for releasably holding the bolt in unarmed position, a firing pin normally disposed in the notched portion of the bolt and adapted to be cammed forward thereby, a striker head mounted in the nose of the fuse body and adapted to move with the firing pin, and a retaining ring for limiting the forward movement of the striker head.

---

1,563,419. MULTIPLANE. WILLIAM FREDERICK GERHARDT and ISAAC MACKLIN LADDON, Dayton, Ohio. Filed May 29, 1923. Serial No. 642,213. 1 Claim. (Cl. 244—12.)



In an aircraft, a plurality of superimposed aerofoils of equal dimensions, an undercarriage embodying an axle and wheels, an auxiliary aerofoil of lesser dimensions interposed between said plurality of equally sized aerofoils and the axle, a supporting strut connected to each end of said axle extending angularly outward through said auxiliary aerofoil and thence vertically through said plurality of aerofoils, said struts passing through all of said aerofoils midway between the leading and trailing edges thereof.

---

1,563,420. PROCESS OF MANUFACTURE OF ARMOR PLATE. JOHN B. JOHNSON and SAMUEL DANIELS, Dayton, Ohio. Filed Aug. 8, 1921. Serial No. 490,751. 9 Claims. (Cl. 148—12.)

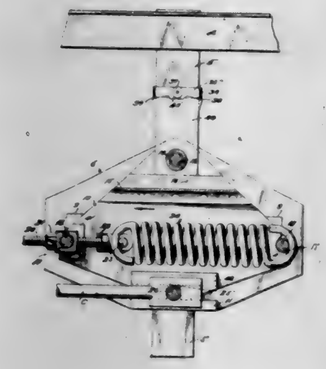
8. The herein described process of manufacturing armor plate consisting in subjecting the plate before it has reached its final thickness, to a carburizing operation, then rolling the carburized plate to the required final thickness, then further carburizing the plate, on one side only while protecting the other side, to form a depth of case from ten to forty-five per cent of the total thickness of the finished plate, depending on the ballistic resistance required, then heating the plate to approximately 1560° F., then quenching in oil, then reheating the plate to 1400° F., and finally quenching in water.

1,563,421. STOVE POLISH. MANUEL LEVIN, Boston, Mass. Filed May 8, 1923. Serial No. 637,589. 3 Claims. (Cl. 134—25.)

1. That process of making stove polish which comprises dissolving resin in cold mineral oil, stirring pulverized graphite and a pigment into the solution, and reducing the mixture to the desired consistency by adding more oil.

---

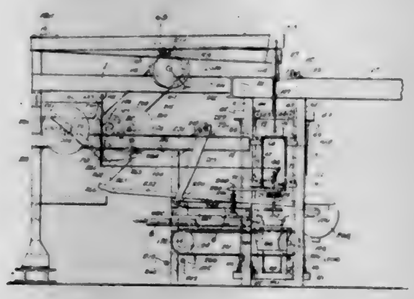
1,563,422. SAFETY DEVICE. WILLIAM H. MCCLELLAND, Huntingdon, Pa., assignor, by mesne assignments, to Ray P. M. Davis, Mount Union, Pa. Filed Dec. 15, 1924. Serial No. 755,938. 12 Claims. (Cl. 192—150.)



1. In a brick making machine, a rocking element for moving the same as a unit, a member for connecting the two, and means for disconnecting the element from said member upon the developing of adverse working conditions in said machine.

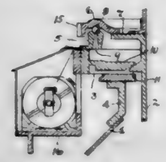
---

1,563,423. STRIPPER. WILLIAM H. MCCLELLAND, Mount Union, Pa., assignor, by mesne assignments, to Roy P. M. Davis, Mount Union, Pa. Filed Dec. 15, 1924. Serial No. 755,939. 25 Claims. (Cl. 25—2.)



1. In a brick making machine, means for receiving a pallet with brick containing mold thereon, mechanical means for stripping the mold from the brick, means for advancing the pallet with brick containing mold thereon from said receiving means to said stripping means, and means actuated by the stripper for cleaning the mold.

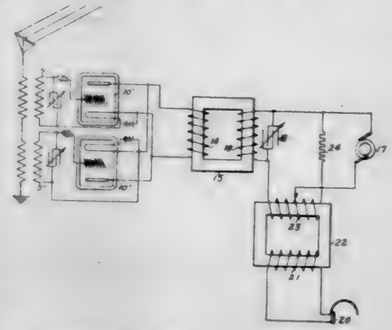
1,563,424. DISTRIBUTOR DRIVE FOR BLAST-FURNACE STACKS. ARTHUR G. MCKEE, Cleveland, Ohio, assignor to Arthur G. McKee & Company, Cleveland, Ohio, a Corporation of Delaware. Filed Oct. 9, 1924. Serial No. 742,523. 7 Claims. (Cl. 214—18.)



1. In charging mechanism for blast furnaces, the combination of a rotary distributor; a base ring providing an annular support for the bearing for said distributor; and driving means for said distributor carried wholly by said ring.

---

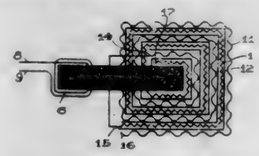
1,563,425. WIRELESS-RECEIVING SYSTEM. RALPH E. MARBURY, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,601. 23 Claims. (Cl. 250—8.)



2. The method of detecting wireless impulses in a receiving system wherein a receiving device is dynamically coupled with a source of currents of audible frequency through a parallel resonant circuit which comprises largely destroying the condition of parallel resonance for the frequency of said source upon the receipt of an incoming signal.

---

1,563,426. CONDENSER FOR POWER-FACTOR CORRECTION. RALPH E. MARBURY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 7, 1921. Serial No. 506,171. 3 Claims. (Cl. 175—356.)

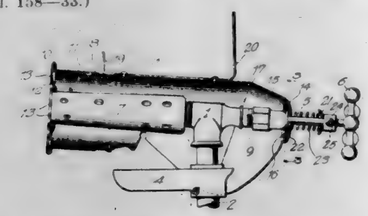


3. In a power-factor-correction device, an iron core and a winding thereon, said winding comprising a plurality of pairs of superposed layers of conducting sheet material having dielectric material disposed therebetween, the outer end of one conducting layer of one pair being connected to the inner end of one conducting layer of another pair, and so on, until a series is produced including one conducting layer from each of the pairs,

the other conducting layers of the pairs being similarly connected in a second series, and the outer end of one series being connected to the inner end of the other series.

---

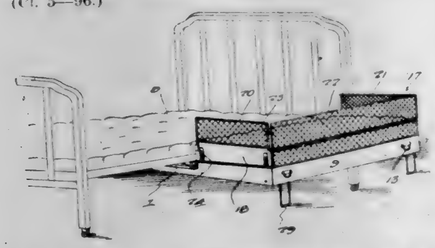
1,563,427. HOOD OR PROTECTOR FOR GASOLINE TORCHES, ETC. BRUNO MARTIN, Saginaw, Mich. Filed June 5, 1925. Serial No. 35,112. 8 Claims. (Cl. 158—33.)



5. A protecting hood for gasoline torches, etc., comprising a substantially cylindrical body portion with protecting wings at one end and depending flanges at said end, having an opening for the reception of the valve stem of a burner, an adjustable cap for said end of the hood, resilient means acting upon said cap, and adjustable means on the stem acting in conjunction with said resilient means.

---

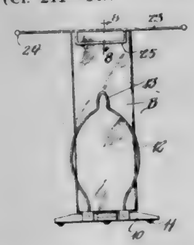
1,563,428. CHILD'S BED. ETHEL MELTON, Atlanta, Ga. Filed Nov. 12, 1924. Serial No. 749,457. 2 Claims. (Cl. 5—96.)



1. In combination, a supporting structure, two pairs of links, one pair pivoted at each end of the supporting structure, each link provided with a longitudinally extending slot having a plurality of notches on one side thereof, and a bed having pins projecting from its ends for engagement in the slots of the links.

---

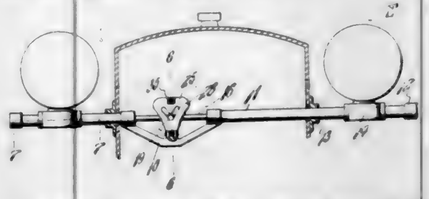
1,563,429. DISPLAY RACK. THOMAS J. MILES, Louisville, Ky. Filed Aug. 22, 1924. Serial No. 733,570. 3 Claims. (Cl. 211—14.)



3. A display stand including a base, a pair of spring wire loops each having its ends inserted in said base, said ends each having a laterally extending portion parallel with the top of the base and a vertical portion extending into the base, and cover plates bearing on the lateral portions and secured to the base, said base being provided with recesses receiving the laterally extending portions and the loop ends being arranged in pairs, said cover plates each having a pair of openings to receive corresponding ends of respective wire loops whereby each cover plate secures a pair of loop ends in position.

---

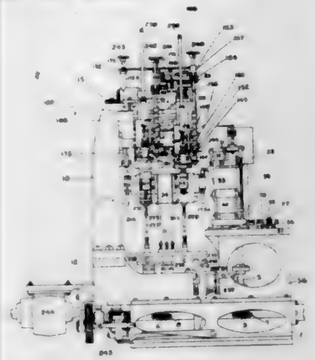
1,563,430. HEADLAMP-CONTROL DEVICE. CALVIN C. MOORE, Steubenville, Ohio. Filed Mar. 29, 1924. Serial No. 702,941. 1 Claim. (Cl. 240—61.)



In a dirigible headlamp device, a bracket carrying tubular housings, headlamps journaled transversely through the housings, a longitudinally movable member slidable through the housings and operatively connected with the headlamps for effecting turning movement thereof from side to side, and an operating rod extending longitudinally with respect to the axis of the vehicle and having a flexible connection with the bracket and a fixed connection with said means for operating the latter, said longitudinally extending member being movable forwardly and rearwardly for tilting the bracket, and means on said longitudinally extending member cooperating with the bracket for maintaining the latter in adjusted position, said named means including an arcuate rack bar carried by the bracket, and a spring pressed latch mounted on the longitudinally extending member cooperating with the rack bar.

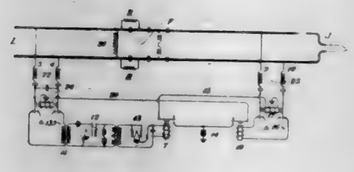
---

1,563,431. MACHINE FOR MANUFACTURING AND MOUNTING PINIONS AND WHEELS. ANDREW H. NEUKEUTHER, Peru, Ill., assignor, by mesne assignments, to Western Clock Company, a Corporation of Illinois. Filed Dec. 17, 1923. Serial No. 681,312. 35 Claims. (Cl. 29—38.)



1. In a machine for forming and mounting pinions and wheels, a slidably mounted assembling means, a rotatably mounted turret adjacent to said assembling means, a pinion and pivot holding means, a washer holding means, and a wheel holding means, each mounted on said turret, means for successively and intermittently moving and stopping said turret to bring said holding means in line with said assembling means, and means for uniting said parts brought together by said holding means.

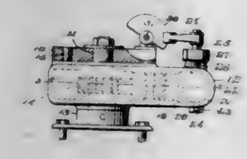
1,563,432. COMPOSITE RINGER FOR TRANSMISSION SYSTEMS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 10, 1921. Serial No. 499,782. 7 Claims. (Cl. 179—2.)



1. A transmission line arranged for the transmission of telephone and signal currents, a composite ringer circuit associated with the line including a relatively high and a relatively low frequency signaling circuit, a filter in said line permitting the passage of telephone currents only, and an impedance element associated therewith, rendering the telephone circuit anti-resonant for one of said signaling frequencies.

---

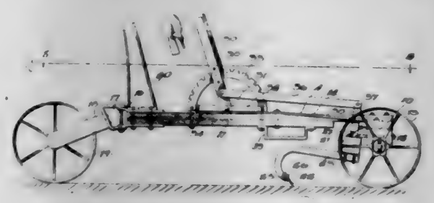
1,563,433. RUDDER BAR FOR AIRCRAFT. CHARLES L. PAULUS and ROBERT KAUCH, Dayton, Ohio. Filed May 8, 1924. Serial No. 711,882. 13 Claims. (Cl. 244—29.)



1. In combination, a control, a fluid system, a member in said system movable in the movement of said control, and means for controlling the flow of the fluid in said system to lock said member and, with it, said control in adjusted position.

---

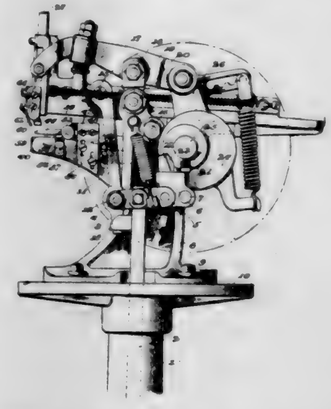
1,563,434. WEEDER. JOHN PRATER, Stanfield, Oreg. Filed Aug. 13, 1923. Serial No. 657,119. 1 Claim. (Cl. 97—144.1.)



A weeder of the character described comprising a frame including a longitudinally extending beam consisting of a pair of spaced bars, a transverse beam connected to the forward terminals of said bars, ground wheels associated with the terminals of the transverse beam, a caster wheel carried by the rear end of the longitudinally extending beam, a transversely extending implement carrying beam disposed in spaced parallel relation to the transverse frame beam, means pivotally connecting the implement carrying beam to the transverse beam, arcuate arms rigidly connected with the implement carrying beam extending downwardly and rearwardly therefrom, a transversely extending weeder blade secured to the lower ends of the arms and arranged substantially the full width of the frame, a pivoted lever secured to the longitudinally extending beam, an upwardly extending arm rigidly connected with the implement beam, a link connecting the lever to said arm, and a ratchet and pawl mechanism for holding the lever in any preferred adjusted position, the lever being arranged between the bars of the longitudinally extending beam.

---

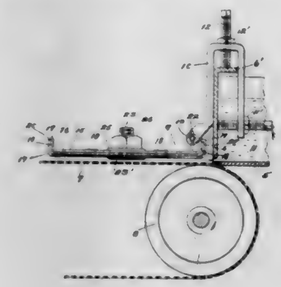
1,563,435. STAPLING MACHINE. ADAM HENRY PRENZEL, Halifax, Pa. Filed Aug. 21, 1922. Serial No. 583,322. 18 Claims. (Cl. 12—2.)



6. A stapling machine comprising means for supporting the peripheral portions of a shoe upper structure, means to support the peripheral portions of a sole in spaced relation to said upper structure portions, and means including a staple guide to press the upper structure toward the sole to form folds around said upper structure supporting means.

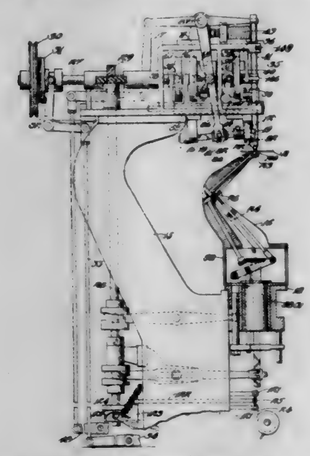
---

1,563,436. RIPPLE AND BUBBLE ELIMINATOR. RUSSELL M. PUTNAM, Oconto Falls, Wis. Filed July 11, 1925. Serial No. 43,046. 8 Claims. (Cl. 92—44.)



1. The combination with a paper making machine including a pulp vat and an endless belt, of a ripple and bubble eliminator therefor, comprising bracket means for connection with the pulp vat, and a floating member pivotally connected to the bracket means and positioned above the endless belt and engaging the pulp carried thereby.

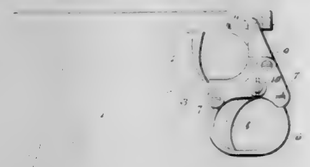
1,563,437. SHOE-SEWING MACHINE. JAMES H. REED, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 25, 1921. Serial No. 517,584. 4 Claims. (Cl. 112—36.)



1. In a shoe sewing machine, the combination with a flattened needle, of means for reciprocating said needle and for imparting rotary movement thereto to cause the same to penetrate the work in a position with its greatest cross-sectional dimension transverse to the length of the seam and to be turned into a position with said dimension parallel to said seam when withdrawn from the work, and an awl having a chisel edge disposed transverse to the seam in an angular position corresponding to the angular position of said needle during the work penetrating movement of the latter.

---

1,563,438. OPERATING TRIGGER FOR DOUBLE-GUN MOUNTS. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,405. 1 Claim. (Cl. 89—27.)

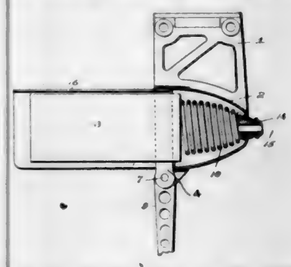


An operating trigger for a double gun mount embodying in combination with the trigger guard of one gun, an auxiliary trigger assembly including a frame attached to said trigger guard, a shaft rotatably carried by said frame, a trigger on said shaft, a lever on said shaft extending upwardly above said trigger guard, and an operating connection leading from the upper end of said lever to the control device of another gun.

---

1,563,439. FLARE BRACKET. HERBERT O. RUSSELL, Detroit, Mich., and CHARLES LEIGH PAULUS, Dayton, Ohio. Filed Apr. 18, 1922. Serial No. 555,406. 6 Claims. (Cl. 240—1.)

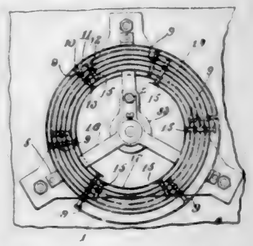
1. A flare bracket embodying a supporting member adapted for attachment to an aircraft, a housing on said support adapted to hold a flare candle, candle ejecting means in said housing, clamping means for holding the



candle against the ejecting action of said ejecting means, and a trip arm for releasing said clamping means, operable on contact with the ground.

---

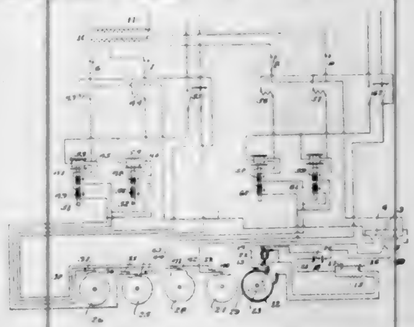
1,563,440. VARIABLE CONDENSER. ARTHUR RUSSELL, Baltimore, Md., assignor to The Russell Radio Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 3, 1925. Serial No. 6,501. 5 Claims. (Cl. 250—41.)



1. A variable condenser having a rotor and a stator each comprising a plate wound in a spiral about the mutual common axis, the two plates being adapted to intermesh with and being spaced from each other, and means to change the relative spacing between the plates by relative rotation of said rotor and said stator about the common axis.

---

1,563,441. ELECTRIC-FURNACE CONTROL. EARL V. SCHAAL, Harrisburg, Pa. Filed Sept. 12, 1923. Serial No. 662,242. 2 Claims. (Cl. 204—64.)

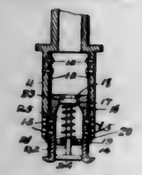


1. The combination in an automatic furnace control, of a galvanometer having a deflecting member, a furnace heating element, a mechanism controlled by the temperature of the furnace for controlling the galvanometer, a rotatable member, a device controlled by the galvanometer for automatically operating the rotatable member, a

series of relays and contacts operated by said rotatable member for automatically regulating the temperature of the furnace by supplying various voltages to said heating element, and a series of contacts automatically operated by said rotatable member for connecting and disconnecting a source of power to said relays to disconnect and connect the heating element as a whole.

---

1,563,442. SHAFT THRUST LOCK. LAURENCE J. SCHEBEN, Dayton, Ohio. Filed Nov. 2, 1921. Serial No. 512,335. 4 Claims. (Cl. 287—119.)



1. A latching device for a gun mount, comprising in combination, a socket member carried by the gun turret, and a latch member insertable into the socket member, the latch member comprising a pair of latches, and a longitudinally movable spring-pressed device engageable with the latches for urging the latches to latching position.

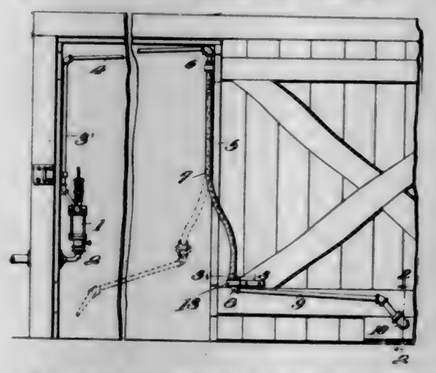
---

1,563,443. CONE HOLDER. FRED J. SCHNORR, Two Rivers, Wis. Filed Apr. 29, 1925. Serial No. 26,732. 3 Claims. (Cl. 224—45.)

1. An ice cream cone holder comprising spaced inner and outer inverted V-shaped portions having aligned openings of relatively different size adapted to receive a cone in an upright position.

---

1,563,444. SYSTEM FOR DISPENSING GASOLINE. CLARENCE SCHOCK, Mount Joy, Pa. Filed Jan. 7, 1924. Serial No. 684,894. 5 Claims. (Cl. 221—72.)

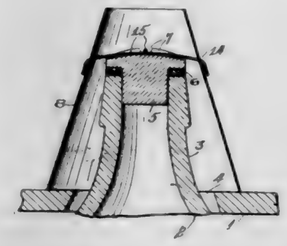


1. In a liquid supply system a pump, piping connecting the pump with a portable outlet tube, and pivoted means supporting the outlet tube in a downwardly inclined position to permit drainage and in such a manner that the outlet tube can be released for use only when said means is swung to a predetermined position, the said pivoted means being provided with an opening through which the outlet tube extends when supported thereby.

5. A system for dispensing inflammable liquid comprising a building structure, a door attached to said structure, a pump located within the structure, piping leading from the pump to an outlet nozzle, a bracket formed on the door of said structure and supporting a portion of said piping to prevent removal of the piping when the door of the structure is closed, and a waste pipe passing through the door of said structure for receiving the said outlet nozzle when not in use.

---

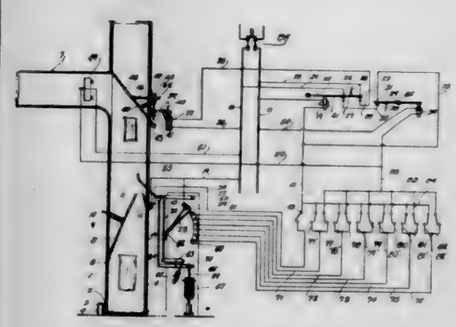
1,563,445. CARBOY-TOP GUARD. GEORGE W. SCOBELL, Rochester, N. Y. Filed July 27, 1923. Serial No. 654,279. 11 Claims. (Cl. 215—37.)



1. The combination with a carboy, of a detachable top guard of resilient sheet material in the form of a truncated cone and slit in the direction of its length to permit compression and expansion thereof, headed projections on the carboy casing, and slotted lateral projecting means on the guard for slidably engaging under the headed projections.

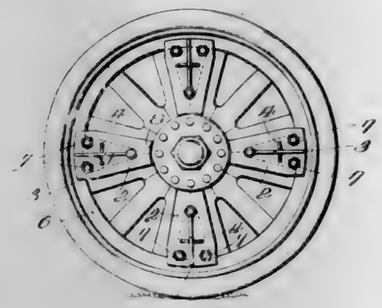
---

1,563,446. PACKAGE SORTER. RICHARD J. SHOLTZ, Kansas City, Mo., assignor of one-third to Emanuel M. Racz and one-third to Clarence M. Hardenbergh, both of Kansas City, Mo. Filed Dec. 26, 1924. Serial No. 758,313. 9 Claims. (Cl. 83—92.)



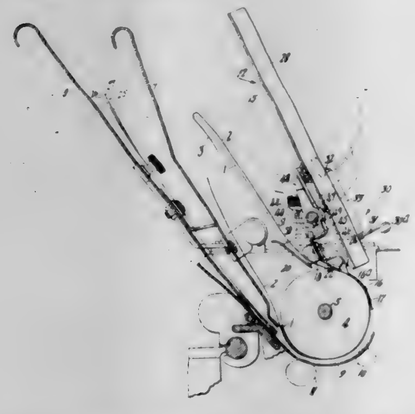
1. A device of the class described comprising an article guideway, an off-chute cooperating with the guideway, an article deflector for deflecting articles from the guideway into the off-chute and electrically operated means actuatable in response to impact and friction of the articles for rendering the deflector operative.

1,563,447. ANTISLIPPING DEVICE FOR MOTOR VEHICLES. HUGH ERNEST SIMONTON, Memphis, Tenn. Filed Oct. 2, 1924. Serial No. 741,144. 3 Claims. (Cl. 301—44.)



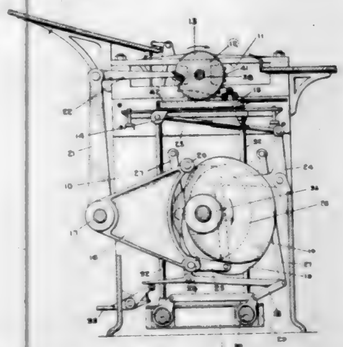
3. A device of the kind described comprising a pair of plates, said plates being adapted to be arranged upon opposite sides of the wheel of a motor vehicle, bolts extending through said spokes for connecting said plates to said wheel, one of said plates being provided with an outwardly extending blade connected to said plate by braces.

1,563,448. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1923. Serial No. 670,624. 1 Claim. (Cl. 197—128.)



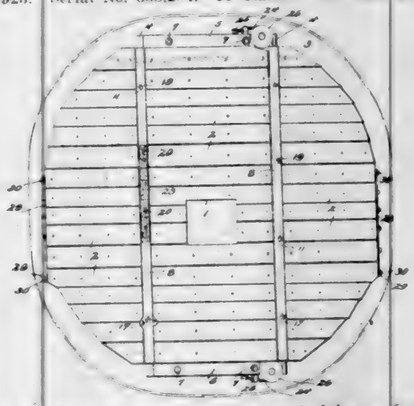
In a typewriting machine having a revoluble platen, an introductory paper-table directing to the platen a wide record-sheet, paper-feeding top rolls bearing lightly upon a narrow carbon-sheet directly overlapping the record-sheet, a collating table at the delivery side of the platen for a narrow statement-sheet placed over the carbon-sheet, and releasable main rollers running upon the platen to hold all the sheets, an auxiliary record-sheet holding element in the form of devices bearing heavily against exposed and widely separated margins of the wide record-sheet and co-operative with said top rolls for securely holding said sheet permanently against the platen, preventing displacement thereof while the main rollers are cast off and the narrow statement-sheet is being withdrawn from the platen and replaced by another.

1,563,449. PRINTING PRESS. WALTER H. SMITH, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 17, 1922. Serial No. 575,517. 1 Claim. (Cl. 101—272.)



In a printing press, a cylinder member; a bed-member; means for moving one of said members laterally with respect to the other, to effect the printing operation; means for moving one of said members transversely with respect to the other to separate said members during a portion of the cycle; a gearing connection between said members operative only when said members are in a non-separated condition, whereby said cylinder member is rotated when in such non-separated condition; and separate gearing for rotating said cylinder, said last-named gearing having a series of its teeth relieved to a progressive extent so as to be operative when said gearing connection is inoperative, but not operative coincidently with said gearing connection.

1,563,450. AIRPLANE-RADIATOR SHUTTER. LORENZO L. SNOW, Washington, D. C. Filed May 11, 1923. Serial No. 638,284. 10 Claims. (Cl. 244—31.)



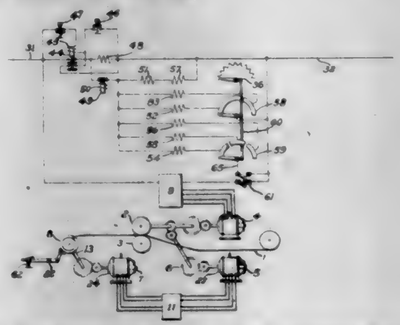
1. An airplane radiator shutter, embodying a frame having upright channeled housings formed with bearing notches, shutter slats journaled for pivotal movement in said notches, and shutter slat operating members slidable in said housings, said slats being detachable from said housings and operating members.

1,563,451. ANCHOR. CHARLES E. STITCHER, Bay City, Mich. Filed July 17, 1925. Serial No. 44,389. 1 Claim. (Cl. 114—206.)

An anchor comprising a shank, a stock extending transversely at one end thereof, an arm extending from the opposite end of the shank in the same longitudinal plane and at an acute angle with respect to said shank.

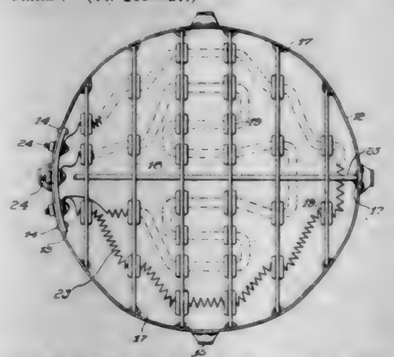
said arm also having a transversely flat inner face and a transversely rounded outer face and a gradually tapering sharp bill at the outer end of the arm.

1,563,452. MOTOR-CONTROL SYSTEM. GLENN E. STOLTZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 8, 1923. Serial No. 617,750. 9 Claims. (Cl. 242—75.)



1. The combination with a strip of unfinished material and finishing means therefor, of means for winding the material in coil form, electroresponsive means for maintaining the finished material under constant tension while winding, and electroresponsive means for stopping said winding operation and for maintaining tension during stopping.

1,563,453. ELECTRIC HEATER. ERNEST E. SUTHERLAND, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1923. Serial No. 677,559. 4 Claims. (Cl. 219—37.)

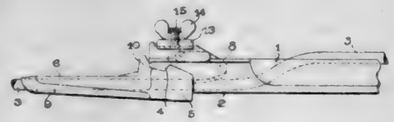


1. In an electrically heated appliance, a heating element comprising a resilient member supported at its ends only and having a plurality of open loops therein, perforated supporting members, of electric-insulating material, in said loops, and a resistor member extending through said perforated supporting members.

1,563,454. ELECTRIC RESISTOR SUPPORT. ERNEST E. SUTHERLAND, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,814. 7 Claims. (Cl. 219—37.)

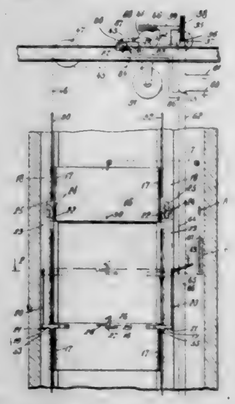
4. In an electric heating unit, the combination with a refractory electrically insulating member having a grooved portion, said grooved portion having longitudinally spaced bridging members extending laterally between the walls of said grooved portion, of a helically wound resistor member supported by the walls only of said grooved portion, and maintained in operative position by said bridging members.

1,563,455. TROLLEY-CONDUCTOR DEVICE. PAUL G. SWARS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 16, 1923. Serial No. 632,183. 9 Claims. (Cl. 191—38.)



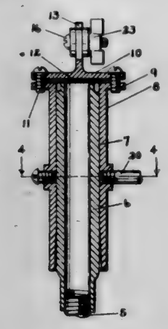
1. A trolley-conductor device comprising a conductor-receiving body member having a notched recess in its under side, and an approach member adapted to engage the notched recess.

1,563,456. POWER-OPERATED DOOR-CLOSURE MECHANISM. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to John Edward Ogden, Mountainville, N. Y. Filed Dec. 28, 1923. Serial No. 683,140. 15 Claims. (Cl. 187—52.)



10. In combination, an elevator hatchway door comprising a plurality of sections biased to open, power actuated mechanism for closing said doors, control means for setting said mechanism in operation and automatic means for discontinuing the operation of said mechanism after the doors are closed, and when said door closing mechanism has been returned to its initial position.

1,563,457. TANK OR BALL VALVE. JOHN VAN DYKE, Kalamazoo, Mich. Filed Mar. 27, 1922. Serial No. 546,949. 1 Claim. (Cl. 137—104.)

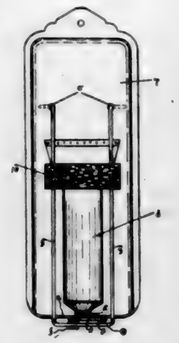


The combination of a tubular valve body member adapted for mounting on a pipe and having external longitudinal guide ribs, a tubular valve member slidable upon said body member and having an outwardly projecting flange at its upper end, a valve member cap piece removably secured to said flange, a valve disk disposed with its edge between said cap piece and flange and adapted to seat upon the top of said body member, a pivot lug disposed centrally of said cap piece, a float arm pivoted to said lug, a supporting link pivotally mounted at the lower end of said valve body member and pivotally connected to said float arm, and a re-fill tube carried by and opening into said valve member.

1,563,458. PERCOLATOR HEATER UNIT. VICTOR GRAVES VAUGHAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,568. 7 Claims. (Cl. 219—43.)

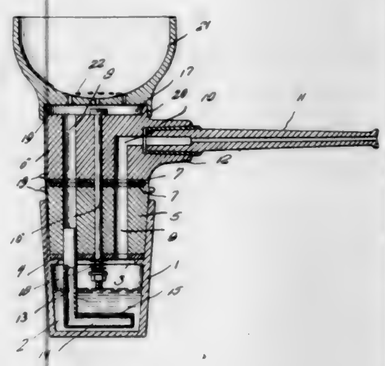
1. In a fluid heater, in combination, a fluid container, a tubular member depending therefrom and constituting a vaporizing chamber for said container and having a laterally-extending integral flange portion intermediate its ends, a flat heating element operatively engaging one surface of said flange portion, a clamping flange member below said heating element and spaced from said tubular member, and a clamping nut, mounted on said tubular member, of relatively large size and having an integral annular portion located within said clamping member, for holding said clamping flange member against said heating element and for simultaneously providing a relatively good heat path from said clamping flange member to said tubular member.

1,563,459. DISPENSING DEVICE. HOMER W. VOLLAND, Omaha, Nebr., assignor to Harold W. Graham, Omaha, Nebr. Filed Sept. 13, 1924. Serial No. 737,624. 1 Claim. (Cl. 221—60.)



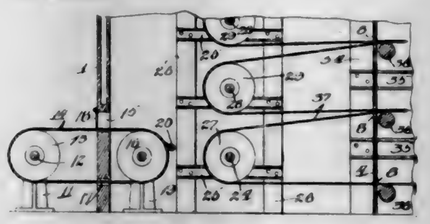
In a dispensing device for collapsing a flexible tube, a holder-plate having apertures formed therein adjacent to one of its ends, its opposite end being provided with a foot-piece for supporting the tube, a compressor of aproximately U-shape providing a pair of parallel arms and a handle at the connected ends of said arms, a contact-piece slidable on said arms, said compressor having its arms engaging in said apertures to permit swinging movements relative to said plate and having a length permitting its handle to be disposed beyond the foot-piece.

1,563,460. SMOKING PIPE. WILLIAM WALKER, Sawtelle, Calif. Filed Feb. 25, 1925. Serial No. 11,435. 1 Claim. (Cl. 131—12.)



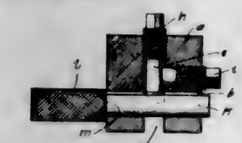
A smoking pipe comprising a cup adapted to contain a fluid through which the smoke is to pass, a bowl for reception of the tobacco, a two-part body interposed between said bowl and cup, one part being received in said cup and the other part being connected with said bowl, resilient connecting means, said parts being formed with aligned openings capable of being disaligned upon relative rotation of the parts, a locking device for maintaining the parts in rigid relation, and a stem carried by one of said parts and serving as a handle for rotating one part with respect to the other.

1,563,461. HIGH-TEMPERATURE RADIANT-DRYING SYSTEM. JOHN E. ALEXANDER, Port Edwards, Wis. Filed Nov. 26, 1923. Serial No. 676,913. 13 Claims. (Cl. 34—48.)



1. A material drying machine comprising a housing substantially closed to the entrance of air, foraminous conveyors therein for conducting a material to be dried through a circuitous path in said housing, heating units within said housing adapted to uniformly dry said material during its passage through the housing, and means connected with said heating units for automatically controlling the same to regulate the temperatures in different parts of the housing.

1,563,462. STOP GAUGE FOR SETTING ANVILS OF SAW SWAGES. EDWARD P. ARMSTRONG, Portland, Oreg. Filed Sept. 5, 1922. Serial No. 586,197. 3 Claims. (Cl. 76—54.)

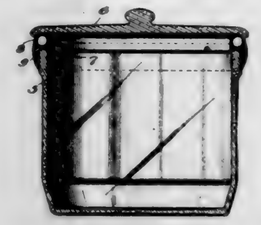


1. A stop-gauge for a saw-swage of the character described, consisting of a rod-like piece adapted to be inserted in the bore of the head for the die of the saw swage; and provided with a portion constituting a stop against which the anvil of the saw-swage may be set, thereby to limit accurately the degree the die may be rotated in the saw-swaging operation relatively to the angle the plane of the face of the throat of the saw tooth shall make with the plane of its back at its point.

1,563,463. PHOTOGRAPHIC APPARATUS FOR CHECKING THE AIMING AND FIRING OPERATIONS ON BOARD AIRCRAFT. LÉON BÉLUGOU, Paris, France. Filed Dec. 21, 1923. Serial No. 682,061. 3 Claims. (Cl. 95—31.)

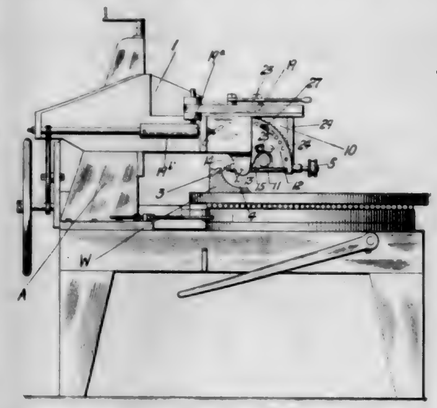
1. A photographic apparatus specially intended for the training of gunners on board aircraft, comprising a shutter, a shutter-controlling means, a cable for actuating the said means, a control for the said cable disposed at a distant point, two film bobbins whereof one is positively actuated, a device for actuating the latter bobbin, said device being controlled by the said cable, and means whereby the said cable successively effects the setting and the release of the said shutter.

1,563,464. GASKET FOR JAR COVERS. CHESTER W. BISLAND, Fremont, Nebr. Filed June 4, 1921. Serial No. 475,034. 10 Claims. (Cl. 215—37.)



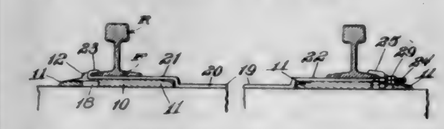
1. The combination with a receptacle, of a gasket comprising a cushion resting on the walls of the receptacle at the mouth thereof, an elastic tube supported on the cushion, and an elastic skirt depending from the cushion and frictionally engaging the outer walls of the receptacle adjacent the mouth thereof.

1,563,465. ATTACHMENT FOR MOLD-ENGRAVING MACHINES. ARTHUR L. BREITENSTEIN, Akron, Ohio. Filed Mar. 19, 1923. Serial No. 626,175. 16 Claims. (Cl. 90—15.)



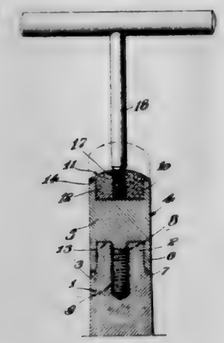
1. In a mold engraving machine, a tool carrying plate, a pivotal support for said plate and a rectilinear guide for said plate, an actuating lever, and means whereby said lever may be employed to move the plate about the pivot or on said guide selectively.

1,563,466. GAUGE PLATE FOR RAILS. ORRIN JOSEPH BUJOL, Estherwood, La. Filed July 30, 1925. Serial No. 47,096. 4 Claims. (Cl. 238—288.)



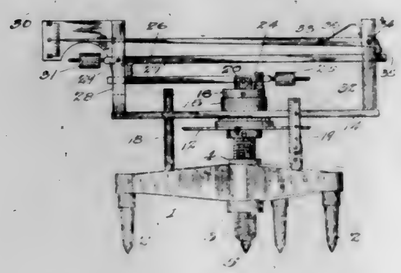
1. A gauge plate for rails having a seat for the flange of the rail, said plate having openings formed therethrough for the passage of spikes at opposite sides of the rail, said plate having in its upper surface a longitudinally extending channel transversely dividing the rail seat.

1,563,467. BILLIARD CUE. GEORGE K. CANIAS, Philadelphia, Pa. Filed Oct. 16, 1924. Serial No. 743,893. 3 Claims. (Cl. 273—70.)



1. The combination with a cue, having a cup on its upper end, of a tip fitting within the cup and having a hole in its bottom whereby, when the tip is worn to the hole, a tool may be secured therein and the tip removed.

1,563,468. SPHEROMETER. NAPOLÉON CARREAU, Jr., Wichita, Kans. Filed Mar. 17, 1924. Serial No. 699,760. 1 Claim. (Cl. 33—172.)



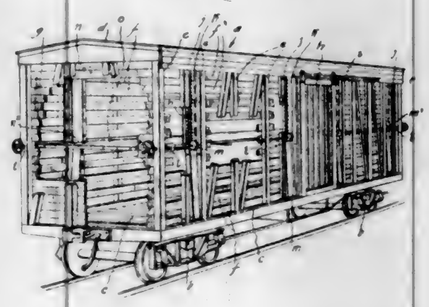
A measuring instrument comprising a plurality of fixed contact members, an adjustable threaded contact member about which the fixed contact members are radially disposed carrying a floating needle having a contact point, and mechanism for magnifying and registering the point of contact.

1,563,469. DISPLAY RACK. EDWIN S. CHAMBERLIN, Dayton, Ohio. Filed Aug. 29, 1924. Serial No. 735,002. 1 Claim. (Cl. 211—14.)

The herein described rack consisting of upright members, horizontal members extending from one upright member to the other, other upright members bent near the central parts thereof so that the upper parts of said members extend in a plane laterally to the lower parts thereof, the upper parts of said upright members cooperating with the first mentioned upright members to form a depressed space and constituting a frame adapted to receive display cards, whereby the outer display card may be maintained substantially flush with the forward edges of the first mentioned upright member, legs secured to the lower ends of the first mentioned upright members, one pair of such legs extending forward of the point of connection, a table supported by said legs and having a detachable connection with the upright members, whereby the table may be folded to occupy the space

between the lower portions of the first mentioned upright members, the upper ends of one set of legs being foldable against the sides of the first mentioned upright members.

1,563,470. CONVERTIBLE STOCK CAR. RAY C. CHISAM, The Dalles, Oreg. Filed May 31, 1924. Serial No. 716,983. 6 Claims. (Cl. 105—370.)



1. In a stock car and the like, a movable floor composed of sections located at the opposite ends of the car, the movable floor being composed of floor boards, having transverse joist members fastened to and projecting below their under side, the main floor of the car being provided with recesses in which said joist members are received so that the movable floor can rest throughout directly on the main floor of the car, and means for lifting the movable floor sections independently, such means operable from the exterior at each end of the car.

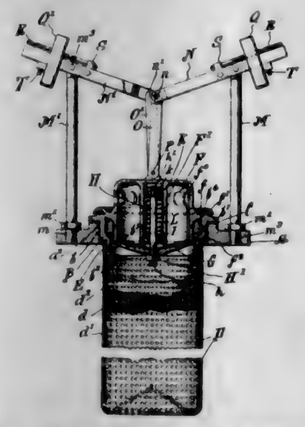
1,563,471. DIAGNOSTIC INSTRUMENT. HANS CLEMENT, New York, N. Y., assignor to General Optical Company, Inc., a Corporation of New York. Filed Apr. 26, 1924. Serial No. 709,285. 3 Claims. (Cl. 88—20.)

1. A diagnostic instrument comprising a handle having battery contacts, a tube carried by the handle, an objective lens in the outer end of the tube, a lamp within

the tube having electrical contact with the battery contacts, a condensing lens having screw threaded connection with the lamp mount and adjustable thereon to

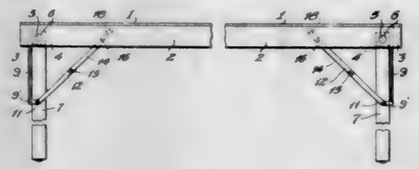
vary its distance from the lamp filament, and means to adjust the distance of the objective lens from the lamp and condensing lens.

1,563,472. SAFETY VENTING ATTACHMENT FOR LARGE RECEPTACLES CONTAINING VOLATILE EXPLOSIVES. JACOB COHN, New York, N. Y., assignor, by mesne assignments, to Non-Explosive Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Oct. 13, 1922. Serial No. 594,406. 5 Claims. (Cl. 220—86.)



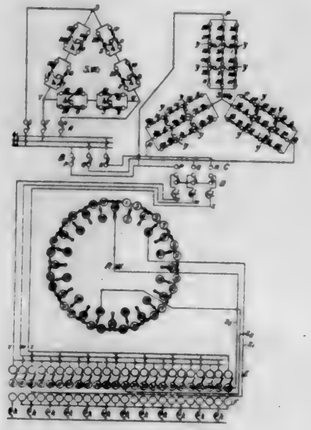
1. A safety attachment for receptacles containing volatile inflammable liquids comprising a hollow cylinder provided with a wire gauze screen adapted to project down into the upper portion of said receptacle, a hollow relief valve provided with an air passage therethrough, normally closing the top of said cylinder, weight means for adjustably counterbalancing said relief valve, said weight means being exterior of the receptacle and valve, an air valve carried by said relief valve and adapted to normally close said air passage, but to open same when the pressure in said receptacle falls below a predetermined limit, with means for causing said air valve to open at a predetermined fall of pressure in said receptacle.

1,563,473. FOLDING TABLE. THAD H. COLLADAY, Decatur, Ill., assignor to Colladay Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed July 14, 1923. Serial No. 651,681. 4 Claims. (Cl. 45—11.)



1. In a folding table, in combination: a table top, a pair of transverse leg supporting members journaled adjacent the ends of said top, a pair of table legs rigidly mounted on each of said supporting members and adapted when extended to support said table top; a collapsible brace member extending between one of each pair of table legs and said top and comprising a pair of arms pivoted together, one end of each of said arms being respectively pivoted to said table leg and said top, one of said arms being provided with a sidewise extending lug, and the other of said arms terminating in a resilient extension having a lateral aperture to receive said lug, whereby said apertured extension may be sprung into interlocking engagement with said lug to maintain said brace member in extended position and said legs in table-supporting position.

1,563,474. CASCADE MACHINE. FREDERICK CREEDY, Ilkley, England. Filed July 30, 1921. Serial No. 488,686. 24 Claims. (Cl. 172—274.)

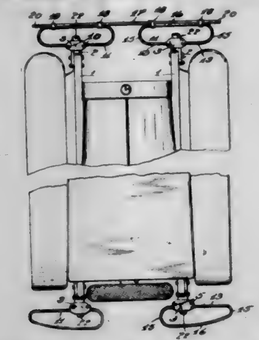


1. An internal cascade machine comprising a stator and a rotor, polyphase windings on said members which produce fields of different numbers of pole pairs the sum or difference of which, divided by their G. C. M. is greater than three, the winding on one member producing a number of equally spaced maxima of ampere conductors equal to the algebraic difference of the numbers of pole pairs in the two fields (taking account of the relative directions of rotation of the two fields).

1,563,475. AUTOMOBILE BUMPER. JAMES B. DRENNAN, Portland, Oreg. Filed Feb. 4, 1925. Serial No. 6,726. 6 Claims. (Cl. 293—55.)

1. In an automobile bumper, a supporting block rigidly connected to the frame of a car having a notch at each

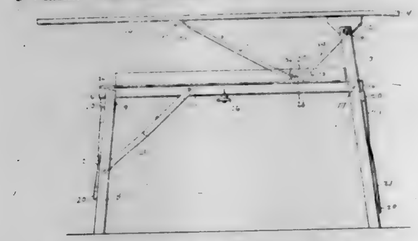
of its lateral ends and a vertically disposed bolt, and a bow-spring having an eye at each end pivotally secured



to said bolts, respectively, and extending at its middle portion across and in front of said block.

---

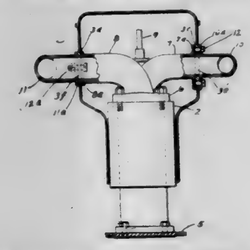
1,563,476. IRONING BOARD. JOHN N. FARIS, Portland, Oreg. Filed Mar. 7, 1923. Serial No. 623,390. 1 Claim. (Cl. 68—10.)



In an ironing table, the combination of a board having an ironing surface and having two legs hinged to and supporting one end thereof with a horizontal frame under said board having two short legs hinged to one end and having its other end hinged to said board supporting legs; brace means for supporting the other end of said ironing board over said frame; and a pair of independent sliding trays on said frame adapted to be pulled outwardly beyond the edges of said board, said trays consisting of overlapping slats having cleats fastened across the inner and outer ends thereof and having a holding cleat between said inner cleats secured to said frame.

---

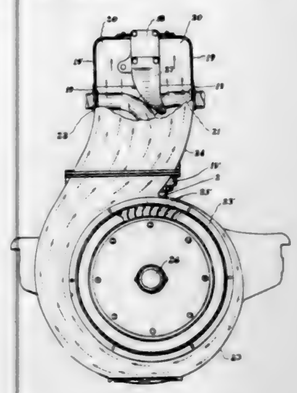
1,563,477. INTERNAL-COMBUSTION ENGINE. ANSLEY H. FOX, Philadelphia, Pa., assignor, by mesne assignments, to Fox Holding Company, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 5, 1921. Serial No. 519,962. 4 Claims. (Cl. 123—171.)



1. In an internal combustion engine, the combination with a plurality of cylinders having ducts connected with the heads thereof, and manifolds connected with the ducts, of an air duct encasing said cylinder heads and ducts first mentioned, said air duct having its sides fixed between and supported by said ducts and manifolds.

---

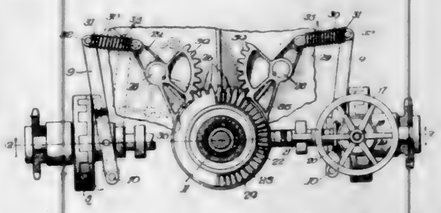
1,563,478. MEANS FOR AIR-COOLING ENGINES. ANSLEY H. FOX, Philadelphia, Pa., assignor to Fox Holding Company, Philadelphia, Pa., a Corporation of Delaware. Filed July 1, 1922. Serial No. 572,319. 8 Claims. (Cl. 123—171.)



1. The combination with an internal combustion engine having one or more cylinders, of an air cooling system comprising a conduit leading to said engine, means in the course through said conduit to said engine for dividing and maintaining a division of the air flowing therethrough and deflecting the divided streams over the top and then downward over opposite sides of said cylinder or cylinders, and means for passing said streams at high velocity over said cylinder or cylinders in contact therewith.

---

1,563,479. TRACTOR DRIVING AND STEERING MECHANISM. JAMES C. FRENCH, Chicago, Ill., assignor, by mesne assignments, to F. C. Austin Machinery Company, a Corporation of Illinois. Filed Nov. 19, 1918. Serial No. 263,210. 6 Claims. (Cl. 180—9.2.)



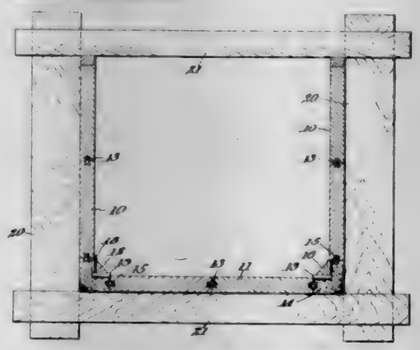
1. In a tractor of the class in which the direction of travel is governed by controlling the transmission of power to the traction devices at opposite sides of the vehicle, the combination of a turn-table, mechanism to communicate power to the traction devices, power transmission means to connect said mechanism with a source of power on the turn-table, and instrumentalities including steering gear connections to control said mechanism from a position on the turn-table, said instrumentalities including a pair of vertically disposed rock shafts connected to said mechanism, and the steering gear comprising a gear ring mounted to oscillate about the axis of said turn-table, means to connect said gear ring with said rock shafts, and means including bevel gearing whereby the driver operates said gear ring to steer the vehicle.

1,563,480. CHAPLET. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 26, 1924. Serial No. 688,679. 3 Claims. (Cl. 22—184.)

1. A core supporting chaplet having a stem with a portion laterally offset from the remainder of the stem by a partial shear.

---

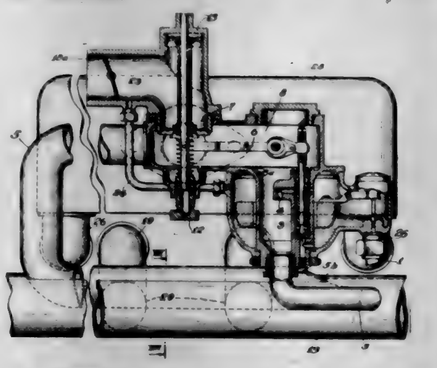
1,563,481. CORNER CONSTRUCTION FOR FLUMES, TROUGHS, LAUNDERS, AND THE LIKE. HUGH WILSON GILCHRIST and JOHN JAMES REID, Anaconda, Mont. Filed Sept. 12, 1924. Serial No. 737,434. 13 Claims. (Cl. 61—14.)



1. A corner construction for polygonal section flumes or the like comprising relatively heavy timbers held end to end and constituting angle-pieces, and liquid-tight joints between the adjacent ends of the timbers.

---

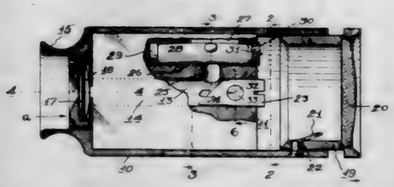
1,563,482. CARBURETOR. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 2, 1916, Serial No. 134,784. Renewed Sept. 28, 1923. 16 Claims. (Cl. 123—122.)



1. A carbureting system for combustion engines, comprising means providing an air entrance space, exhaust gas-heated and unheated passages leading the air therefrom and together conducting the total air supply to the engine, a single engine throttle intercepting and controlling said total air supply, a constant level fuel receptacle having a discharge orifice operated by the engine suction thereon and delivering the fuel in substantially direct proportion to variation of the air flow occurring in said entrance space, and means associated with the unheated passage for promoting flow of the air through the heated passage, said heated passage being arranged for receiving and vaporizing liquid fuel in the presence of such air flow.

---

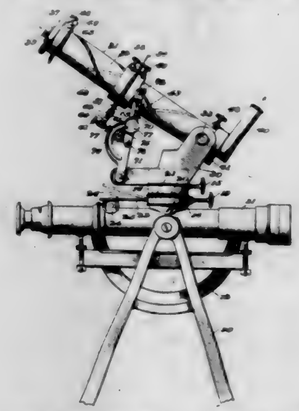
1,563,483. TELESCOPIC HAND LEVEL. ALBERT A. GROSSMANN, St. Paul, Minn. Filed Apr. 18, 1922. Serial No. 554,866. 5 Claims. (Cl. 88—2.2)



1. In an instrument of the class described, a barrel having a longitudinal wall therein dividing the same into two compartments, an eye-piece at one end of the barrel including a converging lens segment registering with one compartment, and a diverging lens segment registering with the other compartment, an adjustable object glass at the other end of the barrel, said diverging lens segment co-operating with said object glass to magnify distant objects through its respective compartment, a bubble tube carried by the barrel, a bubble reflector in the compartment registering with said converging lens segment, said reflector partially closing said compartment at the end opposite its respective lens segment, a leveling pointer traversing the space between said reflector and said longitudinal wall, the focal length of said converging lens segment being substantially equal to the distance of said pointer from said lens, also substantially equal to the distance of the bubble tube from the reflector plus the distance of the reflector from said lens.

---

1,563,484. SOLAR ATTACHMENT FOR TRANSITS. JOHN MALCOLM GUNN, Laguna, N. Mex. Filed May 5, 1923. Serial No. 636,881. 13 Claims. (Cl. 33—61.)



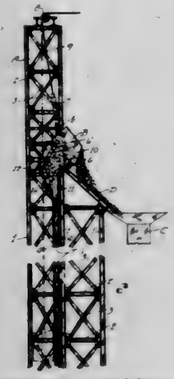
1. In a solar attachment for transits, a frame, a solar tube assembly swingably supported on said frame, said solar tube assembly including a tube containing an optical system adapted to construct and present to view

an image of the sun and brace rods connecting the solar tube assembly and the frame, said brace rods comprising links pivotally connected to each other.

1,563,485. DISPLAY DEVICE. LANDY R. HALES, New York, N. Y. Filed Sept. 29, 1924. Serial No. 740,576. 5 Claims. (Cl. 35—12.)

1. A rigid display device comprising a plurality of superimposed layers of substantially plane rigid material, lowermost layer comprising the full design and having a portion at least of one of its faces of greatest area exposed to view, and each succeeding layer also having a portion at least of one of its faces of greatest area exposed to view, the several layers each forming a constituent part of a relief design.

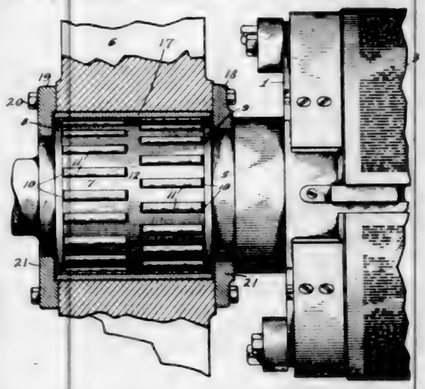
1,563,486. DUMPING HOIST. NORMAN L. HELY, Cape Girardeau, Mo. Filed Sept. 29, 1924. Serial No. 740,531. 17 Claims. (Cl. 214—120.)



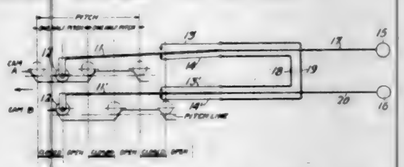
1. A dumping-apparatus comprising, in combination, a car, means for effecting travel of the car, and car trackways including shiftable members actuable by the traveling car for effecting a tilting thereof.

1,563,487. BEARING FOR ROTARY PRINTING COUPLES. FREDERICK HERB, Brooklyn, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 19, 1923. Serial No. 663,685. 2 Claims. (Cl. 101—216.)

1. In a printing machine, the combination of a form cylinder and a blanketed impression cylinder running in impression contact, journals therefor, and bearings for the journals, the bearings for one of the cylinders including a plurality of rollers shorter than the bearing and proportioned and arranged so that on a given center line no roll is positioned at each side of the bearing so that a cylinder shaft may be adjusted out of axial alignment without binding in the bearing to compensate for varying pressures between the form and impression cylinders.

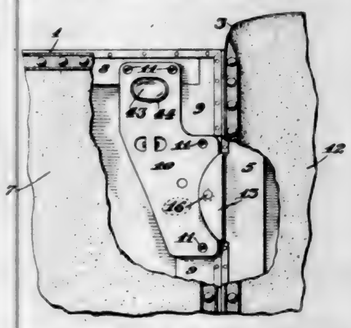


1,563,488. CIRCUIT INTERRUPTER. JOSEPH F. D. HOGE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 17, 1921. Serial No. 515,821. 13 Claims. (Cl. 175—373.)



1. In a circuit interrupter, a plurality of sets of contacts, circuit connections between certain of said contacts, and means for operating said sets sequentially, a contact of one set being in series with a contact of another set, and a second contact of said first set being in series with a second contact of said second set.

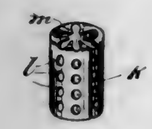
1,563,489. DOORLOCK. OSCAR W. HOOPPAW and CHARLES A. RINEHART, St. Louis, Mo., assignors to Hooppaw Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 3, 1922. Serial No. 526,488. 8 Claims. (Cl. 292—220.)



1. In combination with a door-frame pillar and a door arranged to swing in respect to said pillar, of a keeper on said pillar, including a cylindrical stud having

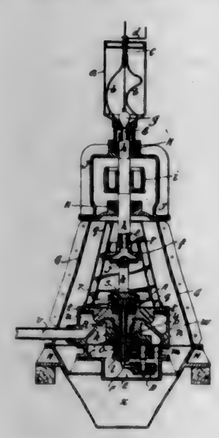
a tapered end portion, and a lock-body proper on said door, including a plate having a circular aperture to receive said stud with dowel-like effect, and a latch member on said lock-body plate, said keeper stud and said latch member being relatively arranged and adapted for releasable interlocking engagement.

1,563,490. SPRINKLER INSTALLATION. SPENCER HORTON, Birmingham, England. Filed Oct. 3, 1924. Serial No. 741,306. 2 Claims. (Cl. 210—170.)



1. In a sprinkler head or jet for use in automatic sprinkler installations, a strainer comprising a rectangular metal sheet perforated and provided with tongues along one edge, the sheet being bent into cylindrical form and the tongues bent inwardly to close partially one end of the cylinder so formed.

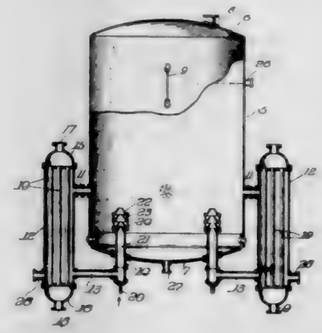
1,563,491. CENTRIFUGAL SEPARATOR. HENRY PATRICK HOYLE, Durham, England. Filed July 12, 1923. Serial No. 651,086. 14 Claims. (Cl. 233—7.)



1. A centrifugal separator comprising a centrifugal distributor, a feed for the centrifugal distributor central to the separator, a vertical rotating vessel mounted outside the centrifugal distributor, the mouth of the centrifugal distributor being located in the upper part of the rotating vessel, means for discharging the heavier portion of the charge from the top of the vessel and means for rotating the distributor and the vessel at different speeds.

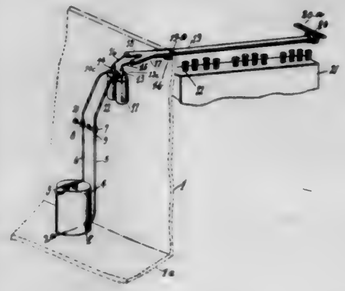
1,563,492. CONDENSER. EDWARD W. ISOM, Winnetka, Ill., and JOHN E. BELL, Brooklyn, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed May 19, 1921. Serial No. 470,790. 8 Claims. (Cl. 261—77.)

1. In an apparatus for condensing vapors, a closed tank adapted to contain the condensate thereof, a cooler, a pair of connections between the cooler and the tank to provide a closed circulation from the tank through



the cooler and back to the tank, means for injecting the vapors below the normal liquid level in said tank, and means for withdrawing condensate from the tank.

1,563,493. VALVE LUBRICATOR. SPEAR N. JANNES, Rock Island, Ill. Filed Aug. 18, 1923. Serial No. 658,108. 2 Claims. (Cl. 184—6.)

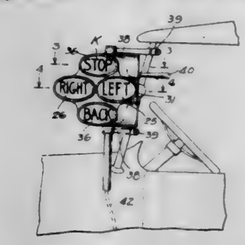


1. In a motor vehicle having an internal combustion engine therein provided with outwardly projecting valves, and a dashboard associated with said engine; a lubricator comprising an air pump, a plurality of containers on said dash board, a conduit having a valve therein connecting each container with said pump, an apertured distributor projecting through said dash board and extending in proximity to said engine valves, and branched means connecting said distributor and said containers, said system permitting the discharge through said distributor apertures against said engine valves of fluid from said containers selectively.

1,563,494. DIRECTION SIGNAL FOR MOTOR VEHICLES. ELIAS A. JENSEN, Santa Barbara, Calif. Filed Dec. 10, 1924. Serial No. 755,011. 1 Claim. (Cl. 177—329.)

A direction signal for motor vehicles comprising a triangular casing provided on each face with a plurality of openings having transparent legend bearing panels, the casing having partitions dividing the intermediate portion into a plurality of compartments, certain of the

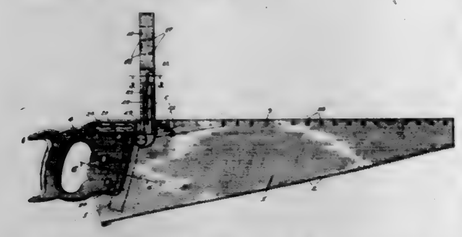
panels being common to certain of the compartments and other partitions above and below the compartments providing a compartment above the first compartment and



a compartment below the first compartment and the casing being positioned with respect to the vehicle to render the legends visible at any angle.

---

1,563,495. CARPENTER'S TOOL. LESTER N. JONES, Livingston, Calif. Filed Mar. 3, 1925. Serial No. 12,876. 8 Claims. (Cl. 7—13.)



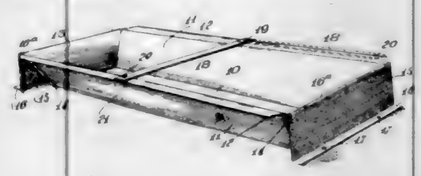
3. A carpenter's tool comprising the combination with a handsaw having a straight edge along the back thereof, of an arm mounted upon the saw and movable to a position at right angles to the back to form a square, and an extension slidably mounted upon said arm for extending the length thereof when the same is in use as a square.

---

1,563,496. COMBINED MOP AND WRINGER. DUNCAN KEIR, Atlantic City, N. J. Filed June 14, 1924. Serial No. 720,096. 1 Claim. (Cl. 15—119.)

In a combined mop and wringer, a handle, a yoke pivotally mounted thereon, eccentrically pivoted bearing arms secured to the yoke and having longitudinally disposed slots therein, a roller mounted between the outer ends of said arms, a mop carried by and adapted to be wound upon the roller, means whereby the roller may be rotated, a pressure arm rigid with the handle and adapted to engage the mop when the latter is in use, bearing arms carried by the pressure arm, a shaft extending through the slots of the eccentrically pivoted arms and carried by the bearing arms, whereby the shaft will form a guide for the eccentrically pivoted arms and a squeezing roller mounted upon said shaft for engagement by the mop carrying roller when the yoke is moved pivotally.

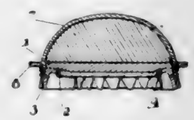
1,563,497. FEED TROUGH. LOUIS KLOW, Chicago, Ill. Filed Mar. 1, 1924. Serial No. 696,254. 5 Claims. (Cl. 119—61.)



5. A sheet-metal trough comprising in combination a bottom, two side walls inclining upwardly and outwardly from the bottom, two end walls also upwardly and outwardly inclined from the bottom, the end walls being formed separately from the side walls and having their end margins connected with the end margins of the side walls by interlocking folds and a supporting member extending downwardly from the upper part of each end wall and spaced from such end wall

---

1,563,498. BOOT AND SHOE. PHILIP G. KNOLL, Port Colborne, Ontario, Canada. Filed Sept. 19, 1922. Serial No. 589,203. 1 Claim. (Cl. 12—145.)



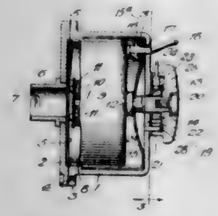
In a process of manufacturing shoes, the steps which consists in forming an insole with the usual channel and with a lip extending round and close to its under edge and projecting well below the under surface of the insole; positioning the insole on a last; drawing an upper over the last with its edge against the lip and at the same time stapling the upper and lip together well below the under surface of the insole thus avoiding the use of temporary fastenings; sewing a Goodyear welt in place by stitching through the channel lip and edges of the upper above the staples; and then trimming off the upper and lip between the line of staples and the line of stitching close to the under suerface of the insole.

---

1,563,499. PROCESS OF PRODUCING TRUE GRADATION PRINTS FOR MAKING HALFTONE PRINTING PLATES. HUGO C. KNUDSEN, Brooklyn, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1919. Serial No. 320,140. 6 Claims. (Cl. 95—5.6)

1. That improvement in the art of photography comprised in causing a beam of light to pass successively through a condenser, a lens, the openings in a halftone screen, and a design plate against a light sensitive surface in close contact with said design plate, whereby the design is photographically imprinted upon the light sensitive surface in true gradation corresponding with said design as modified by said screen.

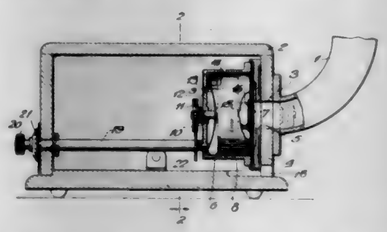
1,563,500. LOUD-SPEAKING RECEIVER UNIT. HENRY KOCH, Jamaica, N. Y., assignor to Dictograph Products Corporation, a Corporation of Virginia. Filed Sept. 8, 1923. Serial No. 661,596. 10 Claims. (Cl. 179—115.)



1. A telephone receiver comprising a frame, a diaphragm mounted in said frame, an electromagnetic unit slidingly mounted in said frame for movement toward and from the diaphragm and adapted to actuate said diaphragm, a stud carried by the unit and passing through an aperture in the frame, a spring acting between the unit and frame for yieldingly pressing the unit in one direction toward or from the diaphragm, a nut on said stud acting against the frame to draw the unit in a direction against the action of the spring, whereby adjustment of the nut serves to adjust the unit toward or from the diaphragm and thereby vary its influence thereon, and an operating button rotatably mounted on said stud adjoining said nut, said nut and button having cooperating coupling means whereby they may in relatively different angular positions, be coupled together for rotation as an entity, said button and frame having cooperating indicating means for indicating the extent of relative rotary movement between them.

---

1,563,501. TELEPHONE RECEIVER. HENRY KOCH, Jamaica, and FRIEDRICH H. N. WOHLERS, Hempstead, N. Y., assignors to Dictograph Products Corporation, a Corporation of Virginia. Filed Jan. 8, 1924. Serial No. 684,952. 6 Claims. (Cl. 179—115.)

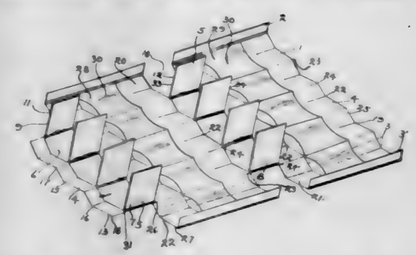


6. In a telephone receiver, a diaphragm, an electromagnetic actuating device for said diaphragm movable relative thereto for varying its influence thereon, means including a gear for producing such relative movement, a pinion meshing with and driving said gear, means by which the pinion may be rotated, and means whereby the operative connection between said last named means and the gear through the pinion may be broken to permit an initial setting to be given to the diaphragm and its actuating device.

---

1,563,502. METHOD OF MANUFACTURING AUTOMOBILE RADIATORS. WILLIAM KORB, Cheviot, Ohio. Filed May 30, 1924. Serial No. 716,840. 5 Claims. (Cl. 113—116.)

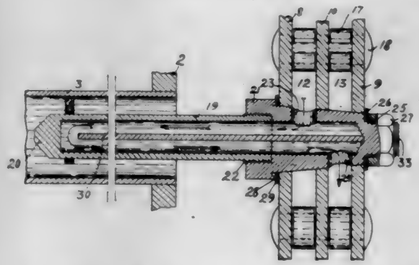
1. A method of manufacturing a section of a radiator core comprising first forming a sheet of metal having a plurality of notches therein, a pair of grouped spaced apart alined perforations therein, a plurality of tongues integral with said sheet and one of said tongues extending outwardly therefrom adjacent each of said perforations, said sheet also having corrugations extending longitudinally thereof, then bending one end of said sheet in engagement with the outer edges of one group of said



tongues, then bending said sheet in engagement with the inner edges of said last group of said tongues, then bending said sheet in engagement with the inner edges of the other group of said tongues, then bending said sheet in engagement with the outer edges of said tongues in said last group.

---

1,563,503. STEAM-BOILER INSTALLATION. TEODORO LARREY and LUIS GODARD, Mexico, Mexico. Filed May 1, 1924. Serial No. 710,435. 7 Claims. (Cl. 122—462.)



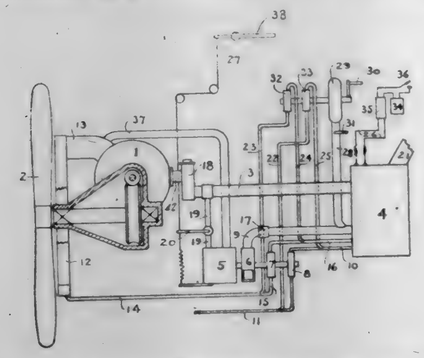
1. A superheating unit, comprising a tube closed at its inner end and having its outer end open and externally threaded; a flat division bar disposed axially within the tube and dividing the interior thereof into two compartments, said bar terminating at its inner end short of the closed end of the tube to permit communication at that end between said compartments, and projecting at its outer end through the open end of the tube; and a stopper mounted on the threaded end of the tube and having an axial bore which registers with the tube bore and which receives the projecting portion of the bar so as to provide extensions of the tube compartments, the free end of said projecting portion abutting against the end wall of the stopper bore to prevent communication between the compartment extensions; said stopper being formed with a pair of openings communicating directly with said extensions.

---

1,563,504. STEAM-POWER PLANT FOR AIRPLANES. WARD LEATHERS, Haworth, N. J. Filed Dec. 26, 1919. Serial No. 347,386. 3 Claims. (Cl. 60—106.)

1. In a steam power plant the combination of a steam boiler, a main steam engine, an auxiliary steam engine, an air pump, a boiler feed water pump, a fuel pump, said air, water and fuel pumps operably connected to said auxiliary engine, connections from said air, water and fuel pumps to said boiler, a connection from said boiler to said main engine, a pressure operated valve on said connection to said main engine, said valve adapted to pass steam when the steam pressure in said boiler ex-

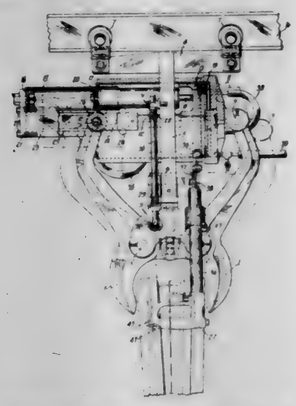
ceeds a predetermined pressure, a connection from said boiler to said auxiliary engine, a throttle valve on said connection to said auxiliary engine said throttle adapted to control said main engine by controlling the speed of said auxiliary engine determining the amount of air, water



and fuel delivered to said boiler by said air, water and fuel pumps, an exhaust steam condenser, connections from said main engine and said auxiliary engine to said condenser and connection from said condenser to said water pump.

---

1,563,505. GRAPPLING DEVICE. HECTOR V. LOUGH, Hartford, Conn., assignor to The Hartford Rubber Works Company, Hartford, Conn., a Corporation of Connecticut. Filed May 29, 1923. Serial No. 642,270. 14 Claims. (Cl. 294—88.)



1. A grappling device having a pair of articulated levers, means for actuating the levers, a carriage movably supporting the levers and their operating means, and a pivotal connection between the levers and the carriage permitting the levers to be swung bodily in a plane transverse the plane in which they are separately actuatable.

---

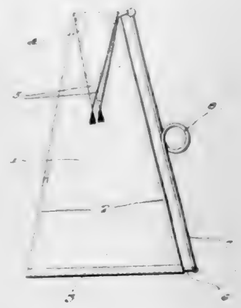
1,563,506. RECOVERY AND UTILIZATION OF MATERIALS OF OLD SECONDARY BATTERY PLATES. JOSEPH O. LUTHY, San Antonio, Tex., assignor to Luthy Research Laboratory, a Corporation of Texas. Filed Jan. 28, 1925. Serial No. 5,376. 13 Claims. (Cl. 136—20.)

1. The method of utilizing old lead secondary battery plate material which comprises separating the material from the grids or supports, pulverizing the separated material, and mixing the pulverized materials from positive and negative plates in such proportions that the same combined with an aqueous binder will set up into a relatively hard and self-supporting cementitious mass.

11. A lead battery plate comprising a grid and a filler composed of pulverulent recovered active material from old plates and an aqueous binding medium.

---

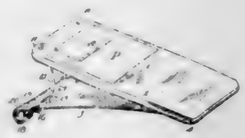
1,563,507. COMBINATION CAP. DAVID L. MANTLE, Stillwater, Okla. Filed May 22, 1922. Serial No. 562,800. 3 Claims. (Cl. 2—195.)



1. A novelty device, as herein described, comprising a pair of triangular shaped fabric sheets, connected along their edges for the major legth thereof, and staves between the sheets at the widened end thereof and at the terminal of the connected edges of said sheets, said staves being in a normally flat condition but bendable to provide ring-like members whereby the sheets may be retained in flat triangular shape or caused to assume a conical shape, and also wherein the pointed ends of the sheet beyond the staves may be bent over the body.

---

1,563,508. PAPER CLIP AND BOOKHOLDER. ARTHUR H. MAYNARD, Warwick, R. I., assignor to Boston Wire Stitcher Company, Portland, Me., a Corporation of Maine. Filed Nov. 28, 1924. Serial No. 752,561. 5 Claims. (Cl. 120—28.)



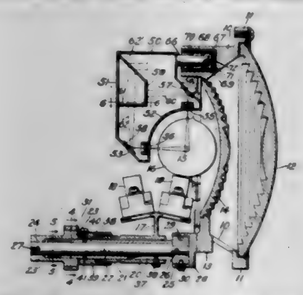
1. In a device of the type specified, the combination of a sheet-metal panel having a rolled edge, a sheet-metal spring-leg joined at one end to the panel with its edge held by the rolled edge thereof, and a brace extending between the leg and the panel.

---

1,563,509. METHOD AND MEANS FOR LOCATING LAMPS. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, a Corporation of Illinois. Filed Apr. 28, 1921. Serial No. 465,143. 2 Claims. (Cl. 88—14.)

1. The method of locating a lamp filament at an objective point which consists in illuminating the filament; projecting two beams of light therefrom at substantially

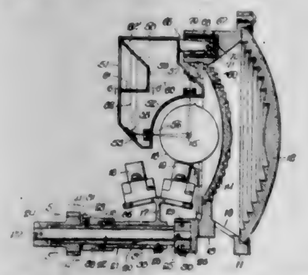
right angles to each other; reflecting both of the beams towards each other; providing a receptive surface, one for each beam upon which the respective beams impinge



and adjusting the lamp for position until said beams of light appear at predetermined objective points on two adjacent surfaces.

---

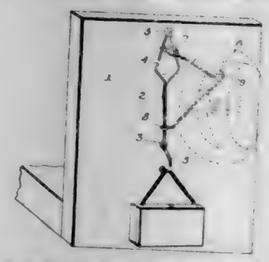
1,563,510. LAMP-LOCATING DEVICE. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, a Corporation of Illinois. Original application filed Apr. 28, 1921, Serial No. 465,143. Divided and this application filed Jan. 16, 1922. Serial No. 529,433. 7 Claims. (Cl. 88—14.)



1. A lamp indicating means having a casing; a pair of lenses in the wall thereof having their focal axes at right angles and crossing outside the casing; reflecting surfaces in the casing located in the path of light passing thru each lens to direct the light to a receiving surface, two surfaces each to receive an impression of the filament of the lamp, both visible at the same time and means on the receiving surfaces to indicate when the filament of the lamp is located at the point where the axes of said lenses cross each other.

---

1,563,511. COLLAPSIBLE HAT HOLDER. HUGH F. MCDONALD, San Francisco, Calif. Filed Feb. 5, 1924. Serial No. 690,743. 1 Claim. (Cl. 45—13.)



A hat-hanging device comprising a vertical supporting member formed of twisted wire having a resilient dinmond-shaped member at its upper end, and a hook member having loops embracing said vertical member and diamond-shaped member and loosely secured thereto for swinging horizontal movement thereon, said diamond-shaped member being adapted to retain said hook member in position for use.

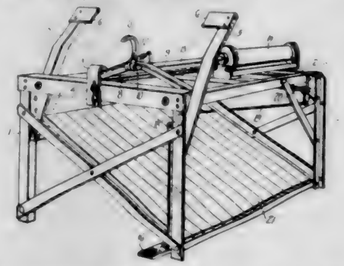
---

1,563,512. TELEPHONE DIAPHRAGM. LESLIE R. MCDONALD, Westmount, Quebec, Canada. Filed Mar. 7, 1924. Serial No. 697,434. 2 Claims. (Cl. 179—115.)

1. An integral telephone diaphragm composed of a plurality of layers of metal, differing one from another in capacity for expansion and contraction under the influence of electricity.

---

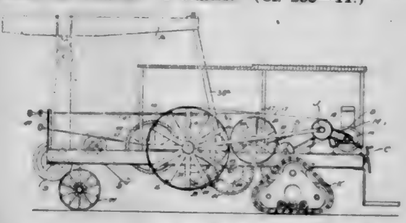
1,563,513. APPARATUS FOR REMOVING VULCANIZING BAGS. GEORGE K. MCNEILL, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Feb. 23, 1924. Serial No. 694,519. 6 Claims. (Cl. 18—2.)



1. An apparatus for removing vulcanizing bags from casings comprising, in combination, means engageable with a bead portion of a casing at one side thereof, rests for the opposite side of the casing, and power operable means manually engageable with a bag within the casing for pulling the two apart.

---

1,563,514. POWER-TRANSMISSION MECHANISM. JOHN W. MILLER, Pasadena, Calif. Filed Nov. 6, 1923. Serial No. 673,149. 4 Claims. (Cl. 255—11.)



2. A power transmission for drilling apparatus, comprising a driven shaft, a band wheel fixed thereto and about which a power-conveying belt is adapted to be trained, a bull wheel, a gear wheel fixed to the bull wheel,

a gear movable on the driven shaft to engage or disengage the gear wheel, a clutch for operatively connecting the gear to the driven shaft, an idler shaft, and an idler pinion constantly meshing with the gear and movable on the shaft to engage or disengage the gear wheel.

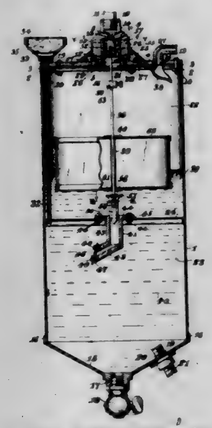
---

1,563,515. PREPARATION OF CONCENTRATED UNALTERABLE FOODS. EUDO MONTI, Turin, Italy. Original application filed Oct. 3, 1916, Serial No. 123,563. Divided and this application filed May 6, 1922. Serial No. 559,079. 3 Claims. (Cl. 99—11.)

3. The process consisting in predigesting protein compounds in fruit extract, adding a substantially equal weight of flour which has been previously torrefied, together with the desired flavoring, sugar and baking powder, and drying the whole in an oven at a temperature not exceeding the boiling point of water.

---

1,563,516. VACUUM TANK. ENRIQUE MÜLLER, Chihuahua, Mexico. Filed Jan. 10, 1924. Serial No. 685,388. 10 Claims. (Cl. 103—236.)

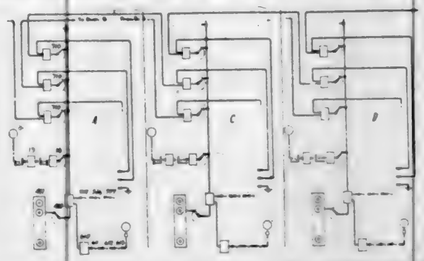


1. In a vacuum fuel feeding system for motor vehicles, means to provide a suction chamber adapted to communicate with a fuel supply, means to provide a fuel receiving chamber adapted to communicate with a carbureter, said suction chamber provided with a suction port and an inlet for atmospheric pressure, a shiftable suction controlling valve for said port, a gravity seating atmospheric pressure controlling valve for said inlet, a combined suction and float operated vertically movable rigid element extending lengthwise of the suction chamber for simultaneously seating the suction valve and unseating the atmospheric pressure controlling valve, means for supplying atmospheric pressure to the receiving chamber, said atmospheric pressure controlling valve provided with passages for establishing communication between said suction chamber and an engine when said suction controlling valve opens said port, and a fuel supply element leading from the suction chamber and depending into the receiving chamber and provided with a valvular element shifted to open position on the passage of fuel through said element and seated to closed position by atmospheric pressure supplied to the receiving chamber.

---

1,563,517. SIGNALING SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1924. Serial No. 730,366. 27 Claims. (Cl. 179—27.)

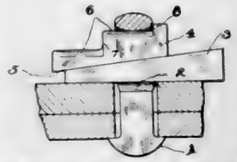
1. In a telephone system, toll lines, a cord circuit including impulse transmitting means, means for selecting toll lines comprising a plurality of automatic switching equipments, a plurality of senders, means operative on the connection of the cord circuit to the toll line selecting means for selecting an idle switching equipment and for selecting and associating therewith an idle sender, means operative in response to impulses from the cord



circuit for storing said impulses on the sender and for actuating the switching equipment to select an idle toll line in a group corresponding to the digits represented by said impulses and means responsive to an impulse incoming over said selected toll line for operating the sender to transmit over said toll line impulses of a different character representing said digits.

---

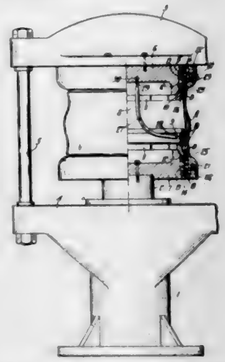
1,563,518. GIB. RODNEY W. NORTHEY, Toronto, Ontario, Canada, assignor to John P. Northey, trustee, Toronto, Canada. Filed Feb. 25, 1925. Serial No. 11,478. 7 Claims. (Cl. 85—7.)



1. A slotted bolt and wedge key in combination with a gib having a longitudinal key engaging edge inclined to the axis of the bolt and a plurality of seats opposite said edge, and at different distances therefrom, adapted to engage the end of the slot in the bolt.

---

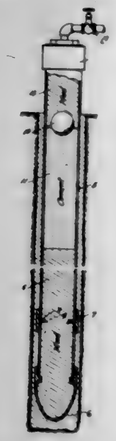
1,563,519. APPARATUS FOR MANUFACTURING TIRE CASINGS. ALBERT OTTO, Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Mar. 6, 1924. Serial No. 697,178. 9 Claims. (Cl. 154—10.)



1. An apparatus for shaping endless band structures into tire form comprising a bull ring for engaging the band after shaping, yielding supports for the edges of the band, means for pushing the band edges and for cooperating with the yielding supports for sealing the edges of the band to form a fluid-retaining chamber containing the ring the inner surface of the band constituting a wall of the chamber, means for applying the pressure of the fluid in the chamber to the band for distending it, and means for operating the yielding supports and pushing means for relatively moving the band edges and the supports toward each other and for further moving the edges relatively to their supports until they are engaged by the said bull ring.

---

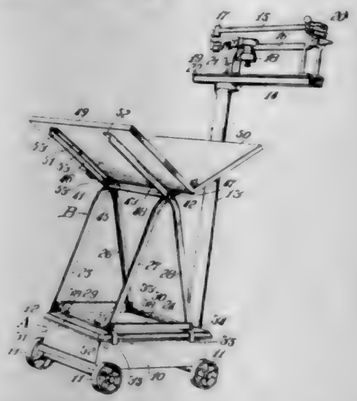
1,563,520. OIL-WELL CEMENTING. JACK M. OWEN, Long Beach, Calif. Filed Apr. 2, 1924. Serial No. 703,724. 11 Claims. (Cl. 166—21.)



7. A well casing and a freely movable float therein of a slightly lower specific gravity than that of cement grout commonly used for cementing oil wells.

---

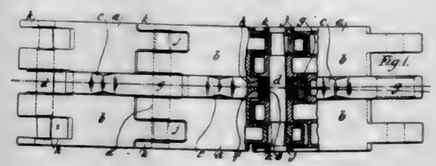
1,563,521. WEIGHING STAND. EDWARD PEARSON, Dalbo, Minn. Filed June 30, 1925. Serial No. 40,553. 4 Claims. (Cl. 265—27.)



1. A weighing stand for use upon the platform of a platform weighing scale, comprising lower frame members, shoes on the under side of certain of said members adapted to bear directly upon the scale platform, upright frame members secured at their lower ends to said lower frame members and terminating at their upper ends in pairs of upwardly diverging arms, and a scoop having an open end and plane sides meeting at an angle corresponding to that of said pairs of arms and adapted to fit and rest in said arms when in weighing position.

---

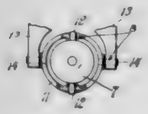
1,563,522. ENDLESS TRACK FOR VEHICLES. OSCAR STYLES PENN, London, England, assignor to Roadless Traction Limited, Hounslow, England. Filed Mar. 6, 1925. Serial No. 13,611. 7 Claims. (Cl. 74—32.)



1. A link joint comprising a pin connecting together the adjacent link ends, each link having a central lug on one end, a spherical seating in the lug, a spherical member supported by the pin and adapted to turn in the seating, two other lugs on the same end, two lugs on the other end intermediate the lugs on the first mentioned end, and holes adapted to receive the pin in all the lugs, the diameters of the holes in the first mentioned two lugs being greater than the diameters of the parts of the pin passing through them.

---

1,563,523. DEVICE FOR CASTING IRON AND OTHER DIFFICULTLY-FUSIBLE METALS UNDER PRESSURE. ERNST PETERSSON, Orebro, Sweden. Filed Sept. 11, 1924. Serial No. 737,196. 2 Claims. (Cl. 22—76.)



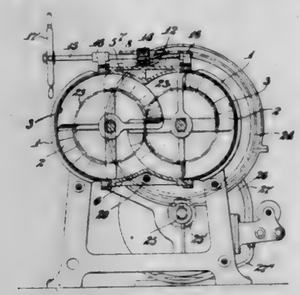
1. In a device for casting iron and other difficultly fusible metals by forcing the molten metal into the mold by vacuum, the combination of a furnace, a crucible located in said furnace, a pipe extending into the metal bath in the crucible and consisting of an incombustible material, and having a nozzle adapted to be pressed, at the casting instant, against the mold, said nozzle having a plane surface at the side to be pressed against the mold, and a self-adjusting suspension device carrying said nozzle and its pipe and permitting the said plane surface of the nozzle, when pressed against the nozzle, to automatically adjust itself in alignment with the inlet side of the mold, so as to perform an air-tight connection between the nozzle and the mold.

---

1,563,524. MACHINE FOR MIXING. WILLIAM EDWARD PRESCOTT, Harrow, England. Filed Dec. 27, 1923. Serial No. 683,050. 7 Claims. (Cl. 259—6.)

1. A mixing machine comprising a pair of mixing blades rotatable about spaced axes said blades being of such dimensions as compared to the spacing of said axes that upon rotation the paths of said blades intersect in a zone between said axes, a mixing chamber having an opening through which material may be intro-

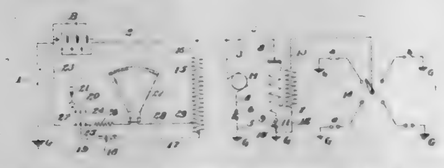
duced into said zone, said chamber being defined by end and circumferential walls approximating to the non-intersecting paths of said blades, except where the con-



tinuity of the wall is interrupted by said opening, and a cover removably mounted in said opening and having an inner surface completing the continuity of the chamber walls.

---

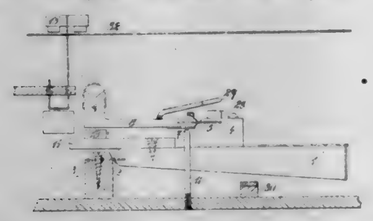
1,563,525. ELECTRICAL SYSTEM FOR MOTOR VEHICLES. DAVID R. PRICE, Newtonville, Mass., assignor of one-half to Curtis Delano, Newtonville, Mass. Filed July 15, 1919. Serial No. 311,043. 4 Claims. (Cl. 175—183.)



1. In an electrical system, the combination of a storage battery, a working circuit in series with said storage battery, a branch circuit in parallal with said circuit including said storage battery in one branch thereof, a source of standard potential in the other branch of said branched circuit, an indicator, means for connecting said indicator into said branched circuit, and resistance means whose resistance is fixed in value and divided between the branches of said branched circuit, the divided portions of said resistance means having such resistance that when the storage battery is discharged the indicator deflection is zero and when the battery is fully or partly charged the deflection registers the amount of said charge.

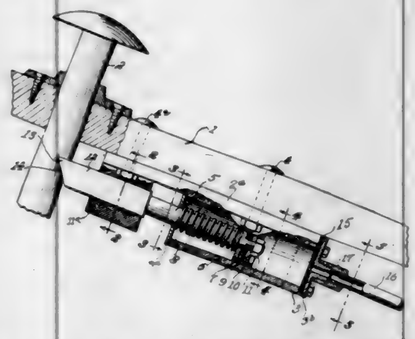
---

1,563,526. PIANO ACTION OR MOVEMENT. ANTON PÜRRER, Klosterneuburg, Austria. Filed Nov. 11, 1924. Serial No. 749,130. 3 Claims. (Cl. 84—237.)



3. A piano action comprising a key-lever fulcrumed at its rear end, a hammer-shaft flexibly jointed thereto, and a guide member adjacent the key-lever to prevent lateral motion of the latter and having a portion overlying the lever designed to be encountered as a fulcrum by the hammer shaft when the key-lever is depressed.

1,563,527. AUTOMATIC SAFETY DEVICE FOR MOTOR-VEHICLE STARTERS. ROBERT E. ROSS, El Paso, Tex. Filed Feb. 16, 1925. Serial No. 9,623. 1 Claim. (Cl. 74—7.)



A locking device of the character described comprising a base plate adapted to be secured beneath the floor board of a motor vehicle, a cylinder formed with one end thereof, a piston slidably mounted in said cylinder, a rod for said piston and extending from one end of said cylinder, a coil spring for normally holding said piston in one position, a guide block formed with and arranged at the opposite end of said base plate, a squared portion of said piston rod slidably mounted within said guide block, a pawl formed on the end thereof, adapted to engage a coacting notch formed in the shaft of the starter pedal, and a tube communicating with one end of said cylinder whereby the oil pressure of an engine lubricating system may enter said cylinder.

---

1,563,528. KNEE OR FOOT REST FOR SHOVELS AND THE LIKE. SALVADOR RUBIO, Los Angeles, Calif. Filed Apr. 28, 1924. Serial No. 709,625. 9 Claims. (Cl. 294—60.)

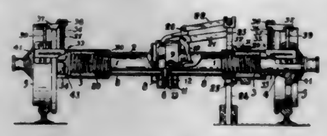
2. A knee or foot rest for earth working implements comprising an element adapted to be engaged by the knee or foot, and means for securing the element in fixed position upon and at any point along the length of the handle of an earth working implement, said means including flexible members adapted to embrace the handle.

---

1,563,529. FLEXIBLE CORE FOR MOLDING. HENRY S. SATTERLEE, New York, N. Y. Filed July 17, 1924. Serial No. 726,502. 8 Claims. (Cl. 18—45.)

1. A flexible core having a curved body, a traction member therein and a plurality of transverse elements disposed along and fixed to said traction member.

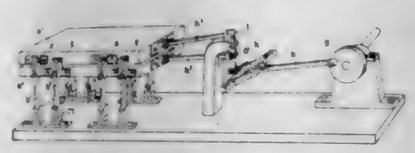
1,563,530. DEVICE FOR OVERCOMING THE BREAK-OF-GAUGE DIFFICULTY IN RAILWAYS. JOHN HENRY SAUNDERS, Kilkenny, South Australia, Australia. Filed Dec. 27, 1923. Serial No. 682,876. 16 Claims. (Cl. 104—33.)



1. In break of gauge mechanism of the character described, in combination, an axle, wheels splined thereon, means for moving the wheels in axially opposite directions, and means for normally holding said first named means in inoperative position and for simultaneously releasing said first named means and locking it in operative position.

---

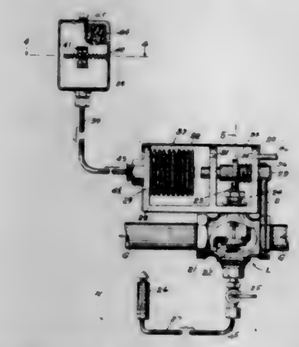
1,563,531. METHOD OF AND MEANS FOR BALANCING AND COUPLING FREELY-OSCILLATING UNITS AND UNITS WITH RESTRAINED OSCILLATIONS. GEORG HEINRICH SCHIEFERSTEIN, Berlin-Charlottenburg, Germany. Filed Nov. 13, 1924. Serial No. 749,722. 8 Claims. (Cl. 74—14.)



1. In a device of the character described, in combination, one oscillating unit, a pair of naturally oscillating units, a positive, operative reversing connection between said pair of naturally oscillating units, and a yieldable coupling between said one oscillating unit and said connection.

---

1,563,532. HEATER CONTROL. RICHARD H. SHADRICK, Minneapolis, Minn. Filed Aug. 26, 1924. Serial No. 734,180. 8 Claims. (Cl. 126—35.)



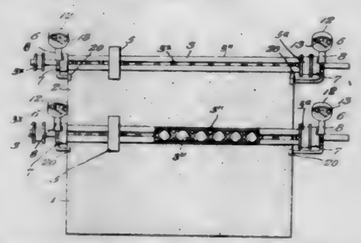
1. The combination with a hot water heating system having a gas burner, of a normally closed gas valve, a manually actuable device including a cam co-operating with the valve for opening the same, and thermally responsive means associated with said device to disengage the cam from the valve when the latter is in an open position.

1,563,533. SHORE. FRANK F. SINKS, Seattle, Wash. Filed Oct. 20, 1924. Serial No. 744,641. 6 Claims. (Cl. 254—100.)

4. A shore of the character described, comprising a standard, a cap secured thereto, said cap being provided with a screw threaded aperture, an extension having a channel to receive said standard for relative longitudinal movement, pairs of complementary sockets provided in the extension at opposite sides of its channel, said pairs of sockets being disposed in spaced relation longitudinally of the extension, a screw engaging the threads of the cap aperture, a carrier mounted upon the screw and having a slidable connection with the extension, and laterally movable pins provided in the carrier and engageable with the pairs of sockets selectively for coupling the carrier to said extension at a predetermined elevation.

---

1,563,534. INDICATOR. DE WALT W. SMITH, Louisville, Ky., assignor of one-half to Neal V. Trautman, Louisville, Ky. Filed May 17, 1920. Serial No. 382,047. 2 Claims. (Cl. 33—172.)



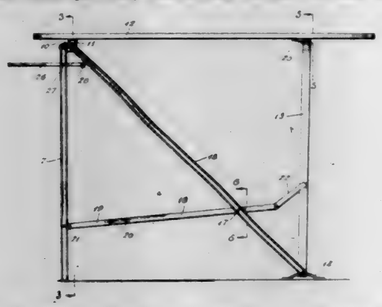
1. A displacement indicator for the grinding mechanism of carding machines comprising a cap at each end of the grinding means, said cap rotatably receiving such grinding means, a guiding member carried by said cap and movable transversely of the axis of said cap, a dial supported by said guiding member, a finger associated with the dial, a rod slidably supported by said guiding member, an arm at the lower end of said rod for engaging the carding cylinder and means for communicating the movement of the rod to the finger.

---

1,563,535. IRONING BOARD. ABRAHAM SONDACK, Bronx, N. Y. Filed Feb. 21, 1925. Serial No. 10,818. 2 Claims. (Cl. 68—10.)

1. In a support for ironing boards, a standard, a board pivoted at one end to said standard, a second standard upon the upper end of which said board is capable of resting, diagonal bracing members connecting

said standards, an intermediate brace pivotally connected intermediate its ends to said bracing members, an end brace pivotally connecting one end of said inter-



mediate brace with the first named standard, and a second end brace pivotally connected to the other end of said intermediate brace and to said second standard.

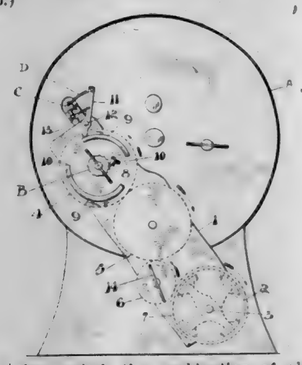
---

1,563,536. PROCESS FOR PRODUCING ARTIFICIAL CRYOLITE FREE FROM IRON, FROM ALUMINUM-SALT SOLUTIONS CONTAINING IRON. HEINRICH SPECKETER, Griesheim-on-the-Main, Germany, assignor to Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Jan. 10, 1925. Serial No. 1,706. 5 Claims. (Cl. 23—88.)

1. A process of producing artificial cryolite free from iron from aluminum salt solutions containing iron, which process comprises adding to the said solutions while stirring 9 molecules of hydrofluoric acid at most and 3 molecules of alkali metal chloride at least to one molecule of aluminum oxide and treating in the presence of water the precipitate thus obtained with alkali metal fluoride.

---

1,563,537. TIME SWITCH. JOHN GORDON STEISS, Kitchener, Ontario, Canada. Filed Jan. 8, 1923, Serial No. 611,505. Renewed Oct. 15, 1925. 2 Claims. (Cl. 200—38.)



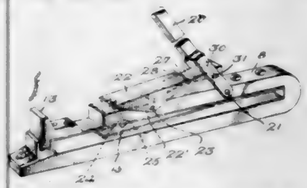
1. In a time switch the combination of alarm clock mechanism including a vibratile rock arm and a winding arbor which rotates when the alarm train is in motion; a rotary switch; a gear train adapted to rotate the switch and including a gear wheel concentric with said winding arbor; a pawl and ratchet connection between the said gear wheel and the arbor permitting the arbor to be rotated to wind the alarm train; a pivoted detent; means tending to move the detent to prevent the operation of the rock arm; and means rotating with the gear wheel aforesaid adapted to hold the detent in inoperative position a sufficient length of time after the alarm mechanism has been tripped to enable the gear to actuate the switch.

1,563,538. HOOK AND EYE. MARY A. STREHLEIN, Chicago, Ill. Filed Oct. 20, 1924. Serial No. 744,800. 3 Claims. (Cl. 24—228.)

1. In a hook arranged to co-act with an eye, a wire member, the wire of said member bent to obtain parallel elements in a substantially horizontal plane, additional parallel elements in a substantially vertical plane, additional elements in a substantially horizontal plane and at substantially right angles to the first and second named parallel elements, and curved elements, in combination with a disk provided with a peripheral bead arranged to cover the curved elements of the wire member, to rigidly join said wire and disk member all arranged so that said wire member is on and wholly within the periphery of said base.

---

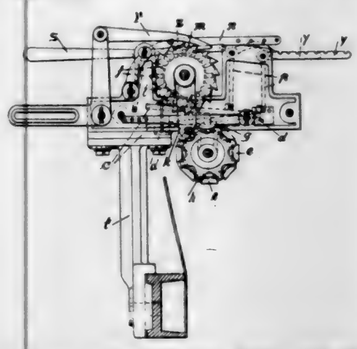
1,563,539. SAW SET. WILLIAM L. TAYLOR, Black Oak, Ark. Filed Dec. 1, 1924. Serial No. 753,268. 2 Claims. (Cl. 76—70.)



1. A saw set comprising a base having an anvil surface at one end, a saw setting element arranged above the base and adapted to be engaged by an implement, a resilient arm arranged above the base, a lever pivoted above the base, a vertically movable element adapted to engage the resilient element to hold the same into contact with the saw, a plate pivotally mounted above the base and manually operable longitudinally movable inclined block adapted to engage the plate and move the same into engagement with the pin to move the same downwardly against the resilient arm.

---

1,563,540. CARD-SAVING DEVICE FOR DOBBY LOOMS. FRANTIŠEK VOLECH, Vrchlabi, Czechoslovakia. Filed Oct. 31, 1924. Serial No. 747,069. 3 Claims. (Cl. 139—171.)

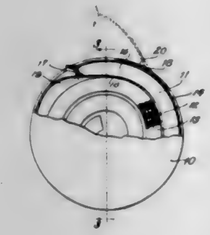


1. In a card saving device for dobby looms, the combination with a pattern cylinder and a change-box mechanism, of a plurality of push bars arranged so as to be selected and positioned by said cylinder, a roller having

a helical row of lugs arranged so as to operate selected push bars in succession when the roller is rotated, and means for transmitting the motion of said bars to the change-box mechanism.

---

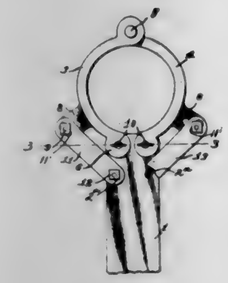
1,563,541. SMOKER'S ARTICLE. CYRUS M. ADLER, Chicago, Ill. Filed Sept. 26, 1923. Serial No. 664,837. 2 Claims. (Cl. 206—41.)



1. A smoker's article comprising a cylindrical casing, a spiral passage therein and terminating near the peripheral wall thereof, a knife hinged to said peripheral wall and adapted to close said passage, and a spring normally holding said knife in position to close said passage.

---

1,563,542. PIPE TONGS. JOHN W. A. ANDRAE, Point Arena, Calif. Filed May 8, 1922. Serial No. 559,379. 4 Claims. (Cl. 81—66.)

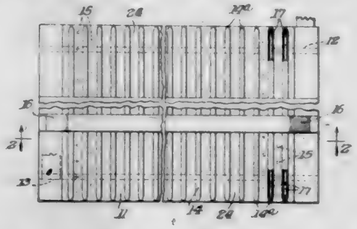


1. Pipe tongs comprising a pair of jaws to embrace a pipe, a pin pivotally connecting the jaws at one end, a lever having a link connection with said jaws at points spaced from the free ends thereof, and cooperating means carried by said lever and jaw ends adapted to interengage and to be shifted to change the direction of pull of the lever.

---

1,563,543. RADIATOR. EDWARD F. ANDREWS, Chicago, Ill. Filed Oct. 9, 1918. Serial No. 257,445. 3 Claims. (Cl. 244—31.)

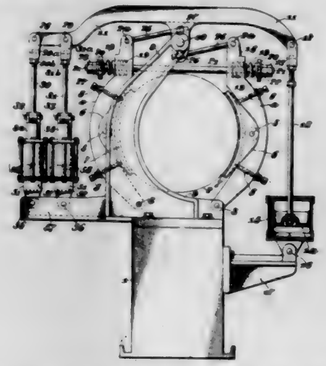
1. A radiator comprising a thin sheet of flat material bent back upon itself at its end to provide a header, and a second sheet of material secured to said first-named sheet and being folded or corrugated to provide a series of fluid passages adjacent said first-named sheet, said



first-named sheet being provided with apertures which form communications between said header and said passages.

---

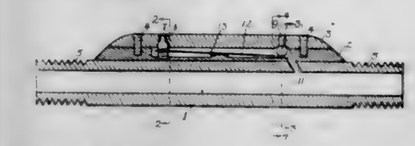
1,563,544. BRAKE MECHANISM AND MAGNET SYSTEM THEREFOR. WILLARD S. ATKINSON, Ashland, N. J., assignor to Atlantic Elevator Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1923. Serial No. 680,610. 9 Claims. (Cl. 188—171.)



1. The combination with an elevator brake mechanism comprising a brake drum, braking means co-acting therewith, and a control lever, of a plurality of single phase electro-magnets whose magnetic-circuits are substantially independent and each comprising relatively movable core elements and a winding, means for connecting the windings of the different magnets with different conductors of a polyphase circuit, whereby the currents traversing said windings are dephased with respect to each other, and means for connecting the movable core elements of the different magnets with said control lever.

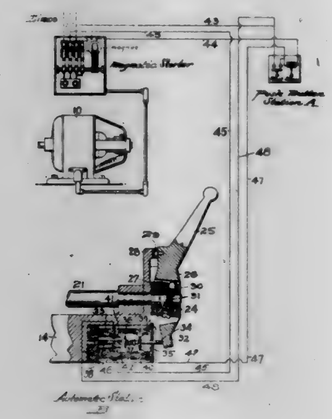
---

1,563,545. ADJUSTABLE AUTOMATIC PRESSURE-RELIEF VALVE. ORRIN C. BLAKESLEE, Compton, Calif. Filed Apr. 29, 1924. Serial No. 709,773. 14 Claims. (Cl. 251—121.)



6. In an oil or other well, a series of sections adapted to form the pipe line or tubing of said well, and means mounted on one of said sections whereby the gas pressure accumulating in said well may be relieved, substantially as described.

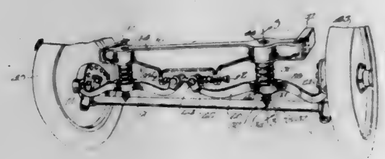
**1,563,546. ELECTRIC-MOTOR-DRIVEN CHANGE-SPEED DEVICE.** CONSTANT BOUILLON, Torrington, Conn., assignor to The Hendey Machine Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 1, 1922. Serial No. 540,342. 4 Claims. (Cl. 172—239.)



1. A change speed device, operating connections therefor, an electric motor for driving the change speed device, a magnetic starter and push button station for controlling the motor, and an electric switch connected in circuit with said push button station and arranged so that when said connections are operated to change speed the switch will be operated to cut the motor out of operation and so that when the change is effected the motor again will be thrown into operation.

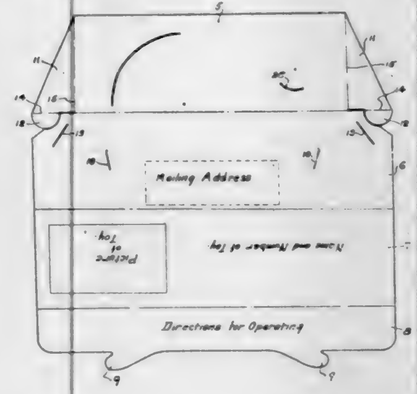
---

**1,563,547. SPRING SUSPENSION FOR VEHICLES.** RANSOM Y. BOVEE, Maywood, Ill., assignor to Bovee Transmission Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1924. Serial No. 745,175. 24 Claims. (Cl. 267—20.)



1. In a spring suspension for vehicles, a load supporting member, opposed load supporting arms therebelow, means pivotally connecting one end of the arms to the said member, means pivotally connecting the other ends of the arm to the vehicle running gear, and elastic means interposed between the arms and the said member to cushion their relative movements, the first recited means embodying means to permit longitudinal movement of the said member and the ends of the arms one with relation to the other.

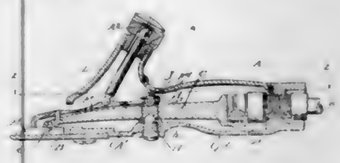
**1,563,548. ANIMATED TOY.** WALTER BRASHEAR, Jr., Castleton, N. Y., assignor to Fort Orange Paper Company, Castleton-on-Hudson, N. Y., a Corporation of New York. Filed May 19, 1924. Serial No. 714,370. 4 Claims. (Cl. 46—37.)



1. A blank for animated toys comprising a sheet subdivided into a base portion animated figures mounted on said base portion, and portions foldable to enclose the base portion, said latter portions having means for maintaining the blank in folded condition.

---

**1,563,549. SHEEP SHEAR.** FRANCISS GEORGE WILLIAM BRISTROW, Sydney, Australia, assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1923. Serial No. 643,156. 8 Claims. (Cl. 30—1.)

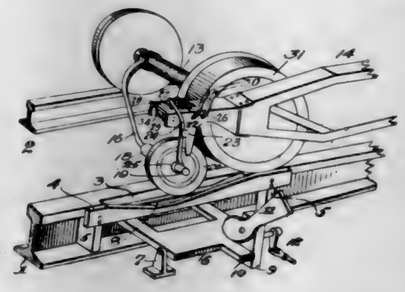


1. In a sheep shear and the like, in combination with a rigid comb-carrying frame structure and a comb carried thereby, a vibrating cutter; a cutter-actuating lever having a fixed fulcrum on the frame structure and engaging the cutter for vibrating the latter; a pressure member for holding the cutter to the comb, engaged at one end with the cutter independently of the cutter-actuating lever, and at the other end pivoted to the frame structure independently of said cutter-actuating lever; and a thrust member for applying pressure to the pressure member, stopped in one direction on the pressure member and in the opposite direction on the frame and in both said stoppages, being independent of the cutter-actuating lever; whereby the pressure for holding the cutter to the comb is transmitted to the cutter independently of the cutter-actuating lever.

---

**1,563,550. AUTOMATIC TRAIN-STOPPING APPARATUS.** EARL D. BROWN, Riverbank, Calif. Filed Sept. 4, 1924. Serial No. 735,881. 5 Claims. (Cl. 246—190.)

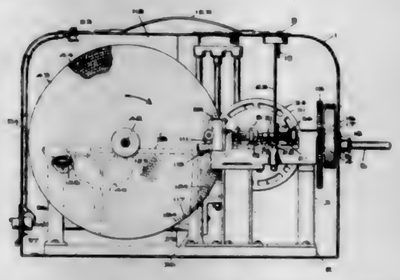
2. In an apparatus of the class described, the combination with a rail provided with a cutaway portion in its head, of blocks against said rail at the ends of said cutaway portion, a plate bridging said cutaway portion and fastened at its ends to said blocks, brackets near said rail, a lever frame pivotally mounted on said brackets and having its inner end extending under said plate and cutaway portion, a block in said cutaway portion



and fastened to said inner end of said lever frame, a cam at the outer end of said lever frame for holding it in set positions, and a signal actuating wheel adapted to pass over said block.

---

**1,563,551. DISK-RECORD APPARATUS.** FRANCIS J. PULASK, Toledo, Ohio, assignor to The Pictures Development Co., Toledo, Ohio, a Corporation of Ohio. Filed May 3, 1920. Serial No. 378,528. 16 Claims. (Cl. 88—18.8.)



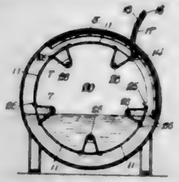
1. A motion picture apparatus comprising a disk record, a control disk for the record provided with seat means, and a device manually shiftable into and out of registry with the seat means for fixing an angular position for the control disk and record.

16. A motion picture apparatus comprising a housing provided with a way for a light line, rotary shutter means for intermittently intercepting said light line, disk film actuating mechanism including a master disk coaxial with a film, said disk provided with a spiral series of seats inwardly terminating in an elongated seat, and driving means for rotating the shutter and intermittently actuating the master disk, said driving means including a guide extending perpendicularly to the disk, and a pin in said guide coacting with said seats until riding into said elongated seat to there locate a period of rest for the master disk and a film in a light line intercepted position of the shutter.

---

**1,563,552. WASHING MACHINE.** OTTO BUTZBACH, Chicago, Ill., assignor to The Invincible Blow Pipe Company, a Corporation of Illinois. Filed July 3, 1923. Serial No. 649,233. 1 Claim. (Cl. 68—18.)

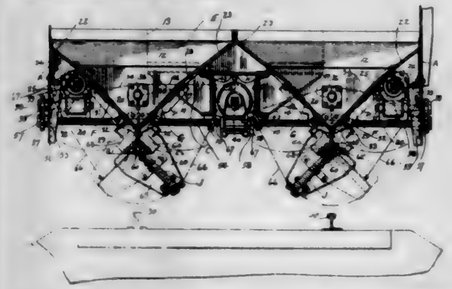
A cylindrical receptacle for a washing machine comprising a pair of flanged heads, a plurality of partitions in spaced relation with said heads for dividing the receptacle into a plurality of compartments, said partitions having V-shaped notches in its periphery, perforated slotted V-shaped baffle members extending between



said heads and resting in the notches of said partitions, said partitions extending into said slots, and tie rods passing through said baffle members and partitions.

---

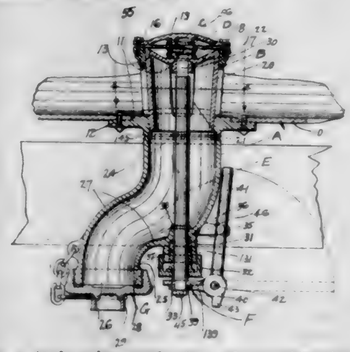
**1,563,553. HOPPER CAR AND THE LIKE.** ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1924. Serial No. 713,132. 18 Claims. (Cl. 105—251.)



1. In a car of the character described, the combination with a car body having longitudinally arranged sets of hoppers on each side of the center sill; of hinged center dumping doors for said hoppers, said doors being hinged on longitudinally extending axes and being movable towards each other in an opening direction to discharge the load between the rails; a longitudinally extending common operating shaft for said doors and located therebetween; flexible connections between the shaft and the respective doors; and means for reversing the direction of the pull between the shaft and the doors to close the doors.

---

**1,563,554. TANK-VALVE MECHANISM.** ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,844. 10 Claims. (Cl. 137—21.)

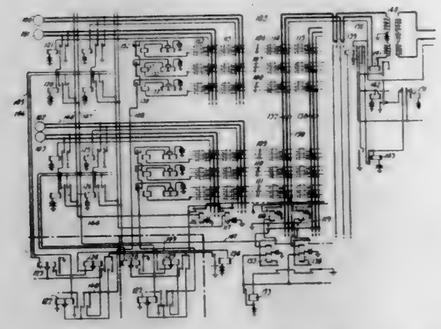


1. In a tank valve mechanism, the combination with a hollow chamber member having a rotatable valve disposed therein, an operating element passing through the

chamber and adapted to have rotary movement in unison with the valve, said element being also bodily movable from the exterior of the chamber to induce a movement of the valve in a plane at an angle to its plane of rotation, said valve being maintained in operative position independenetly of said operating element.

---

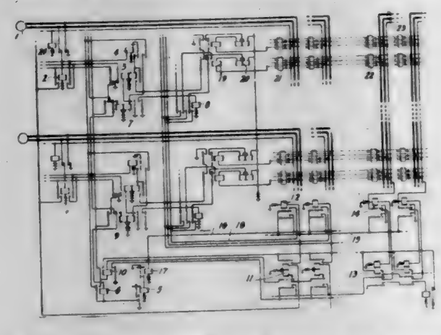
1,563,555. ELECTRICAL SWITCHING MECHANISM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1923. Serial No. 655,385. 9 Claims. (Cl. 179—18.)



1. The combination in a switching device of a plurality of operating magnets coacting jointly to effect a connection, means for closing circuits for each of said magnets without operating the same, and means for thereupon altering said circuits to permit said magnets to operate.

---

1,563,556. TELEPHONE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,333. 5 Claims. (Cl. 179—18.)

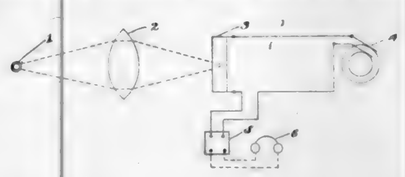


1. In a telephone system, line magnets, link magnets, trunk magnets, a circuit for said link magnets controlled by said other magnets, and time controlling means for limiting the closing period of said circuit to a definite interval.

---

1,563,557. OPTICAL MEANS FOR RECTIFYING ALTERNATING CURRENTS. WILLIAM W. COBLENTZ, Washington, D. C. Filed Sept. 18, 1923. Serial No. 663,412. 5 Claims. (Cl. 250—1.)

3. Means for signalling by rectifying alternating currents comprising a light reactive resistance, having substantially the properties of light reactive molybdenite, interposed in an alternating current circuit, and means for



exposing said resistance to thermal radiant energy having substantially the properties of sun-light, the exposure being in accordance with the signal to be transmitted.

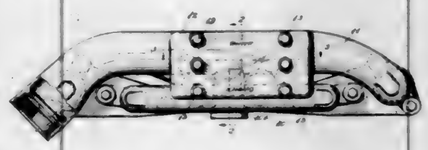
---

1,563,558. OILING SYSTEM. WILLIAM COBURN, Seattle, Wash. Filed Nov. 2, 1922. Serial No. 598,495. 7 Claims. (Cl. 184—11.)

1. A lubricating attachment for automobile engines having rotating oil-carrying members enclosed within a casing, comprising an oil receiver entering said casing, a conduit leading from said receiver to a lower portion of the engine, a standpipe connected into said conduit, a valve at the foot of said standpipe controlling the rate of flow of oil through the conduit, a stem therefor extending through the upper end of the standpipe, and gravity-controlled means for regulating the closing or opening of said valve in accordance with the inclination of the automobile.

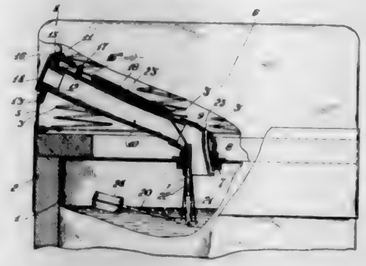
---

1,563,559. INTAKE-MANIFOLD HEATER. WALTER A. FREDERICK, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Mar. 16, 1922. Serial No. 544,081. 4 Claims. (Cl. 257—241.)



1. The combination of an intake manifold, an exhaust manifold, a member, said member being adjustably mounted on and engaging both manifolds in the different positions of adjustment of said member, and devices for securing said member in engagement with said manifolds in two relations, said member being hollow and having an opening through one wall opposite said exhaust manifold and said exhaust manifold having an opening therethrough in alignment with said opening in said member for one relation of said member to said manifolds, said opening in said exhaust manifold being closed by said member when secured to said manifolds in its other relation thereto.

1,563,560. MEANS FOR FILLING GASOLINE TANKS. WILLIAM FRIEDHOFF, Chicago, Ill. Continuation of application Serial No. 708,387, filed Apr. 23, 1924. This application filed Aug. 20, 1924. Serial No. 733,227. 3 Claims. (Cl. 220—86.)



1. Means for the purpose specified including a spring cushion open at the bottom and having flexible fabric walls surrounding the springs thereof, there being free spaces between said springs, a filler-tube for a tank disposed beneath said cushion projecting through and secured to one of said fabric walls of said cushion, and co-operative means for detachably associating the tube with respect to the tank to thereby permit the cushion and tube to be removed without detaching said tube from said cushion, said last-named means permitting rotation of the tube relatively to said tank for permitting said tube to be attached to any desired vertical wall of said cushion.

---

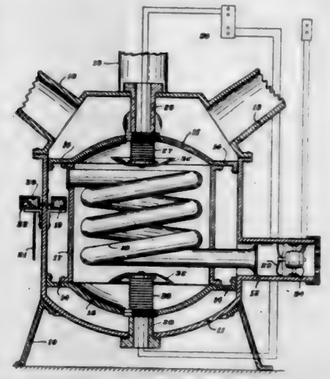
1,563,561. FLUID BRAKE. JOSEPH GASSER, Trenton, N. J.; Theresa Gasser, administratrix of said Joseph Gasser, deceased, assignor to New Jersey Twin Hoist Company, Trenton, N. J. Filed Sept. 19, 1921. Serial No. 501,536. 1 Claim. (Cl. 188—91.)

In a brake mechanism, the combination with an axle, an eccentric mounted thereon, a casing surrounding said eccentric and enclosing it, said casing having an extension forming a valve chamber, a partition extending into said valve chamber, and provided with a pocket therein, a piston operable by said eccentric and movable in said pocket, and a valve associated with said valve chamber.

---

1,563,562. ELECTRIC HEATER. JOSEPH GASSER, Trenton, N. J.; Theresa Gasser, administratrix of said Joseph Gasser, deceased, assignor to New Jersey Twin Hoist Company, Trenton, N. J. Filed Mar. 30, 1923. Serial No. 628,863. 3 Claims. (Cl. 219—39.)

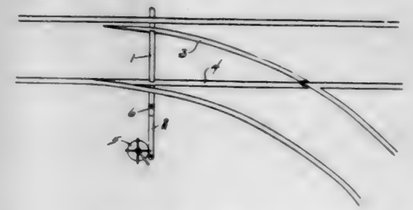
1. In a device of the class described, the combination of an outer shell, a plurality of reflectors supported therein and forming a heating chamber suspended in said outer shell, a coil of tubing in said heating chamber and communicating with the space between said chamber and outer shell at one end and with the atmosphere at



the other end, means for forcing a draft through said tubing, and an electrical heating means supported in said heating chamber.

---

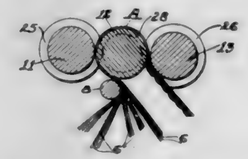
1,563,563. JOINTED SWITCH-THROWING BAR. HERMAN H. GERDES and THOMAS L. HENSLEY, Alvarado, Tex. Filed Feb. 17, 1925. Serial No. 9,771. 4 Claims. (Cl. 246—452.)



1. A switch throwing bar comprising a relatively wide flat bar having a head enlarged above and below the planes of said bar and having a curved horizontal recess of greater depth than said bar and a slot leading centrally from said recess outwardly through the end of said head and a connecting rod having a flat body movable in said slot and having a curved head occupying and movable horizontally in said recess and having shoulders projecting above and below the planes of said slot.

---

1,563,564. METHOD OF FORMING BRAID. GEORGE D. GOODSPEED, Gardner, Mass., assignor to Heywood-Wakefield Company, Gardner, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1922. Serial No. 588,864. 1 Claim. (Cl. 96—16.)

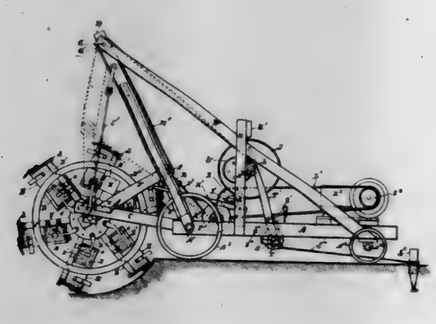


The herein described method of producing braid from tenacious or non-flaccid strands which consists in drawing off the strands at the edge of the braid at a constant and equal rate, drawing off the centermost strands at a higher rate and drawing off the intermediate

strands at varying intermediate rates dependent upon their position in the braid, any given strand being drawn off at a greater or less rate than the other strands according to which is furthermost from the center, while confining tht strands as the braid forms, thus producing a braid permanently arcuate in form, with the braid at the center of a more open character than at the edges which are firm.

---

1,563,565. DITCH-DIGGING MACHINE. WILSON T. GRIFFIN, North East, Pa. Filed Dec. 29, 1924. Serial No. 758,621. 8 Claims. (Cl. 37—94.)



1. In a machine of the class described, a series of scoops arranged to rotate around a common axis, and hoisting mechanism adapted to engage each upcoming scoop and lift it to its uppermost position.

---

1,563,566. METHOD OF MAKING PISTON RINGS. RAY GROVER, Milwaukee, Wis. Filed Feb. 27, 1922. Serial No. 539,487. 14 Claims. (Cl. 29—156.6.)

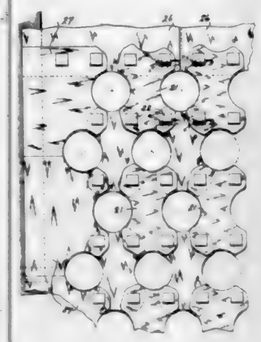
1. The process of making a piston ring having a stepped, sealed joint, said process comprising thinning a portion of such ring from the inside towards the outside, severing said ring at the thinned portion, deflecting the adjacent free ends of the ring laterally, and forming outwardly projecting tongues and an adjacent thinned portion.

3. The process of cutting peripheral marginal grooves in a split ring, said process including the warping of the abutting ends of the split ring to expose the end of the portion to be grooved, and the subsequent cutting away of the material of the exposed portion to produce a groove of the desired depth by a cutting movement along a line substantially paralleling the margin of the ring.

---

1,563,567. BAFFLE AND METHOD OF CONSTRUCTING THE SAME. ISAAC HARTER, Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Mar. 7, 1921. Serial No. 450,167. 16 Claims. (Cl. 110—98.)

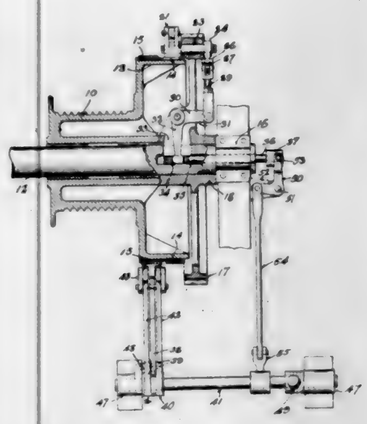
1. A cross baffle for a water tube boiler having a plurality of parallel tubes arranged in rows in staggered relation, said baffle comprising a plurality of relatively thick metallic plates substantially quadrilateral in outline and having a single circular recess in each of the four end



faces and the wall of each recess fitting closely against and around a water tube for substantially the full width of the face.

---

1,563,568. WINCH CONTROL MECHANISM. ROGER SHERMAN HOAR, South Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed June 6, 1923. Serial No. 643,640. 18 Claims. (Cl. 192—17.)

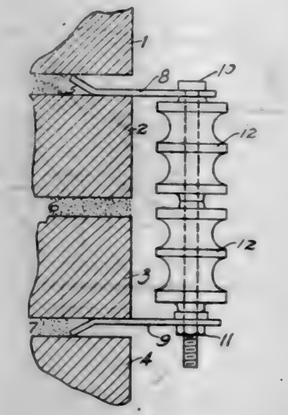


1. The combination of a rotatable member means normally operable to permit rotation of said member in one direction and to prevent rotation in the other direction, means under the control of the operator for rotating said member in the direction first named, and means for gradually releasing said first named means to permit rotation of said member in said other direction at controlled speeds.

---

1,563,569. SEAM ANCHOR. PHILIP HOGAN, St. Louis, Mo. Filed May 2, 1924. Serial No. 710,664. 8 Claims. (Cl. 72—101.)

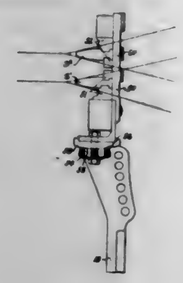
1. Suspension means for cables or the like comprising angular members each adapted to have one end inserted in a respective seam in a wall with the vertex of its angle engaging one face of the seam and said end pointing away from said face, and means engaging the outer ends of both of said members to move said outer ends relatively to each other to turn the members on the



vertices of their angles as fulcrums and thrust the inner end of each member against the face of the wall seam opposite to the face engaged by the angle vertex.

---

1,563,570. LAY FOR NARROW-WARE LOOMS. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 2, 1924. Serial No. 735,262. 8 Claims. (Cl. 139—188.)



1. In a loom, a batten structure, shuttles thereon, supporting means for said batten, and means to vary the angular adjustment of the batten structure with respect to the supporing means, the batten being movable about an axis substantially in alignment with the shuttles.

---

1,563,571. JUMPING BALLOON. WILLIAM E. HUFFMAN, CLARENCE F. ADAMS, and MATT Q. CORBETT, Dayton, Ohio. Filed Mar. 29, 1923. Serial No. 628,497. 4 Claims. (Cl. 244—7.)

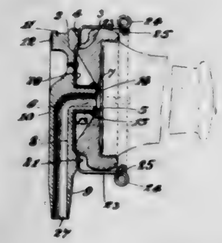
1. In combination with a balloon having a concentrating ring, a normally upright suspension shaft supported

at its upper end by said ring, a man-carrying sling suspended from said shaft, a lifting propeller rotatable

around said shaft, and means controlled by the occupant of the sling for operating said propeller.

---

1,563,572. SOUND CONTROLLER FOR TELEPHONE RECEIVERS. MILLER REESE HUTCHISON, West Orange, N. J. Filed Jan. 22, 1924. Serial No. 687,736. 8 Claims. (Cl. 179—182.)



1. An attachment for telephone receivers, consisting of a flat disc-like member for closing the outlet of the receiver and having peripheral clamps for holding it on the receiver, a projecting tube centrally arranged to register with the sound outlet of the receiver, a rubber coupling on said tube having a cylindrical portion projecting into and fitting said sound outlet.

---

1,563,573. HEAT-RESISTING ALLOY AND STRUCTURE, ETC. NOAK VICTOR HYBINETTE, Wilmington, Del. Filed June 11, 1923. Serial No. 644,800. 11 Claims. (Cl. 75—1.)

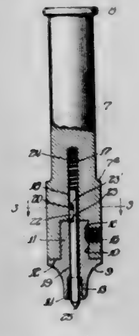
1. Heat resisting alloys containing from 10 to 20% of chromium, 30 to 40% of nickel, from 0.4 to 1.5% carbon, less than 1% silicon and the remainder for the most part iron.

---

1,563,574. HOLLOW PUNCH. JOHN JENSEN, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 4, 1923. Serial No. 660,702. 2 Claims. (Cl. 164—119.)

1. A hollow punch comprising a main body portion providing a shank the upper end of which is arranged to receive the impact of a hammer, a cutting tool formed

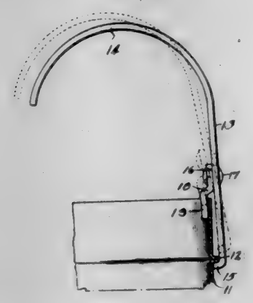
separately from the body portion and shaped to provide an annular cutting edge at its lower end, the lower end of the shank having a socket formed therein and the cutting tool having at its upper end a portion of reduced diameter forming a stem adapted snugly to fit in said socket, there being opposed annular shoulders on the shank and the tool, a screw for fastening the parts



rigidly together with said annular shoulders abutting, a centering pin, said shank and cutting tool having alined axial bores adapted to receive said pin, a spring entered in the upper end of the bore in the shank tending to force the pin downwardly, and means carried by said shank to retain said pin in the shank and to limit the downward movement thereof.

---

1,563,575. LIFTER. JOHN M. JUNG, Sioux City, Iowa, assignor of one-half to Arthur S. Hanford, Jr., Sioux City, Iowa. Filed Aug. 15, 1925. Serial No. 50,427. 2 Claims. (Cl. 294—27.)

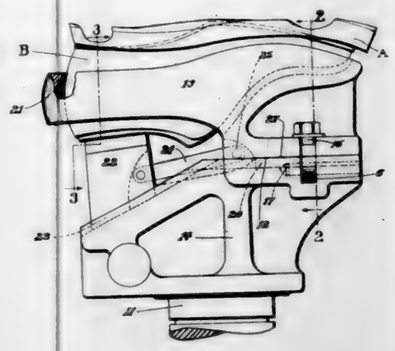


2. In a lifter to be used with a can having an annular flange spaced from its upper edge, a bar, a handle at one end of the bar, a jaw at the other end of the bar, a finger intermediate of the bar, said finger being hooked toward the jaw, the finger, jaw and handle being all positioned on the same side of the bar.

---

1,563,576. LEVELING MACHINE. FRANK BYCROFT KEALL and WILFRID THOMAS MINETT, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 15, 1922. Serial No. 561,201. 9 Claims. (Cl. 12—33.)

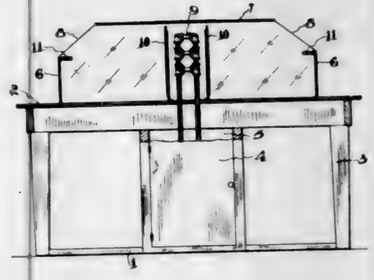
3. In a machine for leveling the bottom of a shoe, a shaped bottom-pressing form, and a work support adapted to sustain a shoe upon a last in proper position against the leveling pressure and comprising correlated means for effecting adjustments of the support so as respectively



to maintain substantially unvaried the relative longitudinal position of the shoe as a whole and the form with changing sizes of shoes.

---

1,563,577. REFRIGERATOR COUNTER. THEODORE PRINGLE LOBLAW, Toronto, Ontario, Canada, assignor to Loblaw Groceterias Co. Limited, Toronto, Canada. Filed Oct. 22, 1924. Serial No. 745,218. 2 Claims. (Cl. 62—101.)



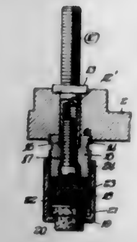
2. A refrigerator chamber having a top, bottom and walls and a rearwardly and upwardly inclined opening in the top adjacent the front; a shelf extending rearwardly from the front wall at the forward edge of the opening; and refrigerating coils located at the back of the chamber remote from the shelf, said coils extending above the level of the forward edge of the aforesaid opening, whereby warm air in the top of the chamber passes to the rear, is cooled, drops down, flows to the front and is deflected rearwardly to form a vertical eddy in the chamber.

---

1,563,578. ADJUSTABLE CONTACT MEANS. BENJAMIN F. LOLLIS, Berwyn, Ill. Filed Feb. 14, 1924. Serial No. 692,933. 7 Claims. (Cl. 200—166.)

1. In a relay device, a housing, a stud extending through a wall of said housing, said stud having a portion abutting against one side of said wall, a collar for said stud abutting against the other side of said wall,

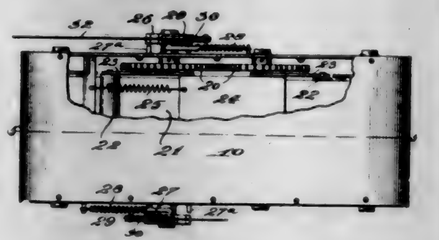
said stud and collar being non-rotatably fitted to said wall, screw-threaded means for holding said collar in intimate association with said stud and wall, a contact



holder adjustably mounted upon said collar, and a lock nut upon said collar adapted to hold said contact holder in adjusted position.

---

1,563,579. STREET OR STATION INDICATOR. ROBERT MAJOR, PIUS J. DURBIN, and FINGAL C. ORR, Los Angeles, Calif.; said Fingal C. Orr assignor to said Robert Major and said Pius J. Durbin. Filed Apr. 19, 1923. Serial No. 633,117. 2 Claims. (Cl. 40—87.)

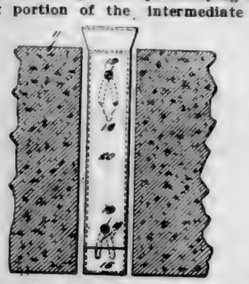


1. In a street or station indicator, a housing provided with a pair of oppositely arranged openings, a series of four drums mounted for operation within said housing, the intermediate pair of drums being geared to each other so as to rotate simultaneously, the end drums being disposed adjacent to the openings in the housing, a beltlike member having its ends secured to the members of the intermediate pair of drums with the web of said beltlike member passing around the end drums, said beltlike member bearing on both faces, the names of the streets or stations, a pair of plates journalled on the axis of each intermediate drum, a spring held member connecting the upper portions of said pair of plates and tension rollers journalled between said pairs of plates and bearing on the portions of said beltlike member between the intermediate drums and the end drums.

---

1,563,580. COLLAPSIBLE CORE. MARTIN D. MAY, Monroe, Mich. Filed May 24, 1924. Serial No. 715,683. 1 Claim. (Cl. 25—128.)

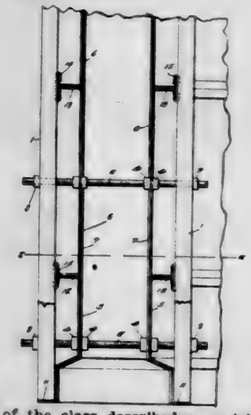
A collapsible mould core of the character described comprising a pair of side plates having their upper and lower edges bent inwardly, a cover plate having its intermediate portion lying flush with the upper inwardly bent portions of the side plate and its end portions extending downwardly in spaced parallel relation and engaging the side edges of the side plate, a plurality of substantially L-shaped end and intermediate plates secured to the inner and opposite sides of the side plate and having their free end portions slotted and registering in overlapping relation, auxiliary draw plates lying flush with the overlapping portion of the intermediate and end



plates, and draw pins received in the end portions of the cover plates and auxiliary draw plates and the slotted portions of the end and intermediate plates respectively.

---

1,563,581. CONCRETE FORM. MARTIN D. MAY, Monroe, Mich. Filed Oct. 10, 1924. Serial No. 742,890. 2 Claims. (Cl. 25—131.)



1. A form of the class described comprising uprights, sectional wall forming pieces having flanges thereon engaging the uprights, bolts passing through the uprights and said pieces, spreader nuts on the bolts engaging the pieces and lock nuts on the bolts engaging the uprights.

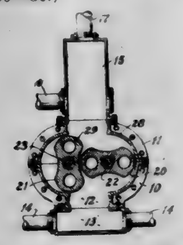
---

1,563,582. SILENT-READING STORY-ILLUSTRATING ARRANGEMENT. JAMES E. MCDADE, Chicago, Ill. Filed Feb. 9, 1924. Serial No. 691,678. 10 Claims. (Cl. 35—12.)

1. In a silent reading story illustrating arrangement the combination with a written or printed story relating to a range of activity having certain places thereon and a plurality of objects to be located at said respective

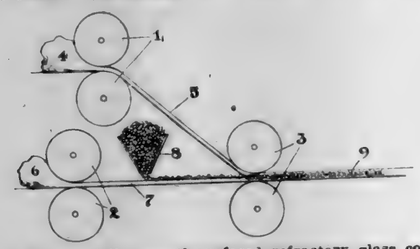
places, of a base structure representing said range and a plurality of members representing the respective objects named in the story, said base structure being so formed that said members may be arranged and supported thereon in the relationship stated in the story.

1,563,583. VACUUM PUMP. WILLIAM H. MILLSPAUGH, Sandusky, Ohio, assignor to The Paper & Textile Machinery Company, Sandusky, Ohio, a Corporation of Ohio. Filed June 28, 1923. Serial No. 648,218. 6 Claims. (Cl. 230—30.)



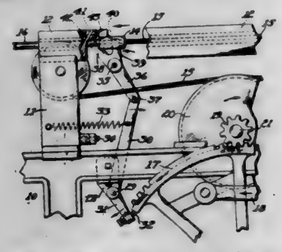
1. A cycloidal vacuum pump comprising a casing and impellers therein, said impellers and casing having cast iron, coacting surfaces, the skin of said coacting surfaces being undisturbed.

1,563,584. REFRACTORY GLASS PLATE OR ARTICLES AND METHOD OF PRODUCING THE SAME. THOMAS A. O'SHAUGHNESSY, Chicago, Ill. Filed Apr. 27, 1921, Serial No. 465,051. Renewed Oct. 28, 1925. 4 Claims. (Cl. 49—82.)



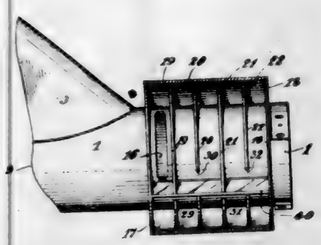
1. Substantially smooth-surfaced refractory glass comprising a rolled sheet composed of originally separate layers of glass and interposed granular glass.

1,563,585. NEEDLE-POSITIONING MEANS FOR AXMINSTER LOOMS. ARTHUR P. PAINE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 9, 1925. Serial No. 29,203. 8 Claims. (Cl. 139—123.)



1. In a needle motion for Axminster looms comprising a needle and a block movable therewith, means to check the motion of the needle as the latter nears the end of its stroke and means to thereafter positively position the needle.

1,563,586. SILENCER FOR TELEPHONES AND THE LIKE. ALEXANDER N. PIERMAN, Newark, and NATHAN A. CURTISS, Ramsey, N. J., assignors to Miller Reese Hutchison, New York, N. Y. Filed Jan. 22, 1924. Serial No. 687,693. 12 Claims. (Cl. 179—188.)

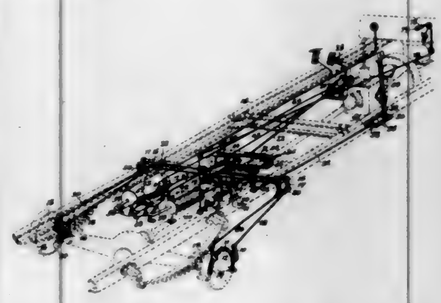


1. A tubular conduit having a vent for air pressures and sound waves and, in receiving relation to the vent, silencer passages including radially extending partitions arranged edgewise on the exterior of said conduit, some of said partitions being circumferential and others longitudinal.

1,563,587. METHOD OF PREPARING CATALYTIC MATERIAL. MURRAY RANEY, Chattanooga, Tenn. Filed Sept. 20, 1924. Serial No. 738,952. 5 Claims. (Cl. 23—236.)

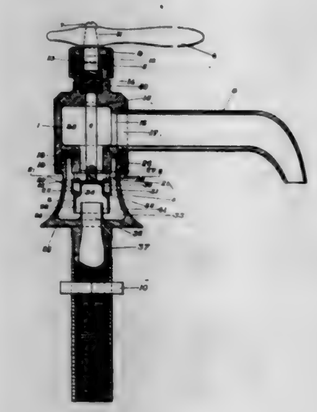
5. A method of preparing catalytic nickel which includes the step of alloying 50% nickel with 50% silicon, pulverizing the resultant alloy, treating the same with caustic soda until the silicon has been converted into sodium silicate, and removing the finely divided catalytic material from the solution.

1,563,588. BRAKE MECHANISM FOR AUTOMOBILES. JOHN H. RICHARD, Buffalo, N. Y., assignor, by direct and mesne assignments, to Richards Airbrake Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed Dec. 16, 1922. Serial No. 607,412. 24 Claims. (Cl. 188—106.)



1. A brake mechanism for automobiles comprising a shifting member for controlling a brake member adapted to engage a part operatively connected with a wheel of the automobile, a manually operated lever having a slip connection with said shifting member, which slip connection compels said shifting member to move in the operative direction with said lever when the latter is operated but permits said shifting member to move in the operative direction independently of said lever, an air operated motor adapted to actuate said shifting member independently of said lever and controlling means whereby said lever during the first part of its forward movement will cause said air motor to apply the brake member by power and during a subsequent part of the forward movement of said lever the latter causes a manual application of said brake member.

1,563,589. FAUCET. JAMES C. ROSS, Seattle, Wash. Filed Mar. 5, 1925. Serial No. 13,215. 3 Claims. (Cl. 251—143.)

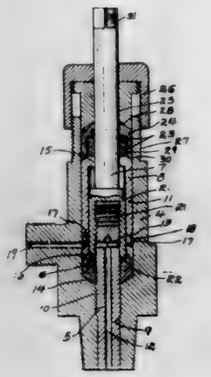


1. In a faucet, the combination with the body having a water receiving chamber provided with water inlet and outlet openings respectively at the lower and upper portions of the chamber, a valve seat at said outlet opening, a cylinder rigid with the body, said cylinder being of less diameter than the chamber and in spaced relation from both of said openings to afford therebetween a communicating passage exteriorly of the cylinder, a valve for said seat, a hollow piston rigid with the valve and operating within the cylinder for regulating the closing movement of the valve, and manually actuated means for effecting an opening movement of the valve.

3. In a faucet, a body comprising two chambered members separably connected together one above the other, the lower of said members having a water-inlet nozzle extending into its chamber, the upper member having an extension depending into the chamber of the lower member and having a cylinder bore at its lower extremity, communicative connections between the body chambers said connections including a passage extending downwardly from the upper chamber to a valve seat and thence to the upper portion of the lower chamber, a piston acting within said bore and having an extension adapted to serve as a valve with respect to said seat, a stem extending from the valve through said passage and the upper chamber of the body, said piston having in its underside a cavity for the impact of water from said nozzle to effect the elevation of the piston and the valve into closing relation with said seat, and manually actuated means engaging against the end of the valve stem for effecting the opening movement of the valve with respect to the seat.

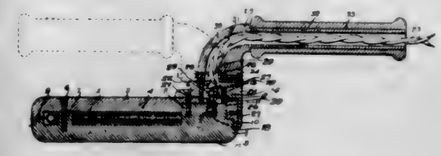
1,563,590. VALVE. HERMAN W. ROTTEL, Milwaukee, Wis. Filed Nov. 2, 1923. Serial No. 672,308. 12 Claims. (Cl. 251—167.)

6. In a valve, the combination of a casing having a valve chamber, a conduit having an exteriorly threaded portion extending into said chamber, an extrudible metal valve seat surrounding said conduit below its outlet, a valve member in said chamber having a head fitting over and engageable with said threaded portion of said conduit and turnable thereon into engagement with said seat, a sleeve slidably mounted in said chamber and having



wedging engagement with said extrudible metal tending when moved to force it toward said conduit and thereby raise the level of said seat, and means for operating said sleeve.

1,563,591. ELECTRIC IRON. ALBERTINE RUELLAND, New York, N. Y. Filed Apr. 15, 1921. Serial No. 461,598. 3 Claims. (Cl. 68—26.)

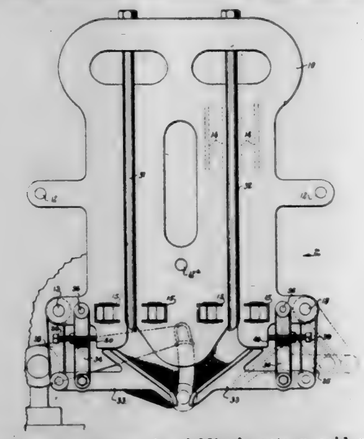


1. An electric iron which comprises a body portion, a heating element within said body portion, a hollow boss disposed on the rear upper surface of the body portion, terminals for the heating element, said element disposed within the body portion substantially beneath the boss, a hollow handle provided with an elbow engaging the boss, circuit wires extending through the handle and engaging with the terminals, and means for adjusting the handle in a plurality of positions with respect to the body portion.

1,563,592. WEFT-CARRIER MAGAZINE. EPPA H. RYON, Pasadena, Calif., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Original application filed July 18, 1921, Serial No. 485,420. Divided and this application filed Apr. 28, 1924. Serial No. 709,410. 2 Claims. (Cl. 139—251.)

1. In a magazine, a support for the tip of a weft carrier, means to position said support and to guide said sup-

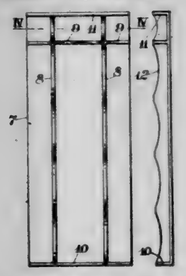
port outward and upward to successive parallel positions and to prevent displacement of said support from



parallelism, and means to yieldingly return said support to operative position.

---

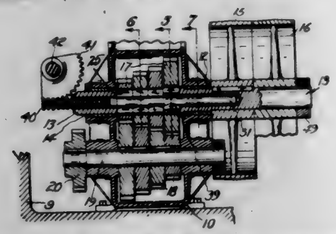
1,563,593. BUILDING SLAB. CLINTON W. SCHALL, Columbus, Ohio. Filed Apr. 17, 1924. Serial No. 707,085. 3 Claims. (Cl. 72—39.)



1. A building slab of plastic material including integrally an outer wall member provided with an inwardly extending studding member, a horizontal flange projecting inward from the upper end of said wall, and a horizontal beam-supporting cross web spaced from said end flange and intersecting the studding member.

---

1,563,594. SPEED-CHANGE GEARING. FRANK H. SLEEPER, Worcester, Mass., assignor to Sleeper & Hartley, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1922. Serial No. 545,842. 2 Claims. (Cl. 74—59.)



1. In a speed changing device, the combination of a driving and a driven shaft, two sets of gears on said shafts meshing constantly with each other in pairs, keys in said gears, a longitudinal reciprocable rod mounted in said shaft, a spring in each gear for operating said keys, and a flat plate dove-tailed into the shaft longitudinally on it behind the said springs to hold them in place, said plate being slidable into position along the shaft.

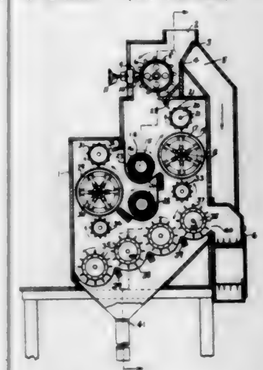
---

1,563,595. COKING PROCESS. FREDERICK W. SPARR, Jr., Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 18, 1919. Serial No. 311,810. 16 Claims. (Cl. 202—8.)

1. In a process of producing low ash coke from liquefiable bituminous materials: heating a proportion of such material to expel a part of the volatile matter and thereby forming a semi-coke; mixing such semi-coke with a proportion of liquefiable bituminous material; and subjecting the mixture thus formed to coking heat; substantially as specified.

---

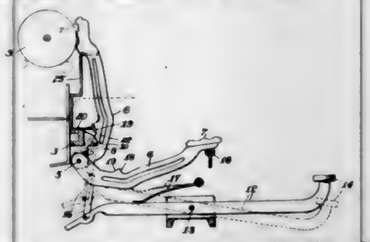
1,563,596. COTTON CLEANER. JOHN ARNOLD STREUN, Sherman, Tex. Filed Apr. 21, 1925. Serial No. 24,744. 9 Claims. (Cl. 19—36.)



2. In a cotton cleaner, a housing, a breaker roll adjacent one side of said housing, a saw cylinder adapted to receive cotton from said breaker roll, means to feed said cotton longitudinally of said cylinder, a knocker roll rotatable adjacent said cylinder to prevent the passage of hulls, a stationary baffle adjacent said knocker roll, means to remove lint from said cylinder, a foraminated screen below said cylinder, and picker cylinders rotatable to brush said cotton over said screen and discharge it from said housing.

---

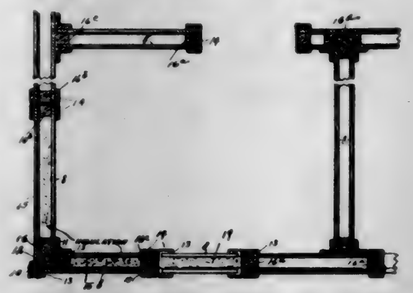
1,563,597. TYPEWRITING MACHINE. RICHARD W. UHLIG, Newark, N. J., assignor to Allen Typewriter Manufacturing Company, Allentown, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1923. Serial No. 635,588. 6 Claims. (Cl. 197—183.)



1. In a typewriting machine, the combination with a platen and fulcrumed typebars adapted to be swung to printing position relative to the platen, of a comb mounted in fixed position between the fulcrum support of the typebars and platen with the teeth of the comb arranged in line with the movement of the typebars adapted to be engaged by the typebars and limit the movement thereof toward the platen, and said teeth adapted to be adjusted in a direction with the movement of the typebars to project to a greater or less extent into the path of movement of the typebars for the purpose specified.

---

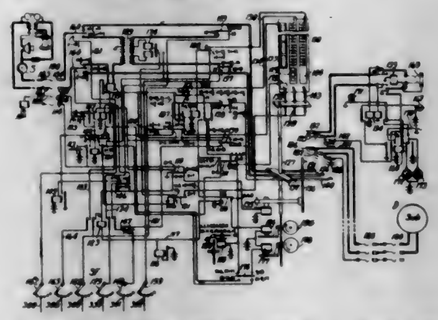
1,563,598. BUILDING CONSTRUCTION. DELBERT G. WAKEMAN, Mooresville, Ind. Filed Apr. 13, 1925. Serial No. 22,641. 8 Claims. (Cl. 72—16.)



1. A building wall comprising an outer and an inner facing of boards, vertical metal strips contacting the outer surfaces of the facing boards and holding them in vertical alinement, and concrete columns at and between the ends of the boards adhesively united with the boards at all contacts therewith and spacing the two facings apart and extending from top to bottom of the wall.

---

1,563,599. TELEPHONE-EXCHANGE SYSTEM. JAMES N. WALTERS, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 19, 1923. Serial No. 663,663. 8 Claims. (Cl. 179—27.)

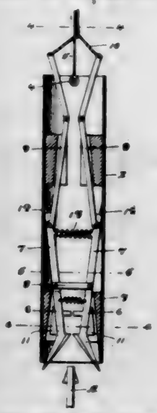


1. In a telephone exchange system, a calling subscriber's line, a selector switch for extending a connection from said line, a register sender for controlling said switch, means associated with said calling line for setting the registers in said sender, a time measuring device and means controlled by said time measuring device to set up a special registration on said sender.

---

1,563,600. WELL DRILL AND TOOL. JOHN R. WALTON, Harvey, Ill. Filed Nov. 27, 1923. Serial No. 677,288. 2 Claims. (Cl. 294—86.)

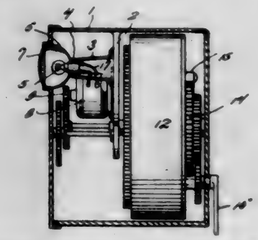
1. A device of the class described comprising a casing having wedges therein, jaw members located in the casing, stems connected with the members and having wedges thereon for cooperating with the first mentioned wedges, links connected with the stems, cables connected with the links and with the casing, means for normally



holding the parts with the jaws in open position and means actuated by the object to be recovered for rendering the first mentioned means inactive.

---

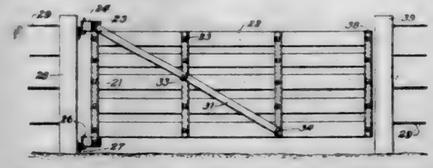
1,563,601. FLASH LIGHT. HARRY G. WATSON, Fairbanks, Territory of Alaska. Filed June 7, 1924, Serial No. 718,586. Renewed Aug. 26, 1925. 1 Claim. (Cl. 240—10.5.)



In combination, a casing, a hanger depending from an intermediate portion of the top of the casing, shafts journaled between the inner end of the hanger and one end of the casing, a bracket extending laterally of the intermediate portion of the hanger and terminating in a socket, an electric bulb in the socket, wires electrically connecting the bulb and the generator, said generator being mounted on the hanger between the shafts and the bracket, a pinion for operating the generator, a train of gears associated with the shaft and one meshing with the pinion, and a motor in the casing on the opposite side of the hanger than is disposed the bracket, and one of said shafts operatively connected with the motor.

---

1,563,602. FARM GATE. WILLIAM A. WEBSTER, Galesburg, Ill. Filed Aug. 24, 1923. Serial No. 659,086. 4 Claims. (Cl. 256—73.)

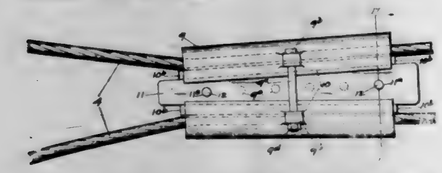


2. A farm gate, comprising opposed uprights, cross boards secured between said uprights, and a separate hinge member secured between end uprights, said end

uprights being of channel-iron formation and said hinge member and cross boards being grooved to receive the wall portions thereof.

---

1,563,603. GUY-LINE GRIP. MAXWELL A. WEST, Portland, Oreg. Filed Jan. 3, 1925. Serial No. 340. 8 Claims. (Cl. 24—136.)



1. In a guy line clamping device, the combination of, a gripping member of convenient length having its sides folded, with opposing interior, longitudinal channels tapering from one end to the opposite end, the edges of said sides being spaced conveniently apart to allow the introduction between them of opposing parts of a guy line of common type and reception of same in the said channels in slidable position, and reinforcing means on the exterior surfaces of the folded parts arranged to prevent them from spreading.

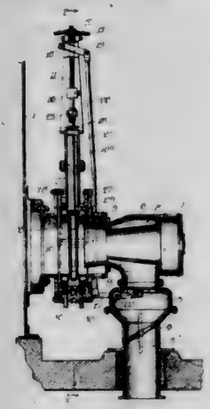
---

1,563,604. CLEANING POWDER AND DISINFECTANT. LAWRENCE E. WHITLOCK, Le Roy, N. Y. Filed Sept. 27, 1924. Serial No. 740,239. 4 Claims. (Cl. 87—5.)

1. A disinfecting compound, composed of nitre-cake and vegetable ivory, ground and mixed in suitable proportions to prevent setting of the nitre-cake and leave it free to dissolve for disinfecting purposes.

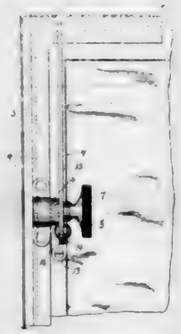
---

1,563,605. VALVE FOR HOT-BLAST STOVES. FREDERICK H. WILLCOX and JOHN C. HAYES, Jr., Chicago, Ill, assignors to Freyn, Brassert & Company, Chicago, Ill., a Corporation of Maine. Filed July 12, 1923. Serial No. 651,099. 4 Claims. (Cl. 277—31.)



1. In combination, a hot blast stove having a port for the admission of a combustible mixture, a valve seat operatively associated with said port, means for directing a combustible mixture through said port, a valve for said port adapted to have a reciprocating movement, said valve being adapted to seat upon said valve seat for closing communication between said stove and said combustible mixture directing means.

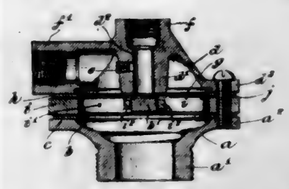
1,563,606. WINDSHIELD. GORDON WILLIAMS, Mount Carmel, Conn. Filed July 6, 1925. Serial No. 41,519. 2 Claims. (Cl. 296—84.)



1. In a wind-shield, the combination with the enclosing-frame, of a movable-member hinged thereto, a link pivotally connected with the movable-member, said link provided at its lower end with an outwardly-projecting finger through which the link is hinged, said link formed with a longitudinal slot provided at its lower end with an inwardly-offset recess, a stud mounted on the frame and extending through the slot in the said link.

---

1,563,607. DIAPHRAGM PRESSURE REGULATOR FOR GAS HEATERS. AARON H. WOLFF, New York, N. Y. Filed Feb. 6, 1924. Serial No. 691,081. 7 Claims. (Cl. 236—26.)



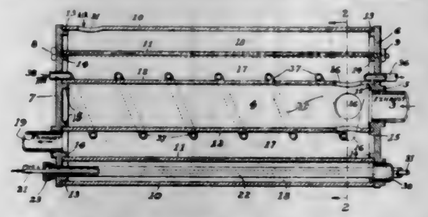
1. A diaphragm pressure regulator for gas heaters embodying therein a recessed casing adapted to be placed in communication with the boiler space of a heater, a diaphragm closing the recess of said casing, a second dished casing forming a gas chamber adapted to be placed in communication with a source of gas supply and with the burners of a heater, a nipple carried thereby and extending into said chamber and having its end finished to form a valve seat, and a reduced side orifice communicating with said recess, a flexible diaphragm closing said last named recess and positioned in close proximity to the valve seat formed upon said nipple, said diaphragms being parallel in relation to each other, a spacer between said diaphragms in communication with atmosphere, and means adjacent said first named diaphragm and in engaging relation with said other diaphragm, said diaphragm co-operating with said nipple having the surface thereof presented toward said nipple coated with a metallic substance immune to the action of sulphur or other acids or substances contained in, or carried by, gas flowing through said nipple into said recess.

---

1,563,608. AIR AND FUEL HEATER FOR INTERNAL-COMBUSTION ENGINES. JESSE N. WOOD, Venice, Ill. Filed Sept. 12, 1921. Serial No. 500,172. 2 Claims. (Cl. 257—241.)

1. A heater for the air and for the fuel supplied to an internal combustion engine, comprising a plurality

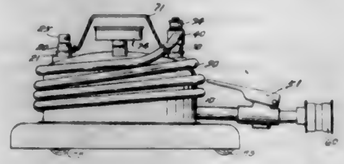
of concentric tubes connected together at their ends by front and rear heads, the central tube having openings at the forward end to form communication with the chamber surrounding said central tube, an exhaust pipe from an internal combustion chamber communicating with the central tube adjacent the openings therein, the rear head having an exhaust pipe which communicates with the chamber adjacent and surrounding the



central tube, an insulated liquid fuel supply pipe extending through the front and rear heads and the outermost chamber surrounding the middle chamber containing the exhaust gases from the exhaust pipe, and a hot air outlet pipe communicating with the said outermost chamber, the outer tube having an air inlet opening near the rear and top portion for admitting air to be heated therein.

---

1,563,609. LUBRICATING APPARATUS. OSCAR ZERK, now by judicial change of name Oscar Ulysses Zerk, Cleveland, Ohio, assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed Mar. 14, 1921. Serial No. 452,125. 8 Claims. (Cl. 221—74.)



6. Lubricant dispensing means comprising a container adapted to withstand internal pressure, means for filling said tank partly with liquid and partly with expansive pressure fluid, a flexible conductor, and a support for said container projecting annularly to form a shelf to receive said flexible conductor when coiled.

7. Lubricant dispensing means comprising a container with a dome shaped top, an inlet and an outlet in said top on opposite sides of the center thereof, a pressure gauge and a contents gauge in said top on opposite sides of the center thereof and on a line perpendicular to a line through said inlet and outlet, and a bail member fastened at its ends to said inlet and outlet and extending across the center between said gauges.

8. Lubricant dispensing means comprising a container with a dome shaped top, an inlet and an outlet in said top on opposite sides of the center thereof, and a bail member fastened at its ends to said inlet and outlet and extending across the center.

---

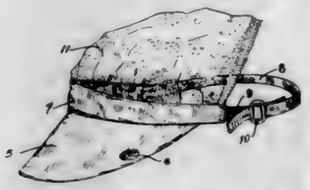
1,563,610. WEATHER STRIP. MILTON H. ZIEGLER, Akron, Ohio. Filed Oct. 15, 1923. Serial No. 668,735. 1 Claim. (Cl. 20—67.)

In a weather strip, an upper leaf having a depending longitudinal flange on the outer lower corner thereof, hinges, a flat lower leaf having its upper portion attached to the lower portion of the upper leaf by said hinges so that the upper portion of the lower leaf is normally in spaced relation to and disposed inwardly of said longitudinal flange and whereby the lower leaf may swing vertically relative to the upper leaf, said flange of the upper leaf depending below the upper edge of said lower leaf, and spring means to normally yieldingly maintain the leaves in an angular relation to each other with the lower leaf inclined outwardly, said spring means embodying a piece of resilient wire with a straight inter-

mediate major portion extending obliquely across the inner surfaces of the leaves, said leaves having flat inner surfaces and having oblique co-extensive grooves formed therein in which the straight major portion of the spring is disposed, and means securing said spring to said leaves.

---

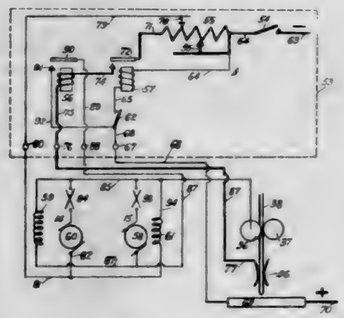
1,563,611. EYESHADE. MAX COHEN, Denver, Colo. Filed Jan. 8, 1925. Serial No. 1,197. 1 Claim. (Cl. 2—12.)



An eye shade comprising a visor, a band connected therewith and adapted to extend around the back of the head, said band being extensible to fit heads of varying size, and a covering for the head connected with the visor, extending rearwardly therefrom over the top of the head and terminating in an edge a short distance above the extensible band, the ends of said edge being at the opposite sides of the head.

---

1,563,612. ELECTRIC WELDING APPARATUS. ARTHUR EDWARD CUTLER and PHILIP ALLAN MARSDEN, Newcastle, New South Wales, Australia. Filed July 24, 1923. Serial No. 653,590. 3 Claims. (Cl. 219—8.)



1. In electric arc welding apparatus a pair of electric motors, the field of one and the armature of the other being connected in parallel across the arc and the armature of the first and the field of the second being also connected in parallel and having impressed thereon a

voltage varying directly to any variation in the value of the welding current, means for regulating said voltage, and differential gear actuating electrode feeding rollers, the main elements of said differential gear being respectively driven in opposite directions by said motors.

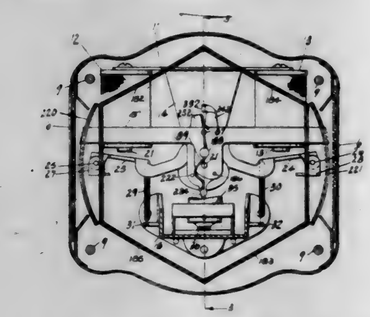
---

1,563,613. METHOD OF SEPARATING SOLUBLE SALTS. CLINTON E. DOLBEAR, San Francisco, Calif. Filed Dec. 17, 1923. Serial No. 681,296. 3 Claims. (Cl. 23—40.)

1. The process of separating sodium chlorid, sodium carbonate and sodium sulfate from each other comprising leaching the mixed salts with a solution of sodium chlorid; separating the undissolved residue from the solution; treating the solution with carbon dioxid; separating the precipitated sodium bicarbonate therefrom; treating the solution with ammonia; separating the precipitated sodium sulphate therefrom; distilling off the ammonia or its equivalent, and using the final liquor to dissolve more of the mixed salts in cycle as before.

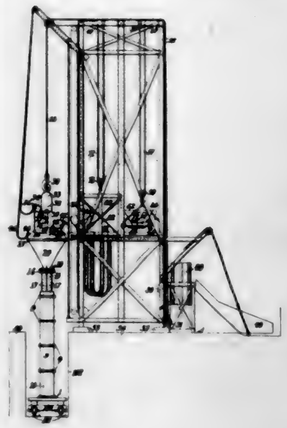
---

1,563,614. SIGNAL DEVICE. ANDREW EKMAN, Grand Rapids, Mich. Filed Jan. 20, 1922. Serial No. 530,511. 7 Claims. (Cl. 177—339.)



1. In an automobile signal device, the combination of a suitable casing with a window front and rear, a supporting frame at one end thereof, a supporting arm secured to the said frame and disposed longitudinally within the said casing, a translucent signal drum with "Stop" signs front and rear and with direction arrows on the upper and lower parts, cross bars at each end thereof and pivotal supports on the said frame and arm, a projecting actuating and stop pin on the inner cross bar, an electric lamp disposed upon the supporting arm within the said drum, a safety sign with display surface front and rear with end cross arms disposed on said pivots, the inner end arm having an arc-shaped slot embracing the said projecting pin on the drum cross arm, a projecting actuating pin on said safety cross arm, a spring holding the said drum and safety sign yieldingly together in the initial position with the stop pin at one end of said slot, lever actuators fulcrumed at opposite sides of the said frame, with springs to hold the same yieldingly in position and with hook portions having clearance and one side of each disposed to rest on said pins to hold the sign yieldingly in initial safety position and with engaging portions on the opposite side of each to engage the said pins and actuate the same in one direction only, each engaging portion being spaced to give said clearance and permit the movement of said pins when not acted upon by its actuator, a stop latch pivoted to the said frame with pin and slot connections to one of said actuators and with its stop portion adapted to engage the opposite actuator with its hook engaged on its pin when both are actuated simultaneously, and means for actuating either or both of said actuator arms.

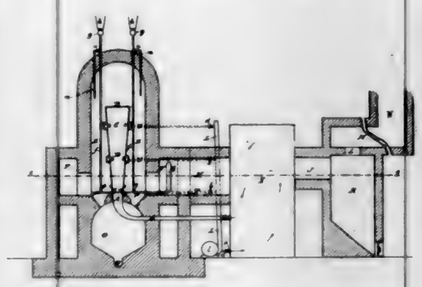
1,563,615. CONCRETE-MOLDING APPARATUS. RUSSELL SCOTT ELLIS, Philadelphia, Pa. Filed Feb. 25, 1925. Serial No. 11,419. 20 Claims. (Cl. 25—37.)



20. In concrete molding apparatus, the combination with a mold; of means arranged to alternately subject the contents of said mold to fluid pressure and a partial vacuum including a conduit extending from said mold, a source of fluid pressure and exhausting means, and valve means movable to control communication between said mold, said source and said exhausting means.

---

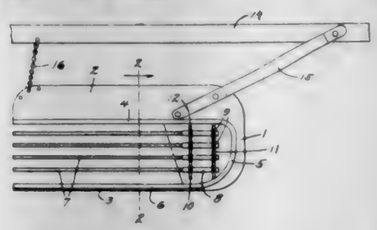
1,563,616. PROCESS AND APPARATUS FOR ROASTING ORES. ADOLPHE DENIS HENRI LÉON FASSOTTE, Lommel Usines, Belgium, assignor to Compagnie des Métaux Overpelt-Lommel, Société Anonyme, Overpelt-near-Neerpelt, Belgium. Filed Jan. 16, 1924. Serial No. 686,553. 4 Claims. (Cl. 263—21.)



1. A process of roasting ores, of the kind wherein the required temperature is derived from the reaction itself and the gaseous current with the ore-particles in suspension is caused to travel first upwardly in a central column and then downwardly in an annular column surrounding said central column, consisting in pre-heating the ore-particle by causing same to absorb heat developed in the annular column, in pre-heating the major portion of the necessary air by means of heat recovered from the spent gases, in feeding the particles together with a small quantity of such pre-heated air horizontally to the base of the central column and causing the main portion of said pre-heated air to meet the mixture at right angles, in bringing about a gradual reduction of the velocity of the gaseous current during its upward travel, in injecting the non-preheated remainder of the necessary air in successive fractions at different points of the height of the central column and from the periphery towards the centre thereof, and finally in removing from the gaseous current after its subsequent downward travel the roasted ore-particles contained therein, substantially as described.

---

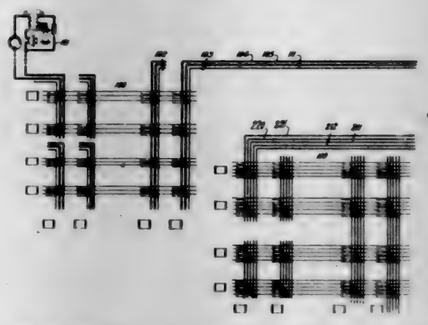
1,563,617. CULTIVATOR FENDER. EDWARD F. FONES, Geneseo, Ill. Filed Nov. 10, 1924. Serial No. 748,847. 1 Claim. (Cl. 97—188.)



A device of the class described, comprising a body portion, formed of sheet metal, provided with a pair of transverse slots; a guard plate projected rearwardly from the upper part of said body member; a runner blade projected rearwardly from the lower edge thereof and adapted to operate in the ground, to act as a guide for the fender; a series of rods provided with fastening means secured in said slots, so as to be capable of adjustment therein; and a reinforcement strip, extending along the lower edge of said guard plate, transversely of said body member, and longitudinally of said runner blade.

---

1,563,618. TELEPHONE-EXCHANGE SYSTEM. EARL S. GIBSON, Ridgewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1923. Serial No. 640,648. 8 Claims. (Cl. 179—27.)

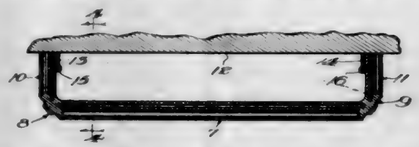


1. The combination in a telephone system of a designation recording mechanism, impulse responsive means for setting up a record on said mechanism, a second recording mechanism, and a device consisting of relays for originating and sending code impulses to transfer the record from said first mechanism to said mechanism.

---

1,563,619. WINDOW CORNICE AND THE LIKE. WILLIAM GOODROW, Chicago, Ill. Filed July 10, 1925. Serial No. 42,716. 4 Claims. (Cl. 156—13.)

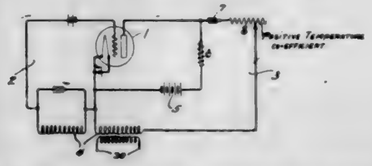
1. As a new article of manufacture, an ornamented frame comprising running strips together with corner or junction blocks located between the adjoining ends of said running strips and establishing connection between them, the exposed faces of all of said parts being suitably ornamented, each running strip comprising a pair of companion sections set together and secured in suitable fashion, said companion sections having companion semi-circular channels establishing circular perforations or holes extending throughout the entire length of the strip, the holes in each strip being parallel to each other throughout their length, and the holes in all of the



strips being equally spaced with respect to each other, the ends of the strips being cut at right angles to the holes aforesaid and the corner or junction blocks being seated squarely against said ends, together with dowel pins on the abutting faces of the different corner and junction blocks reaching outwardly therefrom at right angles, and spaced at the same spacing as the perforations of the strips aforesaid, substantially as described.

---

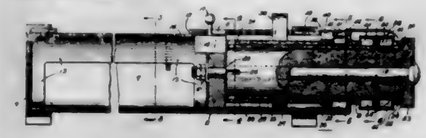
1,563,620. OSCILLATION GENERATOR. WILLIAM S. GORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1921. Serial No. 466,660. 22 Claims. (Cl. 250—36.)



8. An oscillation generator comprising an electric discharge device having coupled input and output circuits including means to predetermine the amplitude of the oscillating current produced by the generator, and also automatically operative to substantially compensate variations in the amplitude of said current.

---

1,563,621. COMBINATION LOCK FOR PEN AND PENCIL SAFES. GEORGE W. GREEN, Beaumont, Calif. Filed Sept. 1, 1923. Serial No. 660,659. 10 Claims. (Cl. 70—53.)



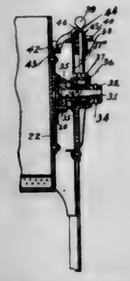
1. A device of the character described comprising; a longitudinally slidable locking bar; concentric locking members in frictional engagement and having notches adapted to receive said bar; external means for rotating one of the members for thereby bringing the notches of any of said members into registry with said bar; and clutch means for severally holding said members so registered.

---

1,563,622. COMBINED CLUTCH AND LATCH MECHANISM. GEORGE HAAG, Peoria, Ill. Filed Apr. 14, 1924. Serial No. 706,286. 3 Claims. (Cl. 192—148.)

1. In a device of the class described, in combination, a reversibly moving tub member, power means for operating said tub, clutch mechanism providing optional en-

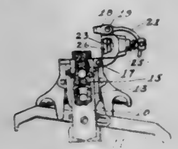
gagement of the tub and power mechanism, a hand lever adapted to operate said clutch mechanism and a latch member pivoted on said hand lever and adapted to locate



the tub portion in a fixed position when said hand lever is in a non-clutched position as well as lock the hand lever against accidental movement.

---

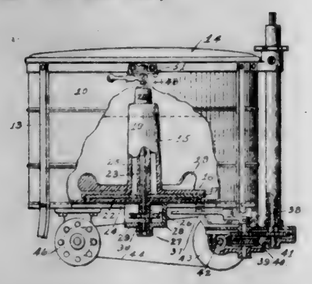
1,563,623. WRINGER. ALBERT R. HAAG, Peoria, Ill. Filed July 25, 1924. Serial No. 728,078. 5 Claims. (Cl. 68—32.)



1. A wringer having in combination, a main frame, a top frame member hinged to the main frame and swingable laterally thereof, a pair of compression rollers mounted in said main frame, vertically movable bearings for the upper of said rollers, means for applying tension to said upper roller, the said tension applying means including a spring bar mounted in the top frame member and having the ends thereof in line with the movable bearings of the upper roller, whereby upward movement of said bearings produced by separation of the rollers is resisted by said spring bar when the top frame member is in operative position, and means on the upper frame member for limiting the impinging action of the spring bar upon the movable bearings when the compression rollers are in contact with each other.

---

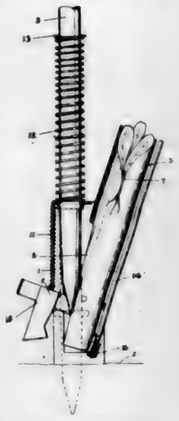
1,563,624. WASHING MACHINE. ALBERT R. HAAG, Peoria, Ill. Filed July 25, 1924. Serial No. 728,079. 13 Claims. (Cl. 259—101.)



1. In a washing machine, in combination, a clothes container, an agitator therein, a member extending upwardly from the agitator member to a point above the normal water level therein fashioned at its upper end to provide a driving connection for agitator operating means, a driving member for said agitator extending upwardly through the bottom of the container and fashioned at its upper end for detachable driving connection with the extension from the agitator member, means for reciprocating the agitator driving member, and a supporting and guard element interposed between the agitator and the bottom of the tub to prevent the entrance of extraneous matter beneath the agitator.

---

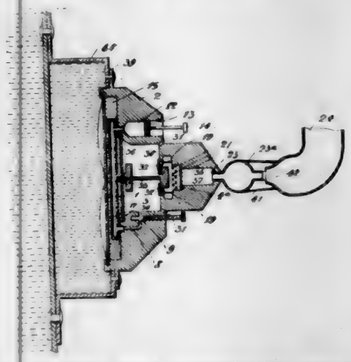
1,563,625. TRANSPLANTER. LANDO C. HARRY, Casco Township, Allegan County, Mich. Filed June 17, 1922. Serial No. 568,941. 1 Claim. (Cl. 111—4.)



In a transplanter, the combination of a base frame adapted to rest upon the ground, a dibble mounted to reciprocate on said base and constituting a handle, a return spring for said dibble, a plant chute mounted on said base, a presser foot pivotally mounted on said base and projecting to be actuated by the foot of the operator, and a return spring for said presser foot.

---

1,563,626. SOUND-SIGNALING DEVICE. HEINRICH HECHT, WILHELM RUDOLPH, and HUGO LICHTE, Kiel, and WALTER HAHNEMANN, Kitzberg, near Kiel, Prussia, Germany, assignors to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Jan. 5, 1921. Serial No. 435,292. 32 Claims. (Cl. 84—0.5.)



30. In subaqueous sound communication apparatus, a plurality of vibratory bodies, a chamber containing gas for coupling said bodies together by gas pressure, and means for relieving said pressure at certain frequencies of vibration.

1,563,627. SYRINGE AMPUL, PISTON, AND PISTON-PACKING CONSTRUCTION. GEORGE N. HEIN, San Francisco, Calif. Filed Dec. 23, 1924. Serial No. 757,657. 4 Claims. (Cl. 128—218.)

1. A piston for hypodermic syringes including an elongated phial provided with an outlet at one end, yieldable closure therefor fitted over the end thereof and extending downwardly over the sides of the phial, said closure having a flap portion for frictionally engaging the syringe barrel wall and adapted for movement outwardly to admit of the discharge of the phial contents.

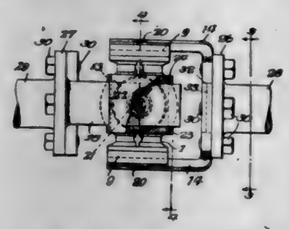
---

1,563,628. DRY CELL. WILLIAM F. HENDRY, Ossining, N. Y., assignor to The Manhattan Electrical Supply Company, New York, N. Y., a Corporation of Massachusetts. Filed May 26, 1923. Serial No. 641,696. 4 Claims. (Cl. 136—126.)

1. In a dry cell, a cylindrical casing of zinc held together by one edge being folded over the opposite edge of a sheet of zinc, and an insulating coating covering the inside edge of the zinc throughout its length.

---

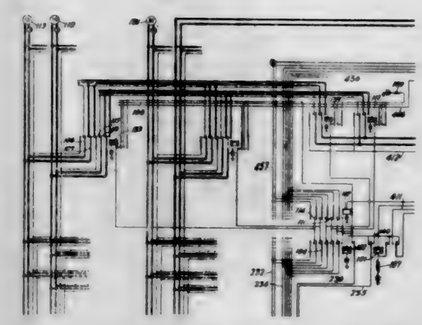
1,563,629. UNIVERSAL JOINT. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Dec. 19, 1919, Serial No. 345,969. Renewed July 2, 1925. 23 Claims. (Cl. 64—102.)



1. In a universal joint, the combination of a hollow body to form a lubricating chamber, forks having trunnion bearings on said body, crossed members arranged within said body and extending into said trunnion bearings, and screws inserted in the ends of said members, at least one of said forks being provided with openings for the heads of two of said screws, so that these two screws are insertable and removable through the prongs of this fork, and the four screws constituting the means for binding the crossed members and the trunnion bearings in assembled relation.

---

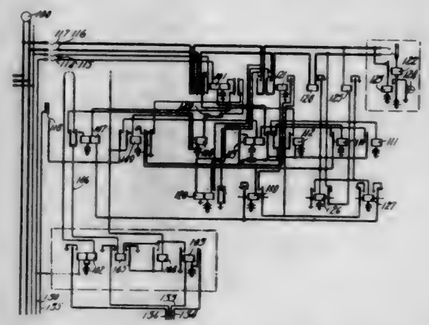
1,563,630. TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1920. Serial No. 433,751. 12 Claims. (Cl. 179—27.)



1. In a telephone system, a direction switch for controlling the establishment of connections to different lines, a pointer for said switch, and a plurality of points with which said pointer cooperates, each of said points being associated with a plurality of lines and means for causing the establishment of connections to different lines by causing said pointer to approach said points in different manners.

---

1,563,631. TELEPHONE SYSTEM. EDWARD E. HINRICHSEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 25, 1923. Serial No. 653,631. 4 Claims. (Cl. 179—27.)

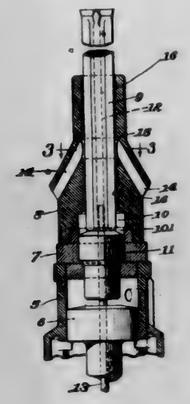


1. In a telephone system, lines, link circuits and trunks, switches for extending said lines to said links, switches for extending said links to said lines, other switches for extending said lines to said trunks, means responsive both to a series of N impulses and to a single

impulse followed by a series of N impulses for moving said second mentioned switches to a definite point and responsive to a plurality of series of single impulses for causing the actuation of one of said other switches.

---

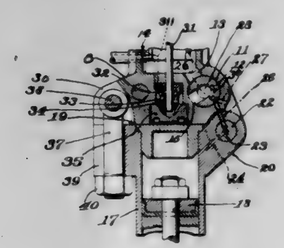
1,563,632. PNEUMATIC DRILL. CHARLES A. HULTQUIST, Los Angeles, Calif. Filed July 31, 1922. Serial No. 578,681. 1 Claim. (Cl. 121—10.)



A pneumatic drill comprising a cylinder, a piston working in the cylinder, a chuck connected with the cylinder and having an anvil chamber therein, an anvil for the anvil chamber projecting into the bore of the cylinder, air leaking from the cylinder into the anvil chamber to maintain pressure above atmospheric in the anvil chamber, and a drill steel engaging the chuck and having a duct for conveying water to the hole that is being drilled, the anvil chamber being closed against escape of air therefrom excepting past the drill steel and the escaping air preventing sludge from running down the drill steel into the anvil chamber, and the chuck being provided with an exhaust port opening from its bore to the atmosphere at a point between the outer end of the chuck and the anvil chamber to permit discharge of air and sludge from the bore of the chuck.

---

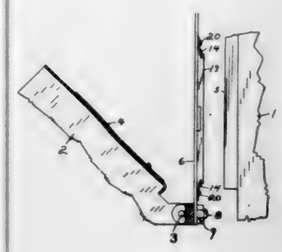
1,563,633. PNEUMATIC DRILL. CHARLES A. HULTQUIST, Los Angeles, Calif. Filed Aug. 14, 1922. Serial No. 581,633. 3 Claims. (Cl. 121—8.)



1. In a pneumatic drill, the combination of a valve block having a water supply duct, a cylinder connected with the valve block, a hammer in the cylinder, a water tube receiving water from said duct and extending through the hammer and detachably engaging the valve block to supply water to the drill, a feed cylinder hingedly connected to the valve block, the hinge connection having a duct, the feed cylinder having a duct connecting its bore wth the second duct, the valve block having a valve chamber and having a duct connecting said chamber with the second duct, there being a port in the valve block connecting the valve chamber with the bore of the first cylinder, a plunger in the feed cylinder, a valve in the valve chamber controlling the port and the duct in the valve block, and means to hold the valve block closed upon the feed cylinder.

---

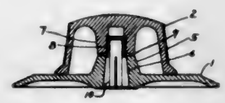
1,563,634. PAPER PERFORATOR. STEPHEN J. JACOB, Appleton, Wis. Filed Dec. 26, 1924. Serial No. 758,025. 13 Claims. (Cl. 164—98.)



1. In a perforating device having a reciprocatory perforating blade, a gripper plate provided with means for resiliently supporting said blade and having one side cut away to provide a recess within which said blade may reciprocate, whereby printing may be done in close proximity to said blade.

---

1,563,635. MEANS FOR SECURING KNOBS AND DIALS TO INSTRUMENT SHAFTS. HENRY J. KASCH, Dayton, Ohio, assignor to The Kury-Kasch Company, South Broadway, near Dayton, Ohio, a Corporation of Ohio. Filed July 3, 1924. Serial No. 723,951. 1 Claim. (Cl. 287—53.)

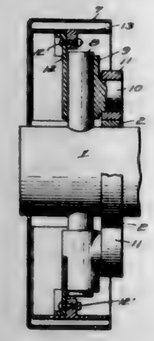


In a device of the type described, the combination with a shaft, of a knob and a dial for conjoint use in turning the shaft, the dial having a tapering axial hole and the knob having a tubular extension adapted to be brought over said hole, a loose bushing having a lower tapered, split end adapted to be forced through said hole, and having its upper end threaded for connection with the tubular extension on the knob, whereby when the knob is turned, the tapered end of the bushing will be drawn tightly against the shaft, for the purpose specified.

---

1,563,636. FRICTION BRAKE. WILLIAM H. LEWIS, Bandon, Oreg. Filed Nov. 18, 1924. Serial No. 750,566. 2 Claims. (Cl. 188—78.)

1. A friction brake comprising a support, a casing mounted concentrically thereon, a ring mounted for turning movement upon the support, and provided with eccentrically disposed portions, means for turning the ring, means for returning the ring to normal position, shafts carried by the support, sleeve slidably mounted upon the shaft and having studs, rollers journaled upon the studs



and bearing against the ring, supporting plates carried by the sleeves, shoes carried by the supporting plates, and traction springs connecting the shoes together.

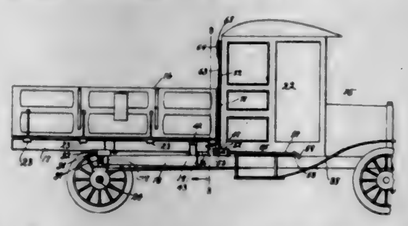
---

1,563,637. RAILWAY-CROSSING GUARD. PAUL A. LUNDBLAD, Linden, Calif. Filed Feb. 24, 1925. Serial No. 11,143. 2 Claims. (Cl. 39—6.)

2. A railway crossing guard structure for highways comprising a flat plate member adapted to extend across a highway substantially level therewith, said plate having a plurality of transversely spaced slots extending lengthwise of the highway, a turnable shaft supported from and under the plate at one end of the slots, teeth fixed on the shaft and adapted to seat in the slots, means applied to one end of the shaft for turning the same to cause the teeth to be raised to a predetermined angle, and independent means acting to cause the teeth to be lowered to a seating position in the slots when the raising means ceases to function.

---

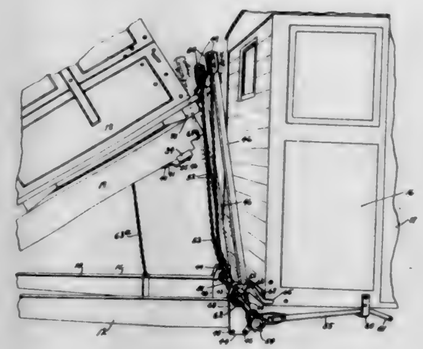
1,563,638. UNIVERSAL MOUNTING AND HOIST FOR DUMPING-TRUCK BODIES. WALLACE H. MCCORMICK, Streator, Ill. Filed Aug. 14, 1922. Serial No. 581,782. 10 Claims. (Cl. 298—19.)



8. The combination with the winding shaft of a hoist for dumping truck bodies, of a ratchet wheel on the shaft adjacent the side of the truck cab, a lever and pawl having angular movement about the shaft with the pawl cooperating with the shaft to turn the shaft, and a hinge joint in said lever to permit the outer end of the lever to be swung away from the cab.

---

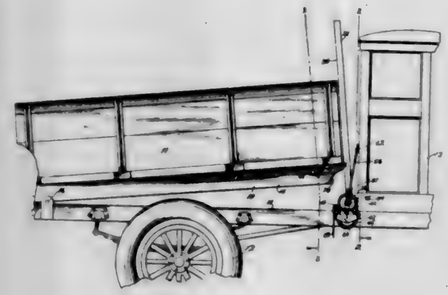
1,563,639. DUMPING MECHANISM FOR TRUCK BODIES. WALLACE H. MCCORMICK, Streator, Ill. Filed May 5, 1923. Serial No. 636,891. 8 Claims. (Cl. 298—19.)



4. In a device of the class described, a chassis frame, a body pivoted thereon, mechanism for hoisting one end of said body, said mechanism including a rotatable hoisting shaft, a ratchet wheel thereon, a crank having a slot within which said shaft engages, a pawl carried by said crank for engaging said ratchet wheel, a spring engaging said crank, and a clip on said body for engaging said crank and holding the same against the tension of said spring.

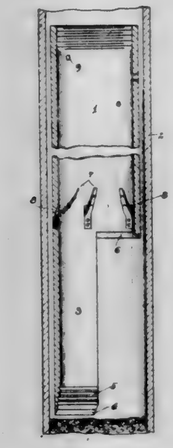
---

1,563,640. HOIST FOR DUMPING TRUCKS. WALLACE H. MCCORMICK, Streator, Ill. Filed Feb. 21, 1924. Serial No. 694,213. 5 Claims. (Cl. 298—19.)



3. A hoisting mechanism for dumping vehicles comprising body elevating mechanism, including a winding drum, means for operating said mechanism comprising a series of power multiplying gears connected to said drum, a stub shaft having one end slidably journaled in said drum, a pinion on said shaft for driving said gears, means for releasably holding said pinion in mesh with one of said gears and a crank for rotating said stub shaft.

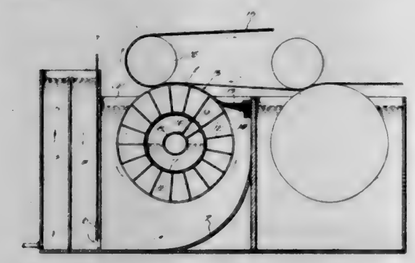
1,563,641. FISHING TOOL FOR UNDERREAMER BITS. WILLIAM IRA MCLAUGHLIN, Oakland, Calif., assignor to Standard Oil Company, San Francisco, Calif., a Corporation of California. Filed Feb. 7, 1923. Serial No. 617,525. 8 Claims. (Cl. 294—99.)



1. A fishing tool comprising a cylindrical body and a plurality of laminated prongs imbedded in pockets in said body.

---

1,563,642. PROCESS AND APPARATUS FOR PRODUCING WATERPROOFING MATERIAL AND PRODUCT PRODUCED THEREBY. THOMAS W. MORSE, Ridgefield Park, N. J., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 4, 1922. Serial No. 541,118. 3 Claims. (Cl. 92—41.)

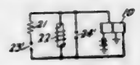


1. A process for producing waterproofing material, consisting in forming a sheet from fibrous stock on a forming cylinder, imposing a layer of waterproofing material in the form of an emulsion on the surface of the sheet immediately subsequent the forming operation, and intimately combining the waterproofing and the sheeted stock by subjecting the coated and formed sheet to a local vacuum action at or immediately subsequent to the imposition of the waterproofing material on the sheeted surface.

---

1,563,643. TELEPHONE SYSTEM. JAMES B. NEWSOM, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1923. Serial No. 680,808. 18 Claims. (Cl. 179—27.)

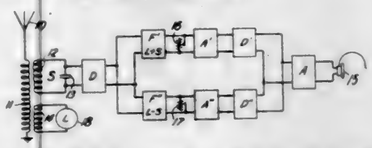
1. In a telephone system, an impulse circuit, an impulse sender therefor, an impedance element in said circuit, means for short-circuiting and impedance during a desired period, and means for including a resistance in



parallel with said impedance element for a short interval after the short-circuit has been removed.

---

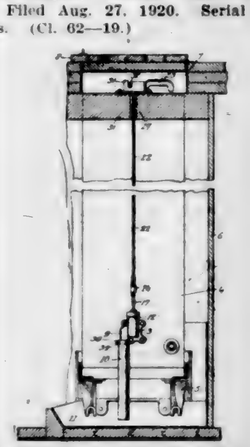
1,563,644. WAVE-RECEIVING SYSTEM. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1924. Serial No. 755,600. 6 Claims. (Cl. 250—20.)



1. The method of receiving signals which comprises combining incoming signal waves with locally generated oscillations of a different frequency, selecting the resultant sum and difference frequency components, separately detecting said components and combining and indicating the detected waves.

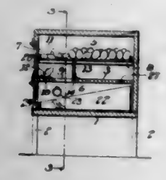
---

1,563,645. VALVE FOR BRINE TANKS. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1920. Serial No. 406,483. 10 Claims. (Cl. 62—19.)



10. In a refrigerator car, the combination of a tank having an outlet, a valve controlling said outlet comprising a casing having a valve seat, a valve member adapted to engage said seat, a valve stem connected with said valve member and projecting through said casing, a spring mounted between the casing and said valve member constantly urging said valve member toward the seat, and means for raising the valve member against the resistance of the spring, comprising a fulcrum member having spaced bearings, a lever fulcrumed in said bearings and having an intermediately located pintle, a rod having a hook engaging said pintle and connected with said valve stem, and means for limiting the movement of said lever in both directions but permitting the same to swing past center, whereby said valve is held open against the resiliency of said spring in one position of said lever and is held closed by said spring in the other position of said lever.

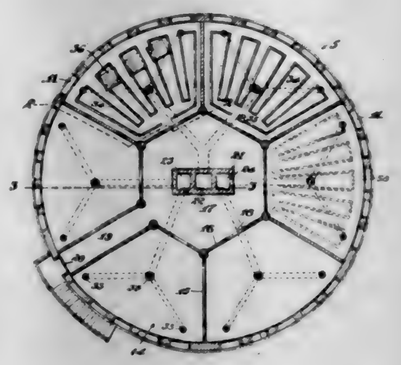
1,563,646. INCUBATOR. ABSALOM F. PEARSON, Mountain View, Calif., assignor of one-half to Robert D. Pearson, Los Angeles, Calif. Filed Mar. 11, 1924. Serial No. 698,545. 4 Claims. (Cl. 119—30.)



1. An incubator comprising an egg chamber, a nursery chamber below said egg chamber, there being an opening in the wall dividing said chambers through which the hatched chicks pass from said egg chamber into said nursery chamber, means for heating said egg chamber and said nursery chamber, said dividing wall forming a shelf adjacent said opening in said egg chamber onto which the hatched chicks drop before dropping through said opening into the nursery chamber below.

---

1,563,647. INCUBATOR. ELMER PEMBERTON, Hyde Park, Calif. Filed Jan. 10, 1921. Serial No. 436,225. 2 Claims. (Cl. 119—35.)

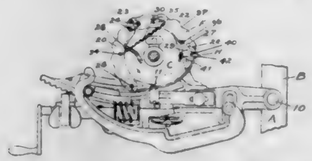


1. In an incubator, a compartment having a top wall, a bottom wall, and side walls; said side walls having openings throughout adjacent to the top wall to permit the flow of air across the upper portion of the compartment from the exterior thereof, a heating element in the lower portion of said compartment, and means for creating a downward tendency of the air in said compartment.

---

1,563,648. BUNCH-BUILDING SPINNING-FRAME CAM. CLARENCE A. PIERCE, Lowell, Mass. Filed Aug. 31, 1925. Serial No. 53,551. 2 Claims. (Cl. 242—43.7.)

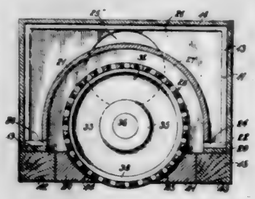
1. The combination in a spinning frame having a builder cam and a builder arm with a cam follower in engagement with said cam; of a pin carried by the builder cam; with an auxiliary cam comprising a plurality of segments pivoted together end to end, the end of one segment being so pivoted to the builder cam that the segments can swing inside the rim of the builder cam and the free end of the last segment being adapted to engage said pin; spring means to keep said



collapsible cam normally collapsed; and a trigger carried by the builder cam in position to engage the cam follower and to disengage the collapsible cam from said pin.

---

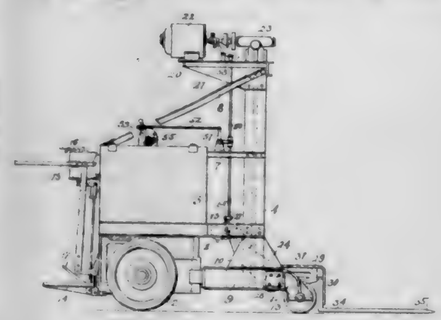
1,563,649. SUCTION BOX. MARLO D. PIGMAN, Middletown, Ohio. Filed June 14, 1924. Serial No. 720,050. 5 Claims. (Cl. 92—51.)



1. A suction box comprising, in combination, inner and outer spaced casings providing a chamber therebetween, means to apply suction to said chamber, a foraminous roller housed within said inner casing, means for communication between the interior of said inner casing and said chamber, said roller adapted to be operated in contact with the web of a paper making machine.

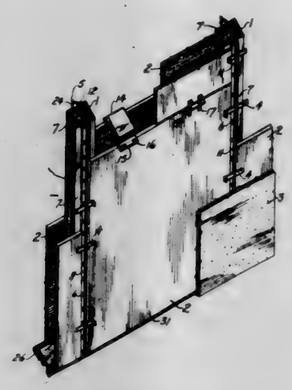
---

1,563,650. INDUSTRIAL TRUCK. HENRY T. PLAINES, Cleveland, Ohio, assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed Dec. 7, 1922. Serial No. 605,376. 24 Claims. (Cl. 214—65.)



1. In a truck, a frame having front and rear supporting wheels, a guide standard fixed to the frame toward the rear end thereof, a carrier movable upon said standard and guided thereby, said carrier having a rearwardly projecting portion extending downwardly at the rear end of the frame and adapted to straddle the rear supporting wheels, said rearwardly projecting portion terminating in a load receiving platform adapted to be moved into close proximity to the supporting surface, and means for raising and lowering the carrier.

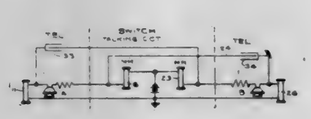
1,563,651. INTERLOCKING SHEET-STEEL FRAME FOR ANCHORAGE OF PLASTER BOARDS. ISADORE POMERANTZ, St. Louis, Mo., assignor to Walter F. Sheehan, St. Louis, Mo. Filed Dec. 26, 1923. Serial No. 682,652. 15 Claims. (Cl. 72—115.)



11. In a studding construction, a sheet metal stud having parallel sides, outwardly directed tongues formed upon said sides having parallel side portions and grooves in said side portions.

---

1,563,652. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 18, 1922. Serial No. 530,115. 13 Claims. (Cl. 179—18.)

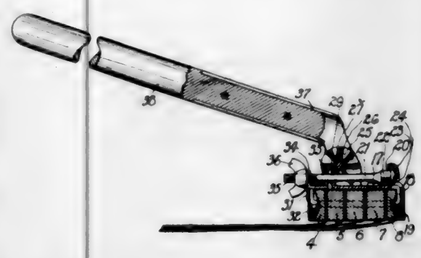


7. In an automatic telephone system, a plurality of telephone lines, a substation having a transmitter for each telephone line, an automatic switch individual to each telephone line for extending said telephone line to any of the other lines, means for directively operating each automatic switch, a common source of current, and circuits for connecting said source of current to the transmitters of a completed telephone connection, said circuits each including a current feed coil and a winding of an induction coil at each of the substations of the telephone connection.

---

1,563,653. MOP AND HANDLE THEREFOR. EDWARD PRENDERGAST, St. Louis, Mo. Filed June 16, 1924. Serial No. 720,233. 2 Claims. (Cl. 15—228.)

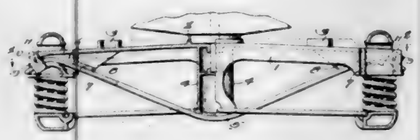
1. A mop composed of a series of slats adapted to lie side by side, mopping material wrapped around each slat, a sharpened pin located in each end of the outer slats and adapted to pass through aligned openings in the intermediate slats, said pins pointing in opposite directions and being spaced apart from each other, the said outer slats being provided with depressions intermediate their ends, an adjustable clamping mechanism provided with jaws located in said depressions and engaging the same intermediate the top and lower edge of the slats, a bolt for drawing said jaws toward each other and against



the slats for holding the same firmly together, and an adjustable handle pivotally carried by said clamping mechanism.

---

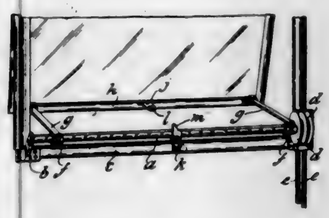
1,563,654. TRUCK BOLSTER. HERMAN C. PRIEBE, Blue Island, Ill. Filed Dec. 19, 1924. Serial No. 757,037. 6 Claims. (Cl. 105—229.)



1. A truck bolster including the center bearing carrying member thereof having sleeves at its ends; a strut member underlying the aforesaid member; a strap underlying the strut member and extending at its ends into said sleeves; keys passing through the ends of said strap and engaging said sleeves; and removable pins passing through said keys, the center bearing carrying member having forked continuations through which said keys pass and which overlie said pins.

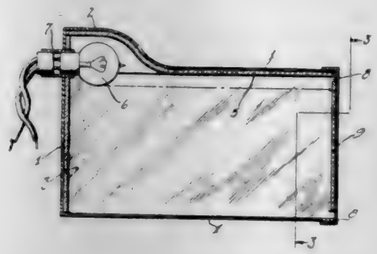
---

1,563,655. MECHANISM FOR OPENING AND CLOSING CASEMENT WINDOWS. RUFUS WILLIAM PRIOR, Braintree, England, assignor to The Crittall Manufacturing Company, Limited, Braintree, England. Filed Apr. 16, 1925. Serial No. 23,561. 2 Claims. (Cl. 268—20.)



1. A casement window having a fixed frame, an opening frame, a screw journalled in the fixed frame, a nut on the screw, a connection between the nut and the opening frame, a spring blade on the opening frame, a peg on the fixed frame, and a lug on the screw adapted to engage with the spring blade.

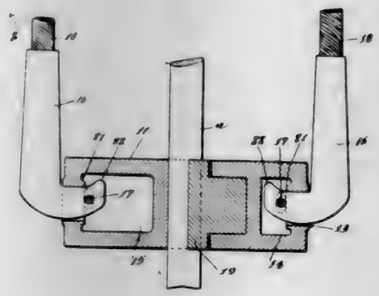
1,563,656. AUTOMOBILE HEADLIGHT. MAX P. E. RADLOFF, Hustisford, Wis. Filed Mar. 24, 1924. Serial No. 701,450. 1 Claim. (Cl. 240—41.)



A headlight comprising a casing of rectangular cross-section and having an extension at its upper rear edge, the front part of the casing being provided with a glazed opening, an electric light bulb disposed in said extension above the upper edge of the glazed opening, the sides, rear and upper inner faces of the casing being provided with light reflecting surfaces.

---

1,563,657. BAIL CONSTRUCTION FOR GRIPS AND THE LIKE. JAMES P. RATIGAN, Walnut Park, Calif. Original application filed June 21, 1924, Serial No. 721,607. Divided and this application filed Apr. 20, 1925. Serial No. 24,648. 3 Claims. (Cl. 294—91.)

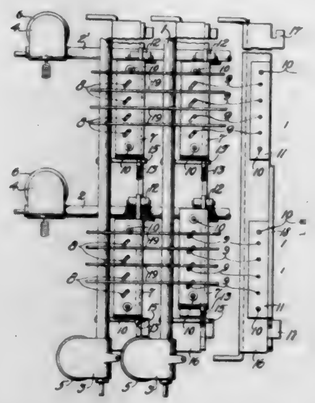


1. A bail construction for grips and the like, comprising a body having cavities near its opposite ends and openings communicating with the cavities, hook-shape links projecting through the openings, the tips of said links extending into the cavities, and suspension cables secured to the links and permitting of independent canting of the links in the operations of attaching and detaching said links.

---

1,563,658. LINE SWITCH. CHARLES D. RICHARD, West New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 1, 1922. Serial No. 565,185. 6 Claims. (Cl. 179—27.5.)

1. In a switch structure, a plurality of sets of stationary conductors arranged in horizontal rows, a plurality of sets of movable contacts arranged in vertical rows for cooperation with said stationary conductors,



and insulative mounting blocks one for each of said sets of movable contacts mounted on said structure and separately removable therefrom.

---

1,563,659. GARMENT-DISPLAY RACK. ROBERT J. RIORDAN and JOSEPH P. HANLEY, Chicago, Ill.; said Riordan assignor to said Hanley. Filed Jan. 9, 1920. Serial No. 350,888. 7 Claims. (Cl. 211—13.)

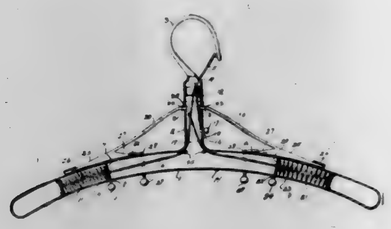
1. In a garment display rack the combination of a pair of main frames, connected together to permit same to be collapsed and extended, a plurality of supplemental frames secured to one of said main frames, a support for the main frames, said support also being collapsible, and extensible, and means connecting said support and supplemental frames whereby said supplemental frames are collapsed and extended when said support is collapsed or extended.

---

1,563,660. GARMENT HANGER. BENJAMIN A. RUBIN, Chicago, Ill. Filed Jan. 15, 1924. Serial No. 686,375. 9 Claims. (Cl. 211—13.)

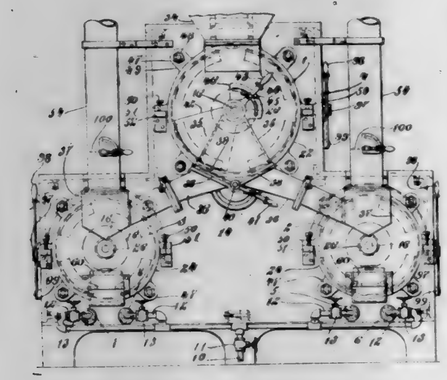
1. A garment hanger comprising an elongated hollow member, a supporting hook carried thereby, a rod slid-

ably disposed within the hollow member and closing the hook member when extended to lock the same on a support, means for drawing said rod inwardly of the hollow member to move the same into open position, and means for normally maintaining said rod in extended position.



---

1,563,661. PEANUT DRYING AND ROASTING APPARATUS. HUNTINGTON D. SAWKINS, Baltimore, Md. Filed May 20, 1925. Serial No. 31,487. 11 Claims. (Cl. 34—5.)

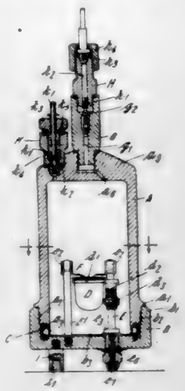


1. The combination in an apparatus for drying and roasting peanuts impregnated with brine in the shell, comprising a drying cylinder with means for draining the same, a roasting cylinder below the drying cylinder, means below the roasting cylinder for heating the roasting cylinder, means for agitating the contents of the cylinder, the cylinders being offset to prevent access of water from the upper to the lower cylinder.

---

1,563,662. CALORIMETER. GEORGE ERNEST SCHOLES, Birkenhead, England. Filed Mar. 23, 1925. Serial No. 17,830. 20 Claims. (Cl. 73—184.)

1. In a calorimeter of the bomb type in combination;—an open ended containing shell; a seating formed at the open end of the shell; a cap adapted to close the open end of the shell; a seating formed on the interior surface of the cap; attachment means between the cap and the shell adapted to hold the cap in closed position with the two said seatings in definite relationship; a flexible ring adapted to make contact with the two respective seatings when the cap is in its closing position so that when the interior of the bomb surface is subjected to pressure the ring is pressed onto the seatings; means



for admitting gas to the interior of the bomb; means for supporting the substance to be tested; and means for igniting the substance.

---

1,563,663. BEARING. RALPH L. SEABURY, Toledo, Ohio. Filed Dec. 3, 1920. Serial No. 428,082. 4 Claims. (Cl. 308—239.)

1. A bearing comprising a shell, and a plurality of helixes of different materials having their coils alternating and held in assembled relation by said shell, one of said helixes being of metal and the other of relatively soft material and said helixes being under relatively great initial compression whereby the several coils are closely compacted.

---

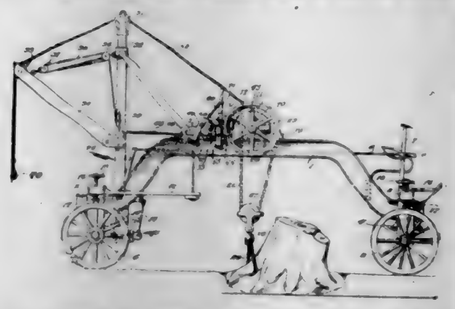
1,563,664. METHOD OF MAKING PIPE COUPLINGS. JOHN H. SENNETT, Woodlawn, Pa. Filed May 11, 1923. Serial No. 638,191. 1 Claim. (Cl. 29—156.)

The method herein described of producing a welded steel pipe coupling which consists in shaping and welding a steel blank whose interior radius is less than the minimum interior radius of the finished article by an amount not less than the depth of flaws in the welded seam, boring out the blank to the depth of such flaws and sinking a thread in the so bored-out blank.

---

1,563,665. STUMP PULLER. THOMAS M. SHORT, Camden on Gauley, W. Va. Filed Mar. 29, 1924. Serial No. 702,798. 8 Claims. (Cl. 254—166.)

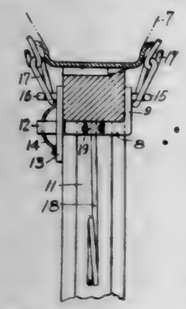
1. In an apparatus for the purpose set forth, the combination of a truck, a windlass mounted thereon, a spur wheel connected with one end of the windlass, a pivot rod on the truck adjacent the spur wheel, a link depending from said pivot rod, a lever pivoted to the lower end of said link, a toothed head on the end of the



lever adapted to engage the spur wheel, and a pawl movable with the lever and projecting upwardly therefrom and adapted to engage the spur wheel.

---

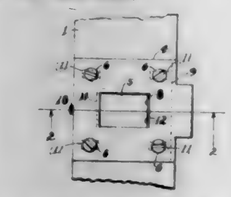
1,563,666. ANTISKID DEVICE. FREDRICK SIEVERN, McKeesport, Pa. Filed July 2, 1925. Serial No. 41,023. 4 Claims. (Cl. 152—14.)



1. The combination with a vehicle wheel, of an antiskid device comprising a yoke having relatively movable parts which are adapted to engage the sides of the felly of a wheel, and a yieldable connecting member holding said parts in engagement with the sides of said felly, the said parts being adapted to support the ends of a tread chain.

---

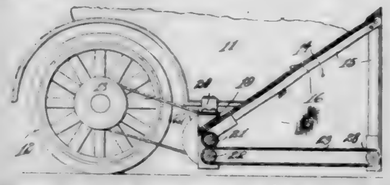
1,563,667. STRIKER PLATE. ROBERT SMITH, near San Jose, Calif. Filed Oct. 2, 1924. Serial No. 741,252. 1 Claim. (Cl. 292—340.)



A striker plate consisting of a plate having a latch receiving opening formed therein and an end portion formed at right angles to the plane of said opening, said end portion having an orifice formed therein, and means for securing said plate to a door jamb, a second plate slidably mounted against the inner side of said first plate and having its central portion cut and bent back to form two parallel flanges and to form a latch receiving opening therein and having slots therein to receive said securing means, one of said flanges normally being in alignment with one edge of said latch receiving opening, and the other flange being threaded to receive a screw, and a screw slidably engaging the orifice in the first mentioned plate and threaded into the last mentioned flange on the second mentioned plate.

---

1,563,668. GRASSHOPPER EXTERMINATOR. VIRGIL S. SMITH and WALTER E. CLARKE, Yale, Okla. Filed Nov. 26, 1924. Serial No. 752,397. 1 Claim. (Cl. 48—138.)



The combination with a vehicle and the rear wheel thereof, of a tapering open-ended receptacle mounted on the side of the vehicle with the larger end directed forwardly to receive insects, crushing rollers mounted in the smaller end of the receptacle, driving means beween the said rear wheel and the crushing rollers, a roller mounted in the larger end of the receptacle, and an endless belt engaged with the last-named roller and the lower of the crushing rollers.

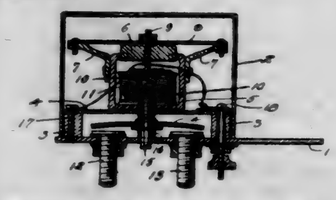
---

1,563,669. EXTENSIBLE-CRANK ELEMENT. SIMON SNYDER, Muncy, Pa., assignor to Sprout, Waldron & Co., Muncy, Pa., a Corporation of Pennsylvania. Filed Jan. 17, 1924. Serial No. 686,921. 10 Claims. (Cl. 74—38.)

1. An extensible crank element comprising separable recessed plates, one of said plates having oppositely and eccentrically disposed substantially semi-circular ribs confronting another plate provided with a hub for mounting on the end of a shaft and a crank-arm diametrically disposed and guided between said plates having grooves within which the ribs of said first named plate are adapted alternately to engage and move said crank-arm when said plates are rotated in relatively opposite directions.

---

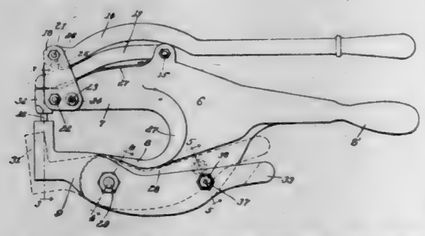
1,563,670. ELECTROMAGNETICALLY-OPERATED STARTER SWITCH. LEON C. SPENCER, Ogden, Utah. Filed June 10, 1924. Serial No. 719,155. 3 Claims. (Cl. 200—87.)



1. An electric switch comprising circuit closing elements including a bridging member yieldingly held from engagement with contact members, a substantially U-shaped frame having the ends of its side members inturned, an electromagnet mounted upon said frame and having an opening through its core, an armature directed in its movements by the inturned ends of the said frame, an element connected to said armature and passing

through the opening of the core of the electromagnet and adapted to actuate said bridging member into engagement with the contact members.

1,563,671. PUNCH. GEORGE H. SPENGLER, Rockford, Ill., assignor to Frank Vander Bogart, Rockford, Ill. Filed May 31, 1924. Serial No. 716,863. 6 Claims. (Cl. 164—120.)



1. A punch comprising a head having an upper punch-carrying jaw and a lower jaw spaced apart to provide a comparatively wide mouth, punch operating means mounted on the head, a lever pivoted on the lower jaw and providing a supplemental lower jaw having a die-carrying portion extending across the mouth formed by said upper and lower jaws with the die therein normally close to and aligned with the punch, and means for releasably holding the lever in an operative position with its die-carrying portion in alignment with the punch in order to permit swinging the supplemental jaw away to make the wider space between the main jaws available for entering a piece of work.

1,563,672. DUO-CORD TIRE CONSTRUCTION. THOMAS BENTON STOVER, Winona, Minn., assignor to Stover Rubber Co., a Corporation of Illinois. Filed Oct. 6, 1922. Serial No. 592,702. 3 Claims. (Cl. 154—14.)

1. A process of manufacturing tire casings comprising treating cord material with rubber by a calendering process, then skimming both sides for the first ply of cord material, then adding bead filler strips adjacent the outer edges of the first ply of cord material, then adding a second ply of cord material which has been frictioned only, adding chafing strips of fabric along the bead filler strips to prevent rubber from working around the strips to prevent chafing thereabouts, and adding breaker strips and tread stock to complete the carcass of the tire.

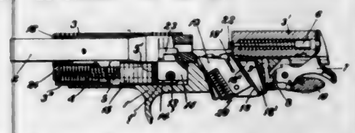
1,563,673. PROCESS FOR IMPERMEABILIZING SUBSTANCES FOR ABSORBING GAS. ERNEST AUGUSTE GEORGE STREET, Levallois-Perret, France, assignor to Société Anonyme le Carbone, Levallois-Perret, France. Filed June 30, 1922. Serial No. 571,926. 10 Claims. (Cl. 136—86.)

1. A process for impermeabilizing gas absorbing substances and particularly porous electrode substances for batteries and electrolyzers consisting in applying on the porous body a non-metallic colloidal solution, in concentrated state, so that, by reason of the adsorbent properties of the porous body, the slight quantity of uncombined water contained in the colloidal layer may be absorbed and that the latter will form a pectized covering impenetrable to liquids.

1,563,674. SURGICAL KNIFE. ALEXANDER A. S. STUART, Bethlehem, Pa. Filed Sept. 8, 1924. Serial No. 736,669. 8 Claims. (Cl. 30—9.)

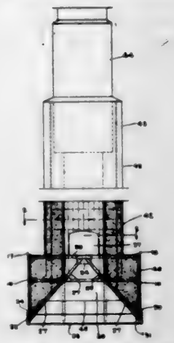
1. A knife comprising a handle formed at its blade-receiving end with a blade-receiving portion of less thickness than the body of the handle, inwardly extending flanges along the edges of said blade-receiving portion to form blade-receiving grooves, a rigid locking stop projecting from the inner portion of said blade-receiving portion, an aperture being formed through the handle inwardly beyond the locking stop, and a blade formed with a tail-piece adapted to fit snugly in the grooves formed by the said flanges on the handle and provided with an opening to receive the locking stop on the handle, the end of said tail-piece lying within the aperture in the handle when the blade is locked in position.

1,563,675. AUTOMATIC PISTOL. GEORGE H. TANSLEY, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 29, 1924. Serial No. 695,916. 13 Claims. (Cl. 42—3.)



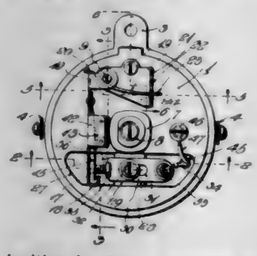
1. In a small caliber automatic pistol, the combination of the frame of a standard large caliber automatic pistol of the "locked" type, a smal caliber barrel mounted on said frame, and a "blow back" breech slide of similar configuration to, but of considerably less weight than, the breech slide of said standard pistol.

1,563,676. REENFORCED-CONCRETE FOUNDATION AND PIER AND METHOD OF SINKING THE SAME. CLAUDE A. P. TURNER, Minneapolis, Minn. Filed Oct. 6, 1921. Serial No. 505,902. 3 Claims. (Cl. 61—52.)



1. A foundation footing for piers comprising a structural steel cage having an outer periphery formed of vertical uprights and longitudinal members and other members extending upwardly and inwardly in an oblique direction from the lower edge of the outer periphery, steel plates secured to said members and forming a continuous cutting edge at the bottom thereof, reenforced concrete united with said cage to form a hollow block of concrete and steel provided with a cutting edge, and transverse bonding blocks of concrete extending across the opening within said block and provided with a V-shaped edge spaced above the plane of said cutting edge.

1,563,677. IGNITION BREAKER. WILLIAM F. WAGNER, Ambridge, Pa. Filed Sept. 1, 1923. Serial No. 660,615. 5 Claims. (Cl. 200—21.)



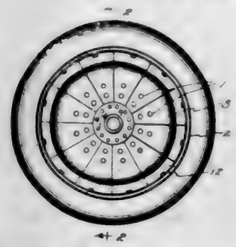
2. In an ignition breaker, a swinging arm having a pair of ears extending laterally in the same direction and provided with alined openings, a stationary support having a post received in said openings in a manner to permit easy sliding of said ears from said post, a helical torsion spring surrounding said post and confined between said ears to prevent relative movement of the arm and spring longitudinally of the post, said spring having one end engaged with said arm to swing the latter in one direction, the other end of said spring being extended to provide a tensioning arm, and a series of spaced overhanging abutments carried by said support for holding said tensioning arm in any desired adjusted position and for holding the spring and support against relative movement longitudinally of the post.

1,563,678. LEVEL DEVICE. ZENAS H. WILLIAMS, San Antonio, Tex. Filed Sept. 5, 1923. Serial No. 661,048. 2 Claims. (Cl. 33—214.)

1. In a device of the class described, a casing comprising a base and a flange outstanding from the base, a carrier, means for mounting the carrier pivotally at one end on the flange, said carrier being supplied at its opposite end with an arm which is curved on itself to form a resilient finger bearing frictionally against the inner surface of the flange, a holding device adjustable in the arm and adapted to bear against the flange to hold the carrier against movement, the flange having an elongated slot for the reception of the holding device, and a vial mounted on the carrier.

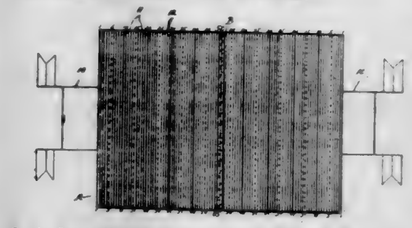
1,563,679. VEHICLE WHEEL. JOHN F. WILMOT, Detroit, Mich. Filed Apr. 11, 1923. Serial No. 631,304. 12 Claims. (Cl. 301—63.)

8. A vehicle wheel comprising a hub and a rim, a plurality of plates providing sectors duplicate in form attached to the hub and to the rim, the sectors lying in overlapping relation at the center and being secured one



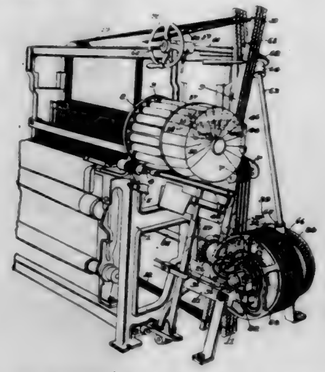
to the other between the ends, the area of adjacent sectors in overlapping relation decreasing from the hub toward the rim.

1,563,680. FOOTBALL GAME. OSCAR ZWIRNER, Hamtramck, Mich., assignor of one-half to William George Apolka, Detroit, Mich. Filed Jan. 26, 1925. Serial No. 4,868. 5 Claims. (Cl. 273—94.)



1. A football game comprising a game board marked with goals and yard lines to correspond with a real football field, a marker for designating the varying positions of the players on the board, a kick off die formed with a plurality of faces bearing relatively large numbers indicating the number of yards kicked, and a line plunger die formed of a plurality of faces bearing relatively small numbers indicating yardage gained and lost for determining the successive movement of the marker toward one of the goals.

1,563,681. SHEDDING MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 31, 1925. Serial No. 47,229. 7 Claims. (Cl. 139—56.)



1. In loom shedding mechanism, the combination of jack levers, heddle frames, means connecting the heddle frames and jack levers, cams for operating the jack

levers in the formation of sheds, an operating shaft for the cams, gearing connections between the operating shaft and cams including a clutch, a hand operated trip lever for disconnecting the clutch members and interrupting the driving connection with the operating shaft to free the cams, a reach shaft having gearing connection with the cams and extending to the loom arch, a manually operable shaft on the loom arch having gearing connection with the reach shaft, and a hand wheel disposed at the same side of the loom as the trip lever for operating the reach shaft when the trip lever has been manually operated to disconnect the clutch members.

---

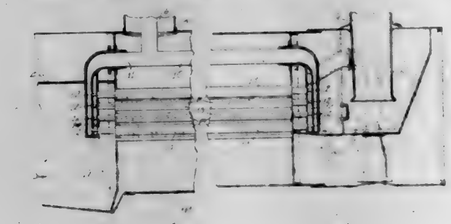
1,563,682. TREATMENT OF CHOCOLATE. JESSE BRYTE BARNITT, Jamaica, N. Y., assignor of one-half to Ralph H. McKee, New York, N. Y. Filed July 26, 1922. Serial No. 577,697. 10 Claims. (Cl. 99—11.)

1. The method of bleaching chocolate which consists in subjecting cocoa nib to the action of a solution of hydrogen peroxide, and then removing the cocoa nib from the solution.

10. The method of bleaching chocolate which consists in subjecting ground, roasted cocoa nib from which the cocoa butter has been largely expressed, to the action of a slightly alkaline solution of hydrogen peroxide, and then removing the cocoa nib from the solution.

---

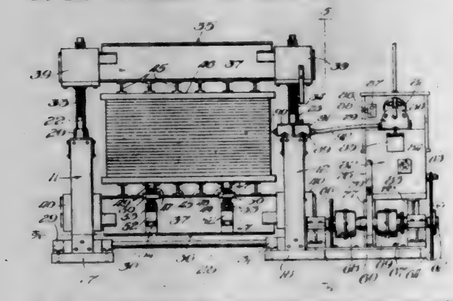
1,563,683. SUPERHEATER CONSTRUCTION FOR LOCOMOTIVES. FRANK ARNOLD BENOLKEN, Helena, Mont. Filed Sept. 12, 1924. Serial No. 737,333. 3 Claims. (Cl. 122—462.)



1. A superheater construction for locomotives comprising a front superheater extending into the smoke box, a rear superheater extending into the combustion chamber, and a common set of tubes between said superheaters for conducting the products of combustion.

---

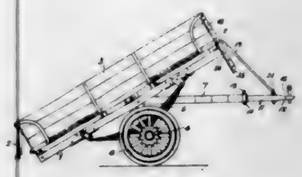
1,563,684. VENEER PRESS AND THE LIKE. JOHN E. BLACK, Mendota, Ill. Filed Jan. 2, 1925. Serial No. 220. 10 Claims. (Cl. 144—281.)



1. In a machine of the class described, the combination of upper and lower vertically movable press heads, vertical tension shafts adjacent to the ends thereof, said shafts having their end portions in oppositely threaded engagement with the adjacent press head ends whereby simultaneous rotation of both shafts causes movement of the press heads towards or from each other, an electric motor, a jack shaft operatively connected thereto, a pair of sprockets rotatably mounted on the jack shaft, a drive shaft, driving connections therefrom to both of the tension shafts, driving connections of unequal gear ratio from both of the sprockets to the drive shaft, clutch mechanism between the jack shaft and each sprocket enabling said sprockets to be selectively connected to the jack shaft, and suitable electric circuits for control of the motor including a reversing switch permitting reversal of motor direction, a magnetic limit switch adapted to open the circuit upon the flow of current in excess of a predetermined amount, an indicator operable according to volume of current delivered to the motor, and having its scale suitably graduated to indicate pressure exerted between the press heads, together with limit switches operable to open the motor circuit at extreme limits of movement of the press heads towards and from each other, substantially as described.

---

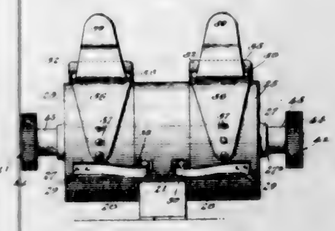
1,563,685. SELF-LOADING AND TIPPING WAGON. SIDNEY JAMES BOYS, Walsall, England. Filed Nov. 17, 1924. Serial No. 750,428. 10 Claims. (Cl. 298—20.)



1. A trailer for vehicles comprising a body, a single axle mounted in said body approximately at the centre of the trailer, an extensible drawbar pivotally attached to said body above said single axle and adapted to be secured at its free end to the vehicle and means connecting the vehicle end of the drawbar to the front end of the trailer body so that when the drawbar is closed by backing the vehicle, the trailer body is tipped by rotation about the single axle.

---

1,563,686. STAMP HOLDER. MELBROOKS B. BULTMAN, Sumter, S. C. Filed Nov. 22, 1923. Serial No. 676,418. 2 Claims. (Cl. 211—31.)



1. A stamp holder comprising a single central mounting having annular flanges at its opposite ends and having sockets on its periphery and also having a shaft-receiving opening at its center, and a pair of stamp holders, each of said stamp holders comprising a casing having one end open and the other end closed, the open ends of the casings being designed to fit on the flanges

of the mounting, spring clips connected to the casings and having portions engaged in the sockets of the mounting for releasably holding the casings on the mounting, and a shaft rotatably mounted on each casing, the shafts having tapered inner ends received in the opening of the mounting.

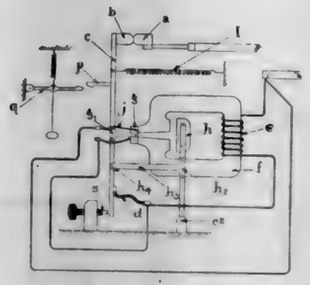
---

1,563,687. DISPLAY STAND. JOHN H. CHANEY, Baltimore, Md. Filed Apr. 10, 1924. Serial No. 705,668. 3 Claims. (Cl. 211—24.)

1. A display stand comprising a back member consisting of a sheet of suitable material, a flap cut in said back member and adapted to swing out of the plane thereof whereby said back member and said flap form an easel, a tray supported on said easel and integral therewith, the side, front and bottom walls of said tray being formed from a single lateral extension of said back member, and an extension on said back member adapted to be folded over said member for covering the aperture made therein by said flap.

---

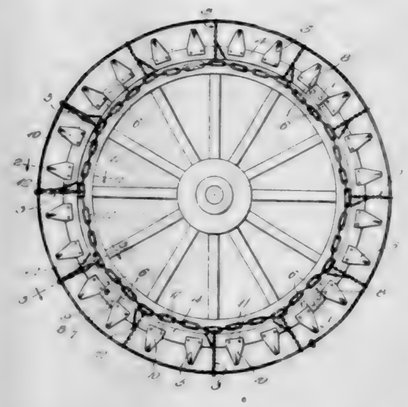
1,563,688. ELECTRIC-CIRCUIT BREAKER. PAUL CHARPENTIER, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Societe Anonyme, Paris, France. Filed Apr. 17, 1924. Serial No. 707,101. 12 Claims. (Cl. 200—103.)



1. A circuit-breaker, comprising a lever, a movable contact carried by said lever, a fixed contact co-operating with said movable contact, an electromagnet, a series winding energizing said magnet, two armatures of different size attracted by said magnet, means controlling said armatures to produce opposite movements in relation to said magnet, mechanical connections between said lever and one of said armatures, and means for limiting the movement of said lever at a point remote from said movable contact, said limiting means forming a fulcrum for further movement of said lever to produce rapid separation of said contacts.

---

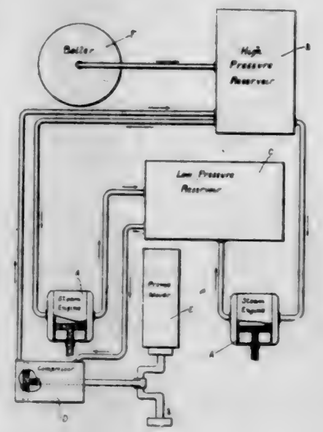
1,563,689. NONSKID DEVICE. WILLIAM HENRY COREY, Newport, Me. Filed Apr. 6, 1925. Serial No. 21,107. 4 Claims. (Cl. 152—14.)



3. Anti-skidding means comprising a ring having projecting prongs, and means for connecting said ring to a tire chain consisting of side and cross chains to be held by said chain at one side of a tire.

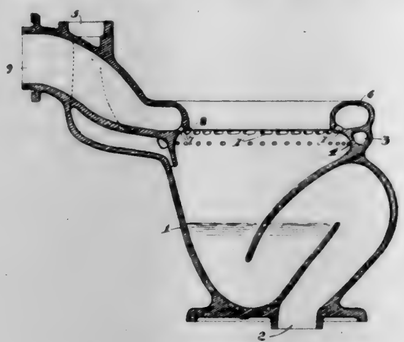
---

1,563,690. SYSTEM FOR TRANSMITTING ENERGY BY MEANS OF STEAM WORKING IN A CLOSED CYCLE. SEVERINO CRISTIANI, Milan, Italy. Filed Sept. 20, 1921. Serial No. 501,993. 4 Claims. (Cl. 60—59.)



1. A power plant comprising a closed-cycle installation adapted to have steam circulated therein, said installation including an engine driven by the steam, and a compressor; a prime mover independent of said closed-cycle installation and adapted to operate said compressor in order to replace the energy in the steam of the closed-cycle installation which was expended in driving the engine; and a boiler for said installation in order to supply steam thereto when necessary.

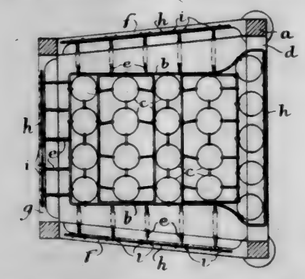
1,563,691. WATER-CLOSET. SALVATORE DE COLA, San Jose, Calif. Filed Mar. 12, 1925. Serial No. 15,041. 1 Claim. (Cl. 4—72.)



An article of manufacture comprising a water closet having a water conduit encompassing its upper portion and provided with orifices connecting said conduit with the interior of said closet, and having an air conduit formed in its upper portion above said water conduit and overhanging the same to form an annular lip and provided with orifices connecting the said conduit with the interior surface of the closet bowl beneath said lip.

---

1,563,692. SPRING SEAT AND THE LIKE. RICHARD DENHAM, Walthamstow, England. Filed Feb. 21, 1923. Serial No. 620,447. 1 Claim. (Cl. 155—179.)



A chair, settee or other seat of the kind hereinbefore referred to, including a main frame, upholstery springs and a frame for the same, the front side of said spring frame being directly connected to the front of said main frame, tension springs for supporting the other three sides of said spring frame, said tension springs being connected to the main frame through the medium of wires upon the corresponding upper sides of said main frame.

---

1,563,693. HAIR PROTECTOR. CARL DRUCKS, Berkeley, Calif. Filed Dec. 22, 1924. Serial No. 757,363. 1 Claim. (Cl. 132—49.)

In a device of the class described, a head covering adapted to snugly fit the head to cover the hair thereof, said covering comprising a body portion having a flat extension at the back thereof, a relatively wide binding around the front edge of the body portion terminating at opposite sides of said portion adjacent the ear of the wearer, a relatively narrow binding around the edge of the flap extension terminating adjacent the respective ends of the first-named binding, ribbon-like reinforcing strips stitched to the body portion longitudinally and transversely thereof, the longitudinal strip extending from the front edge of the body portion to the edge of the flap extension and the transverse strip extending from the respective ends of the binding around the edge

of the body portion, and an elastic band attached to the ends of the binding around the edge of the body portion and adapted to engage the back of the head over the flap extension.

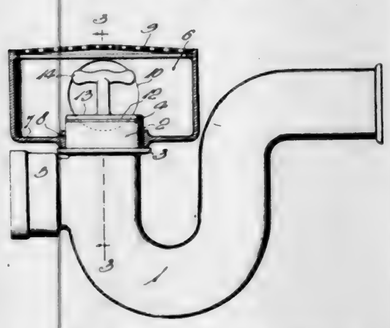
---

1,563,694. DOUGH AND PROCESS OF MAKING THE SAME. LEOTA N. EARL, Forth Worth, Tex. Filed May 23, 1924. Serial No. 715,311. 2 Claims. (Cl. 99—10.)

1. The herein described process for making dough which comprises boiling one gallon of milk, mixing one-half of the boiled milk with six pounds of flour and scalding the flour therewith, mixing the other half of the boiled milk with four pounds of lard, two pounds of sugar and four ounces of salt, cooling the last mixture and then adding it to the scalded flour with two pounds of mashed potatoes, then mixing in these ingredients four cakes of yeast and placing in a warm room for two hours, then mixing the batter thus prepared with four tablespoonfuls of baking powder, two tablespoonfuls of soda, next adding enough flour to make dough of the required consistency and kneading well and placing in a warm room for one hour, and then placing in an ice box or refrigerator for twelve hours.

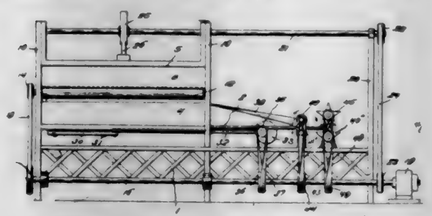
---

1,563,695. COMBINED CATCH BASIN AND TRAP. WILLIAM J. FEMAL, Green Bay, Wis. Filed Apr. 25, 1925. Serial No. 25,853. 2 Claims. (Cl. 182—16.)



1. A device of the class described comprising a conduit having an open end and a pair of internal arcuate ribs at said open end, a closure adapted to span the open end of the conduit, and lugs carried by the inner side of said closure to engage the inner sides of the aforesaid ribs when the closure is turned, said sides of said ribs being inclined with respect to the axis about which the closure is rotated.

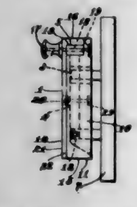
1,563,696. MAP-FOLDING MACHINE. EARL W. FIALA, Cedar Rapids, Iowa. Filed Jan. 30, 1925. Serial No. 5,847. 6 Claims. (Cl. 270—86.)



1. A machine of the class described comprising a frame, a stationary die supported at the forward end thereof, a complementary movable die cooperating with the stationary die for creasing and folding sheet material, means for feeding the sheet material to said dies, creasing rollers supported on said frame in cooperative relation with respect to said dies, folding means supported on the rear ends of the frame and cooperating with said creasing rollers, and means associated with the stationary die for ejecting the sheet of material therefrom, after the movable die has been moved out of engagement with the stationary die, whereby the material is delivered to said creasing rollers.

---

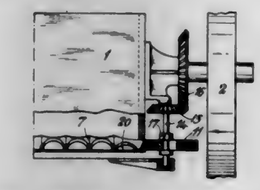
1,563,697. SWITCH COVER. ARTHUR FINKENNAGEL, Baltimore, Md. Filed Oct. 7, 1921, Serial No. 506,160. Renewed Oct. 14, 1925. 7 Claims. (Cl. 200—168.)



7. A cover for knife blade switches consisting of a box separable portions composing the box completely enclosing the knife blade and adapted to swing therewith, means for removably securing the parts together, one said part being slotted to admit the terminals and the other said part having a projecting portion adapted to occupy the space between the knife blades a portion of the box extending beyond and covering the pivotal portions of the knife blade switch and the corresponding terminals.

---

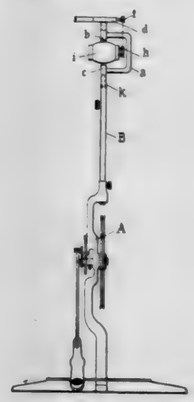
1,563,698. SPREADING APPARATUS FOR ARTIFICIAL MANURES. JACOB VON STRATEN FINNE, Aas, Norway, assignor to A/S Sonoax, Christiania, Norway. Filed Oct. 30, 1924. Serial No. 746,820. 4 Claims. (Cl. 221—120.)



1. In feed devices for apparatus for spreading artificial manures, provided with reciprocating means for discharging the manure from a receptacle through a feed slot, the combination of feeder fingers forming between them scoopshaped pockets, having walls decreasing in height towards the feed slot, with means for reciprocating said fingers.

---

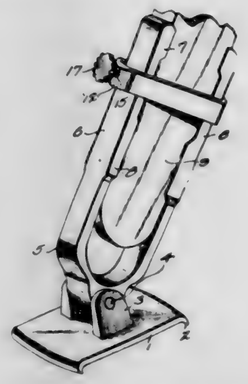
1,563,699. FOOT BORING MACHINE FOR DENTISTS WITH DRIVING MOTOR. PAUL FRANKE, Berlin, Germany. Filed Nov. 25, 1924. Serial No. 752,269. 2 Claims. (Cl. 32—22.)



1. A motor driven foot boring machine for dentists comprising in combination with the vertical shaft of the machine composed of two separate parts, a U-shaped bow inserted between said two parts of the vertical shaft and means for securely mounting the motor in said bow so that its centre of gravity is situated in the axis of the vertical shaft.

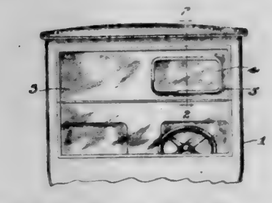
---

1,563,700. ADJUSTABLE LADDER SHOE. WILLIAM B. FRANKENSTEIN, Rochester, N. Y. Filed Sept. 10, 1924. Serial No. 736,983. 3 Claims. (Cl. 228—61.)



1. An attachment of the class described for a ladder including a base, a U-shaped clamp pivoted intermediate its ends to the base and provided with jaws the inner faces of which are cut out to provide spaced shoulders and means for throwing the jaws toward each other so as to swing them into firm frictional engagement with the upright of a ladder.

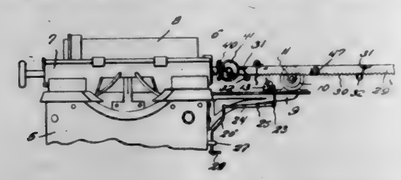
1,563,701. CONDENSATION-PREVENTING DEVICE. RALPH C. FREDERICKSON, Kensal, N. Dak. Filed Mar. 6, 1925. Serial No. 13,478. 1 Claim. (Cl. 20—40.5.)



In a device of the class described an annular vacuum cup composed of a continuous strip of rubber and a continuous strip of fabric directly united, a transparent sheet of celluloid positioned within said annular vacuum cup and having its edges attached to said fabric strip.

---

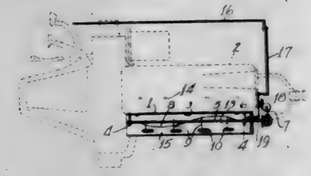
1,563,702. AUTOMATIC CARRIAGE-REVERSING MECHANISM FOR TYPEWRITERS. CHAUNCEY D. FRENCH and LOTT D. BROWN, Dallas, Oreg. Filed Nov. 24, 1924. Serial No. 751,916. 4 Claims. (Cl. 197—66.)



1. An automatic carriage reversing mechanism for typewriters comprising a bracket supported upon one side of the typewriter frame, a motor supported on the bracket, the armature shaft of said motor being equipped with a gear wheel, a rack bar secured to the adjacent end of the carriage and disposed to one side thereof and having its teeth in mesh with the teeth of the gear wheel, a switch in circuit with the motor, abutments, one adjacent each end of the rack bar for engaging the switch for making and breaking the motor circuit, and a spring mounted on the rack bar for engaging the armature shaft of the motor for braking the same after the switch has been moved to an off position.

---

1,563,703. TIMER. HENRY W. GOSSELL, Verndale, Minn. Filed May 11, 1922. Serial No. 560,168. 1 Claim. (Cl. 200—26.)



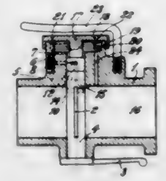
A timer for internal combustion engines comprising a frame, a timer shaft rotatably carried by said frame, means connected with the crank shaft of the engine for rotating said timer shaft, a spiral conductor carried by said timer shaft, a slidable support disposed parallel with said timer shaft, a series of spring conductors disposed in longitudinal alinement on said support and arranged to be engaged successively by different portions of said spiral conductor, and means for shifting said support longitudinally to vary the time of contact of said spiral conductor with said spring contacts.

1,563,704. CLOTH-EXPANDING ROLLER. THEODOR GREIS, Crefeld, Germany, assignor to Maschinenfabrik Benninger A. G., Uzwil, Switzerland. Filed Sept. 2, 1924. Serial No. 735,415. 3 Claims. (Cl. 26—63.)

1. A cloth expanding roller having screw threads on its circumference which is right handed on one longitudinal half of the roller and left handed on the other longitudinal half, the pitch of the thread increasing with an increased distance from the middle of the roller and the number of threads per pitch increasing with said increase in the distance, and the thread being formed by a wire of suitable profile and inserted in grooves cut into the body of the roller which grooves respond to the aforementioned conditions for the screw thread.

---

1,563,705. CARBURETOR. JACOB CHRISTIAN HANSEN-ELLEHAMMER, Copenhagen, Denmark. Filed Nov. 30, 1923. Serial No. 677,913. 4 Claims. (Cl. 261—44.)



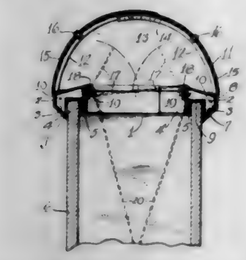
2. In a carburetor, a casing forming a mixing chamber and having a transverse bore; a fuel inlet opening through the periphery of said bore; a throttle valve having a spindle rotating in said bore; said spindle having a fuel passage therein; a cylindrical block rotating and reciprocating in said bore and having a tapering groove to cooperate with said fuel inlet and a passage for fuel leading from said groove and communicating with the fuel passage in the throttle spindle; means for movably holding said block with said groove out of register with said fuel inlet; means responsive to the suction in the mixing chamber for reciprocating said block to cause said groove and inlet to register; and means connecting said block and throttle spindle to rotate the block with the throttle but permit said reciprocating movement.

---

1,563,706. CHIMNEY PROTECTOR. SEAVER ANDERSON HOFFLAND, Fennimore, Wis., assignor to International Chimney and Fire Protectors Company, a Common Law Trust, Fennimore, Wis.; Daniel Jay Flintjer, Frances Hathaway Flintjer, Seaver Anderson Hoffland, and Dorothy Bruland Hoffland, trustees. Filed Aug. 9, 1923. Serial No. 656,565. 1 Claim. (Cl. 98—4.)

A chimney protector comprising a frame having hollow sides, the sides of said frame being composed of telescoping members, whereby said frame is adapted to fit chimneys of various sizes, the walls of said frame being shaped so as to cover the top, inner, and outer sides of the chimney, means for locking said telescoping sides

after they have been moved into the proper position, said means being disposed within the hollow sides, whereby said locking means is protected from the elements and a hood comprised of a plurality of members adjustably secured together whereby said hood may be enlarged or contracted so as to cover said frame.



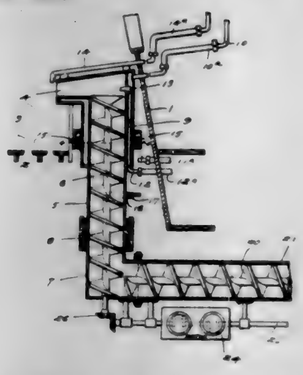
---

1,563,707. HAND-TOOL CONSTRUCTION. JOHN T. HOHL, Indianapolis, Ind. Filed Sept. 20, 1921. Serial No. 501,981. 2 Claims. (Cl. 192—67.)

1. A hand tool construction including a tubular handle having an enlarged opening at one end, a rotating shaft in said tubular handle and terminating within the enlarged opening and having an enlargement thereon, a thrust bearing positioned in said enlarged opening and interposed between the handle and the shaft enlargement, a tool supporting shaft extending into the enlarged opening of said handle, clutch means within the handle for associating said shaft terminations, a sleeve slidably and rotatably supported by said handle adjacent the open end, said handle adjacent the open end having an inclined slot, and a pin carried by the sleeve and positioned in said slot and engaging the clutch means for shifting the same.

---

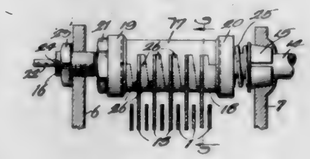
1,563,708. MECHANICAL STOKER. RAINSFORD B. HOLTHAUS and GEORGE D. SMITH, Fremont, Nebr. Filed June 9, 1923. Serial No. 644,415. 5 Claims. (Cl. 110—104.)



3. In a mechanical stoker, a fuel feeder having a conduit section constituting a discharge nozzle, means to automatically actuate said nozzle to distribute the fuel throughout the fire box, means for delivering a blast to effect a distribution of the fuel, and a valve mechanism operable automatically to vary the force of the blast so as to project the fuel different distances.

---

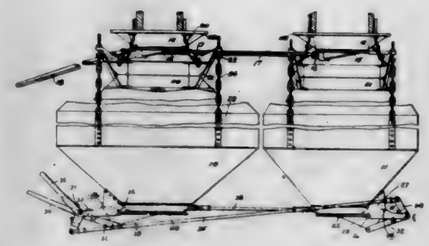
1,563,709. ELECTROSTATIC CONDENSER. PETER G. JACOBSON, Chicago, Ill. Filed Jan. 19, 1925. Serial No. 3,399. 6 Claims. (Cl. 250—41.)



1. A condenser having one side formed of a plurality of plates; and a tube formed in two longitudinal sections, each section being formed with a row of transverse fingers along each longitudinal side thereof that intermesh with the rows of transverse fingers along the opposite longitudinal sides of the other section, respectively, said condenser plates being distributed along said tube and interposed between meshing fingers at both sides of the tube and which fingers have clamping engagement with said plates.

---

1,563,710. MEASURING HOPPER. CHARLES S. JOHNSON, Champaign, Ill. Filed July 14, 1924. Serial No. 726,004. 2 Claims. (Cl. 221—144.)



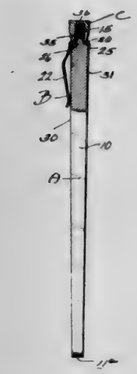
1. A pair of measuring hoppers side by side, a brace secured to the lower ends of said two hoppers, a valve for the outlet end of each hopper, a frame on each hopper to which the valve is hinged so that it will open downward, a lever pivoted on one of said frames for operating one of said valves, a second lever pivoted on the other frame for operating the other valve, a connecting rod extending from said second lever to a point near said hand lever, and a second hand lever pivoted on the same frame as the first hand lever for operating said rod, whereby the means for operating said valves are positioned together.

---

1,563,711. COMB. OTTO W. JOHNSON, Hot Springs, Mont., assignor of one-third to John H. Bras and one-third to Leo A. Henter, both of Hot Springs, Mont. Filed July 2, 1924. Serial No. 723,808. 4 Claims. (Cl. 24—3.)

2. A comb including a back having teeth extending laterally thereof and a screw threaded shank extending outwardly of an end surface thereof, a clip including an attaching wall with an opening therethrough adapted to

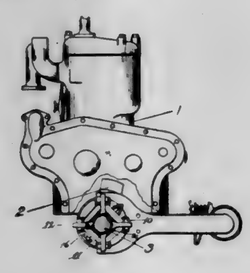
receive the screw threaded shank therethrough, said clip including a retaining arm at one side of the back of said comb and a retaining flange extending in engaging rela-



tion at the opposite side of said comb from said arm, and nut means for said screw threaded shank for clamping the attaching wall upon the end of said back of the comb.

---

1,563,712. BEARING-GRINDING MACHINE. RALPH JOHNSON, Ripley Township, Chautauqua County, N. Y. Filed May 10, 1924. Serial No. 712,354. 6 Claims. (Cl. 51—241.)



1. In a bedring grinding machine, the combination of a split rotating head having radially extending guides; grinding shoes mounted in the head, said shoes having radial projections operating on said guides; and means driving the head.

---

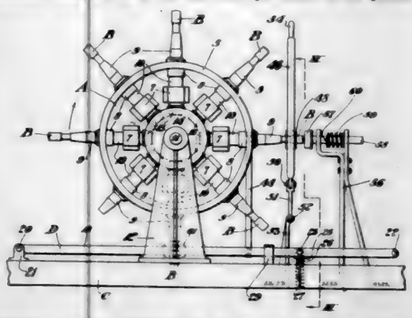
1,563,713. PROCESS OF MAKING A REFLOCCULATED PRODUCT. GEORGE WILSON ACHESON, Caldwell, N. J. Filed Nov. 22, 1924. Serial No. 751,688. 4 Claims. (Cl. 252—6.)

1. Process of making a reflocculated product, comprising subjecting a finely divided solid to successive deflocculation and reflocculation under attrition.

---

1,563,714. HANDLE-POLISHING MACHINE. LOUIS V. BLUE, Elkton, Md. Filed Dec. 18, 1922. Serial No. 607,671. 9 Claims. (Cl. 51—154.)

1. A handle polishing machine comprising an axially rotatable turret having a plurality of handle holding chucks rotatably mounted thereon, means for rotating said chucks on said turret in the handle polishing operations, means for turning said turret axially to move handles held by said chucks into position to be polished,



polishing means adapted to be moved into operative engagement with the handles held in polishing position by said turret and means for actuating said polishing means.

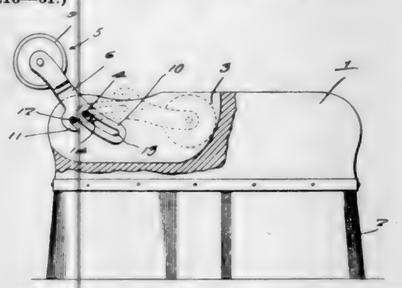
---

1,563,715. PACKING MACHINE. CHARLES BOULANGER, Malaunay, France, assignor to Societe Anonyme Anciens Etablissements Georges Pellerin, Malaunay, France. Filed Apr. 5, 1924. Serial No. 704,440. 4 Claims. (Cl. 93—6.)

1. In a paper bag closing machine, the combination of a main frame, an endless conveyor band mounted thereon, suitable boxes secured at their bottom to the said conveyor band and adapted to contain the paper bags filled with the products to be packed, movable folding elements disposed upon the said boxes and adapted to fold the sides of the bags, cams mounted on the said frame and directly controlling the said folding elements during the travel of the said boxes, and stationary rails which are suitably disposed upon the said frame and guide the said boxes during the folding operation.

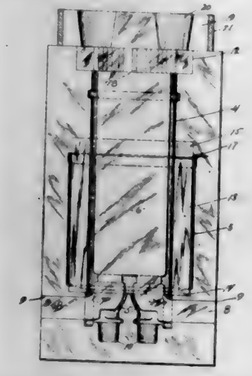
---

1,563,716. PAPER-HANGER'S TOOL. FRANK SPOUAGE BRIGGS, Niagara-on-the-Lake, Ontario, Canada. Filed July 13, 1925. Serial No. 43,298. 4 Claims. (Cl. 216—61.)



1. In a structure of the class described, a backing member having a recess formed therein, a cutter, spring arms connected with and extending from said cutter, a pivot bolt extending between the side walls of said recess, said arms being connected with said bolt.

1,563,717. APPARATUS FOR CASTING ENGINE CYLINDERS. ALEXANDER T. BROWN, Syracuse, N. Y. Filed Dec. 28, 1923. Serial No. 683,164. 1 Claim. (Cl. 22—131.)



An apparatus for casting engine cylinders, comprising a box having a cylindrical cavity, the box being divided longitudinally into two sections, a core composed of two lengthwise sections located in the spaces of the box divisions respectively, and spaced-apart from the wall of the cavity, the core being also spaced from the end wall of the cavity, and having outwardly and laterally extending portions for forming the cylinder head and ports carried by the head, such projections being arranged in corresponding cavities formed in the box divisions and spaced-apart from the walls of such cavities, and an annular series of cores arranged in the cylindrical cavity, and spaced-apart from the former core, each of the annular series of cores having heads at their ends for engaging the adjacent core, the portions of the cores between such heads being spaced-apart to form radial flange forming spaces.

---

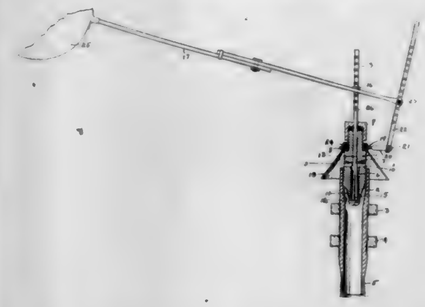
1,563,718. SPIRAL REFLUX CONDENSER. FAY J. BROWN, Shreveport, La. Filed May 25, 1923. Serial No. 641,448. 10 Claims. (Cl. 196—139.)

1. A condenser comprising a housing providing a spiral chamber therein, means for trapping and removing different fractions from the chamber, and baffle means in the chamber for making the vapor therein pursue a laterally tortuous path therein.

---

1,563,719. FLOAT-OPERATED VALVE. WILLIAM J. BUFORD, San Antonio, Tex. Filed Mar. 7, 1924. Serial No. 697,672. 3 Claims. (Cl. 137—104.)

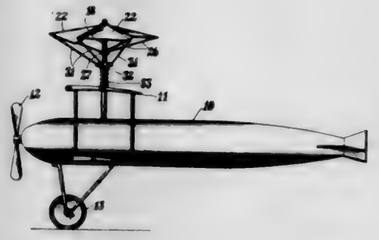
3. In a float valve of the character described, a fitting forming a valve chamber, a plug in the upper end of said fitting, said plug having a central passage and lateral outlets leading from said passage, a valve stem extending through said plug, a longitudially grooved tapered head on the stem, a valve on said head, a float operated arm



connected with said valve stem to open and close said valve, there being limited play between said arm and said valve stem allowing said valve to close abruptly in its final closing.

---

1,563,720. HELICOPTER ATTACHMENT FOR AEROPLANES. MICHAEL BUGAR, Cincinnati, Ohio. Filed Mar. 2, 1925. Serial No. 12,502. 1 Claim. (Cl. 244—15.)



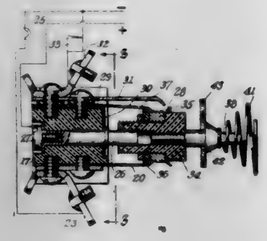
In combination with an aeroplane, a vertical shaft mounted thereon, a sleeve slidable on said shaft, a helicopter wheel comprising a number of triangular vanes attached at their inner apices to the said shaft, a series of struts each attached at one end to one outer corner of the respective vanes and at their inner ends to the said shaft, a series of stretchers each having a pivotal connection at opposite ends with the other outer corners of the different vanes and said sleeve, and means for adjusting said sleeve along the said shaft in opposite directions, comprising a spring bearing on the said sleeve, a rod slidable in a longitudinal boring in the said shaft and having one end fixed to the said sleeve, a collar rigid with the lower end of the said rod and surrounding the shaft, a spring latch engaged with lower end of the rod, a nut member on which said latch is mounted, a screw shaft on which said nut member is mounted, and means for rotating said screw shaft.

---

1,563,721. ELECTRIC SIGNAL SWITCH. JOSEPH O. CADIEUX, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Incorporated. Filed Jan. 10, 1925. Serial No. 1,536. 11 Claims. (Cl. 200—16.)

1. A signal switch comprising an insulating base, a guide pin extending through said base, a binding screw in the rear end of said pin, a contact plunger slidable

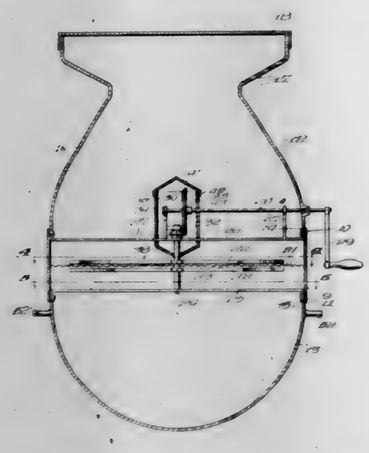
on the front end of said pin, a bracket having an arm extending along one side of said base and having another arm extending along the front of said base and



contacting with said pin, and a spring arm contact secured outside of the side arm of said bracket and engaging said contact plunger.

---

1,563,722. SIFTER. BESSIE A. CARLSON and OLIVER R. SNOW, Newcastle, Wyo., assignors, by direct and mesne assignments, of three-fourths to said Bessie A. Carlson and one-fourth to Mary B. Carleton, both of Newcastle, Wyo. Filed Mar. 27, 1924. Serial No. 702,425. 10 Claims. (Cl. 209—251.)

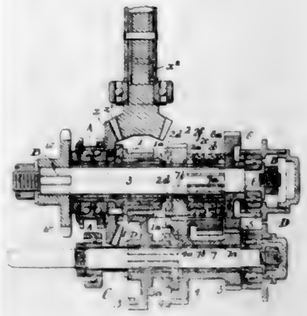


1. A sifter comprising oppositely related receptacles, one of which has a rounded closed outer end, the other having an open end and a detachable closure therefor, a pivotal mounting for the sifter carried by the first mentioned receptacle, and sifting means interposed between the receptacles.

---

1,563,723. CHANGE-SPEED GEARING. CHARLES HENRY CATON, Armley, near Leeds, England. Filed Oct. 6, 1923. Serial No. 666,954. 2 Claims. (Cl. 74—59.)

1. In four-speed gearing, in combination, a countershaft, three gear wheels, one slidable on and rotatable with said countershaft, and the other two loose thereon and connected to rotate in unison, a single clutch situated between the slidable wheel and one of the loose wheels, a main driving shaft, a driven shaft coaxial with the driving shaft, three other gear wheels, one fixed to the driving shaft and the others loose on the driven shaft, a double clutch between said loose wheels,



a single clutch arranged between one of said loose wheels and said fixed wheel, and means for operating said clutches.

---

1,563,724. SAFETY RAZOR. RUSS J. CHRISTY, Fremont, Ohio, assignor to Christy Company, Fremont, Ohio, a Corporation of Ohio. Filed June 16, 1921. Serial No. 478,147. 8 Claims. (Cl. 30—12.)

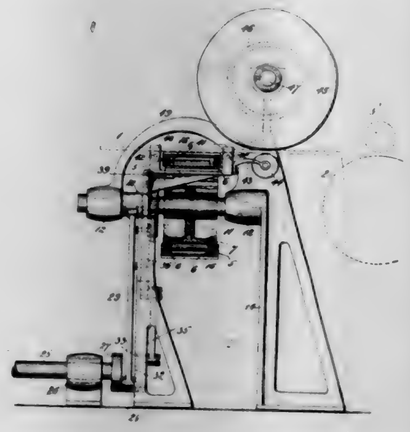
1. In a safety razor, a blade-supporting plate having upturned flanges at its opposite ends and a lug adjacent each end, each of said lugs having an inclined inner wall and a front wall, a blade having projecting ears at its rear corners for cooperation with the upturned flanges on the blade-supporting plate, and having also a notch at each end, each of said notches having an inclined wall and a front wall for cooperation, respectively, with the inclined walls and front walls of the lugs on the blade-supporting plate, and means for holding the blade on said plate.

---

1,563,725. STRAND-FEEDING MACHINE. FRED M. CLEAVELAND, Wakefield, Mass., assignor to Fred W. Green, Ionia, Mich. Filed June 3, 1922. Serial No. 565,731. 8 Claims. (Cl. 144—242.)

1. In a strand-feeding machine, the combination with an operating mechanism, of a movable carrier for receiving and holding the end portions of a number of strands arranged separate from one another on substantially parallel lines and applied to the carrier to extend crosswise it with permitted detachability therefrom, means for

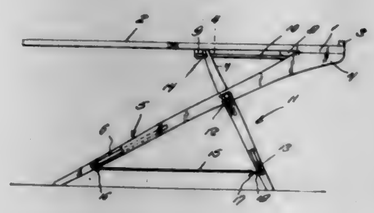
intermittently operating the carrier whereby each of the strands carried by it will be moved laterally to reach and occupy in turn a determinate position with dwell



of the carrier when the strand is occupying such determinate position, means for detaching each strand positioned as aforesaid from the carrier during the dwell of the carrier, and means for feeding the detached strand.

---

1,563,726. FOLDING IRONING BOARD. JESSE CUNNINGHAM, Gas City, Ind. Filed May 28, 1925. Serial No. 33,430. 1 Claim. (Cl. 68—10.)

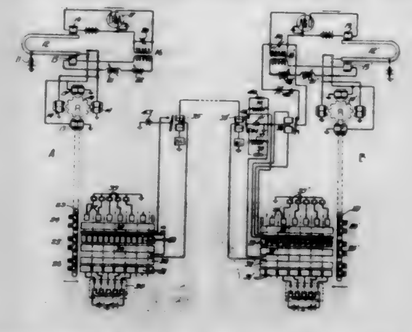


A folding ironing board comprising a leg structure offset laterally at one end, a top section fastened to said offset end, a second top section swingably connected with said first named top section, a guide on the under side of said second named top section, and another leg structure pivoted between its ends to the intermediate portion of the first named leg structure and having slidable connection at its upper end with said guide.

---

1,563,727. ISOCHRONIZING AND SYNCHRONIZING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1923. Serial No. 645,034. 5 Claims. (Cl. 178—53.)

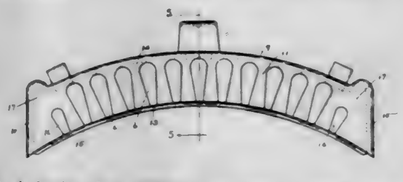
1. An isochronizing system comprising a distributor for imparting impulses to a line, a vibrating mechanism for driving said distributor, a receiving distributor, a variable vibrating mechanism therefor having a sharply tuned operating circuit, and means controlled by current



impulses received from the transmitting distributor to vary the tuning of said operating circuit whereby the distributors are maintained in isochronism.

---

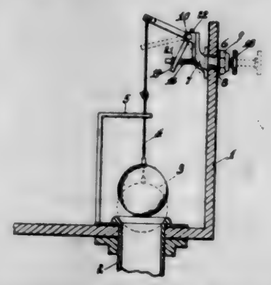
1,563,728. SHELL FOR COMPOSITION BRAKE SHOES. MURRELL R. DE FRANCE, Bellevue, Pa. Filed July 23, 1925. Serial No. 45,551. 3 Claims. (Cl. 188—254.)



3. A brake shoe shell for use with a filling of frictional composition formed with integral back end and side walls, the back wall being of relatively great thickness, and the side walls comprising a plurality of strips tapering in thickness from the back downwardly to the edges of the sides and having their width tapering upwardly to the back of the shell with intervening apertures between strips, said strips being so proportioned that the total area of metal presented by one side is approximately equal at any point along the vertical extent of the shell as the brake shoe wears away in use

---

1,563,729. TOILET-FLUSHING HANDLE. ALFONSO DOMINQUEZ, Berkeley, Calif. Filed Feb. 7, 1923. Serial No. 617,478. 5 Claims. (Cl. 4—67.)

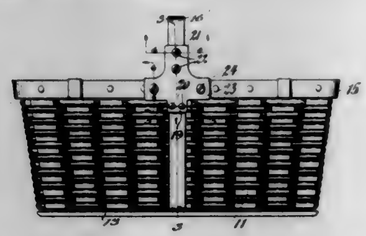


1. The combination with a toilet flush box having an outlet pipe and a closure valve in said pipe, of a lift lever journaled in said box, means joining said lever

and said valve, a stem adapted to extend into said box, means joining said stem and said lift lever, and spring means whereby said stem is returned to its normal position.

---

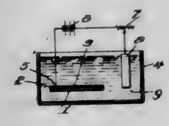
1,563,730. BASKET. CHARLES H. DREHER, Buffalo, N. Y. Filed Oct. 29, 1923. Serial No. 671,343. 2 Claims. (Cl. 217—122.)



1. A basket comprising a body, a handle arranged over the body, a band passing around the underside of the body, and means for connecting said body with opposite ends of said handle and body comprising two clips each of which is of cross-shape and provided with a downwardly projecting arm connected with one end of the band, an upwardly projecting arm connected with one end of said handle and two horizontal arms projecting in opposite directions and connected with said body.

---

1,563,731. ELECTRICAL APPARATUS AND METHOD OF MANUFACTURING THE SAME. CHARLES DUCAS, New York, N. Y. Filed Mar. 2, 1925. Serial No. 12,651. 11 Claims. (Cl. 204—1.)



1. A method of manufacturing electrical apparatus which consists in initially preparing an electrically conductive path upon a supporting surface, subjecting said path to an electroplating bath in which said path comprises the cathode, electrolytically depositing a metal having a low radio frequency resistance upon said path, and removing the conductor thus formed from said bath.

---

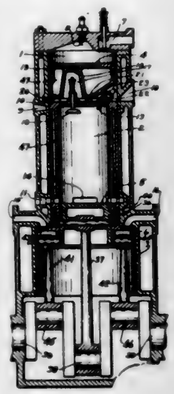
1,563,732. PROCESS OF ABSORBING HYDROCHLORIC-ACID GAS. JAMES ERNEST EGLESON, Ridley Park, Pa., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Sept. 7, 1922. Serial No. 586,587. 7 Claims. (Cl. 23—154.)

1. The process which consists in causing a current of hydrochloric acid gas and an absorbing liquid to travel in mutual contact within a tube which is cooled externally, separating the resulting liquid hydrochloric acid from the unabsorbed gases, carrying away a portion of said liquid acid, diluting the remaining portion of said acid, and bringing the diluted acid into renewed contact with the hydrochloric acid gas in said tube.

---

1,563,733. TWO-CYCLE GAS ENGINE. WILLIAM E. EWART, Raymond, Wash. Filed Mar. 5, 1923. Serial No. 622,814. 2 Claims. (Cl. 123—61.)

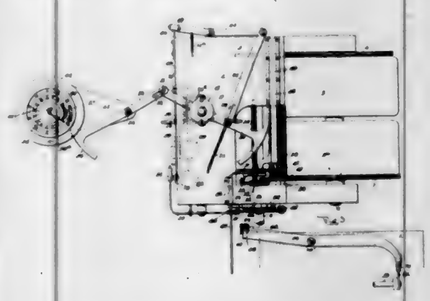
1. A two-cycle engine having a piston within a sleeve piston, an outer cylinder, an enlarged cylinder, an enlarged piston depending from said sleeve piston, connections between said pistons to crankshaft, intake valves to said outer cylinder and to said sleeve piston, an annular row of intake ports on said sleeve piston and leading to its inlet valve, exhaust ports in said cylinder



and sleeve piston, an explosive chamber within the outer cylinder and also within said sleeve piston and above said inner piston.

---

1,563,734. REGISTERING DEVICE FOR TALKING MACHINES. PINCUS FARB, Saginaw, Mich., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed July 22, 1918. Serial No. 246,161. Renewed Sept. 12, 1925. 10 Claims. (Cl. 185—44.)

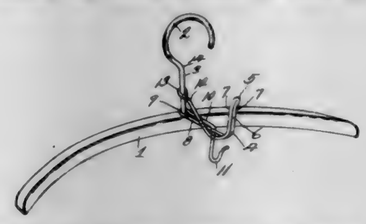


1. In a registering device for talking machines, the combination with a spring motor, having a member movable rectilinearly as the spring is wound and unwound, a slide engaging said member, a lever co-operating with the slide, a second lever having a lost motion pin and slot connection with the first lever, a dial having a scale thereon, a pointer co-operating with the dial, and connections between said second lever and pointer for indicating on the scale the number of records capable of being played by the motor without rewinding the spring at any time during the movement of the slide.

---

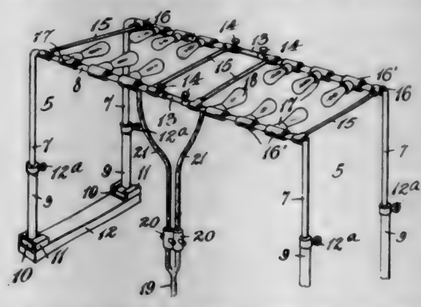
1,563,735. COAT-HANGER ATTACHMENT. CHARLES A. FETTERS, Washington, D. C. Filed Aug. 3, 1923. Serial No. 655,434. 1 Claim. (Cl. 211—13.)

The combination with a coat hanger hook, a vertically disposed shank carried by said hook, of a garment hook carried by said shank, said garment hook being formed from a single piece of spring wire bent upon itself to form an upwardly extending hook and inwardly diverging arms, parallel horizontally disposed eyes carried by said diverging horizontal arms and in which the shank is disposed and frictionally held, the lower eye terminating in an outwardly extending arm, and a hook carried by the outwardly extending arm below the first mentioned garment supporting hook.



---

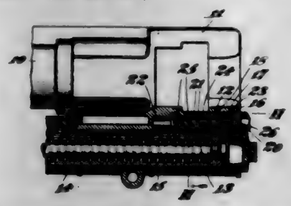
1,563,736. COMBINATION MEDICAL APPARATUS. CHRISTIAN B. FINK, San Francisco, Calif. Filed June 28, 1923. Serial No. 648,385. 1 Claim. (Cl. 174—177.)



A device of the class described comprising two identical frame sections, each of said sections including a pair of spaced apart horizontal branches and depending vertical branches, the free ends of the horizontal branches of one section arranged in horizontal alinement with the free ends of the horizontal branches of the other section, rods movably telescoping the respective free ends of the alined horizontal branches, fastenings securing the rods to the horizontal branches, canopy sections mounted over the frame sections and adapted to engage with said fastenings, lamps supported from the horizontal branches of said frame sections, base bars at the respective lower ends of the frame, and means separable from the bars and carried by said vertical branches for holding the frame in a relatively rigid condition.

---

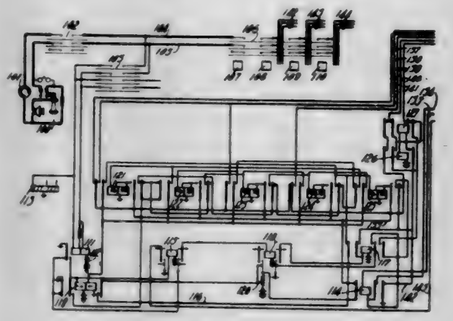
1,563,737. LOCKING DEVICE FOR GUN TUBES. CLARENCE HERVY FROELICH, Bethlehem, Pa., assignor to Bethlehem Steel Company, a Corporation of Pennsylvania. Filed Feb. 26, 1924. Serial No. 695,155. 10 Claims. (Cl. 89—37.)



5. The combination with a gun member and a movable recoil member having an interlocking guide connection and cooperating thrust-transmitting abutments, of a longitudinal recess in one member having interior helical teeth, a shaft journalled on the other member and adapted to fit in the recess and having a row of helical teeth for engagement and disengagement with the first teeth.

---

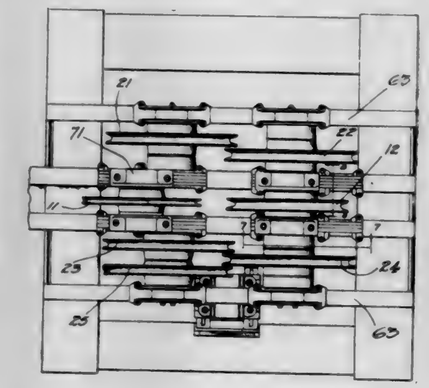
1,563,738. REGISTERING DEVICE. OWEN C. FROM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1923. Serial No. 655,804. 4 Claims. (Cl. 177—353.)



1. In combination, a plurality of relays, means for successively operating said relays in response to a series of impulses, and means to release each relay on the operation of the next succeeding relay, comprising a differential circuit on the earlier operated relay.

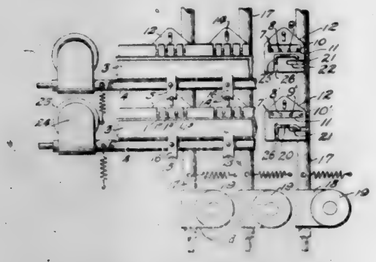
---

1,563,739. CROWN BLOCK. EDWIN W. GOESER, Los Angeles, Calif., assignor to Emsco Tool Company, a Corporation of California. Filed Apr. 7, 1924. Serial No. 704,685. 10 Claims. (Cl. 254—190.)



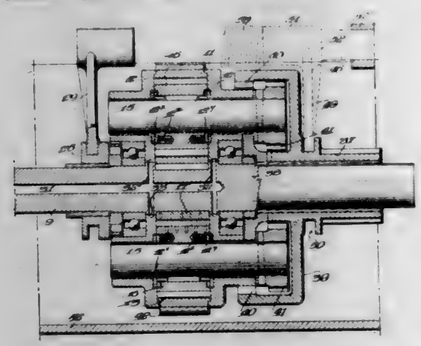
1. In an oil well derrick, the combination of: a supporting structure at the top of the derrick; lower brackets mounted in pairs on said structure; lower shafts, each supported in one of said pairs of brackets; lower sheaves, each sheave turning freely on one of said lower shafts; upper brackets mounted in pairs on said lower brackets and adjustable horizontally; upper shafts, each mounted in one of said pairs of upper brackets and upper sheaves, each turning freely on one of said upper shafts.

1,563,740. AUTOMATIC TELEPHONE SWITCH. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 8, 1922. Serial No. 550,617. 10 Claims. (Cl. 179—27.5.)



1. In a switching mechanism, a plurality of notched insulating members, sets of conductors helically arranged thereon, sets of flexible contacts arranged in rows coordinate to said sets of conductors, and means for selectively establishing connection between said sets of conductors and said sets of contacts.

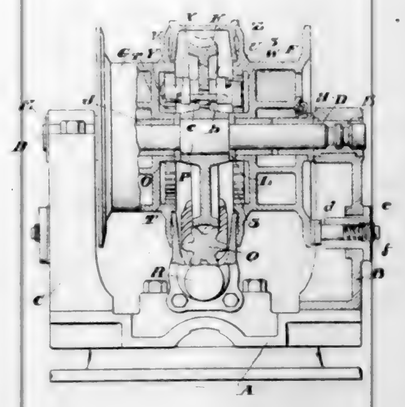
1,563,741. CLUTCH-SPEED CHANGING AND REVERSING MECHANISM. HARPER A. GOOD, Waynesboro, Pa. Filed Nov. 20, 1922. Serial No. 602,314. 5 Claims. (Cl. 74—34.)



1. A fluid clutch comprising relatively rotatable driving and driven members, a head having a rotor chamber in one of the members, a rotor in said chamber having a gear, a rotor carried by one of the members and coacting with the first rotor to constitute a pump, a circulating passageway in the head having an intake and discharge communicating with said pump, means for controlling the flow of fluid through the passageway, a gear driven by the first rotor, a gear connected to the other member and shiftable into and out of mesh with the rotor driven gear, and a clutch operable with the shiftable gear to connect and disconnect the head and second member.

1,563,742. CLUTCH MECHANISM FOR DOUBLE-DRUM HOISTS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,173. 2 Claims. (Cl. 254—185.)

1. In a double drum hoist in which one drum or the other is adapted to be driven from a reversible driving shaft, the combination of a driving shaft and relatively rotatable drums, a main driver mounted between the drums, toothed drum drivers on the drums having oppositely facing teeth, a pivot pin transversely carried by the main driver, oppositely facing pawls removably connected to the projecting ends of said pivot pin, and bolts connecting said pawls, said bolts extending through apertures in the main driver and having play therein to permit the pawls to rock on the axis of the pivot pin.

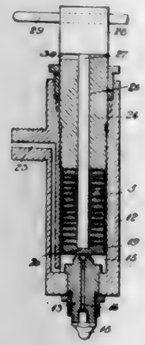


1,563,743. APERTURE STOPPER. JOHN H. HAZLEWOOD, Vancouver, British Columbia, Canada. Filed Nov. 29, 1924. Serial No. 752,927. 4 Claims. (Cl. 137—99.)

1. Means for closing an aperture in a plate, one side of which plate is not accessible except through the aperture, said means comprising a screw adapted to pass into the aperture and transversely apertured at one end, a cross bar endwise movable in the transverse aperture of the screw, said bar having at one end means preventing its withdrawal and between that and the other end means preventing movement beyond a medial position in the screw, a nut threaded on the screw, and a sealing washer of soft material between the nut and the cross bar.

1,563,744. VALVE-CONTROLLING MEANS. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed Sept. 9, 1925. Serial No. 55,284. 5 Claims. (Cl. 137—156.)

1. In a fluid pressure operated valve controlling device, a casing adapted to be internally subjected to the fluid pressure, a set of annular flexible discs adapted to be inserted into said casing so as to loosely engage each other to form a longitudinally flexible hollow column, an imperforate independent end piece at one end of said column, an apertured independent end piece at the opposite end of said column, and means adapted to tran-

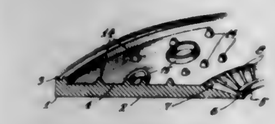


siently engage said discs and said end pieces to prevent said members from being displaced laterally relatively to each other during the actions of assembling the device.

1,563,745. MOP. NEWTON S. HILLYARD, St. Joseph, Mo. Filed Sept. 27, 1924. Serial No. 740,329. 2 Claims. (Cl. 15—229.)

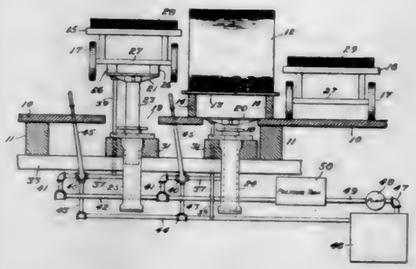
1. A mop comprising a mop head having a reservoir, a swab holder carried by the under side of said reservoir and having depending flanges to provide a swab receiving recess and means for fastening a swab in the recess, the reservoir and the adjacent wall of the holder having openings so that liquid may flow from the reservoir into the recess to contact with the swab and a pad arranged between the reservoir and swab holder sealing the space between the reservoir and swab holder at the edges thereof and projecting outwardly therefrom to thereby provide a buffer.

1,563,746. SHIRT RETAINER. HERBERT SACHS HIRSCH and MORRIS HIRSCH, Newark, N. J. Filed May 19, 1925. Serial No. 31,273. 4 Claims. (Cl. 241—7.)



1. A shirt retainer comprising a centrally perforated rubber member having a flat back and provided on its forward face with a plurality of points or projections formed on said member and upstanding therefrom, said member being provided with a centrally positioned recess in its forward face and which recess surrounds the perforation, and an upstanding bead immediately surrounding the perforation and between the perforation and the recess.

1,563,747. METHOD AND APPARATUS FOR USE IN SORTING PAPER. GUY F. HOSMER, Rumford, Me., assignor to Oxford Paper Company, Rumford, Me., a Corporation of Maine. Filed Dec. 1, 1924. Serial No. 753,397. 11 Claims. (Cl. 214—1.)



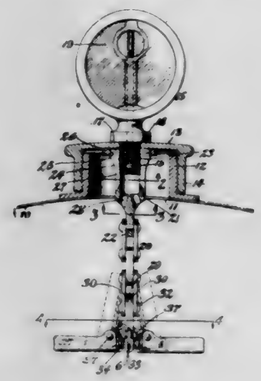
1. In an apparatus for use in sorting paper sheets, in combination, a support for a stack of unsorted paper, supports for stacks of accepted and rejected paper disposed respectively adjacent said first named support, and mechanism for relatively moving said unsorted paper and accepted paper supports in a vertical direction.

10. The herein described method of sorting paper sheets which consists in supplying the unsorted paper in a stack, transferring the accepted sheets successively from the top of said stack to the top of an adjacent stack, and relatively lowering the accepted paper stack and raising the unsorted paper stack as the operation progresses.

1,563,748. WELDING. CHAD H. HUMPHRIES, Kokomo, Ind., assignor to Metals Protection Corp., Kokomo, Ind., a Corporation of Indiana. Filed Aug. 31, 1925. Serial No. 53,766. 4 Claims. (Cl. 219—10.)

4. Process for gas and electric welding of iron and steel articles which consists in applying to the surfaces to be welded a solution of chromic acid, allowing the surfaces to dry, and welding the surfaces.

1,563,749. ANCHOR FOR RADIATOR CAPS, ETC. EDWARD E. JOSEF, Buffalo, N. Y. Filed Nov. 25, 1921. Serial No. 517,734. 2 Claims. (Cl. 220—24.)

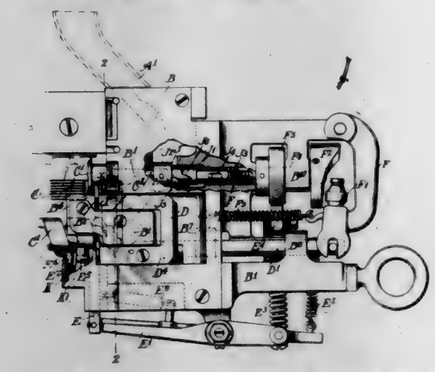


1. An anchor comprising a central body, an ear projecting laterally from said body, and a stop arm pivoted on said ear so as to be capable of swinging downwardly from a horizontal position thereon but held against

swinging downwardly from a horizontal position thereon, said arm comprising two side walls which have their inner ends arranged on opposite sides of said ear and pivoted thereto, and a web connecting the lower edges of said walls and adapted to engage its inner end with the underside of said ear.

---

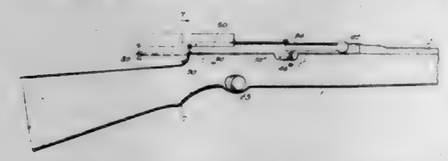
1,563,750. TYPOGRAPHICAL DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 4, 1925. Serial No. 20,848. 18 Claims. (Cl. 199—42.)



1. In a typographical distributing machine, the combination of a distributor box through which the matrices pass by gravity, a matrix lifting finger, a reciprocating pusher member for advancing the matrices into the range of action of the lifting finger, and adjusting means to regulate the stroke of the pusher member.

---

1,563,751. AUTOMATIC FIREARM. JOHN T. KEWISH, New York, N. Y. Filed May 31, 1924. Serial No. 717,061. 55 Claims. (Cl. 42—3.)



1. A gun of the class described having a receiver comprising in one piece means for containing the breech mechanism, a cover case, the trigger mechanism, the trigger guard, the magazine; and having parallel tracks to receive the breech mechanism and cover case.

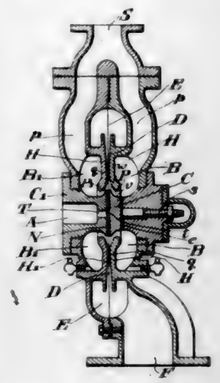
14. A gun of the class described having breech mechanism including an actuator, or traversing weight, having a longitudinally slidable firing pin therein, and a relatively movable bolt rotatably mounted within one end thereof journaled directly on said firing pin.

33. A gun of the class described having breech mechanism including an actuator carrying a slidable firing pin therein formed with a hollow rear section to receive the firing pin and a solid formed section to journal the bolt.

---

1,563,752. EJECTOR. GOTTDANK L. KOTHNY, Strafford, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 26, 1924. Serial No. 728,308. 12 Claims. (Cl. 230—13.)

1. A member of an annular nozzle having its periphery of greatest diameter adjacent that face thereof which forms a wall of the nozzle passage, and having a peripheral fluid-guiding surface of relatively great diameter



curving axially and outwardly and terminating at said periphery of greatest diameter.

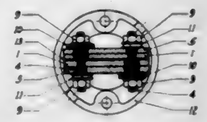
---

1,563,753. ELECTRICAL SWITCH. CARL RUDOLPH KRONE, Oakland, Calif. Filed Mar. 29, 1923. Serial No. 628,634. 4 Claims. (Cl. 200—6.)

1. A planetary electric switch comprising a drive gear, an internal gear mounted concentrically therewith comprising a live section, an oppositely arranged dead section and two interposed contact sections insulated from one another, and a plurality of pinions mounted revolvably between the two gears adapted to selectively engage the live section and either contact section, the live section and both contact sections and the live section and the dead section.

---

1,563,754. ELECTRICAL CONDENSER. MARIUS LATOUR, Paris, France, assignor to Latour Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 19, 1921. Serial No. 493,672. 4 Claims. (Cl. 250—41.)



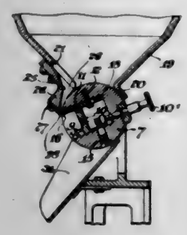
2. The combination of two pairs of conductive plates, a strip of high resistance conductive paper bent into U shape, one end of said paper being fitted between the plates of one pair and the other end between the plates of the other pair and a dielectric between said pairs.

1,563,755. PROCESS OF MANUFACTURING CEMENT. CARL LEONARDT, Los Angeles, Calif. Filed Nov. 19, 1923. Serial No. 675,730. 15 Claims. (Cl. 106—25.)

5. The process of producing a plastic waterproof cement which consists in first treating calcareous material containing calcium carbonate with hydrochloric acid, adding oleaginous material to the mixture, and then incorporating the resulting mixture with cement.

---

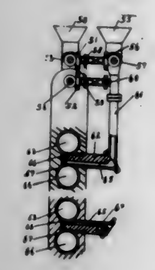
1,563,756. CIGAR BUNCHING. BERNARD LIBERMAN, Philadelphia, Pa. Filed Mar. 29, 1922. Serial No. 547,671. 8 Claims. (Cl. 131—39.)



1. In a scrap bunching machine, the combination of means forming a measuring pocket, movable to and from receiving and discharging positions, means for delivering scrap tobacco thereto, a knife forming a margin of the pocket, means for adjusting the position of said knife, a second knife secured to a stationary part for cooperating with the first knife for shearing off scrap projecting from the pocket.

---

1,563,757. ROASTING MACHINE. JAKOB LIEBERHERR, Islikon, Switzerland. Filed Jan. 9, 1923. Serial No. 611,636. 3 Claims. (Cl. 263—25.)

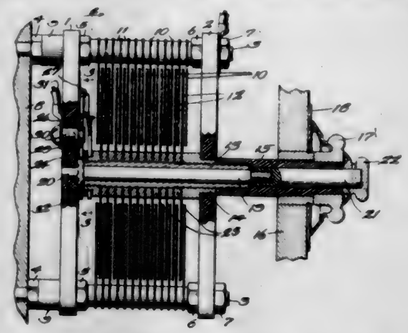


1. In a roasting device the combination of several roasting cylinders, helical conveyers rotating in the cylinders, arrangement for changing the speed of the helical conveyers, passages between the roasting cylinders, means inserted in such passages and which may be used either as an inlet or an outlet for material.

---

1,563,758. CONDENSER. JOHN F. LINDBERG, Chicago, Ill., assignor to Reliance Die and Stamping Company, Chicago, Ill., a Corporation of Illinois. Filed July 5, 1922. Serial No. 572,872. 4 Claims. (Cl. 250—41.)

1. A condenser including the two elements thereof; a hollow shaft upon which one of said condenser elements is mounted and itself mounted to turn whereby the condenser element carried thereby is made adjustable with respect to the other condenser element; a second shaft within the hollow shaft and adapted to



turn with respect thereto; and speed reducing cam and lever mechanism establishing turning connection between the second shaft and the adjustable condenser element.

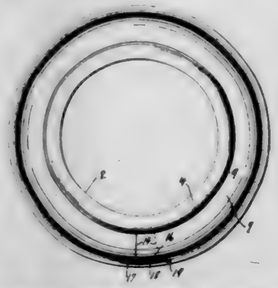
---

1,563,759. SINTERING MACHINE. JOSEPH R. LINNEY, Lyon Mountain, N. Y., assignor to Chateaugay Ore & Iron Co., Lyon Mountain, N. Y., a Corporation of New York. Filed Feb. 15, 1924. Serial No. 693,009. 6 Claims. (Cl. 266—21.)

1. In a sintering machine, a train of separate pallets or grates, an endless track for the same including a loading and combustion portion, a discharge portion, a return portion located below the loading and combustion portion, and means for elevating the pallets or grates from the return portion to the loading portion of the track, said track being longer than the train of separate pallets or grates to provide expansion space for the same, the return portion of the track being provided with means to prevent separation between the pallets or grates at and around the said delivery portion.

---

1,563,760. TIRE COVER. MARTIN B. LOETSCHER, Hollywood, Calif. Filed Dec. 4, 1922. Serial No. 604,952. 4 Claims. (Cl. 150—54.)

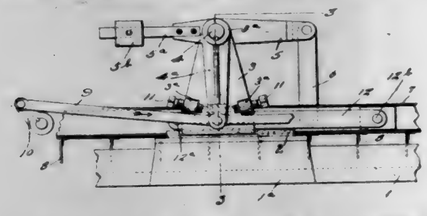


1. A cover for a tire rim having a tire thereon comprising an element engaging one side of the tire terminating in a crimped flange surrounding the tire peripherally, a second element adapted to engage the other

side of the tire being split transversely and terminating in a flange adapted to be sprung over the crimped flange for firmly engaging the same, and means for locking the tire at the split comprising ratchet teeth associated with one end of the second element, and a spring member associated with the other end having ratchet teeth adapted to engage the former teeth.

---

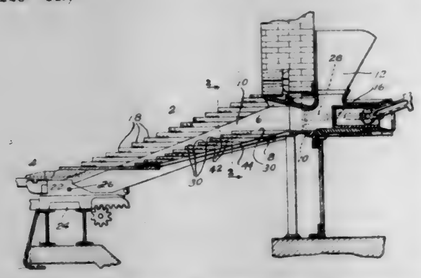
1,563,761. MEANS FOR CONVERTING MOTION. HUGH B. LOWDEN, Denver, Colo., Filed Feb. 29, 1924. Serial No. 695,949. 2 Claims. (Cl. 74—14.)



1. Mechanism for imparting motion to an element in a substantial rectangular closed path comprising a slider, a bell crank pivotally supported thereby having substantially horizontal and vertical arms, means for limiting the oscillation of the bell crank, push and pull means connected to the vertical arm of the bell crank, flexible means connecting said element to the horizontal arm of the bell crank, and connecting means apart from said horizontal arm preventing horizontal and permitting vertical movement of said element relative to said slider.

---

1,563,762. STOKER. EDWIN LUNDGREN, Frederick, Md., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1923, Serial No. 668,798. 4 Claims. (Cl. 110—44.)

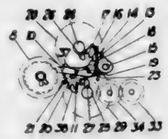


1. A furnace having, in combination, a downwardly and rearwardly inclined fuel retort having side walls longitudinally movable and a downwardly and rearwardly inclined bottom wall, tuyère structures mounted on said side walls, means for reciprocating said side walls longitudinally and for feeding fuel into the forward end of the retort, and a row of tuyère blocks one upon the other in overlapping relation mounted on the inclined bottom wall of the retort spaced a distance below the top surfaces of said first mentioned tuyère structures and extending substantially the width of the retort.

---

1,563,763. CALCULATING MACHINE. CONRAD LUTTROPP, Stockholm, Sweden, assignor of one-half to Anders Lindahl, Stockholm, Sweden. Original application filed Aug. 13, 1923, Serial No. 657,148. Divided and this application filed Apr. 22, 1925. Serial No. 25,091. 3 Claims. (Cl. 235.)

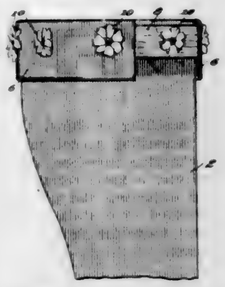
3. A calculating machine, comprising a counting register containing a plurality of numeral wheels, two shafts having series of projections and adapted to be rotated in opposite directions, pinions constantly engaging said numeral wheels, a swingable carrier for each of said pinions, a lever engaging said carrier and adapted to



shift said carrier so as to bring the corresponding pinion into operative position in relation to either of said shafts, and projections on said carriers adapted to be acted upon by the projections of either shaft for returning the carrier into normal position.

---

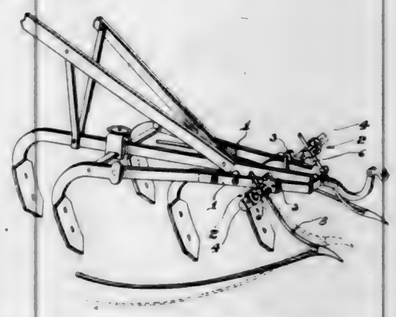
1,563,764. STOCKING. WALTER J. MCCLELLAND, East Orange, N. J. Filed Mar. 25, 1925. Serial No. 18,314. 6 Claims. (Cl. 2—240.)



1. A stocking having a main leg portion, a two ply top portion permantly secured to the leg portion, an endless elastic web adjacent the top portion and between the plies thereof, and cooperating fastening means on said web and top portion to detachably secure the web in position.

---

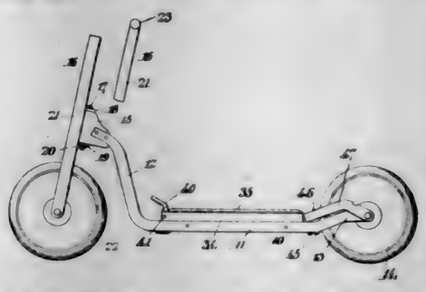
1563,765. VINE TURNER. CHARLES T. MCCREADY, Onley, Va. Filed July 14, 1925. Serial No. 43,599. 1 Claim. (Cl. 97—192.)



In a device of the class described in combination, a bracket, a bar integral and at right angles with the said bracket, a movable clamp, a widened portion at one end of the said clamp having a curved slot therein, the other end of the said clamp being thickened, means for allowing a vine turner to pass through the said thickened portion of the said clamp, set screws opposite each other for clamping the said vine turner in place, one of the set screws acting as a pivot on which the said clamp swings, another screw passing through the said curved slot and a slot in the said bar, the said clamp adapted to move parallel with the said bar and swing on said bar and be fastened to the said bar.

---

1,563,766. VEHICLE. WILLIAM E. MCLAREN, Los Angeles, Calif. Original application filed Apr. 16, 1924, Serial No. 706,820. Divided and this application filed Mar. 12, 1925. Serial No. 14,977. 3 Claims. (Cl. 188—20.)



1. In a scooter vehicle, a foot board, front and rear wheels supporting said board, a bracket at the rear of said board, a rod slidable in said bracket, a yoke at the rear end of said rod, a roller in said yoke adapted when the rod is moved rearwardly to engage said wheel, a pedal at the front of said board connected to said rod, and a spring associated with said rod and bracket and normally holding said rod retracted.

---

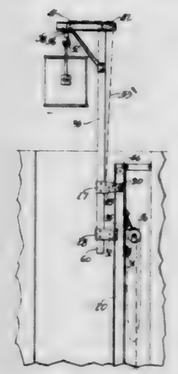
1,563,767. FACIAL DEVICE. SADIE MACDONALD, New York, N. Y. Filed May 28, 1923. Serial No. 641,963. 3 Claims. (Cl. 128—76.)

1. In a facial device, in combination, a pair of tabs each having an adhesive material upon one face and a plurality of loops upon the other face capacle of receiving an ordinary hair pin whereby the hair of the wearer may be made to cover the tabs and extensible means connecting the two tabs.

---

1,563,768. AUTOMATICALLY-EXTENSIBLE HOISTING MAST. PHILIP H. MALLINCKRODT, Salt Lake City, Utah. Filed June 7, 1922. Serial No. 566,604. 4 Claims. (Cl. 212—64.)

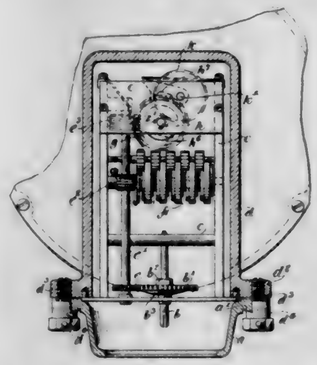
1. In a device of the kind described, a mast portion adapted to movably engage a second mast portion and to be longitudinally guided therealong, a sheave on the said first mast portion, a second sheave on the said first mast portion at a point below the first sheave, another sheave mounted on the said second mast portion at a point above the said second sheave of the first mast portion, a wrapping connector having one end depending from the first sheave, while the other end extends to, and around, the second sheave of the



first mast portion and around the other sheave of the second mast portion in the order named; a hoisting mechanism to which the other end of the wrapping connector may be attached, a stop portion located on the said wrapping connector at a point below the said first sheave, and a stop portion located on the said first mast portion at a point between the said first sheave and the said first stop portion.

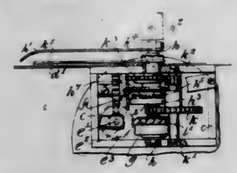
---

1,563,769. REGISTER FOR LIQUID-DISPENSING APPARATUS. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1924. Serial No. 752,837. 3 Claims. (Cl. 235—94.)



1. In a regulator for liquid dispensing apparatus having a meter, a casing for the meter and registering devices adapted to be actuated by the meter mechanism, a casing for the registering devices rotatably mounted on the meter casing and means to secure the two casings together in relatively adjusted position, and means within the register casing for operatively connecting the registering devices with the meter mechanism adapted to permit relative rotation of the casings without operating the meter mechanism or the registering devices.

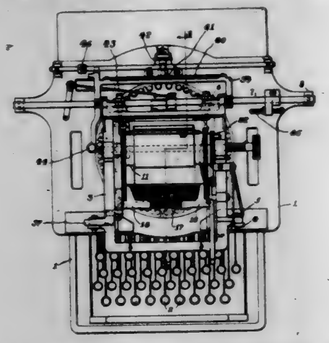
1,563,770. REGISTER FOR LIQUID-DISPENSING APPARATUS. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Original application filed Nov. 29, 1924, Serial No. 752,837. Divided and this application filed May 12, 1925. Serial No. 29,681. 5 Claims. (Cl. 235—144.)



5. In a registering mechanism comprising a driving shaft, a unit indicator shaft carrying a unit pointer and having a resetting handle, and transmitting gearing between the driving shaft and the indicator shaft, a clutch forming a part of said gearing adapted to transmit rotation to the indicator shaft and to permit it to be independently rotated, a sleeve mounted on the indicator shaft and carrying a pointer, a pinion on the indicator shaft, a gear mounted frictionally on the sleeve, a parallel shaft having a gear in engagement with the pinion on the indicator shaft and a pinion in engagement with the gear on the sleeve, means to couple the indicator shaft and the sleeve for resetting, a stop cam and a co-acting pawl on the sleeve and indicator shaft, a second stop cam on the sleeve, and a stop pawl in operative relation with said second stop cam.

---

1,563,771. STENCIL ATTACHMENT FOR TYPEWRITERS. JOHN J. MASON, Brooklyn, N. Y., assignor, by mesne assignments, to Underwood Typewriter Company, a Corporation of Delaware. Filed July 22, 1921. Serial No. 486,735. 4 Claims. (Cl. 197—135.)

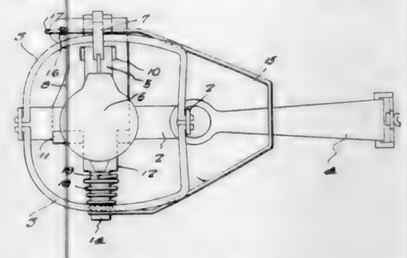


1. In a typewriting machine, a rotatable platen, a flat-bed card holder mounted to reciprocate tangentially to the platen, an inked ribbon carried by said card holder in position to be engaged by the typing members of the machine to type inked characters on the card in one position of said card holder.

---

1,563,772. ANIMAL TRAP. EDWARD E. MAY, Parker, S. Dak. Filed Feb. 23, 1924. Serial No. 694,695. 2 Claims. (Cl. 43—90.)

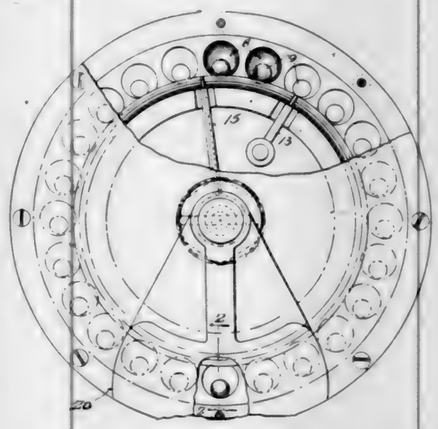
1. An animal trap of the class described comprising a jaw carrying base member, a pair of cooperating jaws pivotally mounted upon said member, resilient means for closing said jaws; trip mechanism in association with said member and jaws for holding the latter open, a base plate extending at right angles to said jaw carrying member and provided with hooks to take over said member, and a U-shaped retaining member pivotally connected at one end with said plate, having a coiled spring at its opposite end connected



with said plate, having its bight portion contacting said jaw closing means, and having the intermediate portion of its arms disposed beneath and engaged with said jaws for assisting in closing the latter.

---

1,563,773. CENTRIFUGALLY-OPERATED CIRCUIT BREAKER. GEORGE WASHINGTON MEYERS, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Aug. 20, 1919. Serial No. 318,773. 7 Claims. (Cl. 200—80.)



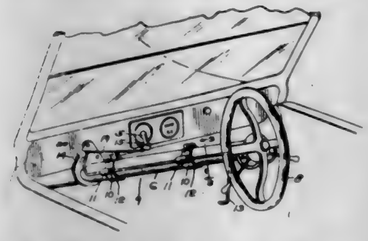
1. In a centrifugally operated circuit breaker, the combination with a rotating shaft, of a member mounted on said shaft to rotate therewith, said member having a circumferentially extending channel therein, an insulation ring in said channel, conductor rings carried in said insulation ring, said insulation ring being provided with pockets in which said conductor rings are exposed for electrical contact and means in said pockets for bridging said conductor rings.

---

1,563,774. HEADLIGHT-OPERATING DEVICE. OTTO A. MEYER, Winchester, Ind. Filed July 10, 1925. Serial No. 42,723. 1 Claim. (Cl. 74—39.)

The combination with the steering column of an automobile, of split adjustable clamps carried thereby, each clamp being provided in its side with an outwardly bulging pocket having its inner side open, adjustable means to contract each split clamp, a rock shaft entering through the pockets, rubber sleeves carried by the rock shaft and located within the pockets and arranged

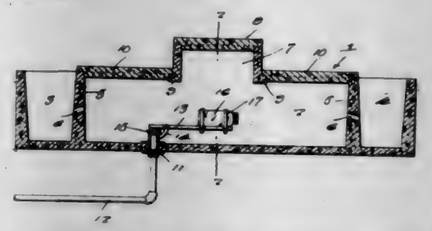
to contact with the steering column, the friction upon the sleeves being regulated by adjusting the tension of the split clamps, a crank connected with the lower



end of the rock shaft, means connecting the crank with the automobile instrument, and a second crank connected with the upper end of the rock shaft and arranged near the steering wheel.

---

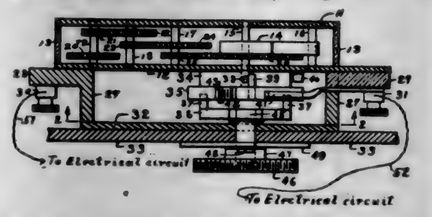
1,563,775. AUTOMATIC HOG WATERER. JAMES MILLER and HENRY GRUBER, Nehawka, Nebr. Filed June 12, 1925. Serial No. 36,649. 2 Claims. (Cl. 119—78.)



1. An automatic hog waterer comprising a substantially rectangular trough, vertical partitions arranged therein to form a central supply compartment and end drinking compartments, said partitions having transverse downwardly inclined openings therein for the passage of water from the central compartment to the end compartment, and an extension on the top of the central compartment at the intermediate portion thereof forming the main hole, a cover therefor, laterally extending flanges formed on the opposed sides of the lower portion of the said extension, and covers supported on the upper ends of the partitions and the adjacent flanges.

---

1,563,776. AUTOMATIC CUT-OFF SWITCH FOR RADIO RECEIVING SETS. FREDERICK G. MITCHELL, Ridgefield Park, N. J. Filed Dec. 6, 1924. Serial No. 754,350. 3 Claims. (Cl. 200—35.)



2. In an automatic cut off switch for an electric circuit of a radio receiving set a clockwise mechanism, a spring arbor therein, a driving member secured to said arbor, to rotate therewith, an engaging means carried by said member, a driven member carrying a corresponding means to be impelled by said engaging means, and forming therewith a one way clutch, to turn said driven member in one direction and to allow said driven member to be turned in the same direction independently of said arbor, an electrical conductor in sliding contact with said driven member, thereby completing said circuit, and a means on said driven member for automatically separating said conductor therefrom, thereby breaking said circuit.

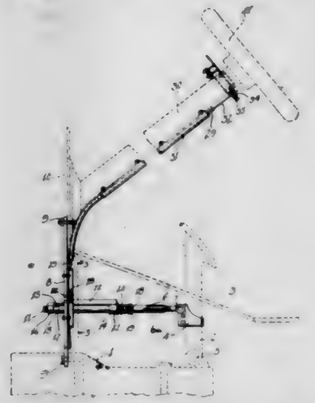
---

1,563,777. SAFETY CATCH. EUGENE MOREHOUSE, Providence, R. I., assignor to B. W. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed July 1, 1924. Serial No. 723,536. 4 Claims. (Cl. 24—157.)

1. A safety catch having a body member, a keeper member rotatably mounted in said body and having an operating handle projecting outwardly beyond the margin of the body member, a detent protuberance on said body extending beyond the margin thereof into the path of movement of said arm, whereby said arm is sprung past the protuberance in moving to and from closed position.

---

1,563,778. NEUTRAL LATCH FOR PLANETARY TRANSMISSIONS. ROLLA E. MUDD, Chicago, Ill. Filed Dec. 8, 1924. Serial No. 754,643. 2 Claims. (Cl. 74—39.)



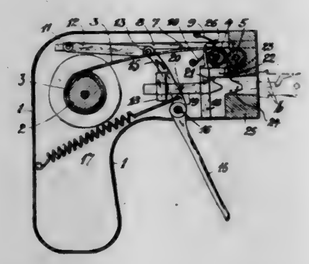
1. The combination with a motor vehicle having a transmission and a pedal for actuating said transmission in low speed, neutral and high speed positions, of a bolt associated with said pedal, a latch, means for normally drawing said latch in engagement with said bolt, whereby said pedal is locked against movement to low speed position, and manually actuated means for releasing said latch, whereby said pedal may be moved to low speed position at will, said bolt being movable with respect to said pedal, whereby said pedal may be moved from high speed to neutral position at all times.

---

1,563,779. APPARATUS FOR MANUFACTURING LIGATURES AND THE LIKE. JOSEF AUGUST NORDIN, Stockholm, Sweden, assignor to Aktiebolaget Stille-Werner, Stockholm Sweden, a Corporation of Sweden. Filed Oct. 18, 1923. Serial No. 669,395. 6 Claims. (Cl. 140—123.)

1. An apparatus for the automatic manufacturing of ligatures comprising in combination a casing, a device for feeding the wire from a reel, a combined cutting and

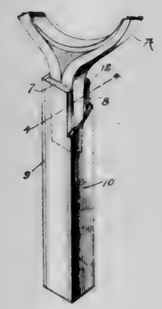
shaping device comprising a slide movable in a direction transverse to the path of the wire and having a chisel-shaped end, tong jaws, said casing having an opening adapted to receive the jaws of the tongs, a dent



on said slide, a stationary edge co-operating with said dent whereby during the forward movement of the slide the end piece of the wire fed forward is cut off and at the same time bent and forced into the jaws, and a manually operable member actuating said device.

---

1,563,780. HANDLE STRUCTURE FOR TENNIS RACKETS. CLYDE A. OVENSHIRE, Berkeley, Calif., assignor to California By-Products Company, San Francisco, Calif., a Corporation of California. Filed Mar. 11, 1924. Serial No. 698,546. 3 Claims. (Cl. 273—73.)

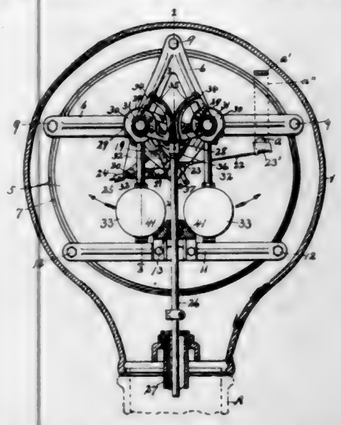


1. A tennis racket comprising a head and handle section, said head being formed of a hoop bent to form the head and the ends of the hoop being joined and extended to form an extension, and said handle consisting of a center section provided with a central recess for the reception of the joined hoop extensions and forming a glue joint therefor, and means for covering the hoop extensions and the glue joint.

---

1,563,781. WEIGHING SCALE. CHARLES E. PAGE, Baldwinsville, N. Y. Filed May 17, 1923. Serial No. 639,673. 3 Claims. (Cl. 194—47.)

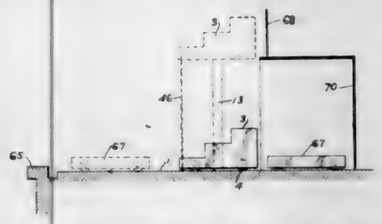
1. In a weighing scale of the character described, a pair of segmental bearings movable about parallel horizontal axes, a pair of bands each having one end connected to one segmental bearing and its other end connected to the other segmental bearing to cause said bearings to move in unison, means actuated by the object to be weighed for moving said bearings about their axes, additional beans for returning the bearings to their starting positions; a stop actuated by the first-named



means, and the coin controlled weight operated means cooperating with said stop for indicating the weight of the object being weighed.

---

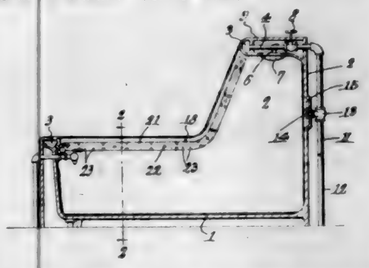
1,563,782. THEATRICAL NOVELTY. JACK A. PARTINGTON, San Francisco, Calif. Filed Mar. 24, 1925. Serial No. 17,999. 9 Claims. (Cl. 20—1.123.)



1. A theatrical novelty comprising in combination with a stage and a track thereon, a platform supported on and movable along the track to a plurality of positions on the stage, and power means normally beneath the stage for elevating the platform from the track and stage in one of such positions.

---

1,563,783. SELF-CLEANING BATHTUB. LEON R. PAUL, Chicago, Ill. Filed Sept. 24, 1925. Serial No. 58,393. 3 Claims. (Cl. 4—181.)



1. A bath tub having an overhanging hood portion, there being a passage within the rim of the hood portion for the reception of water, said passage being provided with spaced longitudinal slots opening through the inner wall of the hood portion, means for directing water into the rim, and an apertured plate flush with the inner surface of the hood portion and bridging the slots, said plate constituting means for directing jets of water inwardly and downwardly against the opposite wall of the hood portion and tub.

---

1,563,784. TRUNK. MAYME J. PEPPARD, Minneapolis, Minn. Filed July 18, 1921. Serial No. 485,445. 4 Claims. (Cl. 211—16.)

1. The combination, with a trunk having a wardrobe compartment, of stationary guides mounted therein, rails slidable in said guides, a cross rod between said rails, flexible means connecting said rod with said guides for limiting the outward movement of said rails, bars slidably supported by said rails and having flexible means connecting them with said rod for limiting the outward movement of said bars, and garment hangers supported by said bars.

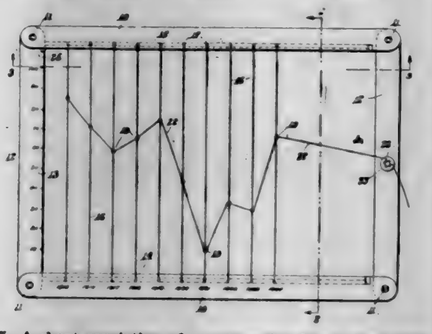
---

1,563,785. SPACING FASTENER FOR WIRE SCREENS. ISAAC PETERSON, Berkeley, Calif. Filed Sept. 17, 1924. Serial No. 738,256. 3 Claims. (Cl. 72—118.)

1. Means for fastening a wire screen in spaced relation to a wall comprising a hollow, rectangular form open on two opposing sides presenting a solid flat base adapted to be placed against the wall, slanting sides and a top forming a saddle, with a single central perforation in the top and a registering perforation in the base allowing a nail to be driven through the form into the wall and allowing a strand of wire to be confined in the saddle by the head of the nail.

---

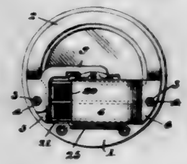
1,563,786. ADJUSTABLE CHART. ROSWELL F. PHELPS, East Dedham, Mass. Filed Dec. 16, 1924. Serial No. 756,239. 6 Claims. (Cl. 116—130.)



5. A chart consisting of a rectangular frame, two parallel bars which are provided with grooves in their inner faces; a plurality of wires having heads on opposite ends thereof positioned in said grooves and movable endwise therein; a datum member on each wire adjustable lengthwise thereof each member having a slot therein to receive said wire and a thread passage therethrough perpendicular to said slot; and a thread inserted through said passages and connecting all of said datum members.

---

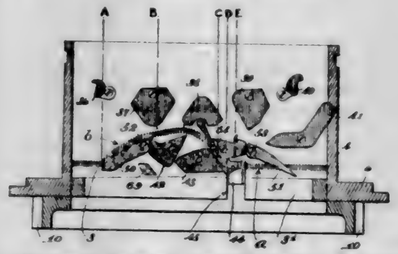
1,563,787. TELEPHONE RECEIVER. ALBERT PIHL, Murray, Utah, assignor to Holliday Radio & Manufacturing Company, a Corporation of Utah. Filed Oct. 25, 1922. Serial No. 596,729. 10 Claims. (Cl. 179—119.)



1. A telephone receiver comprising a ring member, a U-shaped permanent magnet carried by said member, pole pieces attached to the ends of the magnet and extending toward each other, a spool retained in position by said pole pieces, two oppositely wound coils on said spool, an opening through the center of said spool, an armature pivoted to the spool within said opening, a diaphragm carried by the ring member, and means connecting one end of the armature to the diaphragm.

---

1,563,788. CAM BOX FOR KNITTING MACHINES. JOSEPH PARKS PRIMM, Rome, Ga., assignor of one-fourth to Henry R. Berry and one-fourth to John M. Berry, both of Rome, Ga. Filed June 14, 1924. Serial No. 720,030. 7 Claims. (Cl. 66—21.)



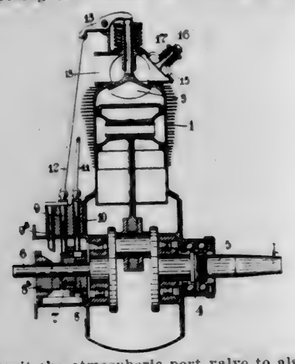
1. The herein described process consisting of drawing needles in a cylinder machine below the sinkers to loop stitches thereupon, causing a relative motion of the coacting sinkers preparatory to holding the looped stitches upon the needles, raising the needles until the looped stitches rest immediately below the hooks where they are held by the sinkers, maintaining said hooks in the aforesaid position thereby preserving an initial looseness in the looped stitches until a subsequent thrust of the needles wherein the latches clear the stitches, and thrusting the needles through said stitches that the latches may clear the stitches preparatory to forming new stitches; said initial looseness permitting said thrusting through of the needles without distorting the stitches.

---

1,563,789. VALVE MECHANISM OF INTERNAL-COMBUSTION ENGINES. CHARLES BENJAMIN REDAUP, Leeds, England. Filed Nov. 29, 1924. Serial No. 752,964. 3 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a cylinder provided with an intake and an exhaust port, engine operated valves for controlling said ports, an exhaust gas passageway communicating with the exhaust port, an atmospheric port in the exhaust gas passageway arranged in close proximity to the exhaust valve and functioning to admit atmospheric air to said passageway during the exhaust stroke for cooling the passageway and exhaust

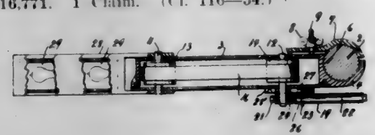
valve, a valve for controlling the atmospheric port, and means for opening the exhaust valve during the suction



stroke to permit the atmospheric port valve to also admit cooling air to the passageway, for cooling the exhaust valve during the suction stroke of the engine.

---

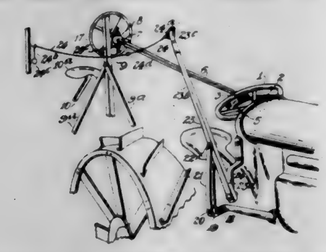
1,563,790. SIGNALING DEVICE. JESSE MITCHELL REID, Pullman, Wash. Filed Feb. 3, 1923. Serial No. 616,771. 1 Claim. (Cl. 116—54.)



In a vehicle signaling device, a bracket arm having one end adapted to be fixedly secured to the vehicle in such position as to extend outwardly therefrom, an operating shaft rotatably mounted adjacent to the connected end of the arm, a signal carrying shaft journalled adjacent to the outer free end of the arm, pulleys on said shafts, and an endless belt connecting said pulleys.

---

1,563,791. DISTANCE CONTROL ATTACHMENT FOR TRACTORS. WILLIAM BETTS RICHARDSON, Dockers Plains, via Wangaratta, Australia. Filed Apr. 10, 1924. Serial No. 705,679. 3 Claims. (Cl. 180—77.)

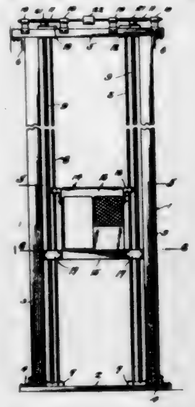


1. Means for controlling the steering wheel of a tractor from a trailer including a socket member, a universal joint connecting the front end of the socket member to the steering wheel of the tractor, a ball mounted for universal movement on the trailer, and having a bore, and an auxiliary steering wheel having a rod passing through said bore and extending into the socket, said rod and socket being constructed to turn in unison.

---

1,563,792. CABLELESS ELEVATOR. JOHN H. RICKARD, Lexington, N. C. Filed May 6, 1925. Serial No. 28,483. 2 Claims. (Cl. 187—24.)

2. In a device of the class described, a frame, lead screws having their lower ends mounted in the lower portion of the frame against lateral movement, driving elements on the lead screws and located above the upper portion of the frame, a carriage, guides mounted at their upper and lower ends in the corresponding portions of the frame and spaced from the side portions of the frame, brackets on the carriage, the brackets being slidable on



the guides, and lead screws being threaded into the brackets, and anti-friction bearings interposed between the driving elements and the upper portion of the frame, the anti-friction bearings carrying the entire weight of the lead screws and the carriage, and effecting a suspension of the lead screws and the carriage.

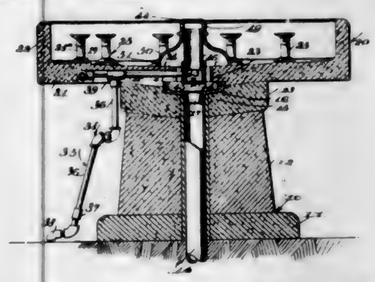
---

1,563,793. PROCESS FOR APPLYING METALLIC COATINGS TO POROUS BASES. KURT RIPPER, Vienna, Austria, assignor to Fritz Pollak, Vienna, Austria. Filed Aug. 21, 1923. Serial No. 658,594. 13 Claims. (Cl. 204—8.)

1. A process for applying metallic contings to non-metallic porous objects, which process consists of rendering the surfaces to be coated conductive by means of conductive substances in such a degree of dispersion, that the particles thereof are of smaller size than the pores of the base, and thereafter effecting the galvanization.

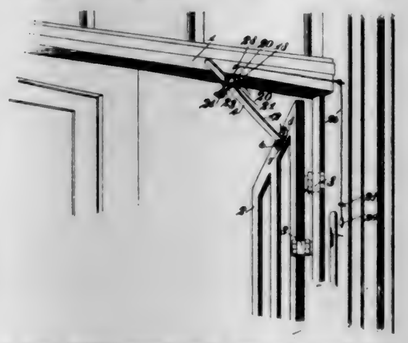
---

1,563,794. DRINKING FOUNTAIN. WILLIAM ROBERTS, Springfield, Ohio. Filed Sept. 24, 1923. Serial No. 664,581. 3 Claims. (Cl. 299—12.)



1. A drinking fountain including a pedestal having a central vertical opening, a drain pipe in said opening, a bowl supported on said pedestal and including a bottom and a rim, the bottom having a central drain opening communicating with the drain pipe and having its upper surface sloping to said central drain opening, a plurality of bubble cups arranged in the bowl around the rim and discharging into the bowl, the underside of the bottom of the bowl being provided with a plurality of slots, and pipes for supplying water to said bubble cups arranged in said slots.

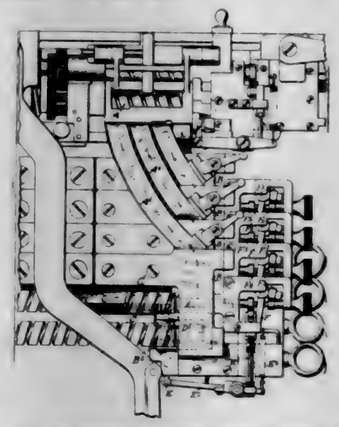
1,563,795. DOOR HOLDER. WILLIAM ROBERTS, Springfield, Ohio. Filed May 26, 1924. Serial No. 716,028. 1 Claim. (Cl. 292—278.)



A door holder comprising a bracket adapted to be attached to a door adjacent to the upper inner corner of the latter, a vertical pivot element carried by said bracket, a latch bar having an opening in one end portion thereof through which said vertical pivot element extends, a guide bracket attachable to the under face of the upper cross member of the frame of said door and having a guide way in which said bar may slide, said guide bracket being rotatable about a vertical axis, said bar having a transverse notch in its lower face at a certain point along its length, said notch having the wall thereof proximate to the free end of the bar inclined slightly in respect to the horizontal and having the other wall thereof inclined slightly toward the free end of the bar and at a relatively sharp angle to the horizontal, and a gravity latch pivotally supported on said guide bracket in position to engage with said notch when the door has been swung to open positnon and to then cooperate with said bar to hold said door against return from open position to its closed position, said latch having the free end portion thereof enlarged and relatively heavy, said enlarged end portion of the latch having a serrated lower face.

---

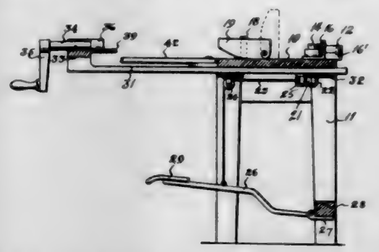
1,563,796. TYPOGRAPHICAL DISTRIBUTING MACHINE. JOHN R. ROGERS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 5, 1924. Serial No. 690,683. 18 Claims. (Cl. 199—39.)



1. In a typographical distributing machine equipped with matrices formed with projecting ears, the combination of a matrice distributor, a reciprocating finger for delivering the matrices successively to the distributor, and means to cooperate with the ears of the matrices for advancing the latter into the range of action of said reciprocating fingers.

---

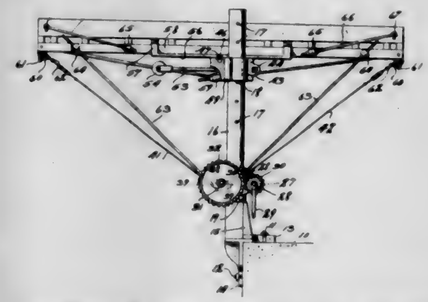
1,563,797. MACHINE FOR FORMING GARMENT HANGERS. BENJAMIN J. RYAN, Dallas, Tex. Filed Jan. 3, 1922. Serial No. 526,466. 8 Claims. (Cl. 140—71.)



1. In a wire forming machine, a support, a pair of swinging wire forming arms having their adjacent ends pivoted on the support and adapted to engage and bend a wire, forming projections carried by the support and over which the wire is bent by the arms, a deflector blade mounted on the support and co-operating with the arms to bend the free ends of the wire outardly, a wire twisting device slidably mounted to engage and twist the ends of the wire upon themselves, said wire twisting device being provided with means for displacing the deflector blade from between the ends of the wire, and a hook forming device comprising a swinging support carrying a hook forming element aranged to receive one of the ends of the wire and form the same into a hook when rotated in reverse directions.

---

1,563,798. APPARATUS FOR CONSTRUCTING THIN CONCRETE WALLS AND ERECTING THE SAME. JOHN M. SARGEANT, Elmira, N. Y. Filed Apr. 18, 1925. Serial No. 24,173. 9 Claims. (Cl. 25—1.)



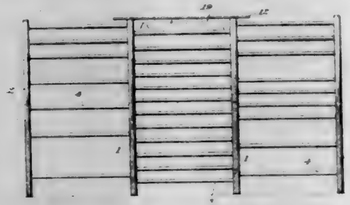
1. In combination with a permanent wall foundation, spaced supports extending upwardly from said foundation, upper and lower journal castings carried by each support, a framework supported from the upper journal castings for rotation to a horizontal or vertical position, a shaft journaled in the lower journal castings and means for connecting said shaft with said framework for raising and lowering the framework or to rock the framework upon its pivot.

---

1,563,799. ADJUSTABLE KNOCKDOWN BOOKSTAND AND SHELVING. FRANZ J. SCHERER, Gregory, S. Dak. Filed July 28, 1922. Serial No. 578,144. 2 Claims. (Cl. 211—27.)

1. An adjustable article of furniture comprising vertical posts provided with vertical sets of inner and

outer horizontal sockets to enable the posts to be used in either a central or side unit, said posts having projecting upper ends, supporting bars having terminal portions adapted to be fitted in the said perforations and to offset the said supporting bars from either side face of the corner posts, a top shelf provided in its lower face with sockets receiving the upper projecting ends of the said posts and holding the posts against outward displacement, shelving arranged upon the supporting



bars and provided with transverse cleats depending at the outer side faces of the supporting bars and engaging the same, said cleats being provided with upwardly projecting portions and the upwardly projecting portions immediately below the top shelf being provided in their inner faces with vertical recesses and a longitudinal bracing member arranged edgewise and having its ends fitted in the said vertical recesses and forming a support for the top shelf.

---

1,563,800. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 2, 1922. Serial No. 591,774. 12 Claims. (Cl. 197—127.)

1. In a typewriting machine, a platen, collating means for guiding two sheets in the machine, side by side, feed-rollers co-operating with the platen to feed one of the sheets without affecting the other, and a clamp for co-operating with the collating means to clamp the second sheet.

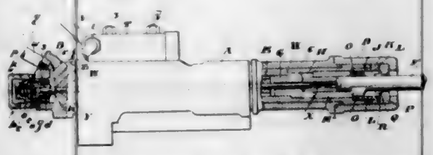
---

1,563,801. BACKSTRAP FOR DRAFT ANIMALS. JOHN E. SMITH, Fremont, N. C. Filed July 9, 1925. Serial No. 42,384. 5 Claims. (Cl. 54—38.)

3. A back strap for draft animals comprising a V-shaped metallic strap adapted to straddle the back of a draft animal, bearing blocks adjacent each end of the back strap, each bearing block having a countersunk recess in the bottom face thereof, a snap fastener mounted on each bearing block, a bolt for connecting the lower end of the back strap and the snap fastener to each of said bearing blocks, the head of said bolt being received within the countersunk recess, lower bearing blocks, chains between the lower bearing blocks and the first mentioned bearing blocks, the upper ends of the chain being engaged by the snap fasteners on the first mentioned bearing blocks, snap fasteners secured to the lower bearing blocks adapted to engage the traces of the harness, and bolts extending through the lower bearing blocks and adapted to connect the lower ends of the chains and the trace engaging fasteners to the lower bearing blocks.

---

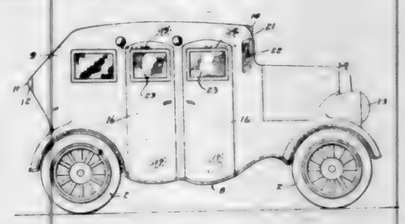
1,563,802. WATER-TUBE CONNECTION. WILLIAM A. SMITH, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1925. Serial No. 31,505. 4 Claims. (Cl. 121—10.)



1. In a fluid actuated rock drill, the combination of a cylinder with a back head, a conical seat in said back head, a water tube extending through the cylinder, a bulb on said tube, and a spring pressed plunger for holding the bulb in fluid tight contact with the conical seat.

---

1,563,803. VEHICLE BODY. ROBERT LEE SOUTHERN, Berkeley, Calif. Filed Feb. 15, 1923. Serial No. 619,241. 1 Claim. (Cl. 296—28.)



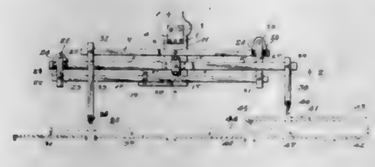
An enclosed body and engine hood for passenger motor vehicles, comprising a shell adapted to extend laterally and longitudinally over the upper segments of the ground wheels of the vehicle and extending vertically along the sides of the body in unbroken lines and flush with the portions overhanging the wheels, the said sides of the body converging slightly at their upper ends and joined by an arched roof and further joined at their rear ends by an arched end wall, the said sides being further provided intermediately with door openings extending through the lower edges thereof together with doors disposed in the said openings, and a reinforcing lip around the entire lower edge of the shell.

---

1,563,804. DRAFT EQUALIZER. EDWARD R. SPELLMAN, Walla Walla, Wash. Filed Feb. 4, 1924. Serial No. 690,561. 1 Claim. (Cl. 278—6.)

A draft equalizer comprising a draw plate adapted to be secured at its rearward end to one end of an agricultural implement, a pair of spaced apart draft beams extending transversely across the draw plate and each being pivotally attached intermediate its ends to the draw plate, a balancing beam extending transversely

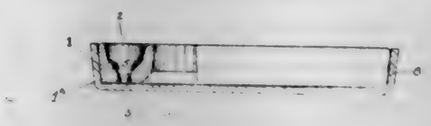
across the draw plate in advance of said draft beams, motion transmitting means swingingly connecting one end of said balancing beam to the adjacent end of one of the draft beams, other motion transmitting means



connecting the other end of said balancing beam with the adjacent end of the second draft beam, and means whereby draft animals may be hitched to the second ends of said draft beams.

---

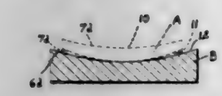
1,563,805. CIGAR AND CIGARETTE EXTINGUISHER. MAX STENZLER, Philadelphia, Pa. Filed Oct. 24, 1922. Serial No. 596,655. 2 Claims. (Cl. 131—51.)



2. A cigar and cigarette extinguishing device including an ash try having a bottom and an upwardly extending wall, and an open marginal frame arranged within the ash tray and fitting the wall thereof and provided at intervals with cigar and cigarette receiving and extinguishing openings and having a horizontal bottom face surrounding the lower ends of the said openings and supported upon the bottom of the tray which forms a lower end wall for the said openings to prevent down draft therethrough and cause an extinguishing of cigars and cigarettes, the lower face of the said frame being beveled at the inner edge beyond the lower ends of the openings to form a hand hold for removing the frame from the tray, said openings consisting of an upper downwardly tapered cigar receiving portion, a lower tapered cigarette receiving portion of less diameter than the said upper portion, and an intermediate downwardly tapered portion presenting inclined walls arranged at a different angle from the walls of the said upper and lower portions of the openings.

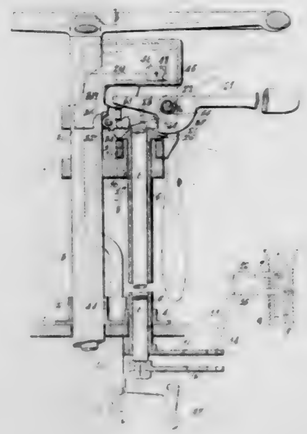
---

1,563,806. OPHTHALMIC LENS. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 6, 1925. Serial No. 41,734. 4 Claims. (Cl. 49—84.)



1. A process for producing ophthalmic lens blanks consisting in providing a glass blank with a finished spherical surface and an accurately formed toric surface, placing the blank on a block having a spherical surface, and changing the finished surface to toric form by dropping the blank, under the action of heat, on the block with its originally formed toric surface contacting the block.

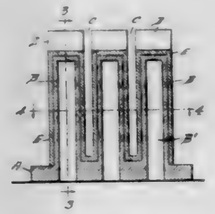
1,563,807. GEAR-SHIFTING AND CAR-LOCKING MECHANISM FOR MOTOR VEHICLES. JOHAN KONRAD TUERCK, Portland, Oreg. Filed July 14, 1924. Serial No. 726,038. 16 Claims. (Cl. 74—39.)



1. In apparatus of the class described, the combination with a plurality of gear selecting shafts, a shifting lever adapted to selectively operate said shafts, means to hold the shaft not selected against action during operation of the selected snaft, and means restraining said lever against moving one of said shafts in one of two directions when the apparatus as a whole is located at a predetermined inclination to the horizontal.

---

1,563,808. MANDREL FOR BATTERY JARS. JAMES H. WAGENHORST, Jackson, Mich. Filed Oct. 10, 1921. Serial No. 506,655. 3 Claims. (Cl. 18—45.)



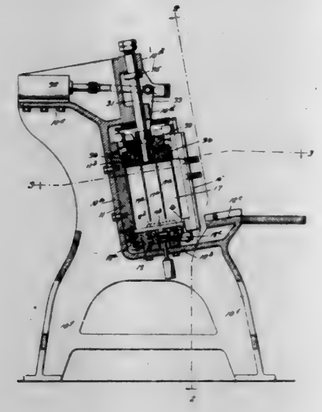
1. In a battery jar mandrel a base, and a plurality of spaced cell froming portions extending upwardly therefrom, the area of the base being greater than the areas of the cell portions whereby a lateral edge is provided, said cell portions having an enveloping covering of lead or an alloy rich in lead.

---

1,563,809. BATTERY-JAR-FORMING MACHINE. JAMES H. WAGENHORST, Jackson, Mich. Filed Dec. 24, 1921. Serial No. 524,647. 13 Claims. (Cl. 18—19.)

1. In a battery jar forming machine, the combination with foldable means for supporting a sheet of

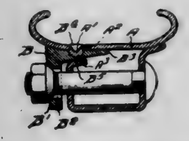
stock substantially vertical and a mandrel contacting with a section of said foldable means, said section of



the foldable means being fixed and adapted to maintain the mandrel stationary while the sheet of stock is folded around said mandrel.

---

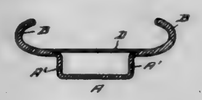
1,563,810. DEMOUNTABLE RIM WITH ATTACHED CLAMPING LUG. JAMES H. WAGENHORST, Jackson, Mich. Filed June 12, 1923. Serial No. 644,968. 2 Claims. (Cl. 301—19.)



1. A demountable tire-carrying rim having an inwardly-projecting bead with a pair of spaced apertures formed therein and an attached lug having an inwardly-extending portion provided with a bolt hole and an axially-extending portion comprising a single tongue, lying along the inner side of the base of said rim, and provided with spaced outwardly-extending riveting studs, extending through said apertures and riveted over, and a depression between said studs receiving the portion of said bead between said apertures.

---

1,563,811. RIM FOR TIRES AND METHOD OF MAKING THE SAME. JAMES H. WAGENHORST, Jackson, Mich. Filed Mar. 3, 1924. Serial No. 696,499. 4 Claims. (Cl. 152—20.)



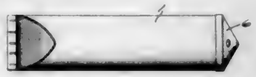
1. A rim for a wheel body comprising an inwardly extending portion, and oppositely disposed tire engaging flanges, the said flanges being of greater thickness than the said central portion, said flanges being provided with oppositely disposed shoulders; and a filler inserted in said rim and having its edges in engagement with said shoulders.

1,563,812. RESISTANCE DEVICE AND WELDING WIRE. ALFRED ERNEST WALLER, Bronxville, N. Y., assignor to Ward Leonard Electric Company, a Corporation of New York. Filed July 6, 1921. Serial No. 482,721. 2 Claims. (Cl. 201—67.)

1. A resistance device comprising a support, a resistor, a welded joint between said resistor and an external lead, and an insulating coating covering said resistor, joint and support, said joint comprising an auxiliary welded piece of high resistance metal.

---

1,563,813. CLOSURE FOR FLUID CONTAINERS. GEORGE WASHINGTON, Jr., and ROBERT COLLER, Brooklyn, N. Y. Filed Nov. 18, 1924. Serial No. 750,540. 5 Claims. (Cl. 221—60.)



1. A closure device for fluid containers and the like, which device comprises a rigid wall section for the container provided with a discharge port and having a sleeve which extends inwardly from a projection in said wall and has its inner end shaped to form a section of a helix, combined with a cap adapted to closely fit the exterior of said rigid wall section provided with a perforation adapted to register with the discharge port in said wall section and rigidly mounted on a shaft journalled in said sleeve, the inner end of said shaft having a radial projection adapted to engage the helically shaped inner end of said sleeve, whereby, when said cap and shaft are rotated in a direction to swing said cap perforation out of registry with said discharge port, said projection from the shaft rides up the inclined surface of the inner end of said sleeve and thereby pulls said cap against the container wall and forms a fluid tight closure of the said discharge port.

---

1,563,814. WHISK. STEPHEN G. WILSON, Philadelphia, Pa. Filed Apr. 30, 1924. Serial No. 709,962. 7 Claims. (Cl. 15—171.)

1. In a whisk, the combination with a dowel stick having an undercut slot at its outer end, of a tubular handle slidable on said stick, and a key arranged in the upper end of the handle having a head adapted to

enter the slot in the stick, said head being provided with a diverging side adapted to be rotated to engage the undercut wall of said dowel stick slot for interlocking said parts, and releasable means for holding said parts in interlocked position.

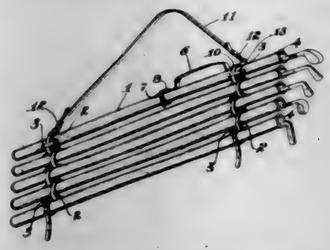
---

1,563,815. COMBINATION TOOL. ANTHONY F. WISNESKE, Detroit, Mich. Filed Aug. 8, 1924. Serial No. 730,893. 1 Claim. (Cl. 7—8.)

A tool including a head having a pick point provided with a transverse opening which is elongated longitudinally of the point, a hammer head having a socket in which is received the pick point and transverse openings alining with the outer portion of the elongated opening, the tool head having a shoulder at the base of the pick point against which the said hammer head bears, and a bolt disposed through the openings of the pick point and hammer head and threaded into one of the openings of the hammer head.

---

1,563,816. GOLF BAG. CHARLES C. WORTHINGTON, Dunfield, N. J. Filed July 21, 1922. Serial No. 576,419. 14 Claims. (Cl. 150—1.5.)



1. A golf bag of variable capacity made up of separate tubes each tube being adapted to hold but a single club and means for connecting said tubes flexibly and separably, said tubes forming a series the members of which may be in the same plane or which may be rolled up in circular or other formation and means secured to the series for carrying the bag.

---

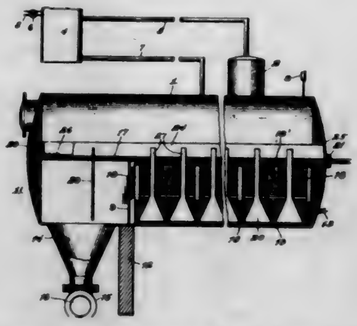
1,563,817. BROOM HOLDER. RICHARD G. WRIGHT, Waterford, Conn. Filed June 18, 1924. Serial No. 720,790. 1 Claim. (Cl. 24—249.)

A broom holder including a base plate, a pair of spaced pivots mounted along the median dimension of the base plate, a pair of segmental spaced heads of the same design, and same relative dimension, each head having at its opposite ends arcuate edges, the arc at one end being of greater magnitude than the arc at the opposite end, the centers from the arcs of each head are struck, lying upon the median longitudinal dimension of the head, the edges and the opposite sides of each head being symmetrically disposed with relation to said median longitudinal dimension of the head, each head being provided upon its median longitudinal dimension with an opening, said openings loosely receiving said pivots, means for holding said heads in spaced relation to said base plate and swingable in the same

plane which is parallel to the plane of the base plate, a plurality of stop pins projecting from the base plate, two of said stop pins being disposed above the median dimension of the base plate and two therebelow, the upper stop pins being spaced farther apart than the pivots and the lower stop pins being spaced closer together than the pivots.

---

1,563,818. OIL-CRACKING AND CARBON-REMOVING METHOD AND APPARATUS. LINTON D. WYANT, Tulsa, Okla. Filed Mar. 20, 1922. Serial No. 545,275. 21 Claims. (Cl. 196—69.)

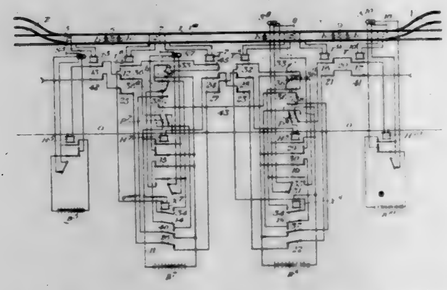


2. The process of cracking oil and removing carbon therefrom, which consists in heating a body of oil to cracking temperature, agitating the heated oil to maintain the liberated carbon more or less in suspension, ejecting portions of oil containing charges of carbon from the body of heated oil through pressure directly generated through the gases present in and as evolved from the body of oil and then separating the charges of carbon from the oil within the still and discharging the carbon so collected.

13. An oil cracking still having a heating and agitating chamber, means for agitating the body of oil in said chamber, a collector arranged above the level of the oil, conductors depending into the body of oil for the collection of evolved gases and upflow therethrough into said

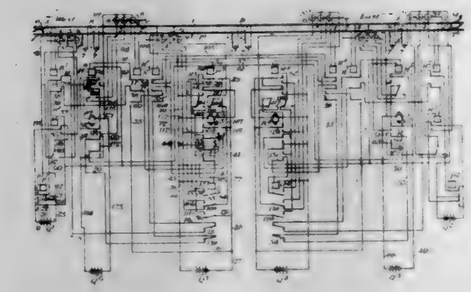
collector of portions of the oil and portions of carbon carried thereby by the pressure of said gases, and means for separating the carbon from the oil ejected into the collector and discharging the separated carbon from the still.

1,563,819. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 4, 1924. Serial No. 684,293. 12 Claims. (Cl. 246—33.)



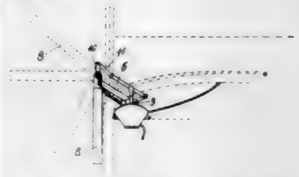
1. In combination, two successive signals governing traffic in the same direction, a line relay for the forward signal, a main circuit for the rear signal controlled by a front contact of said line relay, a normally de-energized auxiliary relay associated with said forward signal, means for energizing said auxiliary relay when a train moving in said direction passes said forward signal, a circuit controller associated with said forward signal and closed only when the signal indicates stop, and an auxiliary circuit for said rear signal controlled by a front contact of said auxiliary relay and by said circuit controller.

1,563,820. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa. a Corporation of Pennsylvania. Filed Feb. 20, 1924. Serial No. 694,038. 5 Claims. (Cl. 246—33.)



1. Railway traffic controlling apparatus comprising a stretch of railway track, a line relay comprising a normal contact and a reverse contact, means for controlling said relay in accordance with traffic conditions, a slow acting relay arranged to be energized whenever said line relay is energized, a stick relay controlled by said line relay and said slow acting relay, a trackway signal, means including a front contact on said stick relay and said reverse contact for causing said signal to display a caution indication, and means for causing said signal to display a proceed indication when said slow acting relay is energized and said normal contact is closed.

1,563,821. SIGNAL. HENRY CARL ZAUN, Oakland, Calif. Filed May 19, 1924. Serial No. 714,305. 3 Claims. (Cl. 116—54.)

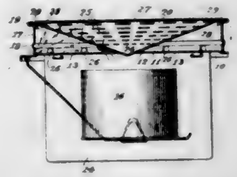


1. A vehicle signal comprising a bracket, a handle journaled on said bracket, an arm extending outwardly from said bracket, a signaling tube journaled at the end of said arm, a second arm pivoted above said first named arm, a link pivoted to said second arm and operatively connected to said tube, and a second link pivoted to said handle and to said second arm whereby said arm is swung to actuate said signal tube.

1,563,822. WASHING-MACHINE CYLINDER. CARL F. ANDERSON, Brookfield, Ill., assignor to Conlon Corporation, Cicero, Ill., a Corporation of Illinois. Filed Dec. 17, 1923. Serial No. 681,085. 8 Claims. (Cl. 68—18.)

5. In a washing machine cylinder, the combination of cylinder heads, a peripheral body portion between said heads comprising a plurality of sheet metal panels, lifters extending at their outer ends between the adjacent panels, tie means acting independently of said lifters to lock said panels together and to anchor said lifters at their outer ends, and means securing the inner ends of said lifters.

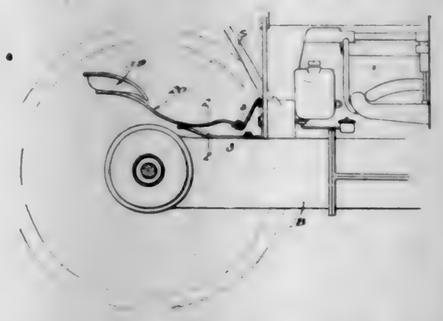
1,563,823. TOASTER. JOHN M. S. ANDERSON, Bridgeport, Conn., assignor to The General Machine and Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed July 17, 1923. Serial No. 652,027. 1 Claim. (Cl. 53—5.)



A toaster comprising an inverted conical plate having a horizontally extending flange at its edge, an upright wall surrounding said plate, said wall being split and having its upper edge bent upon itself to form a clamping rim, said clamping rim receiving the periphery of said flange to support the plate, means for drawing the

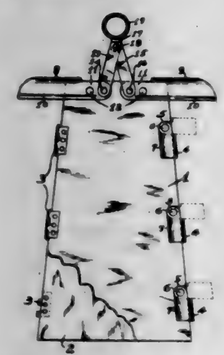
ends of said wall together to hold said rim and flange in contact, a grid supported above said plate and formed of separate spaced wires having their ends removably anchored in said flange adjacent said clamping rim.

1,563,824. SEAT SUPPORT FOR TRACTORS. ERNEST OLIVER BACHMAN, Santa Ana, Calif. Filed Mar. 10, 1923. Serial No. 624,252. 2 Claims. (Cl. 155—51.)



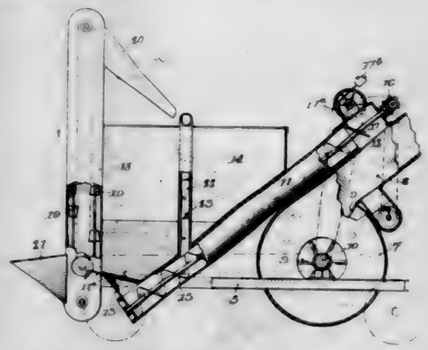
1. In combination, a pair of yieldable standards, a rod supported between the upper and free ends of said standards, a link member pivotally connected at its one end to said rod, a leaf spring having its one end rigidly secured to the remaining end of the link member and carrying a seat upon its other end, and a second leaf spring having its one end anchored and its other end slidably engaging beneath the first named spring for yieldably supporting the same.

1,563,825. APPARATUS FOR PRESSING AND CREASING TROUSERS. AUGUST BALDESBERGER, Pittsburgh, Pa. Filed Nov. 28, 1924. Serial No. 752,571. 3 Claims. (Cl. 100—57.)



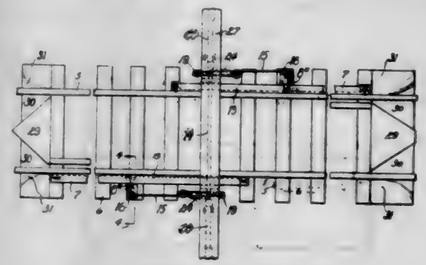
1. In combination, a device for the purpose set forth comprising a pair of pressing boards, each of said pair of pressing boards having its inner face formed with a centrally disposed longitudinally extending recess, a hinge element connecting the longitudinal edges of one side of said pair of pressing boards together, a plurality of clamping members pivotally connected to one of said pair of boards and shiftable to engage the longitudinal edges of the other side of said pair of boards when the latter are in the folded position, a pair of garment supporting clamps pivotally connected to the upper end of one of said pairs of boards and shiftable to engage the upper edges of said pair of pressing boards, a toggle bar pivotally connected with the inner end of each of said pair of supporting clamps, and a suspension element pivotally connected with said toggle bars, substantially as described and for the purpose set forth.

1,563,826. CONVEYER APPARATUS FOR GRAIN AND LIKE MATERIAL. GEORGE BERNERT, Milwaukee, Wis. Filed Feb. 9, 1920. Serial No. 357,450. 10 Claims. (Cl. 209—133.)



1. In a pneumatic conveyer mechanism, the combination of a material conveying air duct and a conveyer casing having a material inlet and outlet, the latter being in communication with said air duct, a conveyer within said casing for conveying material therethrough and into said air duct, a vent adjacent the inlet of said casing, and said vent releasing any back pressure contained within said casing.

1,563,827. AUTOMATIC MINE DOOR. GIUSTO BOGGIO, Royalton, Ill. Filed Sept. 4, 1925. Serial No. 54,455. 4 Claims. (Cl. 246—304.)



1. An automatic mine door comprising a frame, a bell crank lever supported in said frame adjacent its top, a door secured to and depending from said bell crank lever, a lever pivotally mounted intermediate its ends located adjacent said frame, a connection between one end of said lever and said bell crank lever, a flexible connection secured to the opposite end of said pivoted lever, and a lever mechanism secured to the opposite end of the flexible connection whereby said door is opened when the last mentioned lever mechanism is depressed.

1,563,828. COMBINED SHADE-ROLLER AND CURTAIN-ROD SUPPORT. JAMES H. BOYE, Chicago, Ill., assignor to James H. Boye Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1923. Serial No. 655,805. 3 Claims. (Cl. 156—22.)

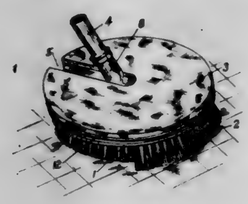
1. A combination shade roller and curtain rod bracket, comprising a pair of forwardly projecting arms adapted

to support a shade roller and curtain rod respectively, said arms having integral overlapping base plates formed with equally spaced upper and lower holes, centering

means on said base plates for bringing the holes of the latter into register, and fastening screws passed through registering holes of said base plates.

---

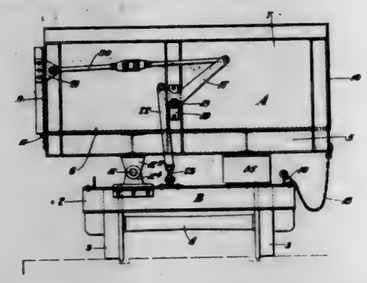
1,562,829. FLOOR POLISHER. FREDERICK GEORGE BROWN, Coogee, New South Wales, Australia, assignor to F. G. Brown Manufacturing Co., Batavia, Ill., a Corporation of Illinois. Filed June 15, 1923. Serial No. 645,674. 3 Claims. (Cl. 15—114.)



1. In a reversible floor polishing device having a double-faced head, means for releasably securing a polishing cloth over one face of said head, said means comprising a soft, resilient band exerting pressure on the periphery of said head and overlying the edges of said cloth, said band also projecting beyond the periphery of the head to serve as a bumper.

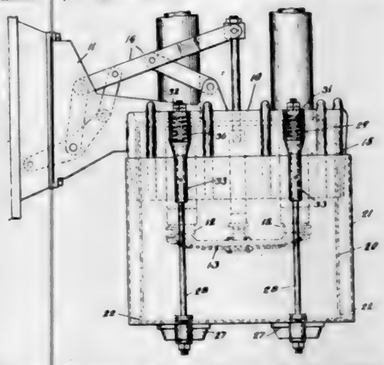
---

1,563,830. DUMP CAR. WILLIAM MILTON BROWN, Johnstown, Pa. Filed Feb. 26, 1925. Serial No. 11,678. 5 Claims. (Cl. 105—272.)



1. A dump car comprising a wheeled supporting frame, a body member pivotally mounted along one side of said frame and adapted to be raised into an inclined dumping position, one side wall of said body being hingedly mounted along the bottom of said body, at least one rocking lever mounted on said car body, a link connecting said lever and said hinged side wall of said body, and means supported on said wheeled supporting frame and cooperating with said rocking lever to rock said lever when said car body is raised and lowered, and thereby positively open and close said hinged side of said body.

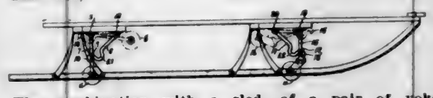
1,563,831. ATTACHMENT FOR ELECTRIC SWITCHES. GEORGE A. BURNHAM, Saugus, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed May 14, 1920. Serial No. 381,466. 10 Claims. (Cl. 200—150.)



1. An attachment for a multi-pole electric switch comprising a plurality of oil receptacles each adapted to contain the switch members comprising a switch pole, an outer receptacles containing said oil receptacles adapted to catch oil expelled therefrom, and means removably to support the attachment in position about the switch members.

---

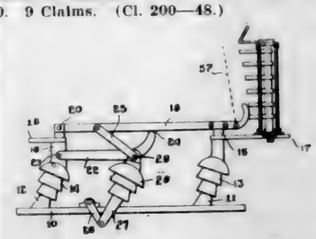
1,563,832. SLED. ROBERT BURRELL, New Haven, Conn. Filed Jan. 21, 1925. Serial No. 3,767. 1 Claim. (Cl. 280—11.)



The combination with a sled, of a pair of yokes mounted near the rear, rollers mounted in the lower ends of said sled and adapted to project below the runners thereof when in a vertical position, links pivotally connected with the sled and formed with hooks adapted to engage with said yokes, whereby they are locked in a vertical position, a pair of yokes pivotally connected to the underside of the sled, near the forward end thereof, rollers pivotally connected with said yoke and adapted to extend below the runners of the sled when in a vertical position, links pivotally connected with the underside of the sled, in line with said yokes, and formed with hooks adapted to engage with said yokes, whereby they may be held in vertical position.

---

1,563,833. HIGH-TENSION AIR-BREAK SWITCH. CHRISTEN CHRISTENSEN, Chicago, Ill., assignor to Electrical Engineer's Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 5, 1919. Serial No. 342,640. 9 Claims. (Cl. 200—48.)

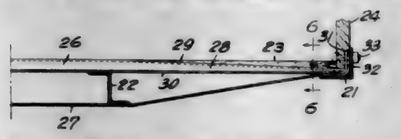


1. The combination with a high tension air break switch having a swinging arm, of a plurality of resistances substantially free of inductance having taps

arranged in the path of movement of the swinging arm to be cut into the circuit controlled by the arm as the same is swung, and an arcing horn in the path of movement of said arm.

---

1,563,834. END STIFFENER FOR CARS. JAMES W. COLEMAN, Montreal, Quebec, Canada. Filed Nov. 27, 1923. Serial No. 67,265. 28 Claims. (Cl. 105—411.)



1. An end stiffener for cars comprising a compression member to be disposed in the thickness of the car end, and a tension member to be disposed externally of a car.

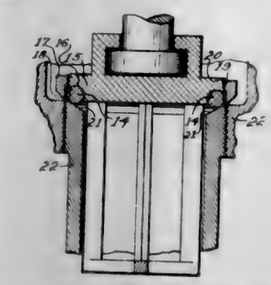
---

1,563,835. END CONSTRUCTION FOR CARS. JAMES W. COLEMAN, Montreal, Quebec, Canada. Filed Nov. 27, 1923. Serial No. 677,266. 13 Claims. (Cl. 105—411.)

1. A car end comprising a series of integrally formed trusses, sheathing interposed between said trusses and forming with the trusses a complete end closure.

---

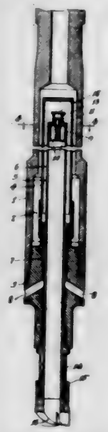
1,563,836. FLUID-TIGHT JOINT. RALPH COPP, St. Louis, Mo., assignor to Pevely Dairy Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 19, 1923. Serial No. 675,556. 4 Claims. (Cl. 285—122.)



3. In combination, a pair of members and an annular packing element of round cross-section therebetween, one of the said members having a cylindrical screw-threaded surface disposed at right angles to the plane of and concentric with the packing, the said surface being retracted at its forward corner portion to form a groove of semi-circular cross-section to receive the said packing; and a retaining ring for the said packing having a cylindrical surface screw-threaded at its rear portion to fit the screw-threads of the grooved member and provided at its forward end with a laterally projecting flange engaging the packing element to hold it in position on the grooved member.

---

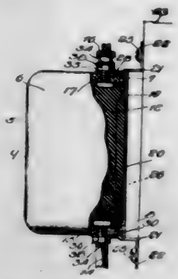
1,563,837. CORE DRILL. ROLAND R. CRUM, Whittier, Calif. Filed Aug. 12, 1922. Serial No. 581,431. 11 Claims. (Cl. 255—72.)



1. In a core drill, a body having a tubular shank providing a circulation water chamber, an imperforate tubular member carried by the body and extending upwardly into the shank, said tubular member having a closed upper end and providing an independent discharge chamber, a centrally disposed core barrel carried by the body and extending upwardly into the discharge chamber, the body having independent discharge ports communicating with the discharge chamber, a tubular core bit aligned with the core barrel, and outer boring cutters carried upon the lower end of the body.

---

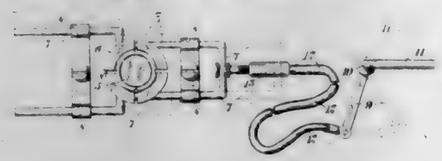
1,563,838. MOUNTING FOR FRANGIBLE CONTAINERS AND THE LIKE. JAMES C. DALEY, Chicago, Ill., assignor to Jefferson Electric Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 20, 1924. Serial No. 751,036. 5 Claims. (Cl. 220—1.)



1. A sheet metal back for containers of the class described provided with lateral flanges for engaging internally within the container and between opposite sides thereof, lateral portions for receiving the container be-

tween them and for externally engaging opposite sides of the container, means for securing the container to said back and means on said back for attaching the container to a support.

1,563,839. STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. THOMAS HERBERT DENNIS, Salisbury, Rhodesia. Filed May 29, 1925. Serial No. 33,840. 3 Claims. (Cl. 123—186.)



2. In an internal combustion engine, in combination, an engine starting mechanism having a movable operating member, a projection on said member, a slidably mounted rod adapted to be moved into position to engage said projection and prevent operation of said starting mechanism, an ignition timing lever, and means for connecting said timing lever to said slidable rod so that the rod is moved into locking engagement with said projection when the timing lever is advanced.

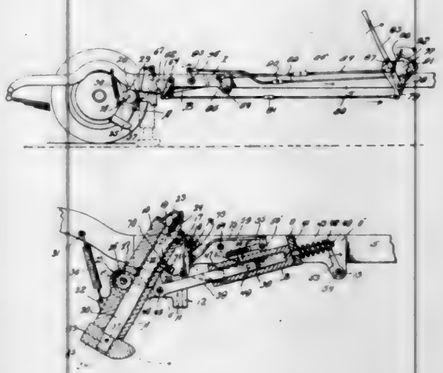
1,563,840. COTTER-PIN PULLER. HENRY D. DIRKS, Marion, Iowa. Filed Sept. 11, 1924. Serial No. 737,091. 3 Claims. (Cl. 29—86.1.)

1. A cotter-pin puller, comprising a hooked plunger, serrated for successive engagement of a dog, a tubular guide therefor provided with a hand-hold disposed laterally of the guide, to form a pistol grip, a lever pivoted to the hand-hold, and a dog connecting with the lever to engage the serrations of the plunger.

1,563,841. CRUPPER. DEE R. ELLIS, Eminence, Ky. Filed July 13, 1925. Serial No. 43,272. 3 Claims. (Cl. 54—22.)

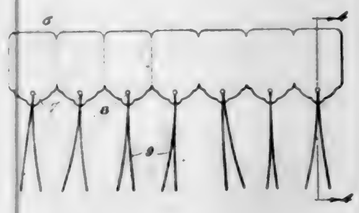
1. A crupper comprising two heel plates adaptable to the buttocks of an animal, a cross bar connecting the heel plates, and strap supporting and guiding elements on the cross bar and at the lower ends of the heel plates.

1,563,842. COMBINATION BRAKE AND JACK MECHANISM FOR AUTOMOBILES. ELMER FERRY and CORA FERRY, Buffalo, N. Y. Filed May 7, 1925. Serial No. 28,703. 7 Claims. (Cl. 188—5.)



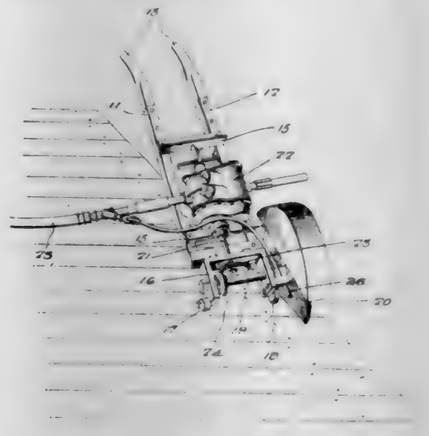
2. In combination, a vehicle, a member including an outer section and an inner section telescopically associated, said inner section provided on one edge with ratchet teeth, and on its other edge with rack teeth, a rack gear journaled in the outer section for engaging the rack teeth, a pawl slidable in the outer section and engageable with the ratchet teeth, means for rotating the gear for extending the inner section, means normally holding the inner section in a retracted relation to the outer section, means normally holding the pawl out of engagement with the ratchet teeth, means for swinging the member to an engaging position, and means operable when the member is in an engaging position for holding the pawl in an active position in relation to the ratchet teeth.

1,563,843. TAG STRIP. CARL A. FLOOD, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed May 2, 1924. Serial No. 710,570. 4 Claims. (Cl. 40—2.)



1. The combination of a strip of tags integrally joined together and separate cords individual to the respective tags, the strip being formed of a single layer of sheet material and having openings spaced from one edge thereof in the successive tags respectively, each opening having a slit leading therefrom in the body of said sheet toward said edge and said cords being anchored in said slits to extend along opposite sides of said sheet toward and beyond said edge, the thickness of said strip being confined to the thickness of said layer throughout the entire extent thereof, whereby the strip may be fed through a printing or cutting machine without interference by the usual cord knots and reinforcing rings around the cord openings.

1,563,844. SAWING MACHINE. WILLIAM H. GERLACH, Huntington, W. Va. Filed Oct. 1, 1923. Serial No. 665,973. 1 Claim. (Cl. 143—43.)

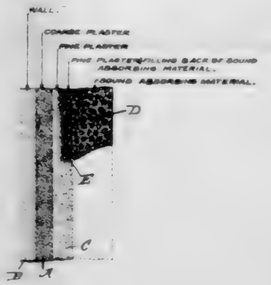


In a sawing machine, a main frame including longitudinal and transverse elements, a second frame, of U form, having its central portion connected with one end of the frame first named, a shaft passing transversely through the side elements of the U frame, a saw mounted on the shaft and positioned beyond the side elements of both frames, a motor mounted on the main frame and including a shaft extending through the central portion of the U frame and gearing for driving the transverse shaft from the shaft of the motor, said gearing being within the second frame, of U form.

1,563,845. CIGAR LIGHTER AND STAND. HENRY JOSEPH GRIESHABER, Chicago, Ill. Filed Oct. 27, 1924. Serial No. 746,213. 9 Claims. (Cl. 219—32.)

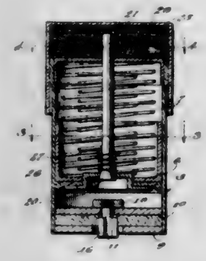
1. A device of the kind described comprising a base, a hollow standard arising therefrom, conductor tracks extending longitudinally within said standard, non-conductor tracks continuing below said first-named tracks, a lighter unit, a conductor cord leading from said unit into said standard, a weight connected with the inner end of said conductor cord and movable upon said tracks, and contact members carried by said weight and engaged with said tracks and having electrical connection with said conductor cord.

1,563,846. SOUND-ABSORBING PLASTER AND METHOD OF APPLYING SAME. RAFAEL GUASTAVINO, Bay Shore, N. Y., assignor to R. Guastavino Co., New York, N. Y., a Corporation of Massachusetts. Filed Sept. 23, 1925. Serial No. 58,147. 4 Claims. (Cl. 72—17.)



1. An acoustical wall or ceiling structure including a coat of binding material and a finishing coat of porous acoustical material intermingled at its back therewith forming a zone between the two coats of diminishing porosity.

1,563,847. GAUGE. GEORGE H. HALL, Hannibal, Mo.; Emma A. Wilson executrix of said George H. Hall, deceased. Filed June 20, 1924. Serial No. 721,267. 5 Claims. (Cl. 137—53.)

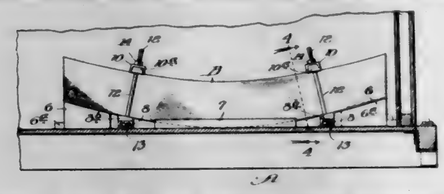


1. A tire gauge comprising a cylindrical body having forward and rear end walls, a valve carried by said forward end wall, a piston in said body and forming therewith a pressure chamber in the body between the piston and the said forward end wall, a relief valve carried by said piston, said relief valve being provided with a stem slidable through the rear end wall of the body, and a cap adjustably mounted on said cylindrical body and arranged in the path of travel of said stem to unseat the relief valve when the piston moves rearwardly beyond a predetermined extent.

1,563,848. ANTISHIFTING MEANS FOR PILED METAL SHEETS. WILLIAM J. HAMMOND, Chicago, Ill. Filed May 20, 1925. Serial No. 31,552. 7 Claims. (Cl. 105—369.)

1. Anti-shifting means for piled metal sheets whereby to prevent their displacement, either singly or as a mass, while in transit, comprising a lower pile-supporting bar of a length to cause its ends to project beyond the sides of the pile said bar frictionally engaging the transporting vehicle in degree proportionate to the

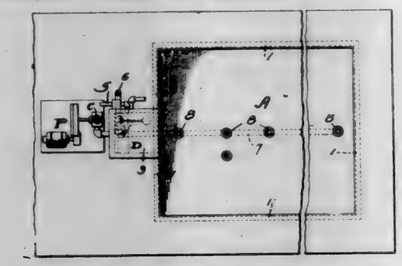
weight of the sheets piled thereon, an upper bar extending across the top of the pile with its ends projecting beyond the sides thereof, means connecting the



ends of said bars, and tightening means co-operating with said bar-connecting means to confine the piled sheets between said bars.

---

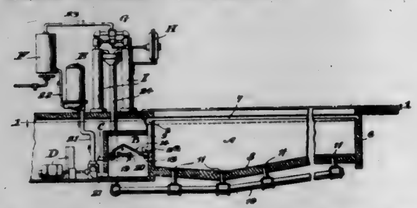
1,563,849. PROCESS FOR PURIFYING AND CIRCULATING WATER IN SWIMMING POOLS. FRANK E. HARTMAN, Scottdale, Pa., assignor to Electric Water Sterilizer & Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1922. Serial No. 556,049. 1 Claim. (Cl. 210—11.)



A process for purifying and circulating water in swimming pools which consists in introducing water at the bottom central portion of the pool at different points throughout its length in sufficient quantity to cause the surface water to continuously overflow uniformly over the overflow rail of the pool, thereby creating upwardly moving stream lines for assisting all foreign matter to the surface and carrying the same off with the surface water, then carrying the surface water to a strainer, subsequently purifying and heating the water, and finally returning the water to the pool.

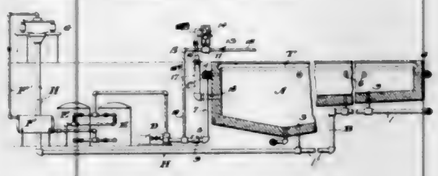
---

1,563,850. SWIMMING POOL. FRANK E. HARTMAN, Scottdale, Pa., assignor to Electric Water Sterilizer and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1922. Serial No. 556,050. 5 Claims. (Cl. 210—11.)



1. A circulating system for swimming pools including an overflow gutter for removing the surface water and floating foreign matter, a sump device for receiving said overflow water, a strainer in said device for separating the foreign matter from the overflow water, a valved raw water inlet pipe communicating with the sump device piping for supplying water to the bottom of the pool, and heating and purifying means included in the circuit between the sump and the said piping.

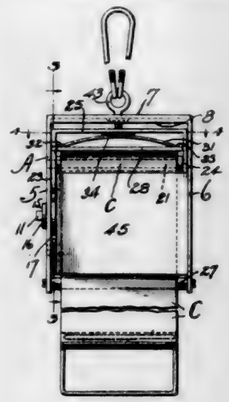
1,563,851. SWIMMING POOL. FRANK E. HARTMAN, Scottdale, Pa., assignor to Electric Water Sterilizer and Ozone Company, Scottdale, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1922. Serial No. 556,051. 6 Claims. (Cl. 210—11.)

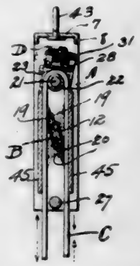


1. A circulating system for swimming pools including in combination, an overflow trough surrounding the pool, an influent piping system arranged at the bottom of the pool and communicating therewith, an effluent piping system arranged near the top of the pool and communicating therewith below the trough, and piping connections including a pump establishing communication between said systems.

---

1,563,852. SAFETY-RAZOR STROP. HARRY BUXTON HARTMAN, Scottdale, Pa. Filed June 14, 1923. Serial No. 645,390. 5 Claims. (Cl. 51—63.)





2. A razor blade stropper including a main frame consisting of top and side members and a rocking frame also consisting of top and side members journaled on the main frame at the inside thereof and provided with a bearing rod, a strop doubled over said rod, a razor blade carrier disposed between and journaled in the side members of the said main frame, means connecting the rocking frame and the blade carrier for rocking the latter upon the movement of the rocking frame, and tensioning means carried by the

rocking frame and cooperating with the bearing rod and the outer face of the strop whereby the movement of the latter actuates the frame.

5. In a razor blade stropper, the combination with a main frame, including a bearing rod, of a strop re-bent over said rod, a rocking frame including spaced legs and a connecting portion, the legs embracing the strop and being fulcrumed on said rod, a razor blade carrier disposed between the end portions of the strop and journaled on the main frame below the rocking frame, means whereby the rocking frame engages said blade carrier to oscillate the same, a pressure plate disposed above the bearing rod and co-operating with the outer face of the strop, a bowed spring interposed between the connecting portion of the rocking frame and the pressure plate, said plate being provided with upwardly extending lugs to retain the spring in co-operative relation with said plate, and means for varying the tension of said spring.

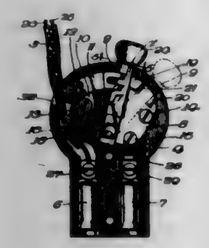
---

1,563,853. REFRACTORY MATERIAL AND METHOD OF PRODUCING THE SAME. WILLIAM A. HARTY, Blasdell, N. Y. Filed Nov. 18, 1921. Serial No. 516,226. 11 Claims. (Cl. 204—64.)

1. The method of producing fused substantially pure silica consisting in fusing sand in an electric furnace beneath an isolating layer of amorphous or crystalline silicon carbide.

---

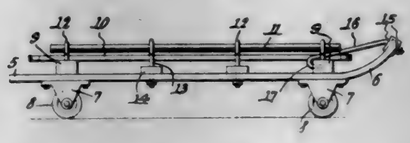
1,563,854. ELECTRIC SWITCH. RAYMOND R. HAUGH, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,854. 8 Claims. (Cl. 200—138.)



1. An electric switch provided with a thin laminated thermostatic blade, means for normally urging said blade edgewise to its open position, means for holding said blade in closed position, and means for manually operating said blade, said blade being adapted and arranged to open at a predetermined temperature by warping sidewise to avoid said holding means.

---

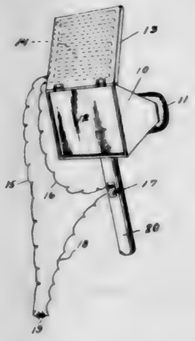
1,563,855. WATER COASTER OR TOBOGGAN. PAUL HELD, St. Cloud, Minn. Filed Apr. 22, 1925. Serial No. 25,156. 1 Claim. (Cl. 296—1.)



In a device of the character described, a body portion including a plurality of spaced members having their forward ends curved upwardly, transversely disposed bars secured to the spaced members and arranged adjacent to the ends of the body portion, substantially thin bars arranged transversely of the body portion and secured to the body portion at points adjacent to the first mention transversely disposed bars, eye bolts extending through the bars and spaced members to secure the bars to the spaced members, hand rails secured within the eye bolts, and a seat portion having its ends secured to the first mentioned transversely disposed bars.

---

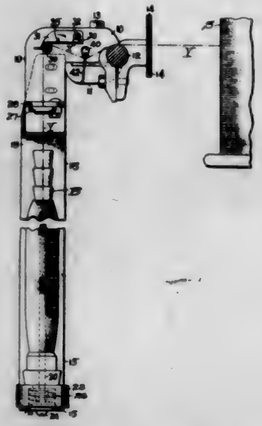
1,563,856. FLUOROSCOPIC SCREEN. ISAAC SETH HIRSCH, New York, N. Y. Filed Oct. 14, 1922. Serial No. 594,549. 15 Claims. (Cl. 250—34.)



11. The process of obtaining persistence of an image on a fluorescent screen consisting in applying heat to the surface of the screen.

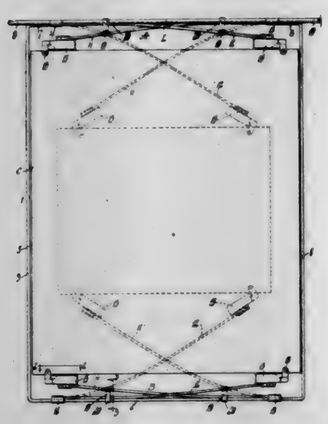
---

1,563,857. TENSION DEVICE FOR WINDING MACHINES. LEWIS T. HOUGHTON, Worcester, Mass. Original application filed July 7, 1916, Serial No. 108,063. Divided and this application filed Dec. 27, 1920. Serial No. 433,082. 4 Claims. (Cl. 242—153.)



4. In a winding machine, a winding device, a guide to deliver yarn directly to said winding device, a yarn tension mechanism, a bobbin holding spindle having its axis directed toward said tension mechanism, and means for supporting said guide, said tension mechanism and said spindle in fixed relation and closely adjacent to each other, said guide, said tension mechanism and said spindle forming one compact unit, and said winding device forming a second unit, and one of said units being relatively movable vertically to traverse the yarn on said winding device during the winding operation.

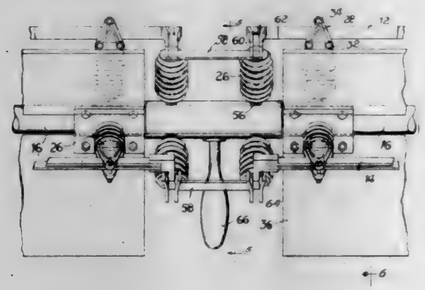
1,563,858. HOLDER FOR PHOTOGRAPHIC FILMS. DANIEL INGVE, Chelsea, Mass. Filed May 23, 1925. Serial No. 32,499. 7 Claims. (Cl. 95—100.)



1. A holder for a photographic film comprising, in combination, a frame, film supporting means located upon said frame and embodying therein a pair of resilient X arms, and means fast to each of said arms to grip a film and secure the latter thereto.

---

1,563,859. POLYPHASE BUS BAR. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1921. Serial No. 457,403. 14 Claims. (Cl. 175—302.)



4. In a multiphase power installation, a set of conductors corresponding in number to the number of phases and extending substantially in parallelism, a second set of conductors similar to the first set, said sets of conductors having opposite ends substantially in alignment, and means rotatable about an axis parallel to both said sets of conductors for connecting and disconnecting corresponding conductors in two sets.

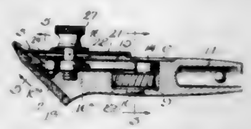
---

1,563,860. TOW ROD. JOHN JACOBSON, Columbia Falls, Mont. Filed Mar. 6, 1925. Serial No. 13,545. 3 Claims. (Cl. 280—33.)

1. A tow rod including a series of tubular telescoping sections having cooperative guide means including internal grooves lengthwise of certain of the sections and outstanding lugs carried by certain sections and slidable in said grooves, said sections also having locking pins and openings engageable with one another whereby to lock the sections in the extended effective position.

---

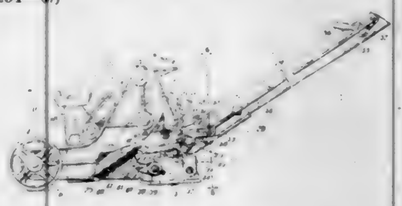
1,563,861. HAIR CLIPPER. STANLEY J. JEMBRZYCKI, Chicago, Ill. Filed Dec. 13, 1923. Serial No. 680,304. 1 Claim. (Cl. 30—1.)



In a hair clipper, the combination of a body, fixed and movable blades mounted at one end of said body and arranged at an angle oblique to the longitudinal axis of said body and forming a V-shaped space between the movable blade and the adjacent end surface of said body, a post anchored in said body adjacent said blades, driving mechanism mounted in a cavity formed in said body and comprising an oscillatory lever journalled on said post and having pivotal connection with said movable blade, through the medium of a pin and yoke connection, and a worm and worm wheel in driving connection with said lever, a cover plate for said recess having a portion extending to said movable blade, and provided with laterally spaced ears extending into the V-shaped space on either side of the point of pivotal connection of said lever with said blade, and a tension plate mounted on said post and having a marginal flange bearing upon said body and bearing lugs engaging said movable blade, and a nut on said post and adjustable to vary the pressure exerted by said tension plate on said blade.

---

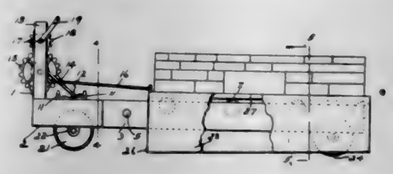
1,563,862. LIFTING JACK. GUNNAR JENSEN, Racine, Wis., assignor to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1924. Serial No. 757,420. 13 Claims. (Cl. 254—6.)



5. A lifting jack comprising a supporting carriage, a vertically movable lifting member, and connections between the carriage and lifting member for elevating and lowering the member comprising a link pivoted at one end to the lifting member and at the other end in the carriage, a ratchet segment formed on the link concentric with its pivot in the carriage, a hand-lever pivoted at one end in the carriage, a spring-pressed pawl mounted on the hand-lever adjacent its pivoted end and adapted to engage the ratchet segment, a spring-pressed locking pawl mounted in the carriage and also engaging the ratchet segment, a reversing member pivoted in the carriage and comprising cam portions adapted to engage the respective pawls and move them out of engagement with the ratchet segment, a spring tending to swing the reversing member to pawl-disengaging position, and connections extending from the reversing member to the operator's end of the handle adapted when in one position to hold the reversing member out of engagement with the pawls, and when in another position allowing the spring to move the reversing member successively into engagement with the pawls as the hand-lever is swung through its operating stroke.

---

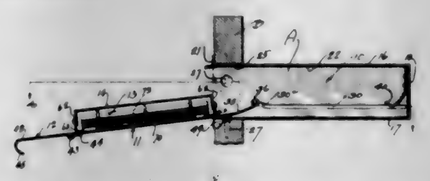
1,563,863. WAREHOUSE TRUCK. DANIEL WRIGHT JOYNER, Kansas City, Mo. Filed June 12, 1925. Serial No. 36,759. 1 Claim. (Cl. 214—84.)



A warehouse truck, comprising a bed disposed in an inclinde plane, a pivotally mounted pilot wheel bearing the forward end of said bed, independently mounted bearing wheels bearing the rearward end of said bed, a plurality of rollers journaled transversely of said bed and arranged to be turned by objects moved thereon, a portable body having an inclined plane platform movably mounted on said bed and bearing on said rollers, and pulling means mounted on said bed and adapted to pull said body over said rollers to load the truck and to regulate its travel on said rollers to unload the same.

---

1,563,864. OPERATING AND MAINTENANCE RECORD FOR VEHICLES. OBEL JUVET, Ferndale, Wash. Filed Dec. 1, 1924. Serial No. 753,349. 19 Claims. (Cl. 281—1.)

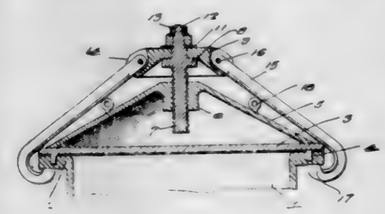


1. In a maintenance record of the class described the combination of a casing having an opening therein, a supporting plate slidably connected to the casing so that it may be positioned within the casing or extended from the opening thereof in supported relation by said casing, and loose leaf binding means connected adjacent a side edge of said supporting plate.

---

1,563,865. CLOSURE-PLATE-SECURING MEANS. MASTON VINCENT KELLY, Beaumont, Tex. Filed Dec. 27, 1924. Serial No. 758,398. 2 Claims. (Cl. 220—57.)

1. In combination with a flanged receptacle, and a closure plate therefor, of means for securing the closure plate on said flanged receptacle comprising a conical member fitting against the outer face of the closure plate, an adjusting screw threaded through the apex of the conical member, a ring-like member swivelly supported on the outer end of the adjusting screw, and a plurality of hooks pivotally secured to said ring and engaging the under side of the flange on the receptacle.



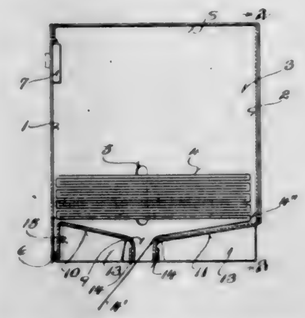
---

1,563,866. PIPE. AARO KORTEJARVI, Fitchburg, Mass. Filed June 5, 1925. Serial No. 35,072. 1 Claim. (Cl. 131—12.)

In a device of the character described, a pipe having a neck portion provided with a recess in the smoke passage; a stem adapted to be received into the outer end of said recess, said stem having a main longitudinal opening, and at its inner end a parallel bore in communication with said opening; a tube adapted to be received into said bore at the inner end of the stem, with a portion of the tube projecting beyond said end; and a stem wiper extending into the inner end of the main opening of the stem and having a projecting portion wrapped around the projecting end of the tube, and also arranged to cover up the open end of the tube, said stem cleaner being of an absorptive nature.

---

1,563,867. DISPENSING CABINET. ALBERT G. KRUEGER, Green Bay, Wis., assignor to Northern Corrugating Co., Green Bay, Wis. Filed Oct. 31, 1924. Serial No. 746,995. 1 Claim. (Cl. 211—29.)

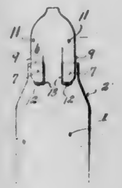


A dispenser for interfolded sheets comprising a sheet metal cabinet having downwardly extending sides, a front member and a back member spaced apart and having downwardly turned portions adjacent their juxtaposed edges, said front member and said back member

each having downturned end portions fitted within the downwardly extending sides of the body portion and secured thereto, said front member having a downwardly extending front portion hinged to the front wall of said cabinet, said front wall being a separate member from the body portion of the cabinet, whereby said front member may be swung downwardly when it is desired to fill said cabinet.

---

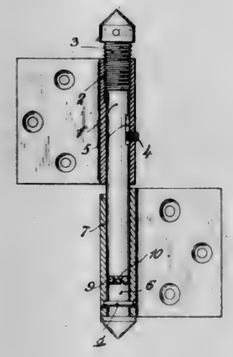
1,563,868. STOCKING AND METHOD OF MAKING. HARRY C. LANGER, Milwaukee, Wis. Filed Oct. 20, 1924. Serial No. 744,788. 4 Claims. (Cl. 66—4.)



1. The method of knitting a blank for a full-fashioned stocking comprising knitting the leg portion to the instep, throwing off stitches on opposite sides of the central instep, burying the central instep portion below the knock-over bits of the knitting machine, knitting heel tabs, and thereafter raising the buried central portion of the instep and knitting straight across the heel tabs and the central instep to form the foot portion.

---

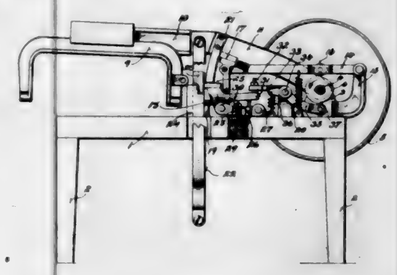
1,563,869. HINGE. ANDERS GUSTAF LARSON, Christiania, Norway. Filed Feb. 14, 1924. Serial No. 692,803. 1 Claim. (Cl. 16—134.)



In a hinge, the combination of a pair of leaves provided with superposed sockets, the upper socket having the upper portion of its internal surface formed with screw threads and the lower portion of said surface plain, and the lower socket having a plain internal surface; a plug bolt secured in the bottom of said lower socket; a plain-surfaced pintle fitting loosely in the lower socket and in the plain portion of the upper socket and having a longitudinal groove formed in its surface; a retaining pin projecting loosely into said groove at its inner end and mounted in the adjacent socket so as to hold the pintle against rotation while permitting its vertical movement; a thrust ball-bearing supported upon the plug bolt and whereon the lower end of the pintle directly rests; and a screw-threaded plug bolt adjustably engaged in the threaded upper portion of the upper socket and directly engaging the upper end of the pintle.

---

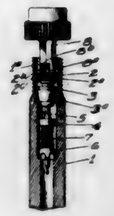
1,563,870. HACK SAW. WILLIAM C. REINHARDT and ARTHUR W. LUNDGREN, Racine, Wis., assignors to Racine Tool & Machine Company, Racine, Wis. Filed May 3, 1923. Serial No. 636,476. 4 Claims. (Cl. 29—73.)



1. A power driven hack saw comprising a saw frame, means for reciprocating said frame, a pivotally mounted guide for said frame, means for lifting said frame upon the idle stroke, means for releasing said lifting means at the beginning of the working stroke, and other means including a pawl and ratchet for operatively supporting said frame when said lifting means is released to limit the downward motion of said frame during each working stroke.

---

1,563,871. VALVE AND CAP APPARATUS. HARRY F. ROLLER, San Diego, Calif. Filed Jan. 13, 1922. Serial No. 528,896. 6 Claims. (Cl. 152—12.)



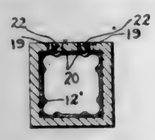
1. In an apparatus of the class described, a supporting means provided with a locking lug portion, a valve provided with a stem reciprocally mounted therein, and a depressor member adapted to engage with and depress the valve stem and provided with lugs thereon adapted to interlock with said locking lug portion on said valve supporting means.

---

1,563,872. PROCESS OF MANUFACTURING PLASTIC COMPOSITIONS. BELA W. ROTH, Cleveland, Ohio. Filed Dec. 11, 1920. Serial No. 430,086. 7 Claims. (Cl. 106—23.)

1. In a process of manufacturing plastic compositions, the steps which consist, in dissolving a minor portion by weight of rubber; saturating a major portion of cotton fibre with the rubber solution; removing the solvent; compressing filling, pigment and vulcanizing material into the dried mixture of cotton and rubber; and then vulcanizing.

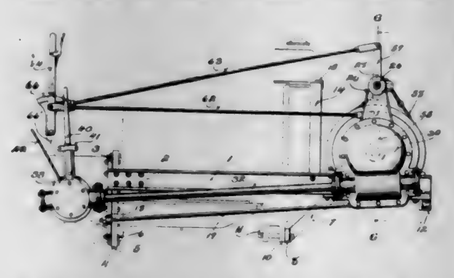
1,563,873. CASKET HANDLE. EDWARD R. SARGENT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Feb. 28, 1921. Serial No. 448,295. 12 Claims. (Cl. 16—112.)



1. In a casket handle, a handle bar, a tip telescopically mounted thereupon, one of said members being provided with a slot, and the other provided with a lug bendable into engagement with the slot after the tip is assembled upon the arm.

---

1,563,874. HOIST FOR TRACTORS. WILLIAM H. SCHMIDT, PAUL O. DALLMANN, and THEODORE G. MUELLER, Milwaukee, Wis., assignors to Dallmann Machine & Manufacturing Co., Milwaukee, Wis. Filed Mar. 26, 1925. Serial No. 18,404. 3 Claims. (Cl. 254—166.)



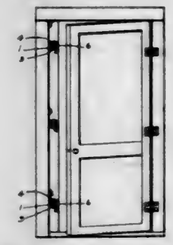
1. A hoist attachment for a tractor having a flanged transmission case and a front axle pivotally joined to a front yoke, said attachment comprising a frame having a pair of side bars located on opposite sides of the tractor body and having their forward ends projecting beyond the front of the tractor, a pair of segmental members carried by the rear ends of said side bars and hooked behind the said flange and bolted thereto, a downwardly extending yoke secured to the forward portion of said side bars and coupled to said front axle at the pivot point of said axle and said first mentioned yoke, a hoisting drum mounted between the projecting portion of said side bars, means for driving said drum from said tractor, and means for holding said drum against rotation.

---

1,563,875. PROCESS OF SEPARATING THE CONSTITUENTS OF MINERAL SILICATES. SHERMAN W. SCOFIELD and JOHN B. LA RUE, Cleveland, Ohio; said La Rue assignor to said Scofield. Filed Feb. 4, 1924. Serial No. 690,656. 4 Claims. (Cl. 23—33.)

1. In the process of converting potash-feldspar into alkali-metal silicate and aluminate by means of converting crystalline feldspar into amorphouse feldspar and heating a mixture of said amorphous feldspar and a solution of caustic alkali in a closed vessel, the method of completely converting the feldspar into water-soluble compounds consisting in, utilizing, for the alkali digestion step, substantially ninety (90) per cent caustic alkali in amount from one (1) to two (2) times by weight of the feldspar and an amount of water substantially equal to the feldspar, together with a pressure of substantially three hundred (300) pounds per square inch and a temperature of substantially 270° C., the treatment being continued until substantially all the normally insoluble constituents are fused, and then adding more water.

1,563,876. SHOCK-ABSORBING DEVICE FOR DOORS. BALUS F. SMITH, Kansas City, Mo. Filed May 13, 1925. Serial No. 29,993. 1 Claim. (Cl. 16—86.)



A shock absorbing device for doors formed of a body of resilient rubber having a flexible compressible rim flange aroung the perimeter of its outer face and adapted to engage the face of a door and a concentrically concaved cup portion registering with the inner end of the rim flange, said body being provided with a concentrically formed cavity and with an opening at the axis of the body communicating with the cup portion and with the cavity, the portion of the body between the cavity and the cup portion forming a flexible annular flange.

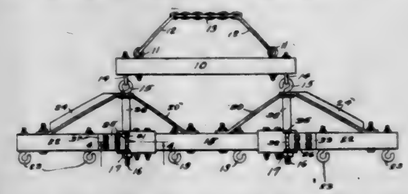
---

1,563,877. HOSIERY AND SUPPORTER THEREFOR. ISRAEL SONN, Schuylerville, N. Y. Filed Jan. 9, 1925. Serial No. 1,386. 3 Claims. (Cl. 2—240.)

1. In a stocking, a supporter knitted integrally therewith and branching therefrom at a point spaced from the top of the stocking and extending a substantial distance above the stocking in the form of a streamer, and means to connect a portion of the supporter adjacent the juncture with the stocking, to the top portion of the stocking.

---

1,563,878. DRAWBAR FOR HARROWS. CHARLES STANEK, Orient, Iowa. Filed Apr. 7, 1924. Serial No. 704,745. 4 Claims. (Cl. 280—44.)

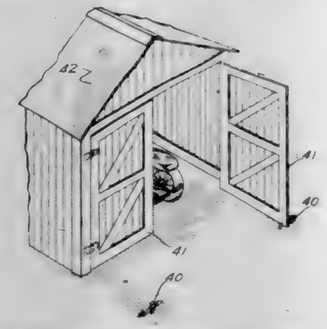


1. A harrow draw bar consisting of a center member, a pair of end members, hinge connections for hingedly connecting the ends of said center member to said end

members whereby said end members may be folded to overlap said center member, a pair of draw rods connected to said center member and end member at the hinge connection therebetween, braces secured to said end members and to said draw rods, braces secured to said center member and secured to said draw rods and means for permitting harrow sections to be secured to said center and end members as and for the purposes stated.

---

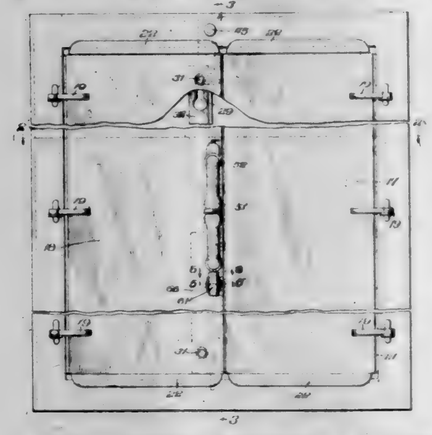
1,563,879. GARAGE-DOOR CATCH. DAVID W. THOMPSON, San Gabriel, Calif. Filed Feb. 21, 1922. Serial No. 538,224. 1 Claim. (Cl. 292—136.)



A garage door catch comprising: a stake member adapted to be driven into the ground or set into the concrete of the driveway and having an elongated slot therein; a catch bar extending through said slot; a bolt passing through said stake and catch bar upon which the catch bar is pivoted; a hook formed on the upper edge of said catch bar in such a position as to engage the lower edge of a door swung over said catch bar; adjustable means for limiting the upward movement of said hook; and means for forcing said hook upwardly.

---

1,563,880. LOCKER. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 20, 1919. Serial No. 318,691. 25 Claims. (Cl. 292—120.)

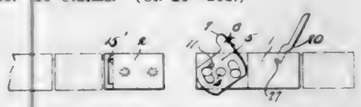


1. A locker, comprising in combination a door frame, a pair of doors hinged to the sides of said frame, one of said doors carrying a latch bar engageable with the frame at the top and bottom and the other door intermediate its top and bottom.

10. A keeper for a locker door and the like, comprising a U member having lugs for engagement with the inside of the door, outwardly pressed shoulders between said lugs for engaging the outer face of the door, and means inwardly of said shoulders for spreading the parts of the keeper to hold the lugs and shoulders in holding relation to the door.

---

1,563,881. CATCH. LOUIS J. VETTER, Attleboro, Mass., assignor to R. F. Simmons Company, a Copartnership consisting of Joseph L. Sweet and Harold E. Sweet, Attleboro, Mass. Filed Jan. 26, 1925. Serial No. 4,780. 10 Claims. (Cl. 24—201.)



1. A safety catch comprising a pair of cooperating separable elements, one carrying a pivoted locking member, and the other a plurality of projecting portions simultaneously engageable by said pivoted locking member to hold said elements together.

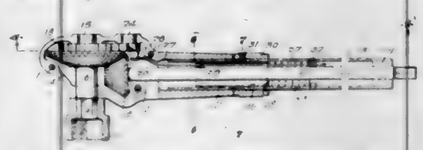
---

1,563,882. METAL-FELLY WHEEL. IRA D. WALTER, Harrisburg, Ark., assignor of one-fourth to Josiah Brinkerhoff and one-fourth to Charles R. French, both of Harrisburg, Ark. Filed Dec. 22, 1923. Serial No. 682,273. 6 Claims. (Cl. 301—67.)

3. In a wheel, wooden tenonless spokes and a metal felly fitted flush to the tenonless ends of the spokes and having as many perforations as there are spokes, and fasteners having tubular portions extending through the perforations in the felly and provided with cutting edges driven into the tenonless ends of the spokes.

---

1,563,883. RATCHET WRENCH. FREDERICK WALTERS, Lyons Falls, N. Y. Filed July 31, 1924. Serial No. 729,324. 5 Claims. (Cl. 81—63.)

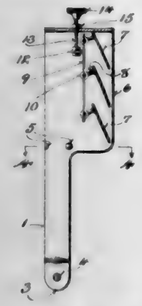


1. A wrench comprising a hollow head portion, a tubular handle carried thereby, a rotably mounted ratchet wheel, a pivotally mounted pawl, a flexible wire carried by the pawl, a sleeve loosely mounted to oscillate within said tubular handle and having an apertured lug for the reception of said wire, and means connected to said tubular sleeve for actuating said pawl.

---

1,563,884. ANTIGLARE DEVICE. LOUIS WEISHAN, Milwaukee, Wis. Filed July 13, 1925. Serial No. 43,326. 1 Claim. (Cl. 240—45.2.)

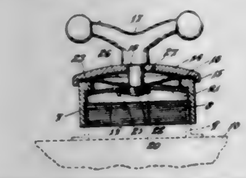
An anti-glare device adapted for attachment to a headlight, comprising an annular band adapted to surround the outer end of the casing of such headlight and having a pair of spaced ears, means for drawing said ears towards each other, said member having projections thereon adapted to engage said casing and prevent inward or outward motion of the device, said band being relatively wider at its upper portion, a plurality of shutters mounted transversely of said upper portion and pivotally carried thereby, each shutter having a crank arm projecting rearwardly thereof, a link



joining said crank arms and having an outwardly projecting apertured ear, and adjusting screw passing through the upper portion of said band and operatively coupled to said outwardly projecting ear of said link, whereby the angular setting of said shutters may be simultaneously varied by manipulating said screw.

---

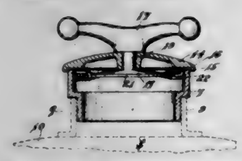
1,563,885. CAP FOR CONTAINERS. OSCAR B. WELKER, Middletown, Conn., assignor to The Welker-Hoops Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Apr. 7, 1923. Serial No. 630,468. 4 Claims. (Cl. 220—24.)



1. A container cap including a supporting member, a closure member hinged to one end of the supporting member, a locking bar rotatably supported within the cover with the opposite ends thereof cooperating with the supporting member for retaining the closure member in closed position and a baffle plate interposed between the closure member and locking bar for retaining the locking bar properly positioned relative to the supporting member.

---

1,563,886. CAP FOR CONTAINERS. OSCAR B. WELKER. Middletown, Conn., assignor to The Welker-Hoops Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed June 8, 1923. Serial No. 644,141. 1 Claim. (Cl. 220—24.)



A closure comprising a supporting member, a cover plate, a stud rotatable in the cover plate, an apertured boss depending from the cover plate through which the stud passes, a combined baffle and locking plate of disk formation interlocked with the lower end of the stud and so retained by the boss on the cover, said baffle and locking plate having diametrically opposite cut-away portions with the remaining divided edge of the plate being of cam formation and diametrically opposite lugs on the supporting member cooperating with the cam formation at the edge of the plate.

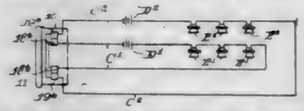
---

1,563,887. DRILL-PRESS GUARD. JULIUS WIESPETAT, Racine, Wis. Filed July 26, 1924. Serial No. 728,431. 2 Claims. (Cl. 77—55.)

1. The combination of a drill press having a head, a rack feed mounted therein, a spindle carried by said rack feed, a chuck carried by said spindle, a tubular casing surrounding said chuck, a slotted strap extending upwardly from said casing, a bracket bolted to said head and having a lug positioned within the slot of said strap, a split bracket carried by the upper end of said strap and adapted to clamp about said rack feed, and a stop screw carried by said split bracket and adapted to engage said head, said casing having an inwardly extending bottom flange and having a hingedly mounted portion giving access to said chuck.

---

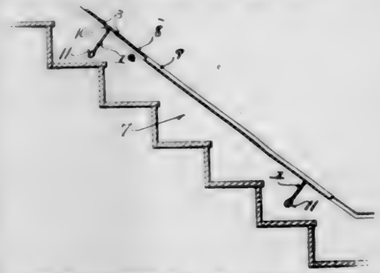
1,563,888. TELEPHONE EARPIECE OR RECEIVER. CHARLES E. WILLIAMS, Chicago, Ill. Filed Mar. 5, 1923. Serial No. 622,882. 3 Claims. (Cl. 179—107.)



1. In an instrument for assisting the partially deaf including a plurality of independent electric circuits, each of which includes a plurality of microphones in series, a telephone ear-piece or receiver including an electromagnet having independent coils included in the respective afore-mentioned circuits.

---

1,563,889. MOPBOARD PROTECTOR. FREDERIC W. ZASTROW, Milwaukee, Wis. Filed Feb. 2, 1925. Serial No. 6,298. 2 Claims. (Cl. 91—65.)

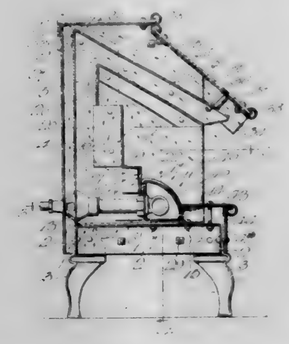


1. A device for protecting mop boards adjacent walls while the walls are being treated, said device comprising a pair of clips adapted for positioning upon the mop

board and having inturned downwardly extending flanges adapted to fit behind the mop board and having inwardly projecting slanting braces terminating in rounded ends for contacting with the face of the mop board, and an elongated plate having downwardly struck lugs adapted to engage the clips.

---

1,563,890. GAS HEATER. BENJAMIN CALVEN BARTLEBAUGH, Wheeling, W. Va. Filed Dec. 15, 1924. Serial No. 756,070. 6 Claims. (Cl. 126—85.)



1. A heater comprising a casing having a rearwardly inclined top and an open front, a burner in the lower portion of said casing spaced forwardly from the back wall thereof, a fire wall behind said burner having openings leading over the same to permit passage of unburnt gases and air to the burner flame to be immediately consumed, the casing being provided with an air inlet behind said fire wall, and a rearwardly inclined baffle plate in the casing spaced downwardly from said inclined top and upwardly from said fire wall, the front edge of said baffle plate being rearwardly spaced from the front edge of said top, and the rear edge of said baffle plate being turned downwardly in rearwardly spaced relation with said fire wall.

---

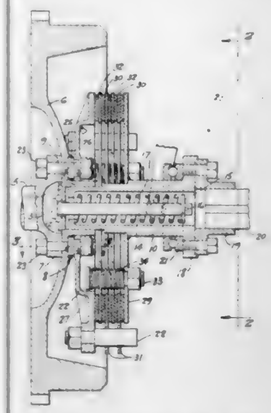
1,563,891. PROCESS OF TREATING MILK. ALFRED W. BOSWORTH and LEWIS H. CHRYSLER, Columbus, Ohio. Filed Dec. 20, 1924. Serial No. 757,271. 7 Claims. (Cl. 99—11.)

1. A process of improving milk which comprises the steps of adding a substance containing the phosphoric acid radical under conditions capable of leaving the casein of the milk still in solution, rendering the milk slightly alkaline, whereby calcium present in the milk is converted into insoluble calcium phosphate, removing the latter from the milk, and thereafter neutralizing any undesired excess of alkali in the milk.

---

1,563,892. DISK-CLUTCH STRUCTURE. EARL R. CLAYTON and AMOS H. KIRKSEY, Los Angeles, Calif. Filed Mar. 5, 1925. Serial No. 13,394. 2 Claims. (Cl. 192—69.)

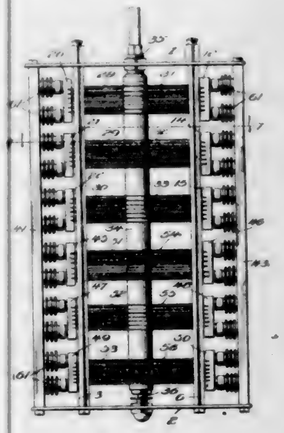
1. In an automobile, the combination of an engine shaft having a fly wheel receiving flange at the end thereof provided with bolt holes; a fly wheel therefor, said fly wheel having a hub and a web with bolt holes extending therethrough; bolts extending through the bolt holes in said fly wheel and flange; shouldered collar heads threaded on said bolts, said collar heads having externally threaded ends; a clutch disk holding plate mounted over said collar heads and abutted against the shoulders thereon; nuts mounted on said collar heads securing said plate to said fly wheel; clutch disk mounted on said plate and held against rotation; a hollow clutch shaft slidably mounted in said fly wheel; a spring within said shaft tending to hold said shaft in its inner position in said



hub, said shaft being arranged to be splined to a propeller shaft; and clutch disks secured against rotation with respect to said clutch shaft.

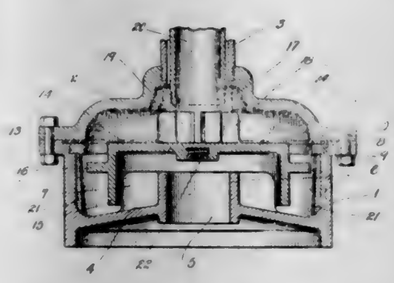
---

1,563,893. MULTIPLE VARIABLE CONDENSER. SAMUEL COHEN, Brooklyn, N. Y., assignor to General Instrument Corporation, New York, N. Y., a Corporation of New York. Original application filed Mar. 14, 1925. Serial No. 15,516. Divided and this application filed Sept. 25, 1925. Serial No. 58,635. 5 Claims. (Cl. 250—41.)



1. A multiple variable condenser comprising in combination a pair of end plates, frame members interconnecting said end plates, a plurality of independent sets of stator plates, insulation means interposed between said frame members and each of said sets of stator plates, whereby one set of said stator plates is substantially insulated from another set of said stator plates, a shaft journaled in said end plates, sets of rotor plates carried by said shaft and arranged to be interleaved between said sets of stator plates whereby the mutual capacity between said sets of plates may be simultaneously varied by rotation of said central shaft.

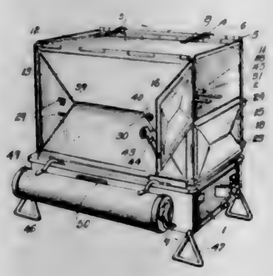
1,563,894. CENTRIFUGAL MACHINE. WILLIAM C. COLEMAN, Wichita, Kans. Filed May 28, 1923. Serial No. 641,968. 5 Claims. (Cl. 233—7.)



1. A separator comprising an inner rotor and an outer rotor, the outer rotor comprising a casing having a mercury-receiving space, the inner rotor comprising a disk having a depending flange, and a distributing flange on the depending flange, the periphery of the distributing flange being within the mercury space.

---

1,563,895. OVEN. WILLIAM C. COLEMAN, Wichita, Kans., assignor to Coleman Lamp Company, Wichita, Kans., a Corporation of Kansas. Filed June 14, 1924. Serial No. 720,004. 4 Claims. (Cl. 126—38.)

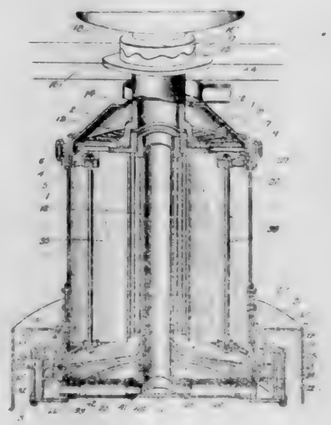


1. A stove comprising a burner carrying case, a vertical wall hinged to said case, a top wall hinged to one longitudinal edge of the vertical wall, a vertical wall hinged to the top wall, and walls hinged to the ends of the second mentioned vertical wall and means on the end walls for engagement with the first mentioned vertical wall to form an oven, the connected end walls, vertical walls and top wall being adapted to be folded so that the top wall, second mentioned vertical wall and end walls lie parallel with the first mentioned vertical wall and means on the first mentioned vertical wall for fastening it to the burner carrying case.

---

1,563,896. VIBRATORY SEPARATOR. WILLIAM C. COLEMAN, Wichita, Kans. Filed Sept. 15, 1924. Serial No. 737,861. 12 Claims. (Cl. 209—199.)

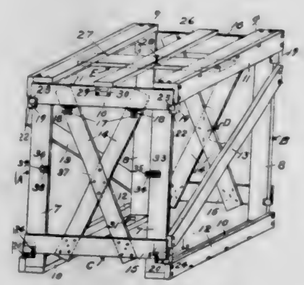
1. A separator comprising a rotatable vertically disposed member open at its respective ends, a bottom member connected to the first named member provided with a mercury compartment, radial amalgamator plates in the first member, a distributor above the amalgamator plates for distributing material into the spaces between the amalgamator plates so that it may gravitate to the bottom member, a valve member on to which the material may be deposited, the valve member being within the bottom member and having its periphery spaced from



the bottom member, the bottom member being spaced from the first named member, water jets adjacent to the periphery of the first named member at its lower edge, said jets being supported by the bottom member and means for delivering water to the jets.

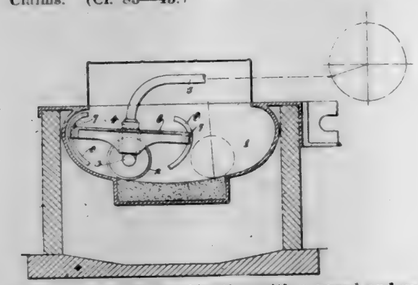
---

1,563,897. COLLAPSIBLE CARRIER. CORNELL FLAGSTAD and OSCAR A. FLAGSTAD, Minneapolis, Minn. Filed Apr. 7, 1924. Serial No. 704,604. 4 Claims. (Cl. 217—43.)



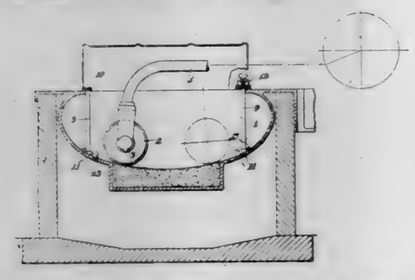
1. In a crate, a pair of side sections, a pair of end sections adapted to be secured at their lower corners to the ends of the side sections, securing members hingedly mounted on the upper ends of the end sections, means at the ends of said securing members for detachably engaging the side sections, and means for engaging said securing members to prevent the means at the ends thereof from swinging out of engagement with the side sections.

1,563,898. CONCH FOR THE MANUFACTURE OF CHOCOLATE. FREDERICK GEORGE FRYER, York, England. Filed Nov. 10, 1922. Serial No. 600,134. 5 Claims. (Cl. 83—45.)



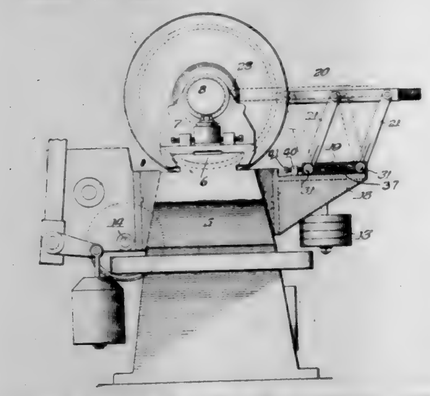
1. In a conch, the combination with a vessel and means movable transversely of the vessel for subjecting the chocolate to attrition, of prongs connected with said means and movable bodily therewith for separately agitating the chocolate.

1,563,899. CONCH FOR THE MANUFACTURE OF CHOCOLATE. FREDERICK GEORGE FRYER, York, England, assignor to Rowntree and Company Limited, York, England. Filed Feb. 5, 1923. Serial No. 617,058. 18 Claims. (Cl. 83—45.)



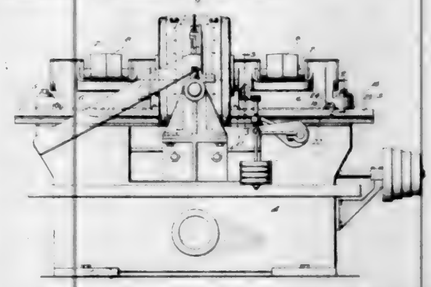
1. In a conch, the combination of a vessel, means movable transversely of the vessel for subjecting the chocolate to attrition, and grid-like means connected with the vessel for separately rubbing the chocolate.

1,563,900. GRINDING MACHINE. EDWARD B. GARDNER, RALPH D. GARDNER, and JOHN NIELSEN, Beloit, Wis. Filed Aug. 18, 1924. Serial No. 732,602. 9 Claims. (Cl. 125—11.)



1. In a grinding machine, the combination with a rotary grinding wheel, of a support located at one side of the axis of said wheel, a tool for surfacing one face of said wheel, and a pair of parallel links respectively pivoted to said support and tool for permitting the tool to be moved substantially radially of the wheel.

1,563,901. GRINDING MACHINE. RALPH D. GARDNER, Beloit, Wis., assignor of one-third to Edward B. Gardner and one-third to John Nielsen. Original application filed Apr. 10, 1922, Serial No. 551,008. Divided and this application filed June 28, 1923. Serial No. 648,216. 7 Claims. (Cl. 51—112.)

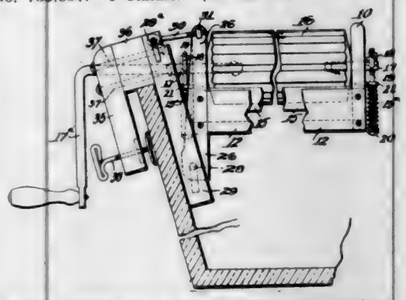


1. In a grinding machine, the combination of a base, a pair of carriages mounted to slide thereon, a pair of grinding wheels, and means for adjustably mounting said wheels upon their respective carriages so as to permit of adjustment of said wheels about a plurality of axes upon their carriages.

1,563,902. COLLAPSIBLE RECEPTACLE. MOLLY G. GRODNICK, Minneapolis, Minn. Filed Aug. 26, 1924. Serial No. 734,172. 2 Claims. (Cl. 220—6.)

1. A collapsible receptacle consisting of a base, side and end sections hingedly secured to the base, a flexible cover member adapted to substantially enclose the receptacle when the latter is collapsed, a sheet metallic top section adapted to close the receptacle when set up, said top section being secured to the cover member and being jointed, as and for the purpose set forth.

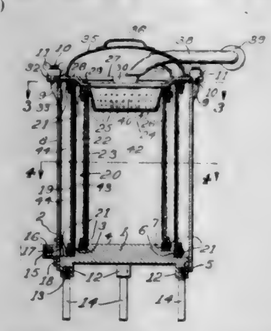
1,563,903. CLAMP. JOHN A. JOHNSTON and ROBERT E. MOLT, Worcester, Mass. Filed Sept. 4, 1924. Serial No. 735,897. 6 Claims. (Cl. 68—2.)



1. The combination with a fluted roll washing machine having a frame adapted to be placed in a tub, of a pair of vertical pivots at one end of the machine

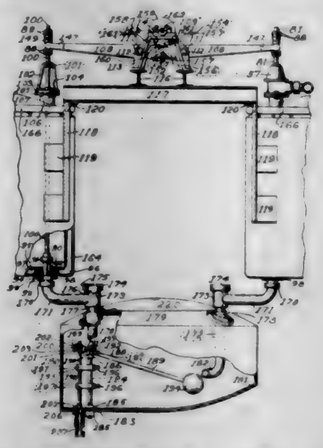
spaced apart, a pair of frames pivoted on said pivots and extending downwardly therefrom and each having a horizontal pivot, and a pair of clamps pivoted on the horizontal pivots for clamping the machine to the wall of the tub.

1,563,904. FILTER. DANIEL C. KERCKHOFF and RALPH COPP, St. Louis, Mo., assignors to Pevely Dairy Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 19, 1923. Serial No. 675,628. 4 Claims. (Cl. 210—154.)



1. A filter including an open topped cylindrical casing having a bottom provided interiorly with a series of concentric steps, cylindrical filtering screens graduated in height and resting on respective steps, a pan shaped strainer fitting within the inner screen at its top and having a peripheral flange resting on the top edge of said inner screen, a removable cover for said casing having a central opening and being concentrically stepped, the inner step of the cover engaging said flange to force it against the top edge of the inner strainer, the outer step of the cover engaging the top edge of the outer strainer, and means to secure said cover on said casing removably.

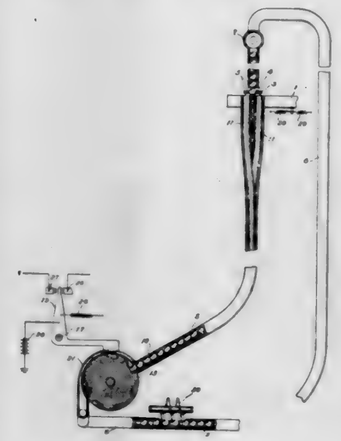
1,563,905. PASTEURIZING PROCESS AND APPARATUS. DANIEL C. KERCKHOFF and RALPH COPP, St. Louis, Mo., assignors to Pevely Dairy Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 19, 1923. Serial No. 675,629. 18 Claims. (Cl. 137—21.)



2. In a pasteurizing apparatus, a holding tank having inlet and discharge openings, respective lift valves for the said openings and provided with guiding means to insure proper seating, and respective operating stems having heads loosely and removably socketed in the said valves, and means for guiding the said stems.

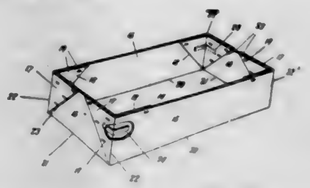
13. In a pasteurizing apparatus, the combination of a revoluble shaft, a plurality of holders, inlet and outlet lift valves controlling the passage of fluid to and from the said holders, operating stems for the said valves projecting above the tops of the said holders, a plurality of cams on said shaft, one for each valve, and respective levers extending from the said cams to the said valves.

1,563,906. BALL STORAGE TRANSMITTER. EDWARD E. KLEINSCHMIDT, Long Island City, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 9, 1923. Serial No. 650,320. 9 Claims. (Cl. 178—17.5.)



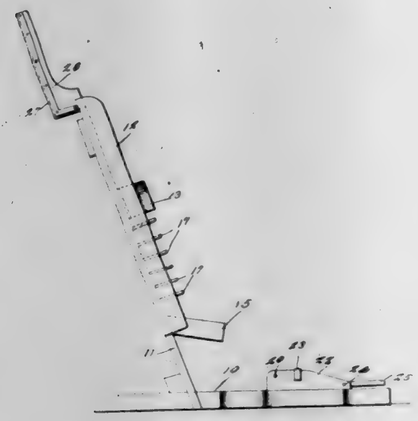
1. A storage transmitter comprising a plurality of contact controlling members; permutation means for arranging said members in various permutations; storage means for storing said permutations of members in fixed order, a single transmitting contact successively controlled by said stored permutation members to transmit code combinations of electrical impulses, and means for feeding said members to said permutation means indiscriminately and out of order.

1,563,907. FOLDING BOX. SAMUEL KOFF, Brooklyn, N. Y. Filed Feb. 11, 1925. Serial No. 8,458. 6 Claims. (Cl. 229—41.)



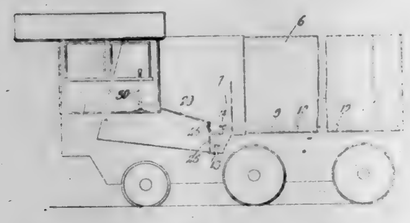
1. A box comprising a bottom, and walls having fold lines to permit the bottom and walls to be folded together, and concealed bendable means permanently secured to the box across a fold line thereof to be bent when the walls are swung relatively to the bottom and composed of material tending to hold its shape in order to hold the box open when unfolded.

1,563,908. GAME. DAVID H. KRAUSE, Anacortes, Wash. Filed Apr. 3, 1925. Serial No. 20,562. 4 Claims. (Cl. 273—101.)



1. A game apparatus comprising a base, a game board supported by the base and arranged at an inclination thereto, a projectile, a holder therefor pivotally mounted upon the base, means for operating said holder, whereby the projectile is directed against the board, a series of pockets disposed adjacent the lower end of the board and having relatively different values, and pegs projecting from the board and arranged to deflect said projectile while finding its way from said board into one of said pockets.

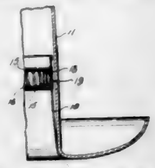
1,563,909. CLEANING SYSTEM FOR BOILERS. SAMUEL JOHN LUPTON, Winnipeg, Manitoba, Canada. Filed Nov. 20, 1924. Serial No. 750,972. 10 Claims. (Cl. 122—382.)



1. The combination with a locomotive boiler having a plurality of spaces liable to accumulate sludge, of a plurality of pipes having openings in said spaces, a valve on each pipe, and a single control for simultaneously opening said valves, said pipes being so arranged as to carry off substantially all the sludge in the boiler when the valves are opened without inducing any substantial circulation of the boiler water and sludge in the boiler.

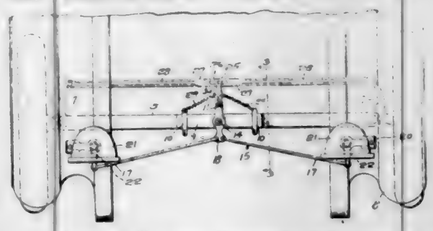
1,563,910. DECORATED HAT LEATHER OR SWEATBAND. ALFRED MARLOR, Hyde, England, assignor of one-third to Ernest Axon, South Norwalk, Conn. Filed Apr. 10, 1925. Serial No. 22,004. 3 Claims. (Cl. 2—181.)

1. A decorated hat leather or sweat band comprising a strip of leather provided with a row of openings therein, and a strip of flexible material having a surface of a contrasting color to that of the leather secured to the back of the leather over the openings so that the surface of the strip will show through the openings, said strip being embossed so that it is pressed into



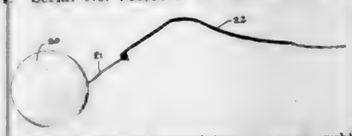
the openings and by its own stiffness will maintain its colored surface substantially flush with the front face of the leather.

1,563,911. AUTOMOBILE DIRIGIBLE HEADLIGHT. SIDNEY G. MEWBORN, Wilson, N. C. Filed Apr. 9, 1925. Serial No. 21,931. 2 Claims. (Cl. 240—62.)



1. A dirigible headlight mechanism comprising an operating lever to be pivotally mounted upon the front axle of an automobile, yielding means adapted to return the operating lever to the normal position and normally retain the same in such a position, headlamps carried by the automobile, operative connecting means between the lever and headlamps so that both headlamps are simultaneously turned by the movement of the lever, operating rods adapted for connection with the steering knuckle arms and provided at their inner ends with elongated slots, and a pin carried by the operating lever and arranged within the said slots, said pin being spaced from the ends of the slots when the lever is in the neutral position and the operating rods are in the position which they occupy when the machine is traveling in a substantially straight course whereby the slight steering movements of the front wheels will not effect a shifting movement of the headlights.

1,563,912. RETURN BALL. VERNON L. MILLER, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1924. Serial No. 748,449. 10 Claims. (Cl. 273—58.)

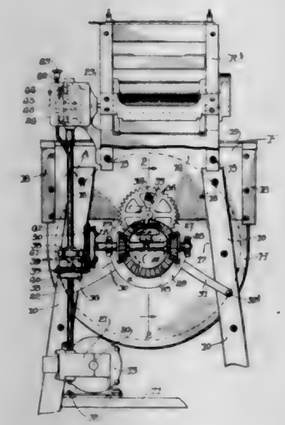


1. A return ball unit comprising a sponge rubber ball, a relatively long life securing member extending into said ball and secured thereto by vulcanization of said ball, and an elastic cord renewably attached to said securing member.

1,563,913. AUTOMATIC REVERSING MECHANISM FOR WASHING MACHINES. WILLIAM F. MORAN, Chicago, Ill., assignor of one-half to Walter J. Conlon, Oak Park, Ill. Filed Nov. 23, 1917. Serial No. 203,486. 8 Claims. (Cl. 74—50.)

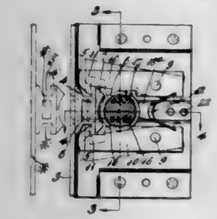
1. The combination with a driving and a driven shaft and reversing gearing for reversibly driving said driven shaft, of a clutch mechanism for controlling the direc-

tion of rotation of said driven shaft, and time controlled means for actuating said clutch mechanism, said means including a time spindle, a time gear rotatably mounted thereon and driven by the driven shaft, a member connected with said clutch mechanism to actuate the same, means on said spindle for operatively connect-



ing said time gear with said clutch actuating member to reverse the direction of rotation of said driven shaft at predetermined intervals, a lost motion connection between said time gear and said clutch actuating member, and means for yieldably restraining the rotation of said spindle.

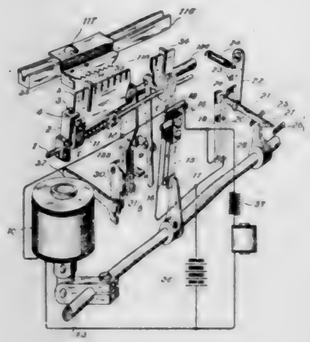
1,563,914. LOCKING MECHANISM. JAMES A. MUZZIO, Cleveland, Ohio. Filed May 25, 1923. Serial No. 641,392. 4 Claims. (Cl. 70—46.)



1. Locking mechanism, comprising relatively rotatable cylinder and plug members, and locking levers actuated by the rotatable member, one of said levers moving in a plane transverse to the plug axis and the other in a plane parallel therewith.

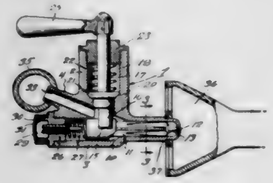
1,563,915. TABULATING MECHANISM FOR PRINTING TELEGRAPHS. CARL ERIC NELSON, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 25, 1923. Serial No. 647,510. 7 Claims. (Cl. 178—23.)

1. A printing telegraph machine comprising printing, carriage, and spacing mechanisms selectively responsive to code combinations of electrical impulses; and means selectively controlled by a single reception of a prede-



termined code combination to cause a plurality of spacing operations of said spacing mechanism.

1,563,916. VALVE. FRANK A. NIEBERDING, Cleveland, Ohio. Filed Sept. 24, 1923. Serial No. 664,439. 6 Claims. (Cl. 251—132.)

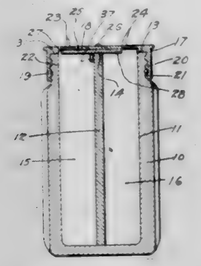


1. In a valve, a casing having a bore that is reduced at one end to provide a fluid emitting orifice and enlarged at the other to form a guideway, the casing being also provided with an ingress port and with an opening both of which communicate with said bore, a valve body that is provided with a part having a sliding fit in the bore, the body being enlarged at one end to effect a similar fit in the guideway and reduced at the other end for cooperation with the orifice, means closing the end of the bore opposite the orifice, a spring interposed between said means and the valve body, and a valve operating member extending through the aforesaid opening and having operative connection with the valve body.

1,563,917. COMBINED SALT AND PEPPER SHAKER. FLORENCE S. O'BRIEN, St. Paul, Minn. Filed Oct. 24, 1921. Serial No. 509,856. 2 Claims. (Cl. 65—45.)

1. A combined salt and pepper shaker comprising a receptacle having two compartments, a cap mounted on said receptacle, an imperforate plate pivoted to said cap at one end thereof, said plate having arcuate portions of a

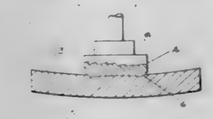
radius substantially equal to that of the cap, and being adapted to swing from one side of the periphery of said cap to the other, and holes in said cap arranged on both



sides of said plate along the periphery thereof in crescent shaped formation to communicate separately with said compartments.

---

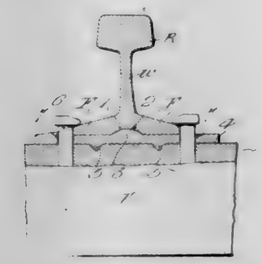
1,563,918. METHOD OF GRINDING LENSES. HAROLD K. PARSONS, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 2, 1922. Serial No. 579,188. 6 Claims. (Cl. 51—278.)



1. The process of producing bifocal lenses consisting in centrally abrading the stock for a plurality of bifocal lenses to form a sunken curve having an inclined surrounding wall flaring outwardly therefrom, and subsequently abrading the surrounding surface of the stock to reduce the height of the wall.

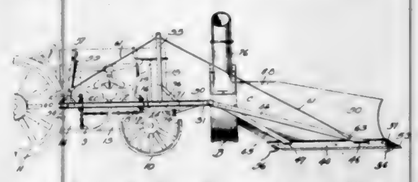
---

1,563,919. RAIL AND TIE PLATE THEREFOR. LOUIS R. PARSONS, Raritan, Ill. Filed Apr. 18, 1925. Serial No. 24,093. 6 Claims. (238—304.)



1. The combination with a track rail having formed in its bottom surface a socket arranged transverse the web of the rail with its ends extending into but terminating short of the edges of the base flanges of the rail, the ends of the socket being formed to prevent undue weakening of the base flanges of the rail beyond the web, and a tie plate formed with a lug to fit in said socket, with the wall of the lug arranged at other than a right angle relation to the plate for guiding influence on the rail.

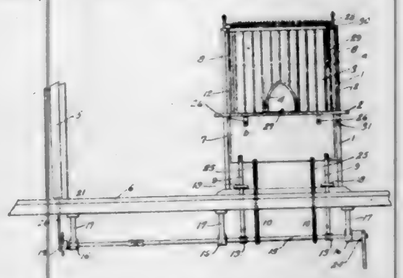
1,563,920. SNOWPLOW. JAY D. PETERS and NELS P. PALLESEN, Marcus, Iowa. Filed Mar. 13, 1925. Serial No. 15,175. 9 Claims. (Cl. 37—43.)



1. In a snow plow, a frame having a pair of forwardly-extending laterally-spaced arms, a unitary scoop and blower structure pivotally mounted in said arms for vertically swinging movement including a blower housing, a fan rotatably mounted in said housing, and means for driving said fan so as to create a suction within the housing by centrifugal action, the scoop being provided with a completely enclosed hood portion communicating with the blower housing at the center of said housing, and extending substantially forwardly therefrom.

---

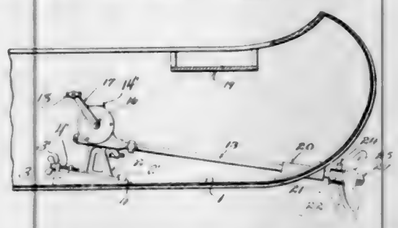
1,563,921. SAFEGUARD FOR BANKS. JOHN S. PLUMMER, Dayton, Ohio. Filed Jan. 9, 1923. Serial No. 611,674. 1 Claim. (Cl. 268—2.)



A safeguard for banks including in combination with a partition having a window, an opening in the window, a counter inwardly adjacent the window, and a guard for said opening supported upon said counter, a separate guard for the window normally held under spring tension below the window and adapted upon releasing of the same to be moved upwardly to close the window and to actuate said other guard to close said opening.

---

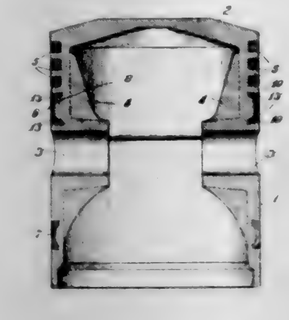
1,563,922. PROPELLING MECHANISM FOR BOATS. HERMAN M. POHLER, Milwaukee, Wis. Filed Sept. 19, 1925. Serial No. 55,538. 1 Claim. (Cl. 115—25.)



Propelling mechanism for a boat comprising a base secured to the bottom of the boat, a standard carried by said base, a housing carried by the upper end of the standard, a spiral worm wheel carried within said housing, a transverse shaft secured to said wheel and projecting from opposite sides of said housing, a pair of crank arms secured to the projecting ends of said shaft, a propeller shaft projecting into said housing and extending rearwardly therefrom through the back of the boat, a spiral worm on said shaft and meshing with said spiral worm wheel, a bearing adjacent the rear end of said propeller shaft, a tubular housing for the propeller shaft extending from said first mentioned housing to the said bearing, a propeller secured to the rear end of said propeller shaft, and means for adjusting the standard upon the base.

---

1,563,923. PISTON FOR INTERNAL-COMBUSTION ENGINES. JOHN PONDELICK, Riverside, Ill. Filed Mar. 11, 1925. Serial No. 14,590. 9 Claims. (Cl. 74—108.)



1. In a composite piston of the kind specified, wearing elements having end surface formations relatively arranged to constitue alternately oppositely disposed wedge formations.

---

1,563,924. BLASTING-POWDER COMPOSITION. CARL D. PRATT, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 31, 1924. Serial No. 717,140. 4 Claims. (Cl. 52—17.)

1. An explosive of the character described consisting of the constituents of black blasting powder, from 5 to 35% of carbohydrates, and from 1 to 15% of a metallic chloride.

---

1,563,925. BLASTING-POWDER COMPOSITION. CARL D. PRATT, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 31, 1924. Serial No. 717,141. 4 Claims. (Cl. 52—17.)

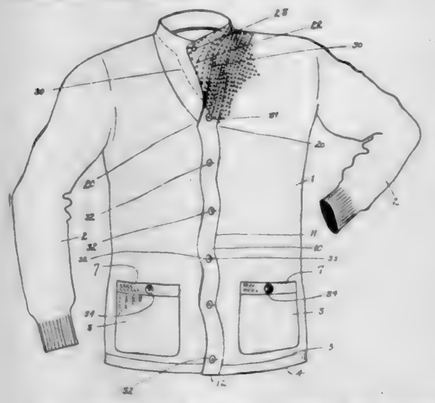
1. A composition consisting of one or more metallic nitrates, sulphur and one or more materials that are essentially carbon, the whole constituting a black blasting powder to which combination is added from 5 to 35% of one or more carbodydrates and 1 to 15% of one or more tartrates and oxalates.

---

1,563,926. BLASTING-POWDER COMPOSITION. CARL D. PRATT, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed May 31, 1924. Serial No. 717,142. 4 Claims. (Cl. 52—17.)

1. A blasting powder consisting of the ingredients of blasting powder, to which combination is added from 1 to 35% of carbohydrates and other non-explosive, oxygen deficient organic substances.

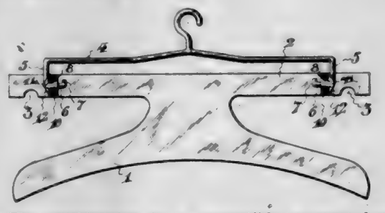
1,563,927. SWEATER COAT. JOSEPH C. W. RAHN, Utica, N. Y. Filed July 3, 1925. Serial No. 41,398. 7 Claims. (Cl. 66—4.)



1. In a sweater coat having a V-shaped neck portion, a one piece stoling, of uniform width, fastened to said sweater coat, said stoling being free around said neck portion to change the same from V-shaped to a closed neck.

---

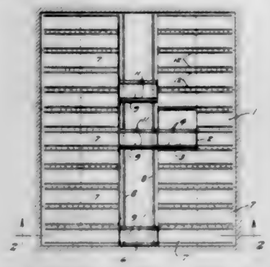
1,563,928. GARMENT HANGER. WILLIAM REID, Philadelphia, Pa. Filed Oct. 24, 1924. Serial No. 745,585. 10 Claims. (Cl. 211—13.)



1. The combination in a convertible garment hanger, of a pivoted suspension bail capable of being folded against the hanger when not in use, means to hold the bail in either the folded or extended position, and means to automatically disengage the bail from the holding means as it is turned from one position to the other.

---

1,563,929. ARRANGEMENT FOR PARKING VEHICLES. FREDERICK E. REINHOLD, Los Angeles, Calif., assignor of one-half to Albert E. Keller, Los Angeles, Calif. Filed Sept. 4, 1923. Serial No. 660,838. 3 Claims. (Cl. 214—16.)

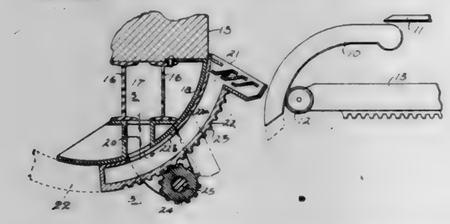


1. A motor vehicle parking arrangement comprising a plurality of floors disposed one above the other, a runway on each floor having guide rails thereon, trucks rid-

ing on the guide rails provided with transverse guideways, elevators disposed adjacent to the runways having guideways thereon adapted to be brought into registry with the guideways on the trucks, and stalls arranged on the sides of the runways having guideways therein registering with the guideways on the trucks when the latter are moved into operative positions so as to allow vehicles to be pushed thereinto from the trucks.

---

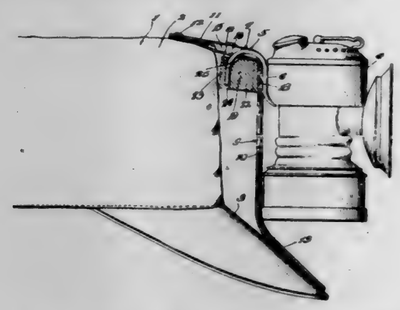
1,563,930. ASH SUPPORT FOR MECHANICAL STOKERS. ROBERT S. RILEY, Worcester, Mass., assignor to Sanford Riley Stoker Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 29, 1924. Serial No. 689,359. 4 Claims. (Cl. 110—32.)



1. In a stoker, a movably mounted refuse-supporting grate, means to give said grate repeated limited raising and lowering movements to agitate the refuse while said grate remains in operative ash-supporting position, means to give said grate an additional lowering movement away from ash-supporting position to discharge refuse therefrom, and means to supply air under pressure to said grate during its limited movements and so long as it remains in ash-supporting position and to cut off the air supply during its additional lowering movement and so long as said grate is in lowered position.

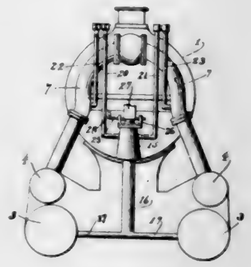
---

1,563,931. LAMP HOLDER FOR MINERS' CAPS. LOUIS SCHERZ, Wilkes-Barre, Pa. Filed Aug. 6, 1924. Serial No. 730,450. 2 Claims. (Cl. 240—60.)



1. A lamp holder for miners' caps comprising, in combination, a supporting member for an attachment to the cap and including an upright portion and a portion extending rearwardly from the upper end of the upright portion and having an opening therein, of a socket member secured to the rear side of the upright portion of the supporting member and provided with a socket opening, the first mentioned opening being slightly displaced with relation to the axis of the socket opening and located above the upper end of the said socket opening, whereby to effect a springing of the bill of a lamp hook inserted through the first mentioned opening and into the socket opening and thus cause frictional binding of the hook bill in the socket opening.

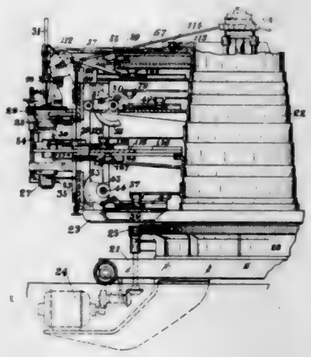
1,563,932. SUPERHEATED-STEAM LOCOMOTIVE. CHARLES W. SMITH, Keyser, W. Va. Filed July 20, 1923. Serial No. 652,789. 2 Claims. (Cl. 121—134.)



1. In a steam locomotive having a pipe for conveying steam to a cylinder, an exhaust steam nozzle within the smoke box directed towards the stack, means for closing the discharge end of the exhaust nozzle, an air inlet pipe extending through the wall of the smoke box provided with an automatic valve for preventing escape of steam therefrom having one end connected to the exhaust nozzle below its discharge end and having its other end open to the atmosphere.

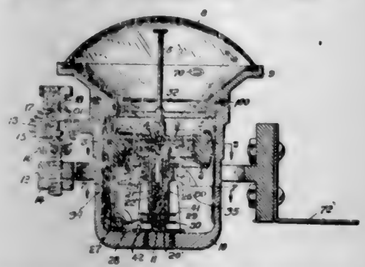
---

1,563,933. GLASS-FORMING MACHINE. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 2, 1922. Serial No. 591,749. 12 Claims. (Cl. 49—5.)



11. In a glass blowing machine, the combination of a mold carriage, a blank mold thereon, means to rotate the carriage and bring said mold over a pool of molten glass, a neck mold above and in register with said blank mold, means to draw a charge of glass by suction into the molds, means to lift the molds, means to sever the glass at the lower end of the blank mold, means to form an initial blow opening in the upper end of the blank, means to simultaneously apply air pressure at the two opposite ends of the blank, while in said molds, means to separate the molds by a relative vertical movement thereof, leaving the blank suspended from the neck mold, a sectional finishing mold on the carriage, and means to move it bodily transversely into a position between the separated neck mold and blank mold.

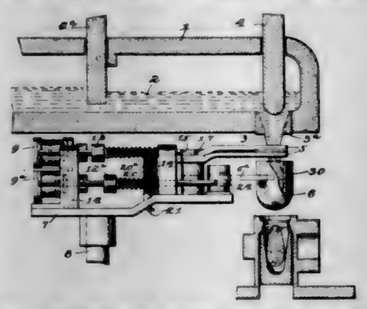
1,563,934. GYROSCOPIC INCLINOMETER FOR AEROPLANES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Jan. 15, 1918. Serial No. 211,989. 20 Claims. (Cl. 74—78.)



3. In gyroscopic apparatus, the combination with a top, means for blowing air on said top in such direction as to exert a couple thereon, a pendulous device, and means responsive to inclination of said device for rendering effective said blowing means.

---

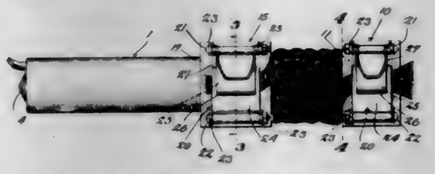
1,563,935. GLASS-FEEDING APPARATUS. THOMAS STENHOUSE, Washington, Pa., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 12, 1920, Serial No. 403,068. Renewed Sept. 17, 1925. 11 Claims. (Cl. 49—55.)



2. Glass delivering and cutting mechanism including a pair of cup forming members pivotally mounted and adapted to oscillate in substantially a horizontal plane, shears pivotally mounted above and adjacent to said cup forming members, and resilient means for maintaining proper shearing contact between the shear blades.

---

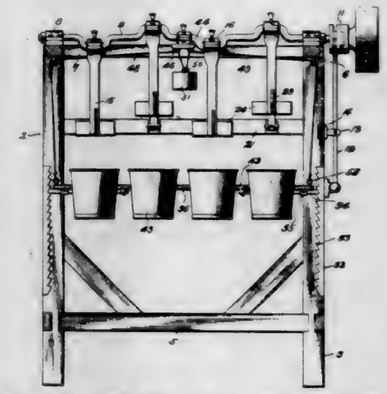
1,563,936. HAIR CURLER. BENJAMIN F. STEWART, Birmingham, Ala. Filed June 6, 1925. Serial No. 35,410. 2 Claims. (Cl. 132—34.)



1. A hair curler comprising a hollow body portion, a core mounted within the body portion, said body portion having a groove extending longitudinally thereof, a head having a rib mounted in the groove to prevent rotation of the head with respect to the body portion, a head secured to one end of the core and adapted to rotate therewith, clamping members on the heads to clamp an article thereto, said last mentioned head adapted to rotate to twist an article around the body portion, and means for restricting reverse movement of the last mentioned head.

---

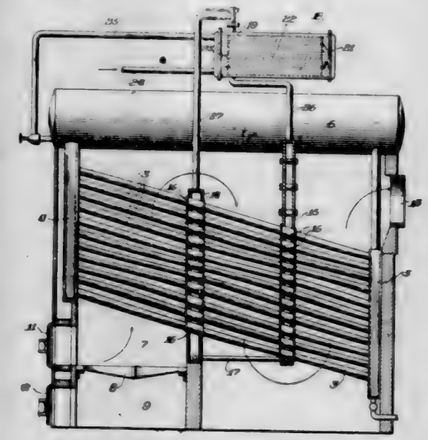
1,563,937. BROOMCORN-HURL-SHAKING MACHINE. THEODORE J. STROEFER, New Bremen, Ohio. Filed May 16, 1922. Serial No. 561,456. 6 Claims. (Cl. 300—18.)



1. In a machine of the character described, in combination a suitable frame, a crank shaft journalled in the frame, a shaker connected with the crank portion of the shaft, said shaker comprising a rod having a jaw, said rod having pivoted thereto an arm, a jaw carried by said arm and cooperating with the first mentioned jaw, whereby a quantity of straw interposed between the jaws is gripped and held for the purpose set forth, a member pivoted to the shaker arm, and to a fixed portion of the machine whereby a spaced pivotal connection is established between said rod and frame.

---

1,563,938. WATER-TUBE BOILER. JOHN M. SULLIVAN, Culver, Ind. Original application filed Aug. 26, 1920, Serial No. 406,113. Divided and this application filed Oct. 26, 1923. Serial No. 670,821. 3 Claims. (Cl. 122—412.)

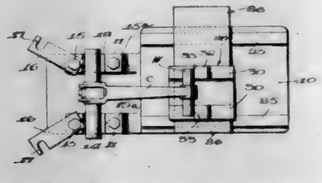


1. In a water tube boiler, the combination of a plurality of water tubes, a fire box beneath the forward end of said tubes, a steam drum above and communicating with said tubes, a front hollow baffle and a rear hollow

baffle intermediate the ends of said tubes, the front baffle being adjacent the fire box and so spaced as to permit the products of combustion to pass above the same, the rear baffle being so spaced as to permit the said products to pass between it and the front baffle and then beneath the same, means providing communication between the hollow interiors of said baffles at their lower ends, a feed water heater, and pipes connecting said heater and said baffles together to form a closed circuit.

---

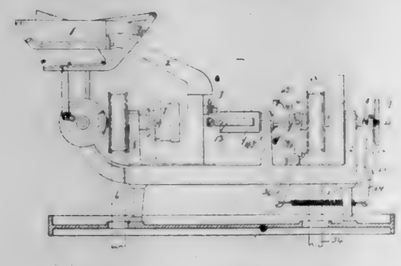
1,563,939. TESTING AND TRUING DEVICE. JOHN COOPER TAYLOR, Hermansville, Mich. Filed Aug. 4, 1924. Serial No. 730,049. 5 Claims. (Cl. 33—180.)



1. In a testing and truing device for connecting rods, a mandrel adapted to be inserted into the crank shaft bearing end of a connecting rod, an elongated base having means for rotatably supporting the mandrel, a carriage mounted for longitudinal adjustment on the base, and a slide mounted on said carriage for movement transversely of said base.

---

1,563,940. BOLT MACHINE. FRANK W. TRENN, Willoughby, Ohio, assignor to The Economy Engineering Company, a Corporation of Ohio. Filed Mar. 23, 1921. Serial No. 454,808. 1 Claim. (Cl. 10—107.)

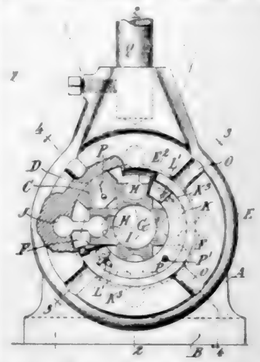


In a machine of the character described, the combination of a rotatable cutting head, a reciprocable, non-rotatable chuck in alignment therewith, said chuck comprising blank grasping mechanism and a reciprocable hollow shaft, a reciprocable rod in said shaft adapted to operate said blank grasping mechanism, cam means for moving said rod to cause said chuck to grasp a blank, resilient cam controlled means to cause said chuck to move toward and insert the blank in said cutting head, and other cam means in connection with said resilient means for causing said chuck to retreat from said cutting head and to cause said grasping mechanism to release said blank.

---

1,563,941. FERRULE-CONTRACTING MACHINE. CARL FREDERICK WICHMANN, Brooklyn, N. Y., assignor to A. Schrader's Son, Incorporated, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 3, 1922. Serial No. 579,510. 4 Claims. (Cl. 78—15.)

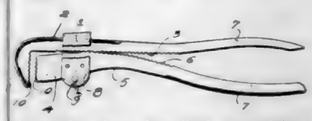
1. A contracting machine comprising a side plate having lugs the exterior surfaces of which are circular in form, said lugs having their opposing faces constructed to form slideways, jaws in said slideways, a circular operating member fitting said exterior circular surfaces of the lugs and carrying members adapted to operate said



jaws, said members being links formed with enlarged substantially cylindrical heads fitting into circular recesses in said operating member and jaws.

---

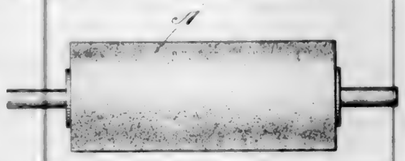
1,563,942. WRENCH. JOHN P. ACORD, Montcoal, W. Va. Filed Aug. 29, 1922. Serial No. 585,105. 1 Claim. (Cl. 81—31.)



A wrench of the class described comprising a pair of parallel shank members having their adjacent opposed edges serrated and adapted for engagement one with the other, a handle formed on the one end of each of said shank members, an inverted U-shaped sleeve pivotally secured adjacent the ends of the arms thereof to one of said shank members and encircling the other of said shank members, the crown portion of said inverted U-shaped sleeve being inclined forwardly and slightly spaced from the outer edge of the last mentioned shank member to permit of clearance and movement of said last mentioned shank member within said sleeve, and serrated jaws formed on the ends of said shank members opposite the handles, the jaw on one of said shank members being angular in design.

---

1,563,943. TOP PRESS ROLL FOR PAPER-MAKING MACHINES. RALEIGH B. ADAMS and FREDERICK R. WOODWARD, Newton, Mass., assignors to Stowe & Woodward Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Dec. 22, 1924. Serial No. 757,529. 4 Claims. (Cl. 92—49.)



1. A top press roll whose surface comprises rubber and a chemical which is soluble in water.

---

1,563,944. MASSAGE APPLICATOR. EDWARD B. ALLEN, Newtown, Conn. Filed Nov. 1, 1924. Serial No. 747,172. 2 Claims. (Cl. 128—62.)

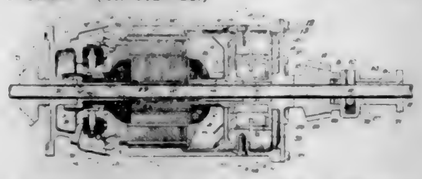
2. In a device of the class described, the combination with a head having a plurality of apertures, of a plu-

rality of elastic rubbing tips projecting through said apertures and formed with collars at their inner ends, a backing member in engagement with the collared ends

of said tips, and a screw disposed substantially centrally of said head and connecting the latter with said backplate.

---

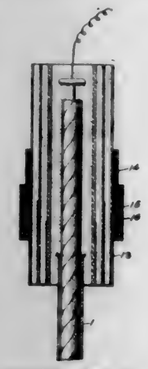
1,563,945. ELECTRIC MOTOR. VINCENT G. APPLE, Dayton, Ohio. Filed July 8, 1921. Serial No. 483,255. 1 Claim. (Cl. 172—36.)



A dynamo electric machine structure comprising a cylinder, a dynamo electric machine in one end of the cylinder, eccentric speed reduction gearing in the other end of the cylinder, a shaft extending entirely through the casing to transmit power from both ends, a tubular shaft upon which the armature of said machine is fixed, rotatable on said extended shaft and extending into said speed reduction gearing, and an eccentric rotated by said extended shaft to operate said gearing in either direction dependent upon the direction of rotation of said extended shaft, but locking against rotation of said tubular shaft by power applied to said extended shaft.

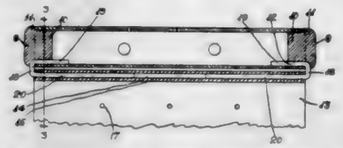
---

1,563,946. HIGH-TENSION TERMINAL. RALPH W. ATKINSON, Perth Amboy, N. J., assignor to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 19, 1923. Serial No. 619,795. 5 Claims. (Cl. 173—353.)



1. A terminal structure for an electrical cable including at one end a screen of conducting material surrounding the cable end, electrically united with the cable sheath, and flaring from the sheath longitudinally of the cable and in direction toward the exposed end, a second shield of conducting material electrically united with the cable sheath and arranged peripherally of the screen first named and terminating at a point more remote from the exposed end of the conductor than the first screen, and a casing of insulating material.

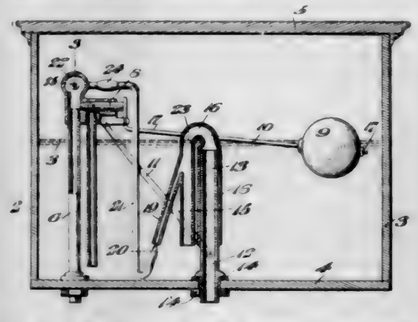
1,563,947. HINGE STRUCTURE FOR LOOSE-LEAF DEVICES AND THE LIKE. HUBERT AUBURN, Cincinnati, Ohio. Filed May 29, 1924. Serial No. 716,782. 8 Claims. (Cl. 129—12.)



8. In a device of the class described the combination of a tubular housing, a U-shaped hinge pin comprising arms, a plug for retaining the one arm of the hinge pin in the tubular housing, and a hinge plate connected with the second arm of the hinge pin.

---

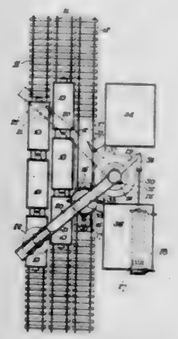
1,563,948. SIPHON FLUSH BOX. GEORGE AZONE, Philadelphia, Pa. Filed Apr. 29, 1925. Serial No. 26,567. 2 Claims. (Cl. 4—44.)



1. In a flush tank, a siphon having a gravity limb, and an open ended limb with two branches at an acute angle to each other, a nozzle in proximity to and in operative alignment with the inclined branch of said free end of the siphon, and means to discharge a jet of water through said nozzle into said inclined branch.

---

1,563,949. METHOD AND MEANS FOR FURNACE CHARGING. DAVID BAKER, New Castle, New South Wales, Australia. Filed Dec. 7, 1923. Serial No. 679,104. 8 Claims. (Cl. 214—18.)



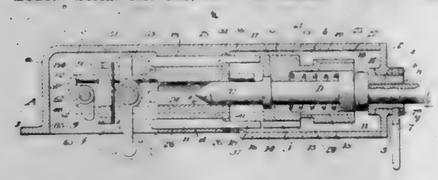
1. The method of charging a furnace which consists in assembling a mass, consisting of a plurality of materials, in required proportions and in evenly distributed horizontal layers, and then depositing said mass into

the furnace in substantially vertical lines of travel while maintaining the layer formation of the mass as assembled.

6. In a furnace charging system, the combination of a hopper, means for delivering charges of pig thereto, means for delivering other materials to the hopper in required proportions and in evenly distributed layers, means for transporting the hopper to the furnace, and means for delivering the hopper contents to the furnace through a substantially vertical path of travel corresponding in cross-section to the full horizontal cross-sectional areas of the hopper and of the furnace in order that the charge may be deposited in the furnace without disturbing its even layer formation.

---

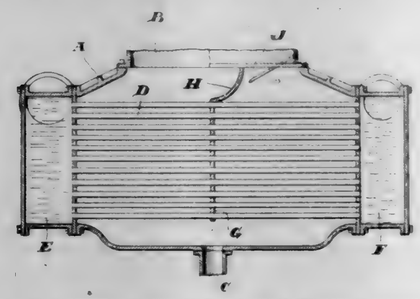
1,563,950. CONTROL MEANS. VERNON W. BALZER and JOHN MCKNIGHT BALLOU, Los Angeles, Calif., assignors to Thomas Coolidge, Los Angeles, Calif. Filed May 4, 1923. Serial No. 636,733. 16 Claims. (Cl. 74—58.)



1. In a device of the character disclosed, a shaft, a ram slidable thereon, a resilient connection between said ram and shaft, and a trigger member for engagement with said ram and adapted to be released from said ram upon movement of the shaft in one direction to permit movement of the ram independent of the shaft.

---

1,563,951. SURFACE CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Oct. 15, 1924. Serial No. 743,695. Divided and this application filed June 30, 1925. Serial No. 40,511. 3 Claims. (Cl. 257—43.)

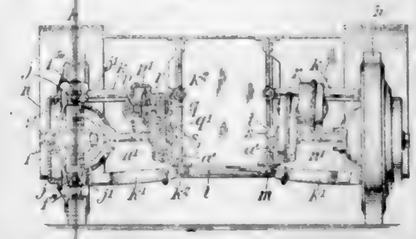


1. A condenser having tubes with different temperatures along their length resulting in unequal capacities for condensing steam in vertical sections along their length, and means including a partition dividing the condenser into warm and cool sections and a valve at the inlet to the warmer section for directing an increased flow or passage of steam to the cooler section.

---

1,563,952. SPRING SUSPENSION FOR VEHICLES. GERALD BARKER, London, England. Filed Oct. 9, 1923. Serial No. 667,447. 10 Claims. (Cl. 180—43.)

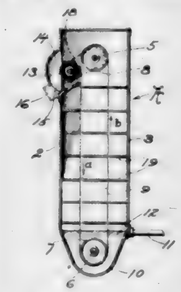
1. In a vehicle spring suspension, in combination, a chassis member, a bearing member for a road-wheel, and resilient supporting means extending between the chassis and the bearing member and comprising two supporting frames attached to said bearing member one above the other, each embodying two arms separately attached



at their inner end to the chassis member at points widely separated in the longitudinal direction of the vehicle and converging towards the wheel.

---

1,563,953. METHOD OF DESICCATING EGGS. CLEO E. BARNHILL, San Francisco, Calif. Filed Apr. 20, 1925. Serial No. 24,384. 3 Claims. (Cl. 159—49.)



1. A method of desiccating egg albumen which consists in separating the egg yolks and albumen and exposing the albumen in the form of a thin suspended film so that both sides of the film are exposed to the drying action of a warm current of dry air to dry the albumen.

---

1,563,954. THIMBLE. JOSEPH M. BARTON, Tulsa, Okla. Filed May 9, 1925. Serial No. 29,132. 5 Claims. (Cl. 223—51.)

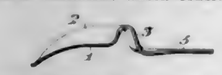
1. A thimble comprising a body formed with a finger receiving socket leading from one end, and a work-engaging head of disk-like formation carried by the other end of said body and having a smooth work engaging outer surface, said head being of greater diameter than the body and extending in overhanging relation to the sides of the body to form a work engaging under surface.

---

1,563,955. IMPRESSION TRAY. SAMUEL R. BARTON, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 25, 1921. Serial No. 455,606. 2 Claims. (Cl. 32—67.)

1. A dental impression tray formed of a unitary blank of sheet material and comprising a pliant bowl of uniform thickness and a handle of relatively greater thickness and stiffness than said bowl.

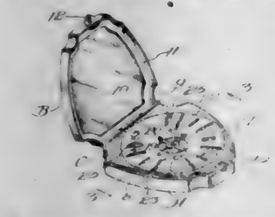
2. The method of producing a dental impression tray having a bowl and handle formed of a stamping of metal of uniform thickness, which consists of immersing



the bowl portion thereof in a solution of caustic soda until the thickness of said bowl is relatively thinner than said handle, and then immersing the handle to provide a uniformly etched surface.

---

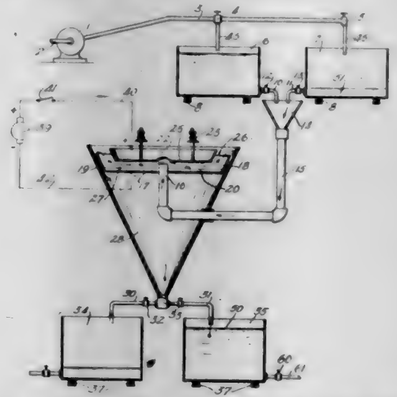
1,563,956. VANITY CASE. GEORGE T. BATES, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed June 3, 1925. Serial No. 34,514. 3 Claims. (Cl. 132—83.)



1. A vanity case in which is a top plate with a seat therein, a circular shaker plate mounted on the seat, there being openings in the two plates adapted to register when the shaker plate is rotated to a predetermined position, and a detachable pivotal connection between the two plates comprising a pin carried by the one and extended through an opening in the other, there being a pair of slots oppositely extended from the opening, and a hub carried by the pin adapted to enter the plate opening, there being a pair of fingers extended from opposite sides of the hub in a manner to pass through the slots in the plate opening and when turned relative therethrough, to secure the one plate to the other, substantially as described.

---

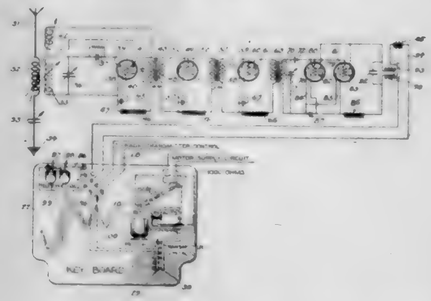
1,563,957. PROCESS AND APPARATUS FOR PRECIPITATING GOLD FROM SOLUTIONS. WELLS H. BATES, Los Angeles, Calif. Filed July 2, 1923. Serial No. 649,004. 7 Claims. (Cl. 204—5.)



1. An apparatus for the recovery of precious metals: a cathode of mercury, said cathode having a comparatively large continuous active area; and a flat anode in close proximity to said cathode, said anode having a comparatively large continuous active area opposite the active area of said cathode.

---

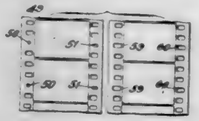
1,563,958. RADIO RECEIVING SYSTEM. JOHN B. BRADY, Somerset, Md., assignor to Morkrum Company, Chicago, Ill., a Corporation of Maine. Original application filed Dec. 28, 1921, Serial No. 525,298, Patent No. 1,485,212, dated Feb. 26, 1924. Divided and this application filed Aug. 11, 1923. Serial No. 656,956. 3 Claims. (Cl. 250—8.)



1. A radio receiving system comprising in combination a plurality of election tube circuits each arranged to respond to a characteristically timed succession of impulses of energy, a pair of electron tubes connected therewith each tube having grid, filament and plate electrodes connected in parallel, an input circuit for said tubes tuned to respond to said impulses of energy, an output circuit for said tubes for delivering said impulses, means connected with said output circuit for responding with negligible time lag to said impulses and mechanical means controlled by said means for selectively choosing a character represented by a particular succession of impulses in said electron tube circuits and for effecting the printing of such character.

---

1,563,959. PRINTING COLOR CINEMATOGRAPHIC FILMS. PERCY D. BREWSTER, East Orange, N. J. Filed Nov. 15, 1920. Serial No. 424,331. 4 Claims. (Cl. 88—16.4.)



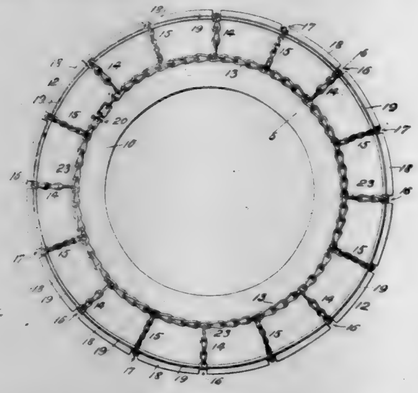
1. In the art of color cinematography, the improvement comprising exposing a negative film in a suitable camera for the production of a series of color value images, developing and fixing the film so exposed, and thereafter re-perforating the film to provide registry perforations, a suitable distance apart in uniform relation to the images, for subsequent use in printing the images on a positive film.

---

1,563,960. NONSKID DEMOUNTABLE TREAD FOR VEHICLE WHEELS. JAMES B. BROCKHURST, Red Bank, N. J. Filed Apr. 28, 1921. Serial No. 465,281. 3 Claims. (Cl. 152—16.)

1. A non-skid demountable tread for the tire casings of vehicle wheels comprising a tread of approximate normal traction width adapted to be applied upon and extend circumferentially around the periphery of the tire casing and to engage the roadbed during normal forward traction, non-skid members engaged with said tread and adapted to extend transversely therefrom along portions of the opposite sides of said casing out of contact with roadbed during normal forward traction and to be throw-

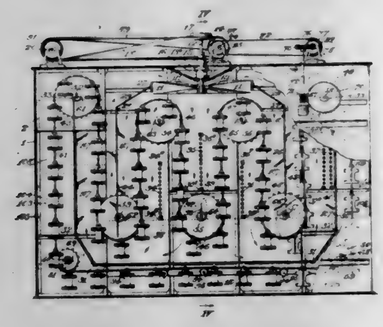
into operative engagement with the roadbed during intervals of lateral stress on the tire casing shifting said tread from its normal relation to the roadbed, and flexible tensioning members to which the outer ends of said non-skid members are connected and which are



adapted to extend along and upon the opposite sides of said casing, the tightening of said tensioning members serving to bind said tread against the tire casing and the extent of distortive yielding permitted in said members under lateral stresses serving to control the lateral movements of said tread on the tire casing.

---

1,563,961. DRYING APPARATUS. JOSEPH L. BUCKLEY, Trenton, N. J., assignor, by mesne assignments, to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 22, 1920. Serial No. 353,226. 9 Claims. (Cl. 34—12.)

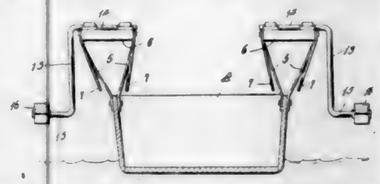


3. Apparatus of the character described comprising, an enclosure and a plurality of substantially U shaped partitions therein, being within another and oppositely disposed with respect the other, the said inner partition being inverted, said partitions being devoid of right angles in cross sectional shape.

---

1,563,962. ROWING MACHINE. GILMORE BUSS, Sandpoint, Idaho. Filed Feb. 28, 1925. Serial No. 12,270. 5 Claims. (Cl. 115—28.)

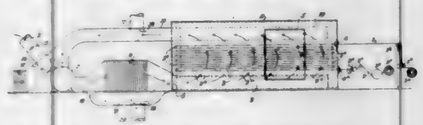
5. A rowing machine comprising in combination with a boat, standards mounted on said boat, a crank shaft journaled on one of said standards, an arm secured to said shaft intermediate of its ends, another arm longer than the first mentioned arm, pivotally mounted on the other standard, a bar pivotally connecting said



arms, a paddle blade secured to said bar adjacent the first mentioned arm, and a counterweight on the free end of the first mentioned arm.

---

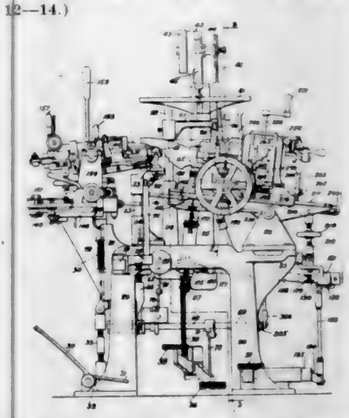
1,563,963. DRYING AND HEATING APPARATUS. HUGH LINLEY BYRD, Stockport, England. Filed July 10, 1925. Serial No. 42,743. 1 Claims. (Cl. 34—48.)



Drying and heating apparatus comprising a treating chamber, a heating element external to said chamber, a blower also external to said chamber, a by-passage round said heating element, and valve controlled passages, whereby during the drying operation air can be circulated through said heating element and the chamber, or can be wholly or in part by-passed past the heating element and circulated through the chamber, and fresh air can be introduced into the system and a portion of the whole of the used air returned to atmosphere; and for rapidly cooling the chamber air can be drawn from atmosphere, passed through the chamber, and then returned to atmosphere.

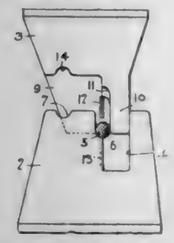
---

1,563,964. LASTING MACHINE. AXEL FOLKE CARLSON, Cambridge, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed July 2, 1924. Serial No. 723,692. 33 Claims. (Cl. 12—14.)



1. In a lasting machine, toe and heel wiping mechanisms, a heel support, an adjuster or wheel for adjusting the heel support toward and from the toe mechanism, the same operating from the heel mechanism, and means for clamping the heel support so that the said adjuster may then be used for adjusting the heel mechanism toward and from the shoe.

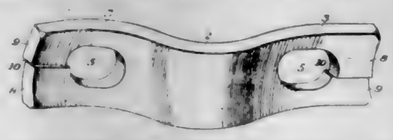
1,563,965. METHOD OF AND APPARATUS FOR MAKING NUTLESS BOLTS AND RIVETS. ANDREW CHRISTIANSON, Butler, Pa. Filed May 3, 1923. Serial No. 636,426. 2 Claims. (Cl. 10—27.)



1. The method of making split bolts and the like that comprises forming a V-notch in the end of the blank by movement of a cutting die thereacross, and by the same movement shearing the end of the blank lengthwise in the line of said notch.

---

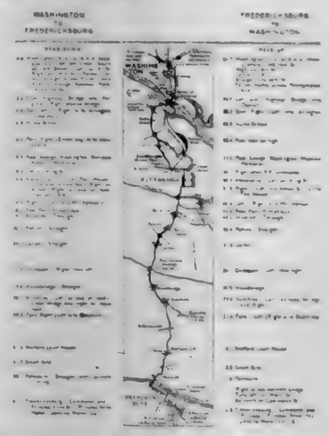
1,563,966. RAIL SPRING AND METHOD OF MAKING THE SAME. WILLIAM J. COSTELLO, Jr., Oakmont, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1925. Serial No. 2,866. 9 Claims. (Cl. 238—259.)



1. A rail joint spring shaped to cooperate with adjacent rail bolts, said spring having at least one end thereof shaped to effectively resist loosening of a nut while permitting relatively free movement of the nut in the opposite direction to tighten the same substantially as described.

---

1,563,967. ROUTE SHEET. RUSSELL W. CULLEN, Hyattsville, Md., assignor to American Automobile Association, Washington, D. C., a Corporation of Connecticut. Filed Oct. 11, 1924. Serial No. 743,066. 4 Claims. (Cl. 283—34.)



1. In a route sheet, the combination of a column bearing cartographic indicia relative to a route of travel; and a second column bearing enumerated informative data relative to said route of travel, certain items of cartographic indicia being disposed in the first column in accordance with the location of certain items of informative data in the second column, and certain other items of informative data in the second column being disposed in accordance with the location of certain items of cartographic indicia in the first column.

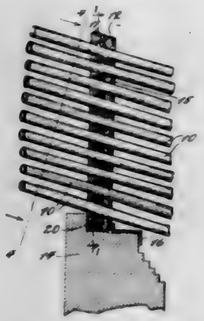
---

1,563,968. METHOD OF MAKING BOILER BAFFLES. GEORGE H. DICKSON, Chicago, Ill., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed June 4, 1918, Serial No. 238,097. Divided and this application filed Dec. 19, 1922, Serial No. 607,919. Renewed Oct. 21, 1925. 9 Claims. (Cl. 25—157.)

1. The method of installing a baffle across tubes which consists in building up two walls across the tubes, at least one of which is formed of tiling, spacing the walls apart by removable means while being built, removing the said means, and pouring hardening plastic material within the space between the two walls.

---

1,563,969. BAFFLE CONSTRUCTION. GEORGE H. DICKSON, Chicago, Ill., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 20, 1919. Serial No. 346,415. Renewed Oct. 26, 1925. 7 Claims. (Cl. 110—98.)

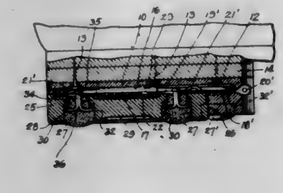


1. The method of installing a baffle across tubes and between walls extending transversely of the tubes, which consists in spacing the walls apart by strips, filling in

hardening plastic material within the space between the two walls, and withdrawing the strips as the filling in progresses.

---

1,563,970. RUBBER HEEL TIP. ARTHUR M. EICHORN, New York, N. Y., assignor to Evernu Rubber Heel Corporation, New York, N. Y., a Corporation of Delaware. Filed July 18, 1923. Serial No. 652,252. 11 Claims. (Cl. 36—36.)



1. A rubber heel tip comprising, in combination, a base portion, means to secure said base portion permanently to a heel, a separable portion, and means to secure the separable portion, and means to secure the separable portion to the base portion, the latter mentioned securing means comprising a headed cushion plug in one of said portions and a member carried by the other of said portions and movable transversely of said headed plug and having an opening into which the headed plug is received, the opening being narrow enough to closely embrace the neck portion of the headed plug when moved to locking position.

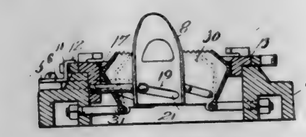
---

1,563,971. PROCESS OF STERILIZING CANNED FOODS. WILLIAM B. FENN, Port Washington, N. Y., assignor to Margaret F. Fenn, Port Washington, N. Y. Filed May 26, 1923. Serial No. 641,752. 2 Claims. (Cl. 99—8.)

1. In the process of sterilizing canned goods by subjecting the contents of the can to steam under pressure, and sealing the steam under pressure within the can, the step of vacuumizing the can and its contents.

---

1,563,972. CORING AND TRIMMING MECHANISM. WILLIAM B. FENN, Port Washington, N. Y., assignor to Margaret F. Fenn, Port Washington, N. Y. Filed Dec. 29, 1923. Serial No. 683,315. 17 Claims. (Cl. 146—52.)

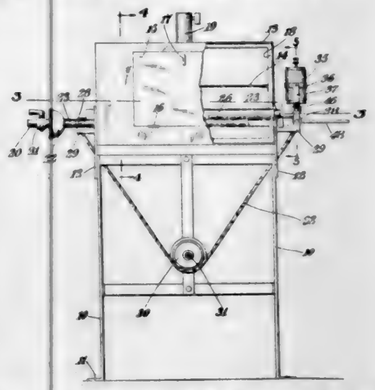


1. A trimming device for fruits, vegetables and the like, comprising a plurality of fruit encompassing trimming blades adapted to be brought into contact with the outer surface of the article to be trimmed, and means for moving said blades.

---

1,563,973. SAUSAGE BROILER. OTTO FEST, Newark, N. J. Filed June 26, 1925. Serial No. 39,662. 6 Claims. (Cl. 126—41.)

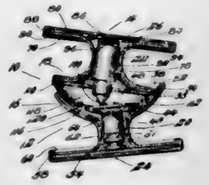
1. A sausage broiler comprising an oven having heat insulated walls, a door in the side of said oven, means for supporting the oven, a tube fixed in the end walls of the oven, gas pipes arranged parallel to said tube, said pipes having jet openings to impinge on said tube,



control means for said pipes, rollers at the ends of said tube, and an endless chain disposed over said rollers to travel through said tube.

---

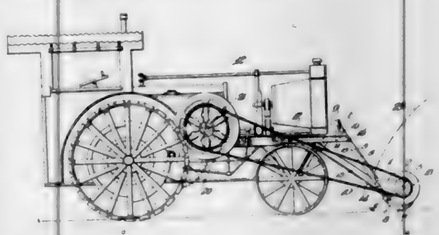
1,563,974. SEPARABLE BUTTON. FRANS EDWARD FORSELL, Providence, R. I., assignor to Parks Bros. & Rogers, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Feb. 4, 1925. Serial No. 6,867. 32 Claims. (Cl. 24—102.)



1. A separable cuff button comprising two cooperating members each having a head, a shank and a base, the heads of said members comprising cooperating, complementary latch portions adapted to couple and to securely interlock said members at an angle to each other when said portions are brought into contact with each other, and said members are manually tilted.

---

1,563,975. DEVICE FOR BACK FILLING TRENCHES. CONRAD F. GOERINGER, Wilkes-Barre, Pa. Filed Apr. 3, 1923. Serial No. 629,545. 6 Claims. (Cl. 37—144.)

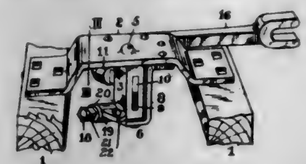


1. In a device of the character stated, an inclined shield pivotally and removably atached to a motor, tractor or the like, which shield extends from the ground to the motor frame in one direction and entirely across the motor front in the other direction, bearings

carried by the lower portion of said shield, a shaft rotatably mounted on said bearings, a conveyor fixed to said shaft and located at the lower portion of said shield, a gear mounted on the end of said shaft and means for rotating said shaft, gear and conveyor in unison to move excavated material laterally for deposit in a trench which trench is in parallelism with the longitudinal axis of said motor.

---

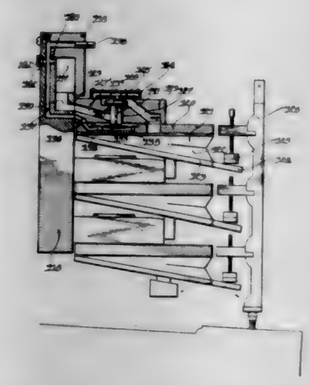
1,563,976. PARALLEL-THROW SWITCH STAND. LOUIS A. GREEN, Pittsburgh, Pa. Filed Sept. 11, 1925. Serial No. 55,658. 9 Claims. (Cl. 246—411.)



1. In a switch-stand, the combination of a support, a vertically disposed pivot-shaft journaled in said support, crank connection between said shaft and the movable switch-rail, said shaft being provided with a vertically elongated dimetric opening, a crank-lever journaled in said support on a horizontal axis, a bar rotatably connected at its one end to the inner end of said crank-lever and having its other end slidably engaging the opening in said pivot-shaft, and a throw-arm fixedly connected to the outer end of said crank-lever.

---

1,563,977. PLAYER PIANO. AXEL G. GULBRANSEN, River Forest, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1920. Serial No. 391,023. 1 Claim. (Cl. 84—24.)



In a player piano, a pneumatic stack comprising two wood members of L-shaped cross-section glued together to form a main channel extending longitudinally near the top thereof, said main channel having a plurality of vertical branch channels leading downwardly from and lying entirely below said main channel, a plurality of narrow wood valve shelves glued to said channel board and situated parallel to said main channel, said shelves each having a plurality of valve chambers therein, and a plurality of striking pneumatics glued to each of said valve shelves, said shelves having communicating channels therein leading from each of said valve chambers to one of said branch channels and one of said pneumatics respectively.

1,563,978. PROCESS OF MAKING CARBON AND OTHER COATED PAPERS. ALFRED HAIGH and HAROLD RAVEN HART, Staffordshire, England. Filed Sept. 7, 1922. Serial No. 586,779. 2 Claims. (Cl. 91—68.)

2. A process including superposing at least four webs of paper in a manner to permit ready separation of the webs, the inner webs being thicker than the outer webs; and coating the exposed face of one of the outside webs, leaving the unexposed faces of the webs uncoated.

---

1,563,979. AIRPLANE. RANDOLPH F. HALL, Ithaca, N. Y., assignor of one-fourth to Theodore P. Hall, Wallingford, Conn., and one-fourth to Paul Wilson, Ithaca, N. Y. Filed Dec. 31, 1924. Serial No. 759,081. 55 Claims. (Cl. 84—40.)

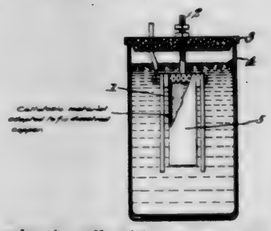
1. In combination, an airplane element formed with an extended substantially horizontally disposed passageway therein, and a mount for ordnance mounted on said element for movement as a unit horizontally along said passageway.

18. In combination, an aircraft including a control surface therefor, and a movable ordnance mount operatively connected with said control surface.

34. In combination, an aircraft element formed with an open passageway therein, an ordnance mount movable along said passageway, and means for maintaining said passageway closed in all positions of said mount therealong.

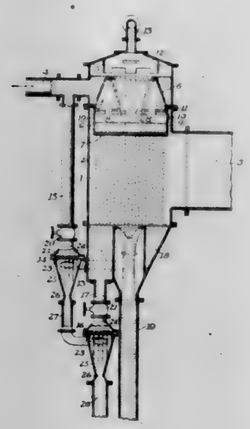
---

1,563,980. GALVANIC CELL OF THE COPPER-OXIDE TYPE. GEORGE W. HEISE, Bayside, N. Y., assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 27, 1924. Serial No. 716,267. 11 Claims. (Cl. 136—116.)



1. In a galvanic cell with copper oxide depolarizer and fluid caustic electrolyte, a material adapted to chemically fix dissolved copper and operatively disposed with respect to the depolarizer.

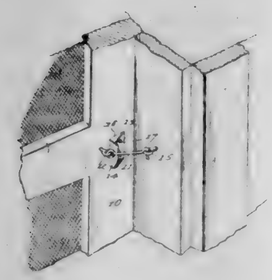
1,563,981. CONDENSER. ERNST G. HELANDER, Philadelphia, Pa. Filed May 20, 1921. Serial No. 471,199. 11 Claims. (Cl. 261—113.)



1. A condenser having a vapor inlet, a liquid inlet above said vapor inlet, means dividing the liquid as it flows downwardly, an air chamber above the liquid, and means operated by liquid from said inlet for removing the air from said chamber.

---

1,563,982. DOOR-JAMB PROTECTOR. JAMES P. HENDERSON, Topeka, Kans. Filed June 21, 1922. Serial No. 569,789. 2 Claims. (Cl. 292—95.)

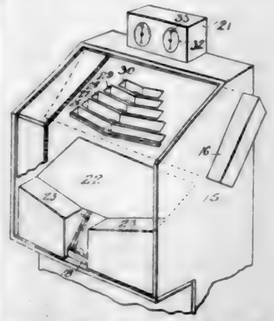


2. A door jamb protector consisting of a plate having angularly disposed flange portions, and triangular end flanges connecting the first mentioned flange portions together, the plate having at one end portion a plane portion which is disposed at a right angle to the triangular flanges.

---

1,563,983. MOVING-POCKET GAME APPARATUS. MONNOSUKE HIGUCHI, College Point, N. Y. Filed Nov. 4, 1922. Serial No. 598,990. 10 Claims. (Cl. 273—101.)

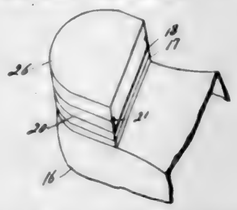
1. In a game apparatus for playing ball and registering the score made, the combination of a cabinet having moving pocket units therein, a ball tossing mechanism in said cabinet, and means for causing the tossing mechanism to become effective to thereby place a ball into play for registering a score made by passing a ball through any one of said moving pocket units.



10. A moving pocket element and means for moving said element, means adjacent said moving pocket element for supplying a predetermined number of balls to be played into said moving pocket element.

---

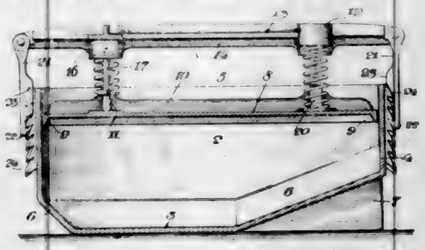
1,563,984. DETACHABLE SHOE HEEL. CLAYTON HOBERT, Philadelphia, Pa. Filed July 29, 1925. Serial No. 46,748. 3 Claims. (Cl. 36—36.)



1. In a device of the character described, the combination with a shoe having an opening therethrough, a holder attached to the shoe and provided with an aperture registering with the opening through the shoe, said holder having an inwardly projecting flange, a detachable heel having a groove for registration with the flange and provided with a key opening for registration with the aperture in the holder, and a key to hold said heel in place, said key comprising a tongue and tang at angles to each other, and a carrier provided with a pocket in which the tongue is inserted.

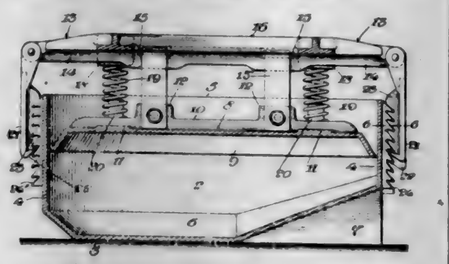
---

1,563,985. HAM BOILER. FREDERICK EDWARD HODDERSEN-BALLING, Brooklyn, N. Y. Filed Apr. 23, 1925. Serial No. 25,250. 19 Claims. (Cl. 100—57.)



1. In a ham boiler comprising a body and a cover, a locking means for connecting the cover with the body and comprising a swinging member connected with the cover and cooperating means carried by said swinging member and body and inclined crosswise in the direction of the width of the body.

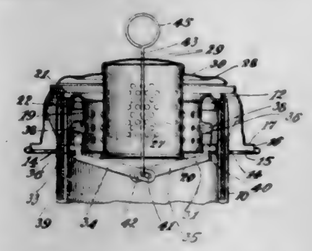
1,563,986. HAM BOILER. FREDERICK EDWARD HODDERSEN-BALLING, Brooklyn, N. Y. Filed Apr. 23, 1925. Serial No. 25,251. 13 Claims. (Cl. 100—57.)



1. In a ham boiler comprising a body and a cover, a locking means for connecting the cover with the body and comprising a swinging member connected with the cover, and cooperating means carried by said swinging member and body and including two sets of spaced ratchet teeth and located side by side.

---

1,563,987. OIL-STOVE BURNER. WILLIAM C. HOMAN, Meriden, Conn., assignor to Lewis T. Wilcox, Peekskill, N. Y. Filed May 1, 1925. Serial No. 27,150. 4 Claims. (Cl. 158—94.)

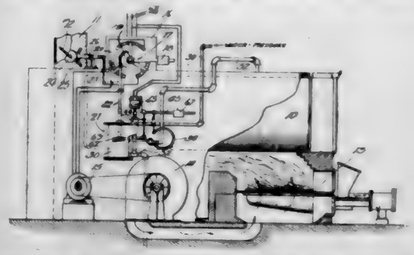


4. In an oil stove burner, burner tubes, a wick associated therewith, an air distributor adapted to be received within the inner burner tube, a pair of bell crank levers having arms of different lengths, means for pivotally connecting the ends of the short arms of the bell crank levers with the said air distributor, the long arms of the said bell crank levers extending beneath the air distributor and overlapping each other, an internal rib on the inner burner tube adapted to be engaged by the said bell crank levers to normally maintain the air distributor in position in the burner, and means for connecting and moving the overlapping ends of the long arms of the bell crank levers for freeing the bell crank levers from the internal rib and lifting the air distributor from the burner.

---

1,563,988. PRESSURE-CONTROLLED REGULATING MEANS FOR FURNACES. CURTIS L. HOWSE, Detroit, Mich., assignor to Craig Damper Regulator Company, a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,651. 2 Claims. (Cl. 236—85.)

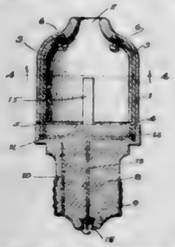
1. The combination with a steam boiler, a forced-draft furnace therefor having a draft-fan, an electric motor for driving said fan and speed-changing means for said motor, of a pressure-controlled engine for operating said speed-changing means comprising a cylinder, a piston therein loaded to tend to move toward one end of said cylinder and operatively connected with said speed-changing means to actuate the latter, hydraulic pressure and relief connections for said end of said cylinder, valving means normally closing said cylinder end and movable to open either the pressure or relief connection alternatively, operative connections between said pressure-responsive device and said valve for moving the same in either direction, said connections including a normally energized electro-magnetic device having a part arranged, when de-energized, to move said valve to one extreme



of position, operative connections between said piston and said valve-moving connections whereby piston-movement tends to restore said valving means to normal position, and electrical connections between said electro-responsive device and the motor circuit whereby rupture of the latter may de-energize the former.

---

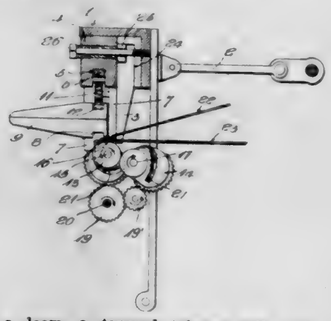
1,563,989. ELECTRIC ATTACHMENT PLUG. ROLAND THOMAS HUGHES, Oak Park, Ill. Filed Aug. 29, 1923. Serial No. 659,988. 6 Claims. (Cl. 173—343.)



1. In a device of the class described, a plug member having a plurality of independent coupling means whereby it may be connected to unlike supply terminals, a casing adapted to be secured to the exterior of said member, means for securing electrical conductors thereto and means for electrically connecting any one of the coupling means to the conductor securing means.

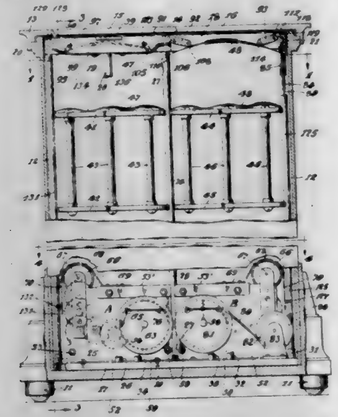
---

1,563,990. LOOM. FREDERIC G. HULME, Tacony, Philadelphia, Pa. Filed Aug. 1, 1925. Serial No. 47,533. 18 Claims. (Cl. 139—305.)



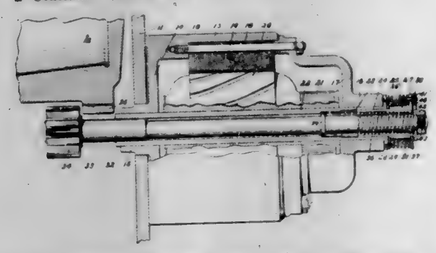
1. In a loom, a tapered take-up roll, and weaving mechanism operating to form the weave directly against a portion of the periphery of said roll.

1,563,991. DISPENSER FOR PAPER NAPKINS, TOWELS, AND THE LIKE. JOHN O. HUNT, Brooklyn, N. Y., assignor to Independent Paper Mills Inc., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 10, 1924. Serial No. 742,737. 10 Claims. (Cl. 211—29.)



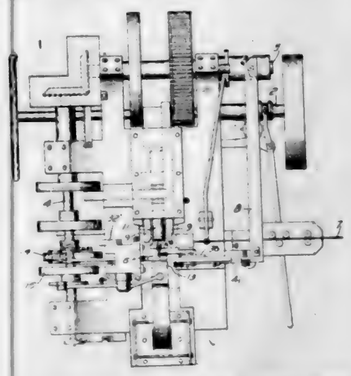
10. In a dispenser for paper napkins, towels and like articles, a vertically movable platform, a motor, a brake associated with the motor, devices for connecting the platform to the motor so that when operative the motor raises the platform to lift a pile of superimposed paper napkins, towels and the like placed thereon, a pair of pivotally mounted rocker levers adapted at corresponding edges to bear against the oppositely disposed edge portions of the outermost article in the superimposed pile thereof, a finger carried by one of the said rocker levers, a lever adapted to be engaged by the said finger, a rocker bar, a link connecting the said lever with the rocker bar, and an arm carried by the rocker bar and adapted to engage with the brake of the said motor whereby when the said rocker lever is permitted to descend to the position in which the finger carried thereby frees the said lever the rocker bar and the arm carried thereby effect the release of the motor brake permitting the motor to become operative to raise the said platform until the superimposed pile of articles thereon raises the said rocker lever to a position in which the finger carried thereby actuates the said lever causing the said link to swing the said rocker bar to move the arm carried thereby into contact with the motor brake to set the same and to thereby cause the motor to become inoperative.

1,563,992. ENGINE-STARTING MECHANISM. ERNEST R. HUNTLEY, Los Angeles, Calif., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 16, 1921. Serial No. 445,371. 2 Claims. (Cl. 290—38.)



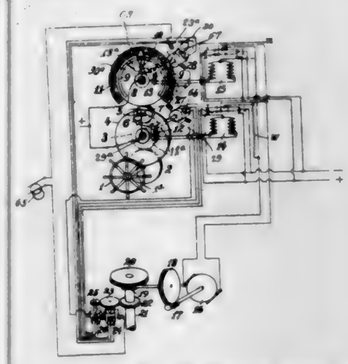
1. In a starter drive for engines the combination of a motor, having a hollow shaft; a drive shaft, screw threaded adjacent one end; a stop arm extending radially from the drive shaft at the end adjacent the screw threaded portion; a drive wheel fixed to the other end of the shaft; a sleeve screw threaded to the threaded shaft portion, said sleeve carrying a pin adapted to engage the stop arm; a spring coiled around the shaft and adapted to form a driving connection between the hollow shaft and sleeve; said stop arm engaging said stop pin only when the sleeve is at its outer limit of movement on the drive shaft.

1,563,993. AUTOMATIC MACHINE FOR MAKING CHAINS. ANDREW LANGSTAFF JOHNSTON, Jr., New York, N. Y., assignor, by mesne assignments, to Ott'N On Chain Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 25, 1920. Serial No. 419,220. 44 Claims. (Cl. 59—28.)



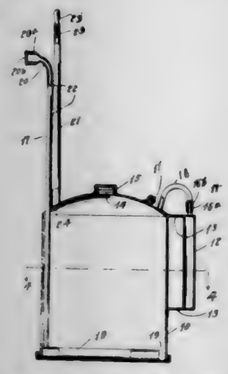
1. In an automatic power driven chain-making machine, the combination with means operative in regular recurrent sequence to form blanks and shape the same into links, of means to effect periodically interrupted threaded connection thereof for producing separate chain units each comprising a predetermined plurality of connected links.

1,563,994. SYSTEM FOR ADJUSTING DEVICES AT A DISTANCE. PAUL KAMINSKI, Berlin-Pankow, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Jan. 24, 1921. Serial No. 439,650. 1 Claim. (Cl. 177—351.)



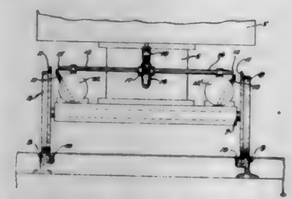
In a system of electric telecontrol of objects the combination of a plurality of contact devices all located at a control station and each of them consisting of a disk provided with two insulated contacts and of a contact pointer, hand-operated means for rotating the disk of each of said contact devices, a plurality of contact relays each of them energized by one of said contact devices, a single motor for adjusting the object to be controlled, and means controlled by the different contact relays, whereby the feeding circuit to the motor is variably controlled to control its speed and direction of rotation, a plurality of transmitters for coarse and fine adjustment actuated by the controlled object, and a plurality of corresponding receivers connected to said transmitters, each of said receivers rotating the pointer of one of said contact devices.

1,563,995. LIGHTING TORCH. ARTHUR KARR, Yakima, Wash. Filed May 10, 1924. Serial No. 712,325. 1 Claim. (Cl. 67—3.



A device of the class described having a container body, a pouring spout extending from the body, said spout being located partly interiorly and partly exteriorly of the body and extending through the top of the latter, said spout at its base having a radial inlet portion located on the bottom of the body and extending more than half way across the bottom and terminating relatively close to the adjacent side wall of the body to avoid use of a valve, said portion being interiorly unobstructed, a wick tube extending from the top of the body to a point beyond the spout, said tube being relatively close to and connected to the spout, said spout at its outer end being deflected away from the tube to form a nozzle, a securing element on said nozzle, and a foraminous safety means covering said nozzle and fastened by said securing element.

1,563,996. CURVE OILER. FREDERICK C. KEHR, Milwaukee, Wis. Filed Apr. 10, 1924. Serial No. 705,610. 7 Claims. (Cl. 184—3.)

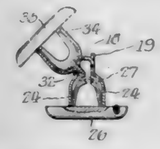


1. The combination with a tracked vehicle equipped with a pivotal truck member carrying a wheel at each side thereof, of a wheel oiling device, comprising an oil reservoir adjacent the inner face of each wheel, and means for automatically spraying oil from the left reservoir against the inner face of the left wheel when the truck member is turned to the left and from the right reservoir against the inner face of the right wheel when the truck member is turned to the right.

1,563,997. CUFF LINK. ANDREW J. KENNEDY, Chicago, Ill., assignor to Parks Bros. & Rogers, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 16, 1924. Serial No. 732,425. 26 Claims. (Cl. 24—102.)

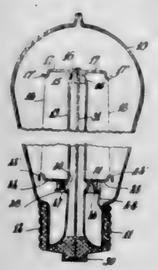
1. A cuff link comprising in combination separable cuff buttons each consisting in a base, a stem attached to said base, and a coupling member attached to the free end of said stem, said coupling members permitting relative movement of the buttons about one axis only so that the buttons may lie at an angle to one another to accommodate the natural slant of the cuff and also permitting the buttons to be disengaged from each other by pressure applied inwardly and at one side of the said axis, the coupling member of one button being adapted to receive the coupling member of the other button, and a slot in one side of the first cylindrical coupling member to receive the stem of the other button when the buttons lie at an angle as mentioned.

1,563,998. CUFF LINK. ANDREW J. KENNEDY, Chicago, Ill., assignor to Parks Bros. & Rogers, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Jan. 12, 1925. Serial No. 1,728. 9 Claims. (Cl. 24—102.)



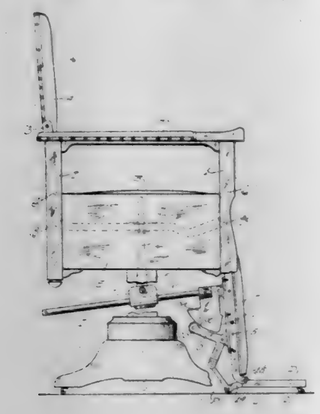
1. A cuff link comprising in combination separable cuff buttons, one of said buttons comprising a head, a stem, and a hollow coupling member, and the other button comprising a head, a stem, and a co-operating coupling member adapted to interlock within said hollow coupling member, said coupling members permitting relative movement of the buttons about one axis only, and means holding said buttons interlocked at an angle to each other.

1,563,999. INCANDESCENT LAMP. EREMY KIRIAK, Ford, Ontario, Canada. Filed Nov. 28, 1922. Serial No. 603,742. 2 Claims. (Cl. 176—16.)



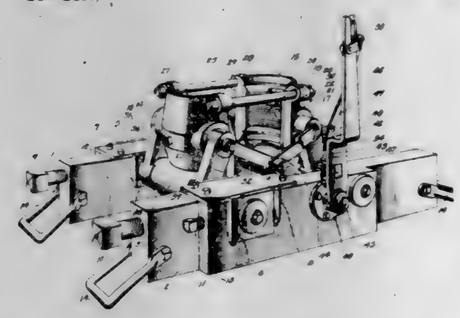
1. In an incandescent lamp, a filament support comprising an elongated member having a circumferential shoulder formed thereon, a disk resting on said shoulder and having a depending exteriorly screw-threaded flange, an element engaging the lower face of said shoulder and having an upwardly projected annular flange screwed into the first flange, and a series of arms radiating from said disk and adapted to have a filament looped thereover.

1,564,000. HAIR DRESSER'S AND BARBER'S CHAIR. WALTER F. KOKEN, St. Louis, Mo. Filed Dec. 14, 1923. Serial No. 680,723. 5 Claims. (Cl. 155—171.)



1. A chair provided with a swinging apron, a foot rest carried by the apron, a rockable member on the apron, a positive connection between said rockable member and foot rest for transmitting movement from one of said parts to the other, a reclining bar connected with the apron, and a cam on said reclining bar arranged so as to engage and actuate said rockable member when the apron moves from one position to another position.

1,564,001. PIPE CLAMP. GEORGE KRELL, Sapulpa, Okla. Filed Dec. 5, 1924. Serial No. 754,094. 8 Claims. (Cl. 24—249.)

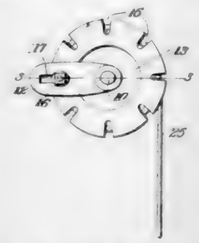


6. A device of the class described comprising two shafts, means connecting the shafts in spaced relation, a pair of rock arms on each shaft, means loose on each shaft for maintaining the rock arms of each bar in parallelism and jaws carried by the rock arms.

1,564,002. ACID-RESISTANT SHELLAC SUBSTITUTE. JOSEPH R. KUHN, Montclair, N. J., assignor, by mesne assignments, to Carleton Ellis, Montclair, N. J. Filed Jan. 12, 1922. Serial No. 528,839. 16 Claims. (Cl. 134—26.)

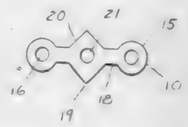
1. The process of making a spirit varnish which comprises treating metaparacresol with about one and one-half times its weight of sulphur chloride in the presence of a hydrocarbon diluent, whereby a resin is formed in solution, blowing the solution with heated air at a temperature below 156° C. whereby the diluent and hydrochloric acid are removed, dissolving the deodorized resinous product in an alcoholic solvent and adding a small amount of phosphoric acid sufficient to change the solution from a brown to a yellow color.

1,564,003. VEHICLE SPRING CHECK SHOCK ABSORBER. CHARLES F. LAVALLEE, Newmarket, N. H. Filed Oct. 31, 1924. Serial No. 747,050. 3 Claims. (Cl. 267—10.)



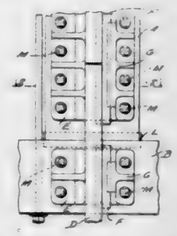
1. A device of the class described comprising a stud, a plate movable turnably on said stud, an arm on said stud, said plate having a plurality of slots, means carried by said arm selectively engageable in said slots to secure the plate in different adjusted positions, a drum movable with respect to the plate, a check member extending from the drum, and a check spring operatively associated with said plate and drum.

1,564,004. HANGER SUPPORT. ROBERT C. LEGAT, New Britain, Conn., assignor to The C. E. Prentice Manufacturing Company, a Corporation of Connecticut. Filed Mar. 23, 1925. Serial No. 17,694. 5 Claims. (Cl. 150—40.)



1. A hanger support for use with a key case, having a pendant portion in the form of a substantially hollow structure that is provided with an opening at the lower end, a hanger for receiving a key having a shank of wire that is projected through said opening so that the free end portion is housed within said structure, and said free end portion being curled upon itself in the plane of the shank without diminishing the cross sectional area thereof to provide an operative fit within said structure for cooperating therewith as a swivel connection.

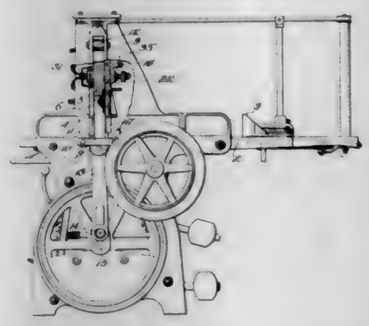
1,564,005. JOINT FOR RAILWAY-RAIL ENDS. BRADFORD LESLIE, London, England. Filed Feb. 13, 1924. Serial No. 692,535. 4 Claims. (Cl. 238—47.)



1. An inflexible support for the ends of railway rails designed to preserve their running surfaces in the same plane without the use of fishplates, comprising a sleeper

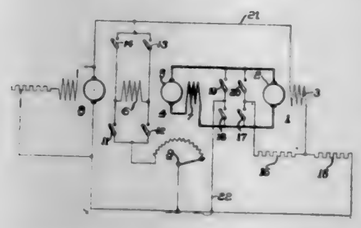
platform consisting of a joint block, additional supporting blocks on either side of said joint block, means rigidly connecting the joint block with the adjacent supporting blocks to maintain the surfaces thereof at the same level, said means including tie bolts passing through said supporting blocks, and a bearing plate secured centrally upon the said joint block and supporting the abutting ends of the rails at their junction and for a distance on either side thereof.

1,564,006. MACHINE FOR CUTTING SHEET MATERIAL. MARTIN B. MCLAUTHLIN, Malden, Mass. Filed Oct. 29, 1924. Serial No. 746,514. 11 Claims. (Cl. 64—47.)



1. In a machine of the character described, the combination of a knife-carrying cross-head; means for moving said cross-head up and down with provision for movement thereof endwise also; a vertically movable clamping bar for holding the material while being operated upon; a stop for limiting the upward movement of said bar; a spring pressed friction shoe connected with the clamping bar and frictionally engaging the cross-head; means for deflecting the cross-head endwise in one direction when the movement of the clamping bar is arrested by the material being operated upon during the downward travel of the cross-head, and means for deflecting the cross-head endwise in the opposite direction when the movement of the clamping bar is arrested by said stop during the upward travel of the cross-head.

1,564,007. MOTOR-CONTROL SYSTEM. RALPH W. MCNEILL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 26, 1923. Serial No. 641,539. 8 Claims. (Cl. 172—239.)

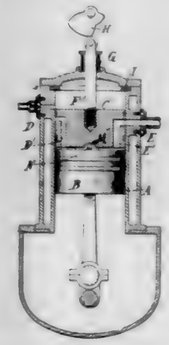


1. The combination with a motor and a generator in circuit therewith, of means for varying the field excitation of the generator to vary the motor speed, and static means for varying the field excitation of said motor in accordance with the generator voltage.

1,564,008. TALKING MACHINE. FRANK MALOCSAY, New York, N. Y., assignor, by mesne assignments, to Sonora Phonograph Company, Inc., a Corporation of New York. Filed May 24, 1915. Serial No. 30,066. 23 Claims. (Cl. 185—44.)

1. In a talking machine, the combination with a record carrier, of means for rotating said record carrier and means for controlling the stopping and starting of said rotating means, of means for rendering said controlling means inoperative to start the rotation, when the record carrier has been rotated to a predetermined extent.

1,564,009. GAS ENGINE. EUGENE V. MYERS, East Orange, N. J. Filed Aug. 14, 1911. Serial No. 643,820. Renewed May 6, 1922. Serial No. 559,058. 19 Claims. (Cl. 123—78.)

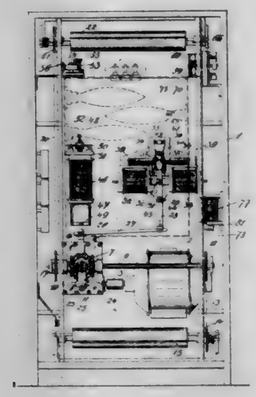


1. In a gas engine, the combination of a cylinder and piston, and a piston valve for reducing or avoiding the normal compression space during the exhaust stroke of the engine, said valve co-operating solely with ports in the cylinder walls.

1,564,010. TRANSLUCENT LUMINOUS ADVERTISING MIRROR. CARL NOURNEY, Berlin-Wilmersdorf, Germany. Filed Mar. 1, 1915. Serial No. 11,433. 2 Claims. (Cl. 40—53.)

1. A device of the character described comprising a casing having a window therein, transversely disposed rollers mounted in the upper and lower portions of said casing, a translucent web windable upon said rollers, illuminating means within the casing rearwardly of said web, a motor driven shaft within the casing, gears upon said shaft individually connected to the rollers for rotating the same, clutch means movable on the shaft for selectively connecting said gears thereto, opposed electromagnetic means in the casing having a core common to

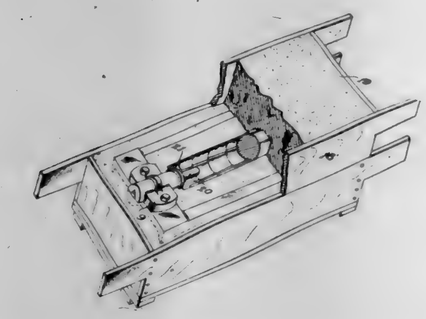
each, means connecting said core to the clutch means, opposed electrical circuit closing means in proximity to said core adapted to be individually closed for controlling said illuminating means, another electro-magnetic means in the casing, a core movable through the same, an electric contact plate carried on said last core, electric contacts on the last mentioned electromagnetic means en-



gageable by said contact plate for controlling energization of said first electromagnetic means, circuit closing means operable by intermittent engagement with said web for energizing the last mentioned electromagnetic means, and other circuit closing means supported upon the casing and operable by movement of the translucent web thereby for effecting selective energization of the first mentioned electromagnetic means.

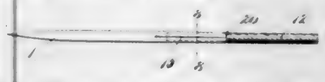
---

1,564,011. ALIGNMENT JIG FOR USE IN CASTING ROLLS. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Nov. 20, 1924. Serial No. 751,081. 5 Claims. (Cl. 22—125.)



1. The combination with a mold for casting rolls having shaft members at their ends, of means for securing shaft members at the ends of the mold cavity and maintaining said members in axial alignment while permitting endwise movement of the same during contraction of the cast roll.

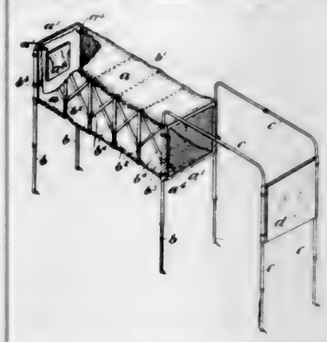
1,564,012. SUTURE. EDWARD J. OVINGTON, Auburndale, Mass., assignor to Davis & Geck, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1923. Serial No. 622,780. 4 Claims. (Cl. 128—339.)



1. A needle having one end swaged to provide free portions the adjacent edges of which converge and merge into the body proper of the needle and which may be brought into substantial contact throughout their length when wrapped about a ligature.

---

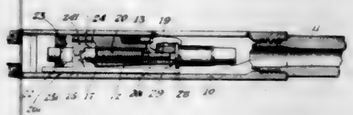
1,564,013. SIGHT-TESTING APPARATUS. HAROLD GEORGE PANK and CHARLES WILLIAM LAUBMAN, Adelaide, South Australia, Australia. Filed Apr. 5, 1922. Serial No. 549,704. 6 Claims. (Cl. 88—20.)



1. In a sight testing apparatus, a tunnel frame adjustably supported and comprising a series of parallel vertically disposed side stays, cross bars movable on a central pivot, each bar being pivoted at one end to the stays, the other ends sliding in slots in the stays, a closure at one end of said tunnel, a mirror and lighting facilities carried by the closure for directing the vision, and an enclosing flexible cover for said frame.

---

1,564,014. FIREARM. JOHN D. PEDERSEN, Jackson, Wyo. Filed Mar. 28, 1925. Serial No. 19,055. 15 Claims. (Cl. 42—25.)



1. In a device of the character described, in combination, a firing pin, an ejector, and a spring for retracting said ejector, said spring surrounding said firing pin.

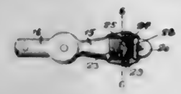
7. In a firearm, in combination, a breech block, a firing pin and an ejector mounted in said breech block and interengaging parts on said firing pin and said ejector normally effective to retain said firing pin and ejector in place in said breech block.

---

1,564,015. LUMINOUS ATTACHMENT FOR ELECTRIC-SWITCH-OPERATING MEMBERS. BENJAMIN C. PERKINS, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed June 27, 1922. Serial No. 571,137. 1 Claim. (Cl. 240—1.)

An attachment for an electric switch operating member having a peripheral threaded area and a radially

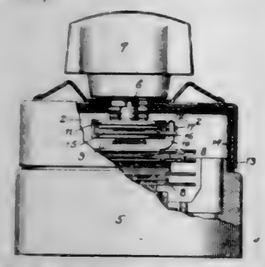
serrated end, said attachment comprising a cap having a tapped recess to screw on the threaded area of the switch operating member, a lock washer secured in the



bottom of said recess to engage the radial serrations at the end of the switch operating member, and luminous material at the opposite end of the cap.

---

1,564,016. ELECTRIC SWITCH. BENJAMIN C. PERKINS, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Nov. 4, 1922. Serial No. 599,015. 3 Claims. (Cl. 200—166.)



1. A coil spring for an electric switch or the like, comprising a double cone torsion spring the terminal spires of which are of greater diameter than the intermediate spires, the spire of least diameter having an internal diameter sufficient to freely accommodate the switch spindle, the terminal spires of the spring having offset ends adapted under torsional stress to straddle and engage between them a pair of abutments relatively pivoted coaxial with the spindle, and angularly displaceable with respect to each other to place the spring under increased torsional stress.

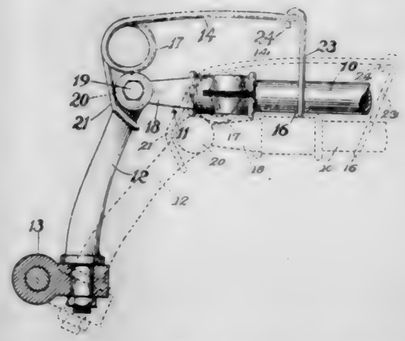
---

1,564,017. VALVE GRINDER. JUDSON C. PEWTHER, Denver, Colo. Filed Aug. 7, 1922. Serial No. 580,288. 2 Claims. (Cl. 51—29.)

1. A valve grinding device comprising a support having a handle, a shaft oscillatably mounted in the support and extending parallel to the handle, a rotatable member mounted upon the support and having a crank handle, a pair of star wheels mounted upon the shaft on each side of the rotative axis of said member, the rotatable member having inwardly projecting teeth adapted to engage the teeth of the star wheel and the teeth of the star wheels being set in alternate relation to each other, the teeth of the star wheel being curved reversely to the direction of movement of the star wheel and the teeth of the rotatable member being inclined in the direction of rotation.

---

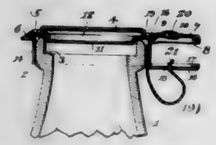
1,564,018. STEERING STABILIZER. JUDSON C. PEWTHER, Wichita, Kans. Filed Dec. 16, 1924. Serial No. 756,303. 3 Claims. (Cl. 280—93.)



1. The combination with two members disposed at an angle and pivotally connected at their adjacent ends, of a resilient body disposed upon the exterior of the angle between the members and having connection with one of the members whereby it is rendered rigid to the member, the opposite end of the body having a stirrup pivoted thereto for rocking movement and engaging the other of said members and by its engagement tending to move said other member into alignment with the first named member, the rocking movement of the stirrup permitting shifting of the resilient body upon the pivotal connection of the members without longitudinal movement of the stirrup upon the other of said members at the point of its engagement therewith.

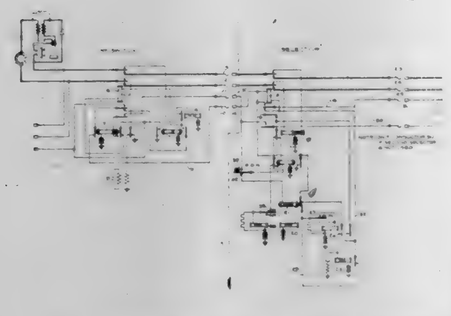
---

1,564,019. MILK-BOTTLE COVER. HENRY M. PIERCE, Chippewa Falls, Wis. Filed Aug. 21, 1924. Serial No. 733,389. 8 Claims. (Cl. 215—38.)



1. A milk bottle cover comprising a body portion having a depressed inner part, a depending rim spaced from said depressed part and a handle member extended laterally from the lower edge of said rim, a closure member having an up-set inner part opposing the depressed part of the body portion, said closure member further including an inclined flange spaced from said up-set part and a laterally extending handle projecting from said flange and opposing the handle of the body portion, said rim and handle being slotted, and a resilient element positioned against the inner face of and further extending through said rim, said element having its upper end connected to the slotted handle of the closure member and its lower end connected to the slotted handle of the body portion and providing means for securing said closure against said body portion and the latter to the bottle.

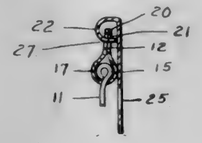
**1,564,020. AUTOMATIC TELEPHONE SYSTEM.** WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 14, 1922. Serial No. 543,697. 18 Claims. (Cl. 179—18.)



1. In an automatic telephone system, a plurality of telephone lines, a plurality of primary trunks, an automatic switch for connecting a calling telephone line to any idle primary trunk, a numerical switch for each primary trunk arranged for directive movement in response to impulses and trunk hunting movements, secondary trunks terminating in said numerical switches, means for sending several series of impulses over said telephone line, means responsive to the first series of impulses for directively operating said numerical switch, means operating at the termination of the first series of impulses for causing said numerical switch to hunt for an idle trunk, means effective to release said numerical switch if a second series of impulses is transmitted over said telephone line before said numerical switch has completed its trunk hunting operation, and means for notifying the calling subscriber of the release of said numerical switch.

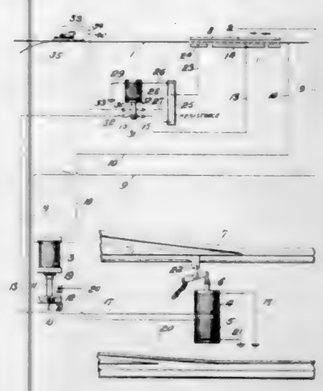
---

**1,564,021. KEY CASE.** GEORGE EDWARD PRENTICE, Berlin, Conn., assignor to G. E. Prentice Manufacturing Company, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 22, 1925. Serial No. 51,837. 1 Claim. (Cl. 150—40.)



In combination, a supporting plate for attachment to a key case, having at one edge a plurality of spaced fingers bent back into contact with the plate and forming loops, a plurality of hanger supports each attached to one of said fingers for free swinging movement thereon, and each having a pendant portion in the form of a substantially hollow structure that is provided with an opening at the lower end, a hanger for receiving a key having a shank of wire that is projected through said opening so that the free end portion is housed within said structure, and said free end portion being curled upon itself in the plane of the shank without diminishing the cross sectional area thereof to provide an operative fit within said structure for cooperating therewith as a swivel connection.

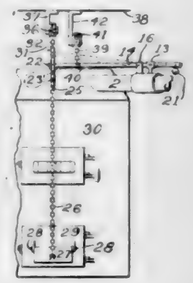
**1,564,022. LOCKING DEVICE FOR ELECTRIC SWITCHES.** ROBERT M. ROBINSON, Louisville, Ky., assignor to Cheatham Electric Switching Device Co. Inc., Louisville, Ky., a Corporation of Kentucky. Filed Sept. 28, 1921. Serial No. 503,945. 3 Claims. (Cl. 246—227.)



1. In an apparatus of the class described, an electrically operated switch throwing device with circuits therefor, a solenoid with means connected therewith for opening the switch throwing circuits contained in said switch throwing device and means for closing a circuit through the solenoid for holding open the switch throwing circuits and a circuit opener with a part adapted to be moved by a trolley wheel to open the circuit through said solenoid.

---

**1,564,023. DRAFT REGULATOR.** DANIEL J. SCANLAN, St. Louis, Mo. Filed Oct. 27, 1923. Serial No. 671,081. 6 Claims. (Cl. 236—10.)

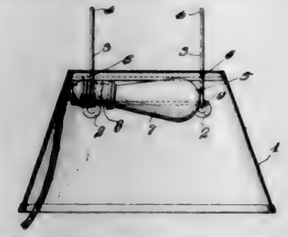


1. The combination with a hot-air furnace provided with a hot-air pipe, of a thermostat located in said hot-air pipe in spaced relation to the body of the furnace, means directly operated by the said thermostat for controlling the supply of cold air to the air-heating chamber of the said furnace, and separate means adjustable relatively to the said thermostat and operated thereby for controlling the draft through the fire.

---

**1,564,024. COMBINATION LAMP AND LAMP SHADE.** ADOLPH SCHERER, Philadelphia, Pa. Filed Aug. 26, 1924. Serial No. 734,159. 3 Claims. (Cl. 240—52.)

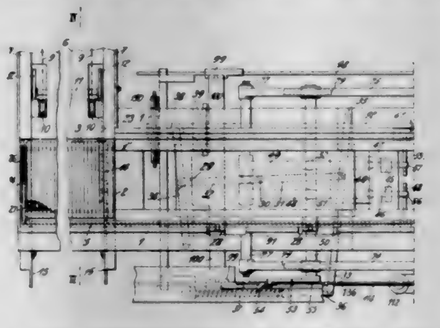
1. A device of the character described including a lamp, a lamp shade and a rack adapted to support the lamp within the shade and to detachably support the shade, the rack consisting of a pair of hangers having hooks to support the shade from without and hooks



adapted to support the lamp within the shade, said hooks being connected by an angularly bent bar fixed to the hangers and carrying the lamp socket.

---

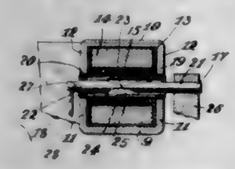
**1,564,025. ADDRESSING MACHINE.** JOHANN SCHEUNER, Konolfingen, Switzerland. Filed Apr. 16, 1923. Serial No. 632,185. 19 Claims. (Cl. 101—63.)



1. In an addressing machine, the combination with a reciprocatory platen, of drawers open below for lines of type arranged side by side therein, means for feeding the said drawers in succession into positional relation with said platen, and means for inking the type in the said drawers while on their way to the said platen.

---

**1,564,026. TELEPHONE APPARATUS.** LAMBERT SCHMIDT, Brooklyn, N. Y., assignor to Radiotive Corporation, Brooklyn, N. Y. Filed Jan. 31, 1923. Serial No. 615,981. 15 Claims. (Cl. 179—119.)



1. An armature for magnet telephones, and resilient fulcrum means for said armature having the physical and geometrical fulcrum axis thereof intersecting the longitudinal axis of said armature.

---

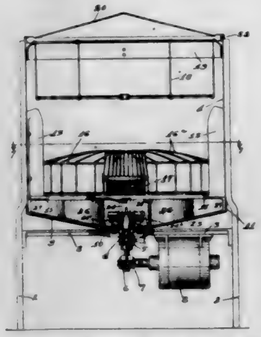
**1,564,027. HAIR CURLER.** DAVID L. SHORT, Philadelphia, Pa. Filed Aug. 19, 1924. Serial No. 732,915. 1 Claim. (Cl. 132—41.)

A hair curler having three arms, two of said arms being formed integral, one of the integrally formed arms being shorter than the other and the longer arm being provided with a perforation at the free end thereof and a third arm pivoted to the first two arms, with the shorter arm between the other two arms and a tongue

formed upon the third arm and adapted to enter the said perforation in the longer, integrally formed arm for securing said arms together.

---

**1,564,028. DISHWASHING MACHINE.** CHARLES F. SMITH, Chicago, Ill. Filed Dec. 10, 1921. Serial No. 521,335. 1 Claim. (Cl. 141—9.)



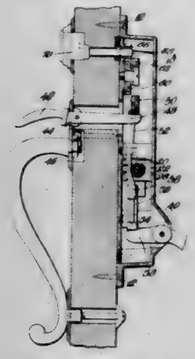
In a dish washing machine, a spray forming wheel having a socket, a driving shaft having an upper end designed removably to receive said socket in clutched relation, and a sealing member comprising a cap flanged at its edge to fit over the shaft bearing and also having an intermediate annular flange fitting a groove in the top of said bearing.

---

**1,564,029. SUSPENSION DEVICE.** GODFREY LEWIS SMITH, Newport News, Va., assignor to Newport News Shipbuilding and Dry Dock Company, Newport News, Va., a Corporation of Virginia. Filed July 27, 1925. Serial No. 46,506. 7 Claims. (Cl. 248—30.)

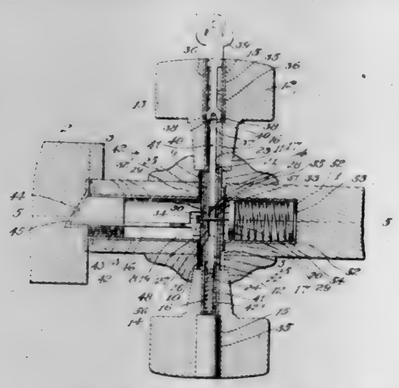
1. In a device of the character stated, a tubular support, upper and lower fittings for said support, upper and lower bridle members having their inner ends connected to said fittings and their outer ends converging and secured together and cables extending from the outer converging ends of said bridle members to fixed supporting points.

1,564,030. DOORLOCK. JOHN OTTO SOEMER, Newark, N. J. Filed Jan. 11, 1924. Serial No. 685,542. 4 Claims. (Cl. 70—29.)



1. A lock comprising a housing, a sliding latch bolt within the housing, a dog pivoted in the housing below the latch bolt, an arm pivoted in the housing below the dog, an inside release connected to the arm adapted to move the dog in a direction to retract the latch bolt, a swinging arm extending across the housing above the latch bolt, means for operating the arm from without the housing to retract the latch bolt, a rotating abutment for locking the arm against movement, and connections between the arm and latch bolt, permitting the latter to be operated by the pivoted dog independently of the movement of the arm.

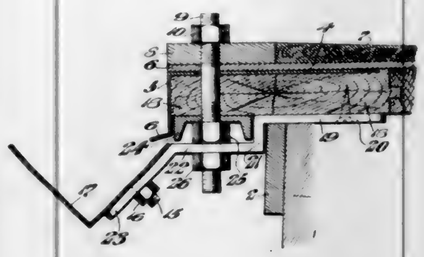
1,564,031. COMBINED DOOR KNOB AND LOCK. JOSEPH SONNENBERG, Irvington, N. J. Filed Oct. 29, 1924. Serial No. 746,485. 21 Claims. (Cl. 70—91.)



1. In a combination door-knob and lock, a door-knob, a tubular spindle extending from said knob, a bolt, means connected with said spindle for actuating said bolt, a tubular member oscillatorily disposed within said spindle, and a key-actuated mechanism within said knob for actuating the tubular member within the spindle and for thereby locking said bolt and the bolt-actuating means of the spindle against movement.

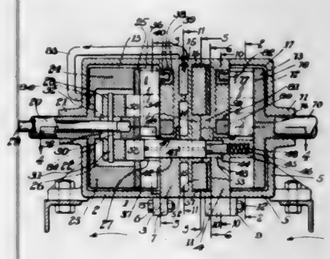
1,564,032. ROOFING CONSTRUCTION. JOHN FRANKLIN STUCKERT, Philadelphia, Pa. Filed July 22, 1925. Serial No. 45,303. 6 Claims. (Cl. 108—28.)

6. A roofing structure comprising supporting means, roofing boards thereon, roofing felt upon said boards, roofing pitch upon said felt, a covering strip arranged in parallelism with the outer edges of said roofing boards and upon said felt and abutting against the outermost



edge of said roofing pitch, and means including bolts and nuts for clamping said covering strip down upon said felt.

1,564,033. HYDRAULIC POWER TRANSMISSION AND BRAKE. WILLIAM M. SUBLETTE, Los Angeles, Calif. Filed Aug. 11, 1924. Serial No. 731,453. 4 Claims. (Cl. 60—53.)

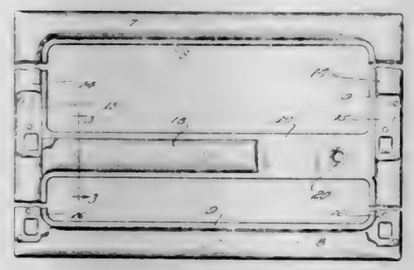


1. In a device of the character as disclosed, a casing containing liquid, a drive shaft journaled in said casing, a rotor on said drive shaft within said casing, said rotor being provided with a liquid chamber, a blade slidable in said rotor and said drive shaft across said chamber, a head in said chamber, means for reciprocating said blade so that it will escape said head during the rotation of said rotor, a driven shaft journaled in said casing, a rotor on said driven shaft within said casing, said rotor being provided with a liquid chamber, a blade slidable in said rotor and driven shaft across the chamber in said rotor, a head in said rotor chamber, means for reciprocating said blade so that it will escape said head as the driven shaft and rotor are rotated, said casing being provided with passages leading from the liquid chamber in the drive rotor at one side of the drive blade to the liquid chamber in the driven rotor at one side of the driven blade, said casing being provided with passages leading from the liquid chamber in the driven rotor at the other side of the driven blade to the liquid chamber in the drive rotor at the other side of the drive blade.

1,564,034. STOVE-OVEN FRONT FRAME. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed July 31, 1923. Serial No. 654,936. 6 Claims. (Cl. 126—190.)

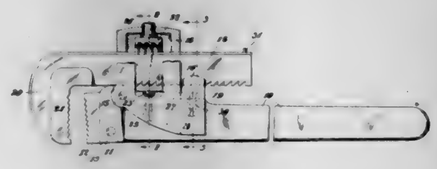
1. In a stove of the character described having a broiler oven and a top oven disposed thereabove, the combination of an integral frame comprising the front wall of the oven and broiler, a door for the top oven

swingably mounted on the frame, a similarly mounted door for the broiler, said frame having an intermediate portion dividing the frame to define the door openings



for the oven and broiler and a replaceable panel member mounted on said dividing portion of the frame, the panel member conforming in appearance with the exposed portions of the frame.

1,564,035. WRENCH. FRANK W. TRABOLD, Marion, Ind. Filed Sept. 20, 1924. Serial No. 738,740. 4 Claims. (Cl. 81—157.)

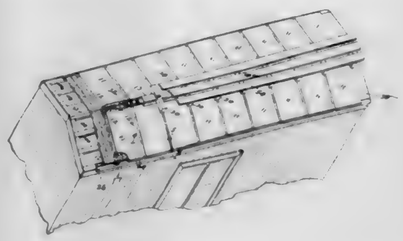


1. In a pipe wrench, a handle, a frame pivotally mounted on the handle, a jaw member having a shank slidable in the frame, a device engaging the slidable jaw to adjust the same to position, means for shifting the device laterally of the slidable jaw and independently thereof for disengaging the same from the slidable jaw thereby permitting the slidable jaw to be shiftable to place, a guide member, and means for yieldingly maintaining the guide member in contact with the shank of the slidable jaw.

1,564,036. RUG STRAND. OSSIAN T. WAITE, Oshkosh, Wis., assignor to Waite Grass Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Mar. 23, 1923. Serial No. 627,127. 2 Claims. (Cl. 96—26.)

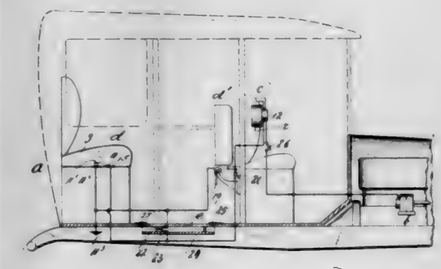
1. A length for the making of rugs consisting of a plurality of constituents braided together, part of the constituents being of a relatively soft, thin and pliable fabric laid flatwise into the braid to expose a major portion of its surface, and a part of the constituents being of thick bulky character and composed of bundled lengths of relatively stiff grass-like material, substantially as described.

1,564,037. CAR ROOF. CHARLES E. WALTER, Cleveland, Ohio. Filed Feb. 7, 1921. Serial No. 442,990. 10 Claims. (Cl. 108—5.)



1. In a car roof, the combination of roof sheets disposed transversely of the car body with uniform spacings therebetween and terminating at the ridge thereof, wooden sheathing therebeneath, drain strips extending transversely of the car with the edges thereof disposed beneath the edges of the roof sheathing below the plane thereof, and means, including a ridge cap and saddle blocks, for movably securing said sheets to the car body.

1,564,038. ATTACHMENT FOR TAXIMETER VEHICLES. ABRAHAM WEISS, New York, N. Y. Filed Jan. 23, 1923. Serial No. 614,363. 1 Claim. (Cl. 180—82.)

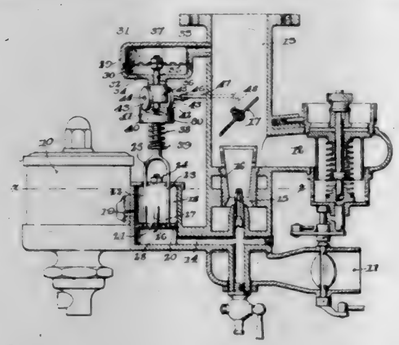


In a taximeter vehicle, the combination with the fare register or clock having a "flag" handle and the electric ignition system having one terminal grounded, of a switch controlled by said "flag" handle, of which one contact point is conductively connected to the insulated terminal of said ignition system, and a switch in the passenger compartment to be automatically controlled by the passenger, one contact point of said automatic switch being conductively connected to said other contact point of said "flag" switch and the other contact point of said passenger switch being grounded.

1,564,039. CARBURETOR. HOMER A. WHITEHORN, Port Washington, N. Y., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1920. Serial No. 360,836. 1 Claim. (Cl. 261—51.)

The combination of a carburetor having a fuel mixture outlet for communication with the intake manifold of an

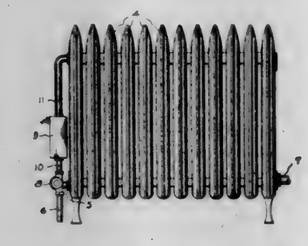
internal combustion engine, a throttle for controlling the flow of fuel therethrough, means controlled by engine suction for varying the richness of the fuel mixture,



and means connected to the throttle for modifying the action of said first named means so that the richness of said fuel is solely dependent upon the speed of said motor.

---

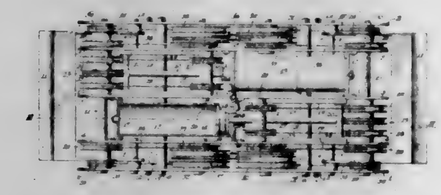
1,564,040. AUXILIARY ELECTRIC WATER HEATER. THOMAS H. WILLSON, Seattle, Wash. Filed Jan. 13, 1925. Serial No. 2,207. 3 Claims. (Cl. 219—38.)



1. The combination with a hot water radiator, having water inlet means, of an electric heater connected with said hot water radiator at two points at different elevations and means controlling the opening and closing of the water inlet connection and the lower electric heater connection with said radiator.

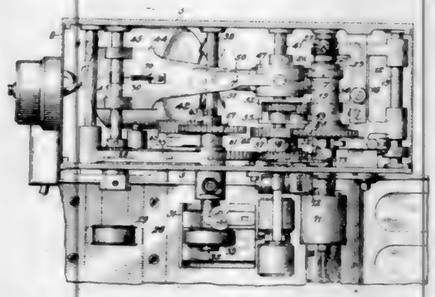
---

1,564,041. GRAB BUCKET. CLIFTON N. WINDECKER, Painesville, Ohio. Filed Feb. 25, 1924. Serial No. 694,881. 11 Claims. (Cl. 37—187.)



1. A grab bucket comprising a framework, spades pivotally connected to said framework adapted to close in proximity to said framework and when open extend downwardly from said framework, and means horizontally disposed in said framework adapted for swinging said spades on their pivots.

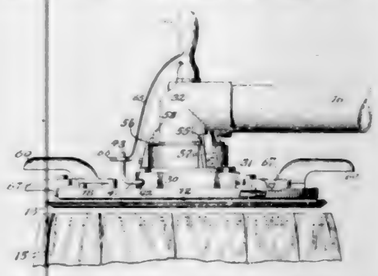
1,564,042. PRINTING MECHANISM. LAWRENCE J. ZAHN, Astoria, N. Y., assignor to The International Postal Supply Company, a Corporation of New York. Filed Sept. 25, 1922. Serial No. 590,255. 9 Claims. (Cl. 101—236.)



2. In a printing mechanism, spaced shafts each actuating an active element of the mechanism, an operating motor suspended from said shafts and having its shaft directly geared to one of the first named shafts, and a housing enclosing said gearing and providing a bearing for the motor shaft.

---

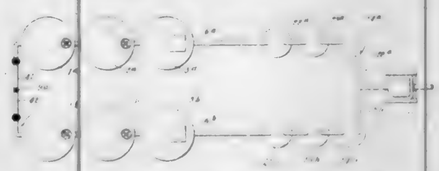
1,564,043. HEADING HOLDER FOR BARREL-MAKING MACHINES. EDWIN F. BEUGLER, Buffalo, N. Y., assignor to E. & B. Holmes Machinery Company, Buffalo, N. Y., a Corporation of New York. Filed Feb. 16, 1922. Serial No. 537,102. 14 Claims. (Cl. 294—64.)



1. A pneumatic gripper comprising a suction chamber which is adapted to be connected with an air exhausting device and which is provided on its margin with a depending flange, and an annular ring having its upper part secured to said flange and provided at its lower edge with serrations adapted to engage with the article to be gripped.

---

1,564,044. CHLORINATION APPARATUS. SANDFORD BROWN, Newark, N. J., assignor, by mesne assignments, to Halowax Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,010. 2 Claims. (Cl. 23—260.)

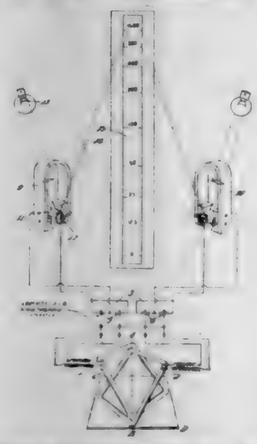


1. In chlorine-utilizing apparatus, the combination of a plurality of series of normally closed vessels adapted for the chlorination of naphthalene, in parallel, means for introducing therein material to be chlorinated in liquid

form, means for connecting at will the first vessel of either series, or of both series, to a chlorine gas container, and a suction pump connected to the last vessel of each series.

---

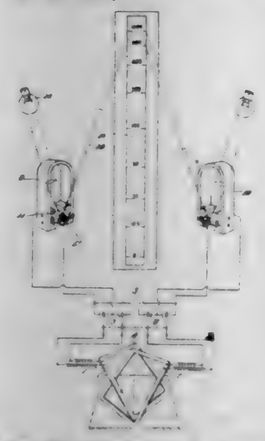
1,564,045. METHOD OF MEASURING ELECTRICITY. HERBERT COOCH, South Farnborough, England, assignor to Vickers Limited, London, England. Filed Apr. 17, 1925. Serial No. 23,822. 2 Claims. (Cl. 177—352.)



1. A method of measuring distance by electrical means, which comprises inducing a current in each of two coils normally positioned symmetrically with relation to the direction of the inducing field, applying the current so obtained to frequency reducers, operating the frequency reducers at such rate as to obtain currents of low frequency, and applying the resultan currents to a measuring means thereby indicating the relative E. M. F.'s induced in each coil.

---

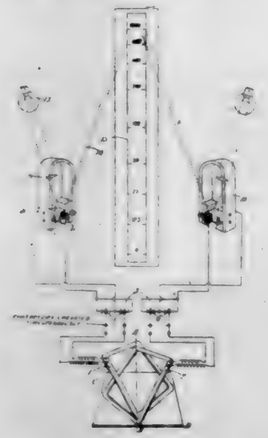
1,564,046. APPARATUS FOR MEASURING ELECTRICITY. HERBERT COOCH, South Farnborough, England, assignor to Vickers Limited, Westminister, England, a British Company. Original application filed Apr. 17, 1925, Serial No. 23,822. Divided and this application filed Oct. 21, 1925. Serial No. 63,822. 2 Claims. (Cl. 75—183.)



1. Means for the measurement of alternating current phenomena, comprising in combination, a coil in which alternating current from a field may be induced, said coil being mounted for bodily movement in all directions so as to present varying areas to the field and thereby varying the E. M. F. of the current induced, a frequency reducer and a measuring device operating at the reduced frequency and responsive to the E. M. F. of the current induced.

---

1,564,047. APPARATUS FOR MEASURING ELECTRICITY. HERBERT COOCH, South Farnborough, England, assignor to Vickers Limited, Westminister, England, a British Company. Original application filed Apr. 17, 1925, Serial No. 23,822. Divided and this application filed Oct. 21, 1925. Serial No. 63,823. 5 Claims. (Cl. 177—352.)



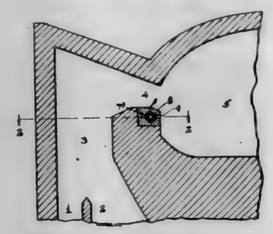
1. Navigational apparatus comprising in combination two coils in which alternating E. M. F. may be induced, said coils being symmetrically disposed with relation to a vertical plane situated fore-and-aft of the craft bearing said apparatus, said coils being also inclined to the horizontal plane and to each other, a frequency reducer connected to each of said coils and a measuring device connected to each of said frequency reducers, whereby the current induced in the said coils is reduced in frequency and indicated by the measuring device.

---

1,564,048. MEDICAMENT-DISPENSING CARTRIDGE. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 2, 1922. Serial No. 540,627. 2 Claims. (Cl. 128—218.)

1. As an article of manufacture, a package for liquid medicaments constructed and arranged to be inserted in a hypodermic syringe; said package including a tube of transparent material and of uniform bore, so that its length is a function of its volume; said tube sealed at opposite ends by plugs, one of which is designed to be pushed by the syringe plunger to eject the medicament; a label adhered to the outerwall of said tube but leaving a longitudinally segment of the tube exposed so that the contents may be viewed; said label having a scale extending lengthwise thereof along one margin, the label being so arranged between the ends of the tube that its markings read in terms of doses or fractions thereof to be administered from the package.

1,564,049. OPEN-HEARTH FURNACE. CALEB DAVIES, Jr., Poland, Ohio. Filed Apr. 6, 1922. Serial No. 550,079. 20 Claims. (Cl. 263—15.)

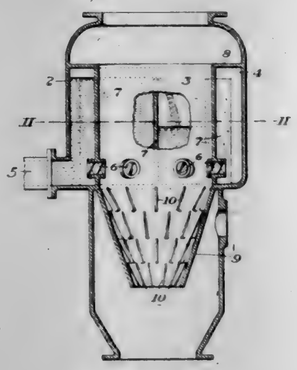


1. In a furnace of the character described, the combination of a hearth, an air port at the end thereof extending approximately entirely across said hearth, and a fuel supply duct formed and arranged to discharge the fuel beneath the stream of air from said air port and in a direction substantially parallel therewith, such fuel supply duct being of approximately the same transverse width as said air port.

1,564,050. METHOD OF TREATING RUBBER COMPOSITION. JOHN B. DICKSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1923. Serial No. 616,183. 5 Claims. (Cl. 18—53.)

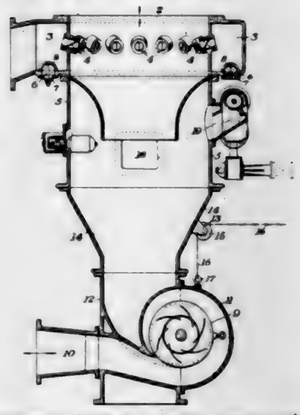
1. The method of treating a mass of rubber composition containing a vulcanizing agent which comprises applying to the surface thereof such small quantity of a vulcanization accelerator as to be effective upon the surface portion only of said mass and thereby effecting a relatively high degree of vulcanization at the surface of the mass.

1,564,051. HEATER FOR LIQUIDS. RAYMOND N. EHRHART, Pittsburgh, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 14, 1920. Serial No. 396,277. 15 Claims. (Cl. 261—118.)



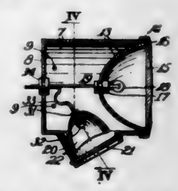
1. A liquid heater, comprising a mixing chamber, means for admitting steam thereto, a series of spray nozzles arranged to discharge into said chamber, and means for maintaining certain of said nozzles out of operation until a predetermined operation of the remaining nozzles has been insured, substantially as described.

1,564,052. CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Oct. 28, 1918, Serial No. 259,946. Divided and this application filed Nov. 30, 1923. Serial No. 677,867. 5 Claims. (Cl. 261—118.)



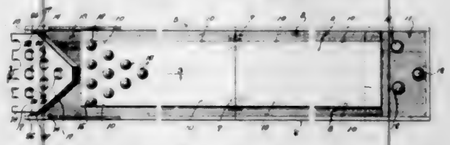
1. A condenser having a water pump casing section provided with a removable cover portion, and a lifting connection on the condenser for the removal of said cover portion, substantially as described.

1,564,053. COMBINATION MOTOR-VEHICLE LAMP. JOHN F. FARMER, Indianapolis, Ind. Filed May 27, 1925. Serial No. 33,087. 4 Claims. (Cl. 240—41.)



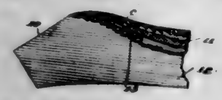
1. A combination motor-vehicle lamp including a main casing having a relatively angular frame on one side thereof, a main reflector supported in the forward portion of the main casing, and a parabolic side reflector arranged partially in the main casing and partially in the angular frame and being shiftable in the frame angularly thereto and bodily supported in place.

1,564,054. GAME. DANIEL FISHER, Milwaukee, Wis., assignor to The Aldan Co., a Copartnership, Milwaukee, Wis. Filed Aug. 29, 1924. Serial No. 734,906. 12 Claims. (Cl. 273—42.)



1. A game of the character described, comprising a support, a pin setting member, means connecting the pin setting member with the support whereby the same may be maintained in a substantially horizontal position as it is moved to and from the support, pin receiving pockets in the pin setting member adapted to receive therein pins to be positioned on the support, means for closing the pockets of the pin setting member, and means operable upon engagement with the support to move the pocket closing means free of the pockets.

1,564,055. COAT COLLAR AND METHOD OF PRODUCING AND APPLYING THE SAME. IRVING I. FRANKEL, Cincinnati, Ohio. Filed July 25, 1925. Serial No. 46,158. 9 Claims. (Cl. 2—98.)



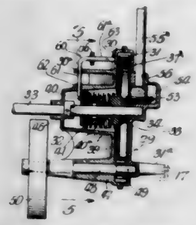
1. The method of applying collars to coats which consists in gathering the stand portion of the collar transversely of its length at spaced points in its length and maintaining said gathering therein prior to the application of the collar to the coat, and then securing the stand portion of the collar to the coat in the usual manner.

1,564,056. LEGGING. MORRIS FRIEDMAN and MEYER FRIEDMAN, New York, N. Y. Filed June 1, 1925. Serial No. 33,910. 1 Claim. (Cl. 36—2.)

As an article of manufacture, a legging of the character designated, the conjuctive edges of which are formed at their lower extremities with extension tips, to which tips the lower ends of hookless fastenings are attached, together with said hookless fastening means arranged to detachably connect the said conjunctive edges of the legging, substantially in the manner and for the purpose set forth.

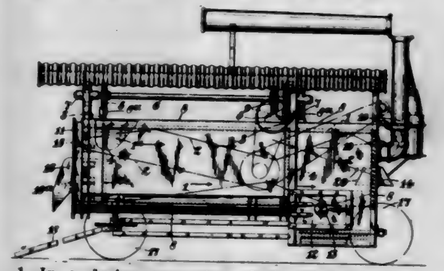
1,564,057. GEARING. WILLIAM H. GEORGE, Fairfield, Iowa, assignor to The Dexter Company, Fairfield, Iowa, a Corporation of Iowa. Filed June 1, 1922. Serial No. 565,059. 1 Claim. (Cl. 74—14.)

In a gearing, the combination of a flat shallow casing, having a centrally disposed hollow boss on one side and a second bearing boss of smaller diameter at its bottom side extending parallel to said first-named boss, a drive shaft bearing in said second-named boss and extending into said casing, a driven shaft extending parallel to said drive shaft and having bearing in said boss and extending into said casing, a large gear loose on said driven shaft and located in said casing, said gear having a hub extending into the first-named boss, a small pinion in said casing engaged with the said large gear and fixed on said drive shaft, a clutch member fixed to the driven shaft near the outer end of said first-named boss, a second clutch member between said fixed clutch member and said large gear, said second clutch member having a hub operatively connected to the hub of the large gear so as to rotate therewith but being capable of an endwise movement thereon, an expansion coil spring surrounding said hubs and urging the second clutch member into engagement with the first clutch member, the second clutch member being



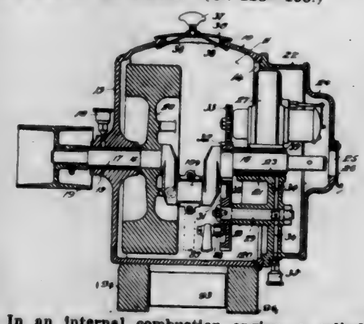
provided with an annular cam shoulder, and a radially disposed pin adapted to be projected into the path of the cam shoulder to disengage the second clutch member from the first clutch member.

1,564,058. ROTARY DRYING APPARATUS. SIDNEY SALTER GETTINGS and WALTER LIGHT BODMAN, Dorking, England, assignors to James Mitchell Thomas Johnston, London, England. Filed Sept. 27, 1924. Serial No. 740,256. 4 Claims. (Cl. 34—5.)



1. In a drying apparatus of the kind described, in combination, a heating-chamber, a rotatable drum having its axis substantially horizontal and situated within the heating-chamber, a driving shaft having its axis parallel to that of the drum and situated outside the heating-chamber, a plurality of driving wheels on said shaft, and a plurality of endless flexible driving and supporting members each extending around one of said wheels and the drum and through apertures in the wall of the heating-chamber.

1,564,059. GASOLINE ENGINE. MEYER J. GOLDBERG, Muskegon, Mich., assignor, by mesne assignments, to The Maximotor Company, Muskegon Heights, Mich., a Corporation of Michigan. Filed Apr. 2, 1920. Serial No. 370,843. 20 Claims. (Cl. 123—195.)

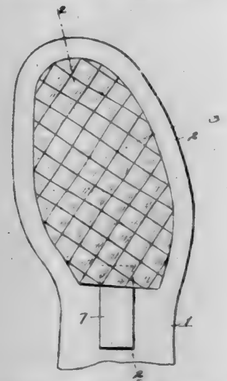


1. In an internal combustion engine, a cylinder and piston, a crank shaft, a fly wheel, a governor mechanism and gearing driven by the crank shaft to operate the

same and a magneto, in combination with a casing having a chamber in which said crank shaft is journaled, said chamber also enclosing all of said parts.

---

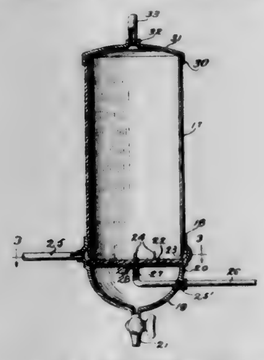
1,564,060. SOLE FOR BOOTS AND SHOES. JAMES E. GROSJEAN, Lima, Ohio. Filed Sept. 13, 1923. Serial No. 662,477. 5 Claims. (Cl. 36—32.)



1. A sole for boots and shoes comprising a tread composed of a layer of rubber having a thread stitched therethrough and exposed at the wear surface thereof, said rubber layer and thread being vulcanized together.

---

1,564,061. ATTACHMENT FOR MOTOR VEHICLES. GEORGE S. HALE, Tekoa, Wash. Filed May 2, 1925. Serial No. 27,558. 4 Claims. (Cl. 158—46.5.)

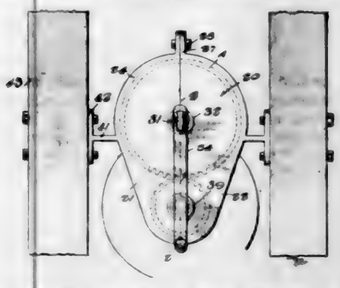


1. A device of the character described comprising an auxiliary tank, a filtering member arranged in said tank and dividing it into inlet and outlet compartments, an inlet pipe having one end connected with a main fuel supply tank, the opposite end of said inlet pipe extending within said inlet compartment, an outlet pipe connecting the outlet compartment with the carburetor of the vehicle, a valve carried by said filtering member and adapted to engage the end of said inlet pipe within the inlet compartment, said filtering member being slightly flexible to permit said valve to be unseated.

---

1,564,062. WELL WINDLASS. FRANKLIN C. HALL, Albertville, Ala. Filed May 28, 1925. Serial No. 33,548. 2 Claims. (Cl. 254—186.)

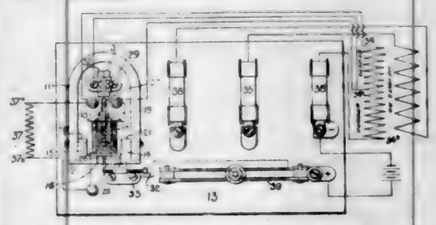
1. A well windlass comprising a drum, a drum shaft therefor extending beyond the ends of the drum and terminating in bearing pintles, and a bearing for one of said pintles, a gear casing including a pair of companion sections arranged to abut at the longitudinal center of the casing, means connecting the companion sections together, the meeting edges of the sections being provided with mating semi-circular upper and lower pairs of bearing notches forming bearing openings, the lowermost bearing openings receiving the other pintle of the drum shaft, an operating shaft rotatably mounted in the upper pair of bearing openings, the sections of the casing having semi-annular flanges surrounding the bearing openings defining bearing cups when the sections are in their



closed position, ball bearing races mounted in the cups for supporting the operating shaft and the last mentioned pintle of the drum shaft, the portion of the operating shaft and the portion of the last mentioned pintle extending into the casing being of a polygonal shape in cross section, a relatively large spur gear mounted upon the polygonal shaped portion of the operating shaft, and a relatively small spur gear meshing with the first mentioned spur gear, mounted upon the polygonal portion of the last mentioned pintle of the drum shaft, and an operating crank for the operating shaft.

---

1,564,063. MECHANICAL RECTIFIER. WILLIAM R. HAMILTON, Montreal, Quebec, Canada, assignor to Dominion Messenger and Signal Company Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed July 18, 1923. Serial No. 652,428. 1 Claim. (Cl. 175—365.)

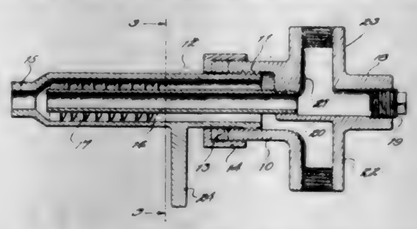


In a device of the character described, the combination of a U-shaped permanent magnet with a cast iron yoke which bridges the poles of said magnet, completely closing the magnetic circuit, said yoke being provided with a slot extending partially therethrough, a solenoid supported between the legs of the magnet and an armature passing through the solenoid and through the slot in the yoke.

---

1,564,064. BURNER. ROBERT L. HANNAH, Waco, Tex., assignor of fifty-five per cent to Louey Migel, Waco, Tex. Filed Dec. 18, 1924. Serial No. 756,820. 1 Claim. (Cl. 158—75.)

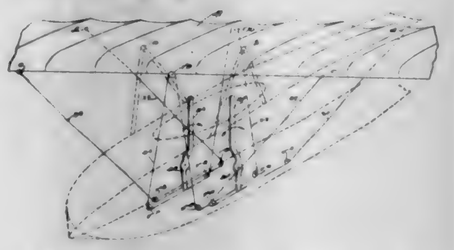
A burner of the character described comprising a body portion including diametrically opposed fuel and steam inlet nipples adapted to support the burner for pivotal movement, an internal web separating said nipples, a nipple projecting from the body portion and interiorly and exteriorly threaded, a steam conveying tube threaded within the last mentioned nipple, a packing nut surrounding said tube and threaded on said nipple, a burner tip carried by the outer end of said tube, an oil tube arranged centrally within the steam tube and projecting beyond the inner end thereof for threaded association with said body portion above said web and communicating with one of the first mentioned nipples, a spiral web carried by said oil tube adjacent the other end thereof,



an additional nipple projecting from the body portion and disposed in axial alinement with said oil tube so that the latter can be conveniently cleaned from time to time, a removable plug normally closing the last mentioned nipple, and a handle carried by said steam tube, whereby the burner can be moved upon its pivots as described.

---

1,564,065. FLYING MACHINE. FRIEDRICH HARTH, Bamberg, Germany, assignor to Louis Harth, Chicago, Ill. Filed July 26, 1922. Serial No. 577,610. 10 Claims. (Cl. 44—29.)

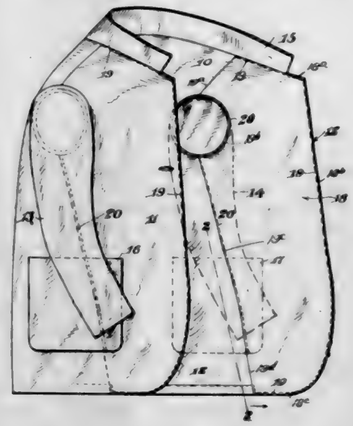


1. In aircraft for utilizing air currents for motive power, a fuselage, an aerofoil, levers, and means connecting said levers and aerofoil for changing the form of the aerofoil by warping and inclining it to an equal degree on each side of the fuselage and at a different degree at the transverse center of the aerofoil.

---

1,564,066. COAT CONSTRUCTION. HARRY S. HASPEL, WILLIAM HASPEL, and JOSEPH HASPEL, New Orleans, La. Filed Oct. 4, 1924. Serial No. 741,576. 1 Claim. (Cl. 2—97.)

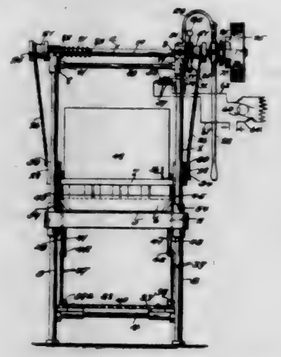
In a coat a facing for and of less width than each front portion of the coat body and further having its top, front and bottom edges secured to said front portion, said facing having its inner edge formed with semi-circular, rearwardly inclined and forwardly inclined portions, said semi-circular portion disposed around the forward side of the armhole of the coat and having its ends positioned at diametrically opposite points at the vertical diameter of such armhole, said rearwardly disposed inclined portion extending from said top edge and terminating at its lower end in the upper end of said semi-circular portion, said forwardly inclined portion extending from the lower edge of said semi-circular portion to said bottom edge and having a part thereof opposing a pocket of the coat at a point between the vertical median of the pocket and its forward side, and a row of stitching extending throughout said semi-circular portion and the said forwardly inclined portion from the top thereof to the lower terminus of that part thereof which opposes the pocket for securing the facing to the coat front, said stitching free of the rearwardly inclined portion and



that part of the forwardly inclined portion below the bottom of the pocket and concealed by a sleeve of the coat when hanging downwardly and further by a pocket of the coat.

---

1,564,067. BRICKMAKING MACHINE. BENJAMIN F. HAYDEN, Springfield, Mo., assignor to Haydenite Brick and Machinery Company, a Corporation of Missouri. Filed Oct. 12, 1923. Serial No. 668,203. 15 Claims. (Cl. 25—41.)



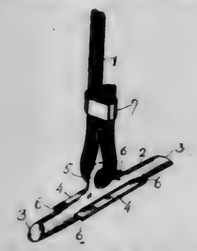
1. In a brick making machine, a frame including a platform and a hopper, a pallet supported on the platform, a mold resting upon the pallet and provided with brick molding spaces, a gravity actuated tamper having members to enter said spaces, means for raising the mold and the tamper a distance slightly greater than the height of the bricks, whereby the pallet with the bricks thereon may be removed, means for raising the tamper to a position equal to the height of the hopper to permit the latter to pass thereunder, and automatic means for stopping the raising means to limit the tamper to a position a maximum distance above the mold.

14. The combination with a brick mold for brick making machines, said mold provided with a plurality of H-shaped compartments open at their upper and lower ends of a tamper having correspondingly shaped tampering members to enter said compartments.

1,564,068. DIRECTION INDICATOR FOR MOTOR VEHICLES. WILLIAM HENRY HIGGASON, El Cajon, Calif. Filed Mar. 27, 1924. Serial No. 702,389. 1 Claim. (Cl. 116—53.)

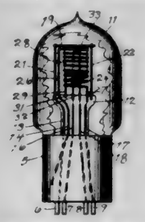
A signal of the character described, comprising a vertical frame; dual signal arms pivotally mounted in said frame adapted to be swung laterally downwardly to horizontal position for signalling purposes; means for normally retaining said signal arms in vertical position within said frame; a lateral extension on said frame; a rotatable pulley supported by said extension; a hand wheel for operating said pulley; and a cable trained about said pulley connected to the lower ends of said signal arms for lowering either of said signal arms at will to horizontal signalling position without lowering the associated signalling arm.

1,564,069. LIGHTNING-ROD ANCHOR. AMASA G. HOOVENS, Goshen, Ind. Filed Apr. 10, 1922. Serial No. 551,170. 2 Claims. (Cl. 189—92.)



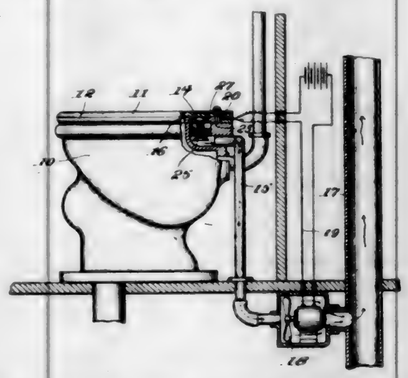
1. An anchor for lightning rod and other cables, consisting of an elongated laterally extended straight body having a central lateral eye extension for cable attachment and twin straight end portions in line with said body and having oppositely beveled ends each beveled upon one side only and either of which acts as a fulcrum engagaing the ground wherein the anchor is imbedded to turn the anchor to right angular position relative to the cable, either of said straight end portions being adapted for engagement with a ground imbedding tool and being also adapted to penetrate the ground straight downwardly when pressure is exerted thereon by said tool, the anchor being reversible when attached to the cable to present either end thereof uppermost.

1,564,070. RADIO VACUUM TUBE. HENRY K. HUPPERT, San Francisco, Calif. Filed Jan. 19, 1923. Serial No. 613,708. 2 Claims. (Cl. 250—27.)



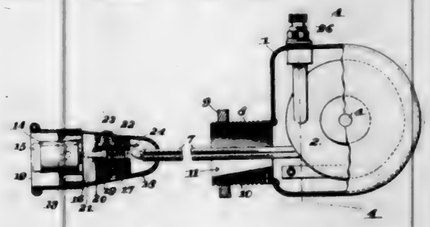
1. In a device of the character described, a stem, a plate supported above said stem at a point remote therefrom, conductors rising from said stem, a filament arranged between said conductors at their upper ends thereof, an extension depending from the plate and arranged in the path of the electronic emissions from the filament, a vertically mounted cylindrical electrode shield surrounding said filament, a solenoid surrounding said shield, said shield being adapted to prevent electronic action between the filament and solenoid, and a bulb secured to said stem and surrounding the above mentioned elements for the purpose of providing a vacuum chamber therefor.

1,564,071. VENTILATING CLOSET. CHARLES E. JACKSON, Minneapolis, Kans. Filed Dec. 15, 1923. Serial No. 680,976. 1 Claim. (Cl. 4—213.)



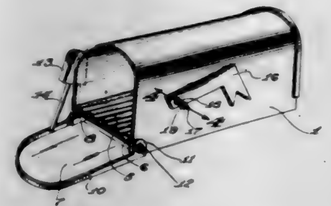
The combination with a toilet bowl provided with a compartment in one side which has communication with the interior of the bowl, a ventilating pipe leading from one end of the compartment, a spider arranged in the compartment provided with a valve seat, a valve adapted to normally engage the seat, a knob on the upper end of the valve and adapted to be engaged by the bowl seat upon lowering the same whereby to move the valve to open position, and a spring engaging the spider and knob for normally holding the valve seated.

1,564,072. CIGAR LIGHTER. JAMES MADISON JACKSON, Parkersburg, W. Va. Filed Feb. 14, 1925. Serial No. 9,217. 2 Claims. (Cl. 219—32.)



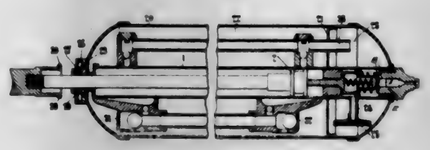
2. A device of the character described comprising an element to be heated, means by which said element is carried including a metallic thimble with which one terminal of said element is in electrical connection, a metallic extension upon the thimble having an opening, an electrical circuit including a cable, means by which one of the wires of the cable is connected to the remaining terminal of said element, an insulating plug situated in said extension, a spring contact guided in said insulating plug at which contact the other wire of said cable is connected, said spring contact entering said opening and completing the electrical circuit through said element and the wall of the opening, spring tension means by which the cable is wound, and means including an insulating bushing by which said extension is receivable, the engagement of said spring contact with the wall of said bushing pressing the contact out of engagement with the wall of said opening and thereby opening the circuit of said element.

1,564,073. MAIL BOX. OSVAL G. JOHNSON, Irene, S. Dak. Filed July 30, 1923. Serial No. 654,696. 1 Claim. (Cl. 232—17.)



A mail box including an elongated body member, an end piece for closing one end of the body having its top and side edges bent over onto the walls of the body, a corrugated bottom arranged within the body and having its longitudinal edges bent downwardly and abutting the inner surface of the walls of the body, said end piece having its lower end bent inwardly at right angles to form a separate support for one end of the corrugated body, a movable door for closing the open end of the body, transverse ears on the said door, a pivot rod extending through the said walls of the body, through the flanges on the bottom and through the ears on said door for supporting the forward end of the bottom and hingedly mounting the door, one end of said rod being extended at right angles and a weight carried by the angular end of the rod and having connection with the door.

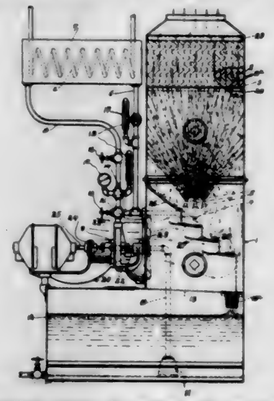
1,564,074. SYRINGE. LEONARD MARCUS JONES, Dulwich, England. Filed Aug. 1, 1923. Serial No. 655,070. 5 Claims. (Cl. 299—98.)



1. A syringe, comprising a casing, a partition extending transverse the casing and dividing the casing into a liquid chamber and an air cushion chamber, each of the full sectional area of the casing, a housing extending lengthwise the casing and through both chambers, a piston reciprocal in the housing, a nozzle carried by the housing, and means operable in the housing to control communication between the air chamber and said nozzle in accordance with the position of the piston.

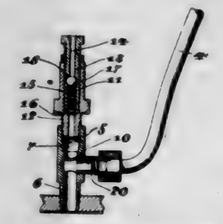
1,564,075. WATER RECOOLER. J HARRY LAKIN, Pittsburgh, Pa., assignor to The Lakin Manufacturing Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Jan. 30, 1925. Serial No. 5,817. 6 Claims. (Cl. 261—114.)

1. In a water cooling apparatus, a vertically disposed casing, means for spraying water upwardly within the upper portion of said casing, said casing being provided with an outlet opening at its upper end, a plurality of



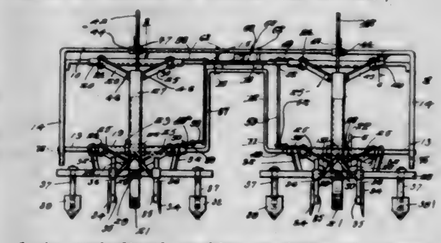
plates extending across the casing and arranged in stepped relation, and means for supplying air under pressure to the casing beneath said plates.

1,564,076. COMBINED VACUUM-TUBE ATTACHMENT AND AIR-INLET DEVICE FOR GAS ENGINES. BENJAMIN F. LARE, Philadelphia, Pa.; Matilda A. Lare executrix of said Benjamin F. Lare, deceased. Filed Mar. 7, 1925. Serial No. 13,781. 4 Claims. (Cl. 123—119.)



1. A combined vacuum tube attachment and air inlet device for gas engines comprising a tubular plug, one end of which is adapted to be secured in an opening leading to the interior of a gas engine, the opposite end of which plug is open and which is provided with an opening in its side, an air inlet device adapted to be secured in either of said openings, and a coupling for a vacuum tube having a nipple which is adapted to be secured in either of said openings.

1,564,077. PLOWING OR CULTIVATING MACHINE. FREDERICK H. LIESS, Watson, Mo. Filed Aug. 15, 1922. Serial No. 581,972. 5 Claims. (Cl. 97—237.)

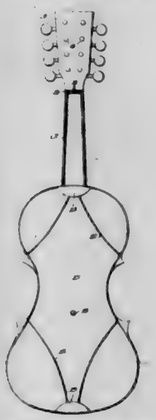


1. An agricultural machine consisting of a beam, a second beam, an arch on one of said beams directly under the other beam, a draft tongue, means to secure said beams and tongue together in superposed relation

at said arch, earth-working means supported and laterally adjustable on said beams on opposite sides of and relatively to said arch, and means operable to impart adjusting movement to said beams.

---

1,564,078. VIOLIN. CHARLES C. LOCK, Hannibal, Mo. Filed Jan. 2, 1923. Serial No. 610,254. 2 Claims. (Cl. 84—294.)



2. A violin of the character described comprising a hollow body, blocks arranged therein and secured at each end thereof, curved strips diverging from said blocks and having their opposite ends secured to the side walls of the body, and said strips being spaced intermediate their ends from the top and bottom of the body.

---

1,564,079. HAIR NET. JOHANNA LORBIECKI, Hatley, Wis. Filed Feb. 28, 1925. Serial No. 12,378. 2 Claims. (Cl. 132—49.)

1. A hair net comprising a mesh-like body portion formed of a pair of oppositely extending sets of spaced threads connected together, the threads of one set at spaced intervals having portions of their length surrounding and connected to the threads of the other set, the connected portions of the threads of one set being alternately disposed with respect to the connected portions of an adjacent set, hollow ornamenting elements disposed throughout said body portion and each having its lower face at each end terminal portion thereof seating directly upon a thread of each of said sets in proximity to a connected portion of the thread and further having its lower face centrally thereof seated directly upon said connected portion of such thread, and a loop-shaped securing member having a portion of the length thereof extending through each element and its remaining portion depending at each side of a connected portion of a thread and further extending under such connected portion for connecting the element to said body portion.

---

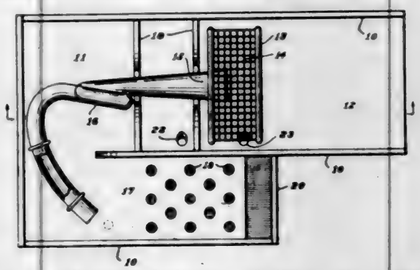
1,564,080. SAFETY ATTACHMENT TO GRAIN ELEVATORS. ARVID LUNDMAN, Winnipeg, Manitoba, Canada. Filed Dec. 20, 1924. Serial No. 757,165. 1 Claim. (Cl. 214—49.)

The combination with a tilting platform, a pivoted dump door associated therewith, a rotatably mounted cross shaft, latches secured to the shaft and normally locking the tilting platform against movement and means for rotating the shaft to release the latches and unlock the platform, of an arm secured to the shaft and moving with the latches, a suitably supported locking pin carried

by the arm and a locking bar secured to the underside of the door and engaging with the pin and preventing movement of the latches upon the door being closed, said locking bar being adapted to pass out of the path of travel of the pin upon the dump door being opened.

---

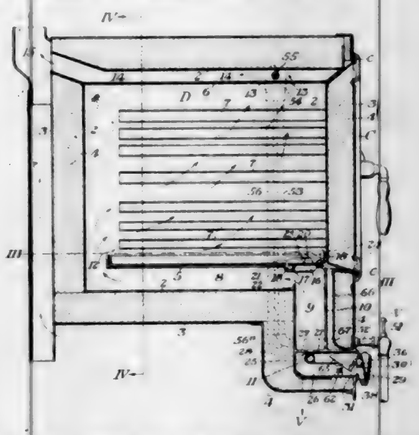
1,564,081. GOLF-PRACTICING DEVICE. ROBERT A. LYCHOU, Chester, Pa. Filed July 7, 1923. Serial No. 650,073. 3 Claims. (Cl. 273—35.)



1. A golf practicing device comprising a net, a tubular member supported with one end in said net and formed with a loop in rear of said net, and means for supporting said tubular member.

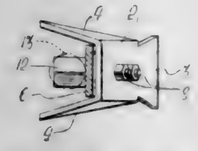
---

1,564,082. OVEN. HOWARD LYON, Gloucester, N. J., assignor to Welsbach Company, Gloucester, N. J., a Corporation of New Jersey. Filed Mar. 5, 1924. Serial No. 696,995. 25 Claims. (Cl. 126—39.)



1. In an oven, a yellow flame burner under the oven chamber and substantially coextensive with one dimension thereof, and a starting stack for the products of combustion extending upwardly from said burner throughout substantially the full length thereof and of less cross sectional area than the cross sectional area of said chamber, substantially as described.

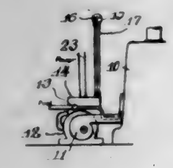
1,564,083. GRAIN-DRILL SHARE. WILLIAM LYONS, Rosebery East, Victoria, Australia. Filed July 17, 1924. Serial No. 726,600. 1 Claim. (Cl. 111—86.)



A detachable share for a grain drill tube and its connected tine, comprising a share having rearwardly extending and outwardly divergent side walls, and means for securing the share to the tine, the share extending below the lower edge of the tine with its side edges downwardly divergent.

---

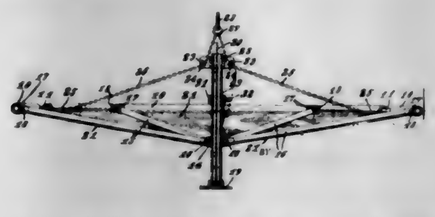
1,564,084. AUTOMATIC CONTROLLING MEANS FOR OIL BURNERS AND THE LIKE. JUDSON MCFELL, Chicago, Ill. Filed Jan. 7, 1925. Serial No. 1,132. 17 Claims. (Cl. 236—78.)



17. In a system of the character described, the combination with a blower, a main motor therefor, and a fuel-supply valve, of thermostatic means for initiating the starting and stopping of the main motor, and control-means comprising a main motor switch, automatic means responsive to thermostatic operation for closing said main switch and opening said fuel valve, and automatic means for restoring said main switch to open position and said fuel valve to closed position upon subsequent de-energization of the main motor.

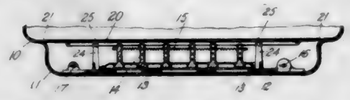
---

1,564,085. ENSILAGE PROTECTOR. ALLIE MCMILLAN, Embarrass, Wis. Filed Mar. 17, 1925. Serial No. 16,259. 4 Claims. (Cl. 217—64.)



2. In a device of the class described, a rim of tubular segmental sections with their terminals movable toward and away from each other, guides slidably fitted in the ends adjacent to each other of the sections for closing the gaps therebetween, a flexible sheet connected to said segmental sections, a tubular post having a laterally directed foot portion, a runner member slidable on said post, a plurality of ribs pivoted at the ends respectively to said runner and to said rim sections, a pull member attached to said foot portion and extending through said tubular post, and means for adjusting said rim sections vertically to expand and contract the same.

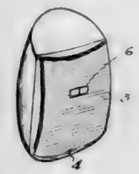
1,564,086. ELECTRIC STOVE OVEN. ROBERT H. MACINNES, Hamilton, Ontario, Canada. Filed Sept. 12, 1924. Serial No. 737,316. 2 Claims. (Cl. 219—35.)



1. In an electrically heated oven having a recess in the flooring thereof and an electric heater element or burner confined within the recess, a plurality of pillars on the heater element, a plurality of rails spanning the heater element and connecting said pillars in pairs, and a plate or cover closing said recess above the heater element and supported upon said pillars.

---

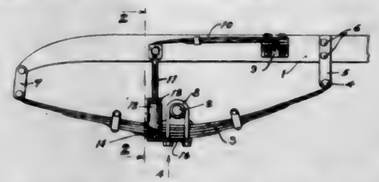
1,564,087. REPLACEABLE TOOTH. WALTER L. MASON, Red Bank, N. J. Filed Sept. 29, 1924. Serial No. 740,616. 2 Claims. (Cl. 32—9.)



1. A replaceable tooth having a split pin imbedded in the body of the tooth and having its free ends projecting from the lingual surface thereof, a back plate disposed against the lingual surface and forming a finished section of the tooth, said back plate having an aperture therein and a recess on its rear face, the free ends of the pin projecting through the aperture and being bent against the rear face of the plate and seated in the recess, said recess adapted to receive a cement for fastening the bent ends in said recess and to provide a smooth surface on the back plate.

---

1,564,088. SHOCK ABSORBER. EDWARD MATTHEWS, Denver, Colo., assignor of one-half to William P. Tichenor, Denver, Colo. Filed June 25, 1924. Serial No. 722,268. 5 Claims. (Cl. 267—28.)



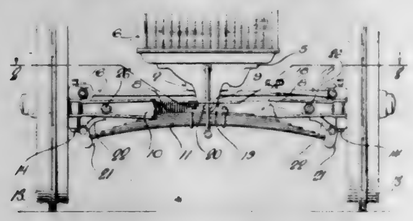
1. In combination, an automobile chassis frame member, a spring operatively associated therewith, a supporting axle secured to the spring so as to be adapted to move towards and away from the frame member, a second spring secured to the frame member so as to have a part thereof stationary with respect to the frame and another part thereof adapted to be moved relative to the frame, a third spring secured to the axle in such a manner that a portion thereof is stationary with respect to the axle while the remainder of the spring is adapted to move relative to the axle and an adjustable link for connecting the movable portions of the last named springs whereby the first mentioned spring will resist movement of the frame member towards the axle, while the other two springs tend to resist the movement of the frame member away from the axle, the second and third springs being of different strength.

1,564,089. ARCHERY DEVICE. EDWIN F. MAXWELL, Berkeley, Calif. Filed Feb. 2, 1925. Serial No. 6,403. 6 Claims. (Cl. 124—7.)

5. In an archery device, a bow including a yoke having oppositely extending members spaced apart at their inner ends to define a notch open at one side to receive an arrow, one of said members being shaped to form a handle, spring arms fixed to said members, and a bow string connected to the free ends of said arms, said notch being adapted to accommodate an arrow lying throughout its length in a plane with said string.

---

1,564,090. AUTOMOTIVE VEHICLE. THOMAS W. MEIKLEJOHN, Fond du Lac, Wis. Filed May 11, 1925. Serial No. 29,454. 4 Claims. (Cl. 280—112.)



1. In a tractor, the combination with its frame and front supporting axle, of means for supporting the frame from the axle, comprising a pair of brace rods connected at their forward ends with the axle adjacent its ends and converging rearwardly, means connecting the rear ends of the brace rods with the frame, a spring, means connecting the medial portion of the spring with the tractor frame, spring perches carried by the forward ends of the brace rods, and shackle members connecting the ends of the spring with said perches.

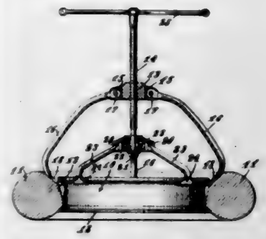
---

1,564,091. SULFONATED OXY-DIANTHRAQUINONYLAMINE DYESTUFFS AND PROCESS OF MAKING THE SAME. WALTER MIEG, Vohwinkel, and HEINRICH RAEDER, Leverkusen, near Cologne, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,869. 6 Claims. (Cl. 260—28.)

6. As new products 1—1'-dianthraqui-nonyloxazine sulfonic acids substantially free from straight dianthraquinonylamine, sulfonic acids, which are brownish-red, crystalline powders, soluble in hot water, from which solution caustic soda precipitates difficultly soluble, red sodium salts; soluble in concentrated sulfuric acid with a green color, having an olive tinge and which is not altered by the addition of formaldehyde, and dyeing wool from an acid bath brownish-violet shades, the same shades being obtained by afterchroming or on chrome mordanted wool.

---

1,564,092. TIRE CHANGER. MATTHIAS MILLER, Gainsville, Fla. Filed Dec. 26, 1924. Serial No. 758,245. 4 Claims. (Cl. 157—6.)



1. A tire changer, comprising a threaded member, a nut device engaging said threaded member, a plurality of arms swingingly coupled to said nut device and each provided with a gripping element at the free end adapted to engage a wheel tire, a sleeve device in which said threaded member is rotative, and a plurality of arms swingingly coupled to said sleeve and each formed with a terminal hook at the free end adapted to engage over the adjacent clincher flange of a wheel rim.

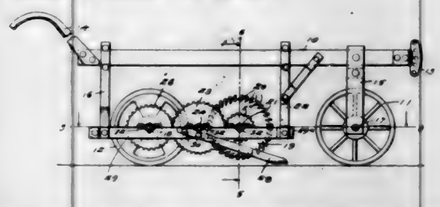
---

1,564,093. METHOD OF MAKING ARSENATES. THOMAS AUSTIN MITCHELL, Ridgewood, N. J., and KEBB TOABE, New York, N. Y. Filed July 21, 1922. Serial No. 576,627. 7 Claims. (Cl. 23—54.)

1. The method of forming a metal arsenate comprising the steps of oxidizing arsenic trioxid to arsenic acid in the presence of a concentrated solution of arsenic acid and simultaneously adding a metal element of the desired arsenate and precipitating the metal arsenate by reaction with the arsenic acid, and regulating the rates of forming the arsenic acid and of precipitating the metal arsenate so as to maintain a substantially uniform and high concentration of the arsenic acid.

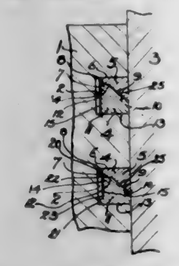
---

1,564,094. VINE CLIPPER OR CUTTER. WILLIAM A. MOATES, Jasper, Fla. Filed Apr. 4, 1925. Serial No. 20,709. 2 Claims. (Cl. 55—64.)



1. A device of the class described having a beam, a frame below and supported from said beam, said frame being centered with respect to the beam, a ground wheel at the front of the beam, a second ground wheel, an axle carrying the second ground wheel and journaled on said frame, a gear member turnable with said wheel and axle, a cutter adjacent the forward end of the frame, a shaft journaling said cutter on said frame, means to drive the cutter shaft from said gear, and a U-shaped lifting element fastened to said frame and in the bifurcation of which the cutting member is disposed.

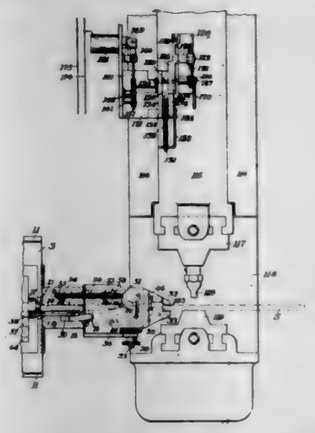
1,564,095. PISTON RING. EDWARD S. MOBERLEY, Detriot, Mich. Filed Aug. 4, 1924. Serial No. 730,007. 2 Claims. (Cl. 74—109.)



1. A piston ring consisting of two split sections of equal thickness and arranged laterally to each other, each section having an outer side at right angles to its outer and inner circumferences, and an inner side bevelled and extending from one circumference and terminating in a portion contiguous to its other circumference substantially parallel to its outer side, thereby forming a stop, said stops and said bevelled sides being adapted to contact with each other, in combination with a multi-sided spring arranged within the inner circumference of and exerting an outward pressure on both of said ring sections, and an annular oil groove in the bevelled face of one of the ring sections.

---

1,564,096. SPACING MECHANISM. JAMES A. MOORE, Rochester, and JAMES S. CONLEY, Beaver, Pa. Filed July 29, 1924. Serial 728,894. 15 Claims. (Cl. 164—117.)



1. Spacing mechanism, comprising a movable carriage, gripper means carried thereby for gripping the work to be operated upon, electromagnetic means for operating said gripper means, and automatic means acting independently of the work being gripped for locking said gripper means in closed position, substantially as described.

---

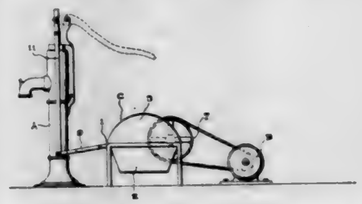
1,564,097. CURTAIN FASTENER. CONNIE W. MORRIS, Fremont, N. C. Filed Jan. 15, 1925. Serial No. 2,611. 1 Claim. (Cl. 24—225.)

A curtain fastening device comprising a guide bracket, said bracket including a base having openings therein, spaced ears having guide openings therein, an attaching plate, tongues extending from said attaching plate and adapted to be passed through the openings in the base of the guide bracket and bent against the face of the base, an attaching member slidable through the guide openings

of the spaced ears and means for yieldingly resisting sliding movement of the attaching member in one direction.

---

1,564,098. PUMP JACK. JACOB MORTENSEN, Moorhead, Iowa. Filed Jan. 20, 1923. Serial No. 613,988. 1 Claim. (Cl. 74—14.)



A pump jack, comprising a rectangular shaped frame horizontally arranged, legs on the frame, a crank case depending from the frame, a crank shaft having its ends journaled in the frame, a power shaft journaled in the frame with one end projecting beyond the frame, a pulley on said projecting end, gears connecting the shafts together, a pitman on the crank of the crank shaft, a lever forked at each end and pivoted to one end of the frame, the inner forked end being connected with the pitman and its outer end being adapted to be connected with a pump and a cover connected with the top of the frame.

---

1,564,099. CLOSURE FOR CONTAINERS. CHARLES M. MORTON, Buffalo, N. Y. Filed Feb. 9, 1923. Serial No. 618,106. 1 Claim. (Cl. 215—64.)

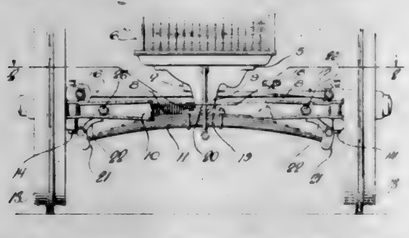
A container comprising a body having its neck provided on opposite sides with integral grooves the upper and lower sides of which are inclined, and a cap engaging with the top of said neck and provided on opposite sides of its periphery with downwardly extending arms arranged on opposite sides of the neck and provided at their lower ends with inwardly projecting lugs which engage with the inclined sides of said grooves, said cap, arms and lugs being formed integrally of the same material and the upper and lower sides of said lugs being inclined at the same angle as the upper and lower sides of said grooves, and the upper end of each of said grooves having an enlargement of sector-shape, one radial side of said enlargement being in line with the bottom of the respective groove and forming a continuation thereof, the other radial side being upright, and the arc of said enlargement connecting the top of said groove and the top of said upright side and curved about an axis which is arranged at the junction between the lower

1,564,089. ARCHERY DEVICE. EDWIN F. MAXWELL, Berkeley, Calif. Filed Feb. 2, 1925. Serial No. 6,403. 6 Claims. (Cl. 124—7.)

5. In an archery device, a bow including a yoke having oppositely extending members spaced apart at their inner ends to define a notch open at one side to receive an arrow, one of said members being shaped to form a handle, spring arms fixed to said members, and a bow string connected to the free ends of said arms, said notch being adapted to accommodate an arrow lying throughout its length in a plane with said string.

---

1,564,090. AUTOMOTIVE VEHICLE. THOMAS W. MEIKLEJOHN, Fond du Lac, Wis. Filed May 11, 1925. Serial No. 29,454. 4 Claims. (Cl. 280—112.)



1. In a tractor, the combination with its frame and front supporting axle, of means for supporting the frame from the axle, comprising a pair of brace rods connected at their forward ends with the axle adjacent its ends and converging rearwardly, means connecting the rear ends of the brace rods with the frame, a spring, means connecting the medial portion of the spring with the tractor frame, spring perches carried by the forward ends of the brace rods, and shackle members connecting the ends of the spring with said perches.

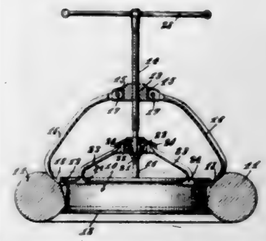
---

1,564,091. SULFONATED OXY-DIANTHRAQUINONYLAMINE DYESTUFFS AND PROCESS OF MAKING THE SAME. WALTER MIEG, Vohwinkel, and HEINRICH RADDER, Leverkusen, near Cologne, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,869. 6 Claims. (Cl. 260—28.)

6. As new products 1—1'-dianthraqui-nonyloxazine sulfonic acids substantially free from straight dianthraquinonylamine, sulfonic acids, which are brownish-red, crystalline powders, soluble in hot water, from which solution caustic soda precipitates difficultly soluble, red sodium salts; soluble in concentrated sulfuric acid with a green color, having an olive tinge and which is not altered by the addition of formaldehyde, and dyeing wool from an acid bath brownish-violet shades, the same shades being obtained by afterchroming or on chrome mordanted wool.

---

1,564,092. TIRE CHANGER. MATTHIAS MILLER, Gainsville, Fla. Filed Dec. 26, 1924. Serial No. 758,249. 4 Claims. (Cl. 157—6.)



1. A tire changer, comprising a threaded member, a nut device engaging said threaded member, a plurality of arms swingingly coupled to said nut device and each provided with a gripping element at the free end adapted to engage a wheel tire, a sleeve device in which said threaded member is rotative, and a plurality of arms swingingly coupled to said sleeve and each formed with a terminal hook at the free end adapted to engage over the adjacent clincher flange of a wheel rim.

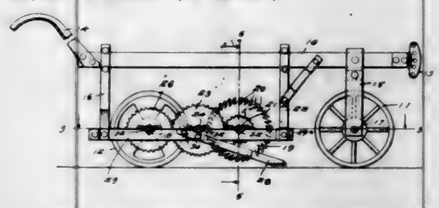
---

1,564,093. METHOD OF MAKING ARSENATES. THOMAS AUSTIN MITCHELL, Ridgewood, N. J., and KEBB TOABE, New York, N. Y. Filed July 21, 1922. Serial No. 576,627. 7 Claims. (Cl. 23—54.)

1. The method of forming a metal arsenate comprising the steps of oxidizing arsenic trioxid to arsenic acid in the presence of a concentrated solution of arsenic acid and simultaneously adding a metal element of the desired arsenate and precipitating the metal arsenate by reaction with the arsenic acid, and regulating the rates of forming the arsenic acid and of precipitating the metal arsenate so as to maintain a substantially uniform and high concentration of the arsenic acid.

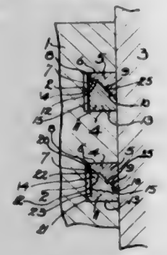
---

1,564,094. VINE CLIPPER OR CUTTER. WILLIAM A. MOATES, Jasper, Fla. Filed Apr. 4, 1925. Serial No. 20,709. 2 Claims. (Cl. 55—64.)



1. A device of the class described having a beam, a frame below and supported from said beam, said frame being centered with respect to the beam, a ground wheel at the front of the beam, a second ground wheel, an axle carrying the second ground wheel and journaled on said frame, a gear member turnable with said wheel and axle, a cutter adjacent the forward end of the frame, a shaft journaling said cutter on said frame, means to drive the cutter shaft from said gear, and a U-shaped lifting element fastened to said frame and in the bifurcation of which the cutting member is disposed.

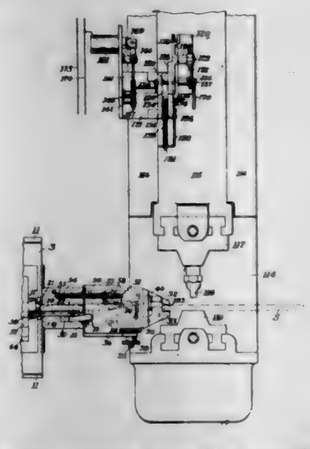
1,564,095. PISTON RING. EDWARD S. MOBERLEY, Detriot, Mich. Filed Aug. 4, 1924. Serial No. 730,007. 2 Claims. (Cl. 74—109.)



1. A piston ring consisting of two split sections of equal thickness and arranged laterally to each other, each section having an outer side at right angles to its outer and inner circumferences, and an inner side bevelled and extending from one circumference and terminating in a portion contiguous to its other circumference substantially parallel to its outer side, thereby forming a stop, said stops and said bevelled sides being adapted to contact with each other, in combination with a multi-sided spring arranged within the inner circumference of and exerting an outward pressure on both of said ring sections, and an annular oil groove in the bevelled face of one of the ring sections.

---

1,564,096. SPACING MECHANISM. JAMES A. MOORE, Rochester, and JAMES S. CONLEY, Beaver, Pa. Filed July 29, 1924. Serial 728,894. 15 Claims. (Cl. 164—117.)



1. Spacing mechanism, comprising a movable carriage, gripper means carried thereby for gripping the work to be operated upon, electromagnetic means for operating said gripper means, and automatic means acting independently of the work being gripped for locking said gripper means in closed position, substantially as described.

---

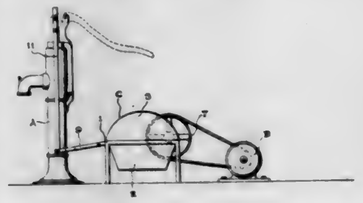
1,564,097. CURTAIN FASTENER. CONNIE W. MORRIS, Fremont, N. C. Filed Jan. 15, 1925. Serial No. 2,611. 1 Claim. (Cl. 24—225.)

A curtain fastening device comprising a guide bracket, said bracket including a base having openings therein, spaced ears having guide openings therein, an attaching plate, tongues extending from said attaching plate and adapted to be passed through the openings in the base of the guide bracket and bent against the face of the base, an attaching member slidable through the guide openings

of the spaced ears and means for yieldingly resisting sliding movement of the attaching member in one direction.

---

1,564,098. PUMP JACK. JACOB MORTENSEN, Moorhead, Iowa. Filed Jan. 20, 1923. Serial No. 613,988. 1 Claim. (Cl. 74—14.)



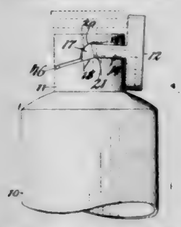
A pump jack, comprising a rectangular shaped frame horizontally arranged, legs on the frame, a crank case depending from the frame, a crank shaft having its ends journaled in the frame, a power shaft journaled in the frame with one end projecting beyond the frame, a pulley on said projecting end, gears connecting the shafts together, a pitman on the crank of the crank shaft, a lever forked at each end and pivoted to one end of the frame, the inner forked end being connected with the pitman and its outer end being adapted to be connected with a pump and a cover connected with the top of the frame.

---

1,564,099. CLOSURE FOR CONTAINERS. CHARLES M. MORTON, Buffalo, N. Y. Filed Feb. 9, 1923. Serial No. 618,106. 1 Claim. (Cl. 215—64.)

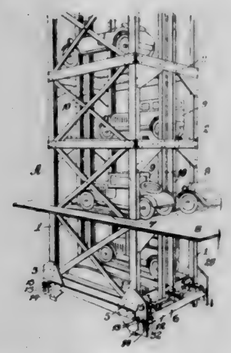
A container comprising a body having its neck provided on opposite sides with integral grooves the upper and lower sides of which are inclined, and a cap engaging with the top of said neck and provided on opposite sides of its periphery with downwardly extending arms arranged on opposite sides of the neck and provided at their lower ends with inwardly projecting lugs which engage with the inclined sides of said grooves, said cap, arms and lugs being formed integrally of the same material and the upper and lower sides of said lugs being inclined at the same angle as the upper and lower sides of said grooves, and the upper end of each of said grooves having an enlargement of sector-shape, one radial side of said enlargement being in line with the bottom of the respective groove and forming a continuation thereof, the other radial side being upright, and the arc of said enlargement connecting the top of said groove and the top of said upright side and curved about an axis which is arranged at the junction between the lower

end of said upright radial side and the radial side which forms the extension of the bottom of the respective groove; and said enlargement having a radius substantially equal to the width of the respective lug arranged therein and said lugs being adapted to fulcrum at the junctions between said radial sides of said enlargements.



---

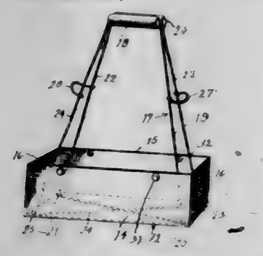
1,564,100. AUTOMOBILE PARKING MACHINE. JAMES ERNEST MORTON, West Lafayette, Ind., assignor of one-half to James H. McVeety, Memphis, Tenn. Filed July 9, 1925. Serial No. 42,527. 5 Claims. (Cl. 214—16.)



1. An automobile parking machine, including a skeleton tower, a plurality of endless chains at two sides of the tower, two columns of car receiving platforms mounted on said chains, means permitting the platforms to move laterally at the upper and lower ends of the tower, a floor through which the tower projects and from which cars may be driven onto the platform, and a bridge in the tower located at the floor level between the two columns of the platform.

---

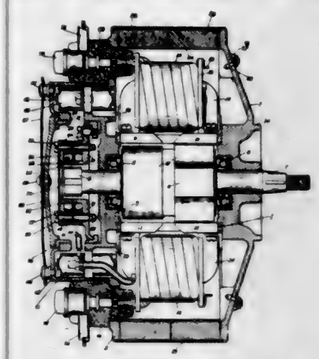
1,564,101. BAG HOLDER. TADAO NAKAMURA, Los Angeles, Calif. Filed June 18, 1925. Serial No. 38,059. 4 Claims. (Cl. 224—45.)



1. In a bag holder, the combination with a rigid and rectangular base member, of fabric elements forming flexible and collapsible side and end walls extending upwardly from the base, cord elements forming loops extending upwardly from the base member and within the limits of the fabric elements and capable of extending to the top of a bag including the bag handles, a rigid handle secured to one of said loops at its extremity and having a longitudinal groove for the reception of the remaining loop and the bag handles, flexible brace strips connecting said loops intermediate the handle and base member, and snap fasteners on the fabric elements to secure the same in folded and collapsed position, the said loops and attached handle being enclosed by the fabric elements in collapsed position.

---

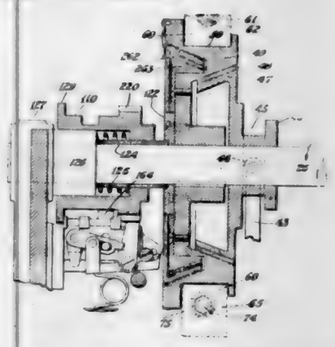
1,564,102. TWO-SPARK MAGNETO. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed May 19, 1925. Serial No. 31,263. 16 Claims. (Cl. 123—149.)



1. A two spark magneto comprising; two independent coils with associated cores and pole pieces, two independent sources of magnetic flux, a single rotor structure carrying flux directing members, operable to direct magnet flux simultaneously through said coil cores and a separate circuit breaker operated by said rotor structure for controlling each coil.

---

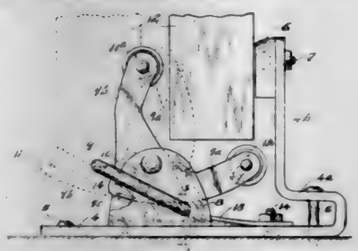
1,564,103. STOPPING AND STARTING MECHANISM FOR SHOE STITCHING OR OTHER MACHINES. JOHN ROGER OLIVER, Medfield, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Apr. 30, 1925. Serial No. 26,948. 11 Claims. (Cl. 192—146.)



7. In a high speed power driven machine, the combination, with a shaft thereof, of stop means operative after disconnection of power to bring the shaft to rest without shock in an indeterminate position, and slow power means coming into action after such indeterminate stoppage for restarting and rotating the shaft slowly to a predetermined final position, comprising a drum loosely surrounding the shaft and slidable thereon, connections rotating said drum at low speed, a plurality of clutch dogs on said drum, and a clutch member on the shaft engageable by any one of the clutch dogs.

---

1,564,104. DOOR-HOLDING DEVICE. EMIL OLSON, South Haven, Minn. Filed Mar. 9, 1925. Serial No. 14,000. 7 Claims. (Cl. 292—216.)



1. A door holding means comprising a stop adapted to be contacted by the door, a spring-pressed bell crank member pivoted on a horizontal axis substantially parallel to the plane of the door when the same is adjacent said stop, said member being swingable to position with the arm remote from said stop below said door and the arm adjacent said stop upstanding in position to be engaged by said door, said member being adapted to be swung by engagement of said door to swing said arm remote from said door in upstanding position at the side of said door when the same is adjacent said stop whereby said door is held between said latter arm and said stop and a securing means holding said member in said latter position.

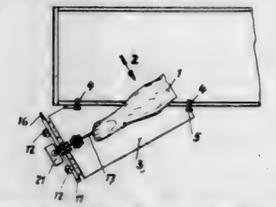
---

1,564,105. SAW. ALBERT F. OUELLET, New York, N. Y. Filed May 19, 1925. Serial No. 31,358. 3 Claims. (Cl. 145—31.)

1. A saw construction, which comprises a piece of metal having one end bent over to form a handle, the end of the handle portion lying adjacent the main body portion of said piece, and a saw blade adapted to be received on the main body portion, the teeth of the saw blade near one end thereof adapted to be disposed in latched engagement with the end of the handle to hold the saw blade on the body portion.

---

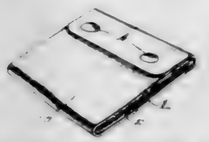
1,564,106. STRETCHING APPARATUS FOR TREATING ARM AND LEG FRACTURES. OTTO PATESCHKE, Sondershausen, Germany. Filed Feb. 7, 1925. Serial No. 7,602. 3 Claims. (Cl. 128—84.)



1. A stretching apparatus for treating arm and leg fractures, comprising a supporting-board adapted to be detachably fastened laterally of a bedstead, and means on said board for stretching the injured arm or leg.

---

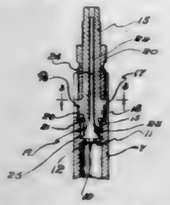
1,564,107. BRUSH. NEAL W. PLOOSTER, Prescott, Ariz. Filed Mar. 30, 1925. Serial No. 19,492. 1 Claim. (Cl. 15—227.)



A shoe polisher comprising a flexible backing, a pad secured to one face of said backing adjacent one end thereof, said backing being of a length to permit of the same being folded entirely around the pad to enclose the said pad or to be looped upon itself over the pad to provide a hand hold, and co-operative means carried by the ends of the backing for detachably retaining the ends of the backing in either of said positions.

---

1,564,108. TIRE VALVE. JOSEPH PLUTO, Pontiac, Mich. Filed May 15, 1925. Serial No. 30,634. 3 Claims. (Cl. 152—12.)



1. A valve of the class described, comprising a stem; an interior abutment mounted in said stem; a valve head adapted for engagement with said abutment; a valve seat bearing member, adapted for loose positioning in said stem; and means for moving said valve seat bearing member relatively to said valve head for forcing said valve head while in engagement with said abutment into close engagement with said seat; and means for sealing the interior of the lower portion of said valve stem from the exterior of said valve seat bearing member substantially simultaneously with the close engagement of said head with said seat.

---

1,564,109. POST BASE. LÉON PONSOLLE, Angers, France. Filed Aug. 12, 1921. Serial No. 491,816. 2 Claims. (Cl. 72—84.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

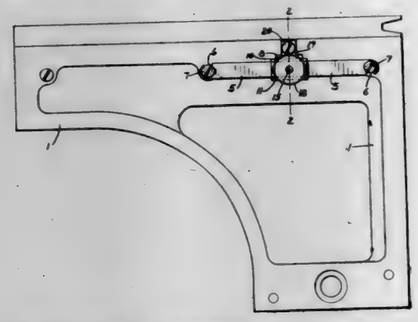
1. A foot for posts or poles comprising a tubular sheath formed intermediate its length with a tapering internal wall and with a lateral air opening above the

level of the lower end of the tapering portion of the inner wall of the sheath, said sheath being adapted to receive the lower end portion of a post or pole, said post or pole resting at its lower end upon the tapering inner wall of the sheath above said lateral opening for

air, and means between said post or pole and said sheath for spacing said post or pole from the sheath to provide a continuous air passage extending within the sheath from the upper end of the latter to said lateral air opening.

---

1,564,110. DEVICE FOR BUFFING MATRICES FOR TYPE-CASTING MACHINES. GEORGE S. PROBERT, Dayton, Ohio. Filed Mar. 28, 1924. Serial No. 702,700. 1 Claim. (Cl. 192—62.)

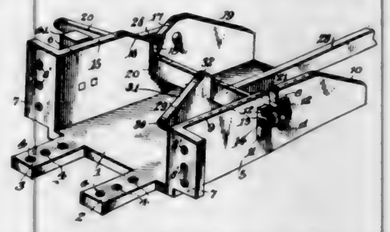


In a type-casting machine including a delivery channel plate having tapped holes, a pair of transfer slides adapted to support matrices longitudinally movable between them, each matrix having an identifying character on one side, a U-shaped frame formed with right-angled feet containing notches facing in opposite directions, screws fitting said notches adapted to be passed into the tapped holes in said channel delivery plate, said slide and plate having registering holes opposite the middle inner portion of said frame, a pair of plates movable along the longitudinal edges of said frame, a buffer member secured between said plates for projection through said holes to engage the identifying character surfaces on said matrices, one of said plates having an inwardly projecting tongue for movement between the legs of said frame, said frame having a hole in its outer end, a rod secured to said tongue for projection through the hole in the outer end of said frame, a spring coiled around said rod between the outer end of the frame and said tongue, said rod being threaded at its outer end, and an adjusting nut on the outer threaded end of said rod for the purpose specified.

---

1,564,111. CAR COUPLER. LOCKHEART W. RAMAGE, Ilfracombe, Queensland, Australia. Filed July 9, 1924. Serial No. 725,001. 5 Claims. (Cl. 213—176.)

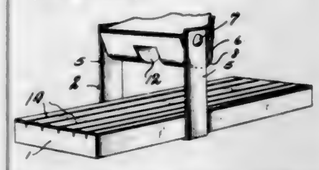
2. A car coupler comprising a channel-shaped casing having each of its side walls intermediate its ends formed with a vertical slot opening at the top edge of the wall, a transverse connecting bar having one end pivoted to one of said walls, seating in said slots and capable of being shifted clear of the other of said walls, a combined draft and coupling bar extending into said casing and having an enlarged triangular-shaped head at its forward end for elevating the connecting bar to a position where it may fall by gravity behind the head



onto the draft bar to couple said bars together, a retaining bar having its rear end pivoted to the said other wall and seating on the free end terminal portion of the connecting bar for maintaining it upon the draft bar, and means carried by that wall to which the retaining bar is pivoted for maintaining the latter against the connecting bar.

---

1,564,112. WRINGER. ALFRED RASMUSSEN, St. Paul, Minn. Filed Nov. 20, 1924. Serial No. 751,082. 3 Claims. (Cl. 15—260.)



1. A wringer of the class described comprising a base member, upstanding arms carried thereby and spaced transversely thereof, a block interposed between said arms and above the base member, means eccentric to the axial center of the block supporting said block by the arms for rocking movement, and means for rocking the block, said block constituting a cam member to exert pressure upon rocking movement of the block upon the article positioned upon the base member and underlying the block.

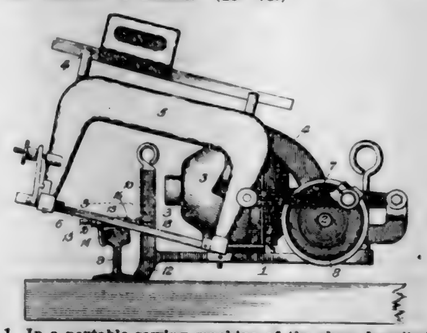
---

1,564,113. BOOK CLAMP. JOHN RAUHOFER, Bethlehem, Pa. Filed Feb. 25, 1924. Serial No. 695,106. 1 Claim. (Cl. 45—61.)

In a device of the class described, a supporting element, an arm pivoted thereon and movable toward and away from said element, rotatable means for mounting the pivoted arm, and devices for retaining an adjusted position of the rotatable means and of the arm connected with the rotatable means, the device for retaining the rotatable means including a coiled spring pressing on said means, a tubular element receiving the rotatable element and spring, and a screw retaining the tubular element and imparting end thrust to the spring for forcing it against the rotatable means.

---

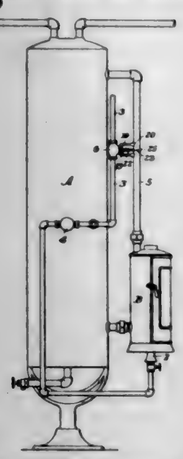
1,564,114. PORTABLE RAIL-SAWING MACHINE. WILLIAM C. REINHARDT, Racine, Wis., assignor to Racine Tool & Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Oct. 10, 1924. Serial No. 742,810. 3 Claims. (29—73.)



1. In a portable sawing machine of the class described, the combination of a main frame having one of its lower corners formed for bearing engagement with the bottom flange of a railway or like rail so as to position the frame wholly to one side of said rail, a vertically movable and horizontally reciprocating saw blade with its carrying and operating mechanism mounted on said frame, an upright guide post fixed on said frame, and a claw member formed for engagement with a top flange of the aforesaid rail and attached to the upright post in a vertically and a horizontally adjustable manner, the weight of the main frame and mechanism mounted thereon tending to cant and bind the aforesaid means of attachment upon the rail.

---

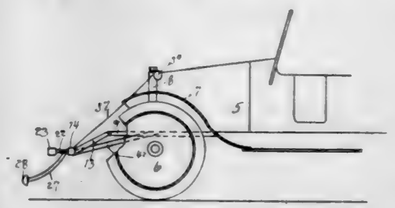
1,564,115. SAFETY DEVICE FOR HOT-WATER SYSTEMS. GEORGE A. ROBERTSHAW, Greensburg, Pa. Filed June 27, 1923. Serial No. 648,001. 2 Claims. (Cl. 122—504.3.)



1. In a hot water circulating system, the combination with a gas-supply pipe and a hot-water circulating pipe, of a safety device comprising a valve tapped into the gas-supply pipe, means tending to move said valve into engagement with its seat, and means for normally maintaining said valve away from its seat, comprising a fusible link looped around said hot-water circulating pipe and connected to said valve, substantially as described.

---

1,564,116. AUTOMOBILE FENDER. AGOSTINO RONTANI, Cloverdale, Calif. Filed June 5, 1925. Serial No. 35,133. 1 Claim. (Cl. 293—34.)



In a device of the character described, the combination with an automobile having side frames, extensions pivoted to said side frames, a box supported on the ends of said extension, a roller mounted in said box, a net positioned on said roller, a bumper positioned in front of said box, a second bumper positioned in front of and in a plane below said first mentioned bumper, means for preventing rotation of said roller, means associated with said second mentioned bumper for releasing said roller holding means, and means for extending said net to a point adjacent the uppermost edge of the radiator of said automobile.

---

1,564,117. GAITER. ROBERT ALFRED AUBERGE, Paris, France. Filed Apr. 5, 1924. Serial No. 704,523. 1 Claim. (Cl. 36—2.)

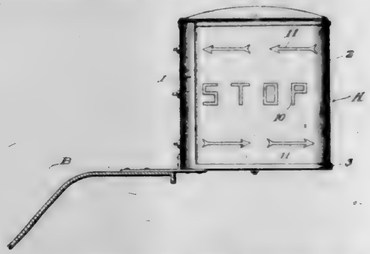
The combination of a gaiter, an elastic and removable foot-strap, two metallic fittings respectively secured to the ends of the foot-strap and folded or bent upon themselves so as to constitute a socket, sheaths secured to the lower edges of the gaiter, two U-shaped clasps, each clasp being adapted to enter, on the one hand, into the socket of the said respective metallic fitting and, on the other hand, into the said respective sheath, and means for preventing these clasps from unduly coming out the said sheaths and sockets.

---

1,564,118. DIRECTION INDICATOR. FRANK AYLER, Tacoma, Wash. Filed Apr. 18, 1922. Serial No. 554,373. 1 Claim. (Cl. 177—329.)

A direction indicator comprising a vertically arranged transversely bowed wall, an annular rim connected with the lower end thereof, a top wall provided with an annular rim which is disposed in parallel relation to the first mentioned annular rim and a bottom wall carried by the lower rim, a split cylindrical transparent member arranged between the bottom and top walls and having its ends received in the rims, and the vertical edges of the transparent member being disposed behind the opposite vertical edges of the transversely bowed

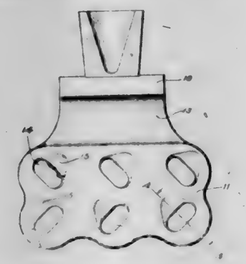
wall, and vertically arranged bolts passing through the top and bottom walls whereby to hold the parts assem-



bled, the transparent wall being provided with indicia and illuminating means carried by the transversely bowed wall for illuminating the indicia.

---

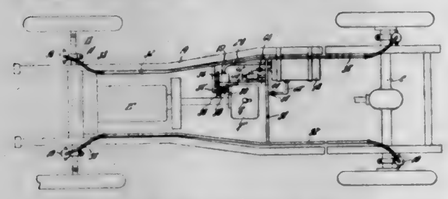
1,564,119. TOOTHBRUSH RACK. JOHN HENRY BALMER, Maplewood, N. J., assignor to J. H. Balmer Co., Newark, N. J., a Corporation of New Jersey. Filed Nov. 11, 1924. Serial No. 749,259. 3 Claims. (Cl. 248—63.)



3. A tooth brush supporting rack comprising a shelf having a plurality of elongated openings for receiving the handles of tooth brushes, the major axis of an opening of a pair of adjacent openings being disposed at a right angle to the major axis of the other opening of the pair, the right angular disposition of the openings providing for retaining the bristles of the brush held by one opening in parallel relation with the major axis of the other opening, said shelf being provided with depressions located at a right angle to the major axis of an opening to receive the lower bristles of the brush and for aiding in locating the brush in proper position in the slots, the arrangement of the openings being such that not only space is conserved but the bristles of the brushes are maintained out of contact with the bristles of adjacent brushes.

---

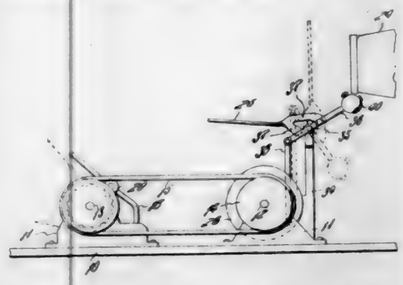
1,564,120. VEHICLE JACK. JAMES EARL BECKWITH, Tampa, Fla. Filed June 8, 1925. Serial No. 35,756. 1 Claim. (Cl. 254—86.)



In an apparatus of the character described, hydraulic jacks mounted upon the axles of a vehicle, a liquid storage tank, a pump adapted to be driven by the transmission for supplying liquid to the jacks from the tank, and automatic pressure operated by-pass means including a casing connected with the tank, and a spring pressed valve structure within the casing connected with the line between the pump and the jacks.

---

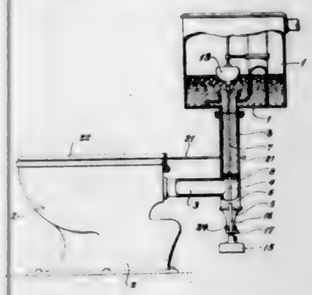
1,564,121. AUTOMATIC SHUTTER. IRA V. BLEVINS, Trammel, Va., assignor of one-half to John W. Whitlow, Trammel, Va. Filed July 23, 1924. Serial No. 727,791. 1 Claim. (Cl. 88—17.)



In an automatically controlled fire shutter for moving picture projecting machines, a friction actuated gear adapted to be partially rotated a predetermined distance from a normal position when the machine is operated, a standard, a lever pivoted upon the upper end of said standard at a point in its length, a shutter supported by said lever, a link connecting one end of the lever with said friction gear, whereby said lever is rocked upon its fulcrum to move the shutter from a vertical to a horizontal position while the machine is in operation, and a weight slidably adjusted on said lever at the opposite sides of said pivot to automatically reverse the movement of said lever and move said shutter upwardly to a vertical position when said gear is released incident to the breaking of the film.

---

1,564,122. FLUSH VALVE. ROBERT O. H. CAMPBELL, Jamaica, N. Y. Filed July 11, 1924. Serial No. 725,479. 1 Claim. (Cl. 4—64.)

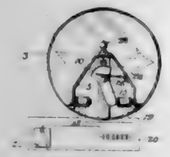


In combination with a bowl having a pivoted seat therefor, and a flush tank, a casing connecting said bowl with the flush tank, a packing gland secured to the lower end of said casing, a rod passing through said packing gland, a weight secured to the lower end of said rod, a second rod secured to the upper end of the rod first mentioned, a valve fixed to the rod second mentioned at its junction with the rod first mentioned, a cup shaped member secured to the upper end of the rod second mentioned and adapted to unseat the flush of the flush tank a U-shaped frame secured to the rod first mentioned adjacent its connection with its weight, rollers on the upper ends of the U-shaped frame, arms

extending from the pivoted seat for engaging the rollers to cause movement of the rods for unseating the flush valve and allowing the valve first mentioned to close the casing upon movement of the seat to operative position and to be unseated upon movement of the seat into inoperative position.

---

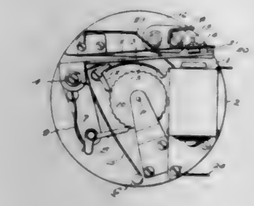
1,564,123. AUTOMOBILE SIGNAL. MOORES P. CLOUGH and NED H. NOYES, North Haverhill, N. H. Filed Jan. 21, 1922. Serial No. 530,891. 2 Claims. (Cl. 177—327.)



1. In a signal device of the character described, a casing, a supporting frame within the casing comprising an inverted U-shaped member having its ends secured to the bottom of the casing, a second frame member crossing the bridge portion of said U-shaped member and having extremities extending outward and then downward and the ends thereof secured to the bottom of the casing, a shaft journaled between the leg portions of said U-shaped member, a pinion fixed upon the shaft, an electro-magnet carried by each extremity of the second frame member, an armature supported for free swinging movement between the leg portions of the U-shaped member, said armature having its one end disposed between the electro-magnets and its other end formed with gear teeth and said teeth being in mesh with the pinion, and signal elements carried by said shaft.

---

1,564,124. OPERATING MECHANISM FOR TIME-PIECES. GEORGE H. COOPER, Hartford, Conn., assignor, by mesne assignments, to Newton D. Holbrook, Thomaston, Conn. Filed Apr. 8, 1922, Serial No. 550,625. Renewed June 5, 1925. 5 Claims. (Cl. 58—41.)



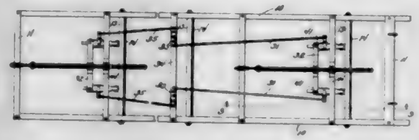
1. A time train driving mechanism comprising a supporting plate, an electro-magnet mounted thereon, a pair of armatures adapted to be attracted toward the magnet, one armature having a longer movement than the other, contacts on said armatures adapted to be engaged during a portion of the travel of the armatures toward the magnet, a spring for retracting the armature having the longer movement, and means comprising a ratchet and pawl adapted to be advanced by the retraction of the armature under the influence of said spring.

1,564,125. HOCKEY STICK, CRICKET BAT, AND LIKE SPORTING ARTICLE. GEORGE FREDERICK CORDWELL, London, England. Filed June 24, 1924. Serial No. 722,150. 2 Claims. (Cl. 273—67.)

2. A hockey stick having the curved striking portion thereof slotted within the length of such curved portion and extending parallel to the striking face, and a reinforce strip inserted in said slot, the grain of the strip being arranged at an angle to the normal grain of the head portion and parallel to the striking face, and means passing through the curved portion of the stick and strip to secure the strip in place.

---

1,564,126. SCRAPER. WILLIAM H. COURTNEY, Threerivers, Calif. Filed Mar. 18, 1925. Serial No. 16,478. 2 Claims. (Cl. 37—150.)



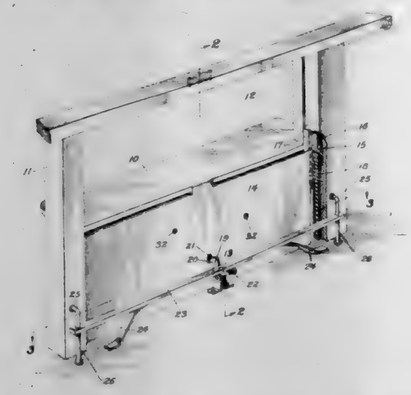
1. A machine of the character described comprising a frame adapted to repose upon the ground, scraping and leveling blades supported transversely thereof, and normally engaging the ground, wheels mounted on said frame and capable of both vertical and horizontal pivotal movement, means for simultaneously shifting said wheels to guide the machine, and means for lifting said frame and blades above the surface of the ground and with relation to said wheels, said last mentioned means including a beam pivoted above said frame, and connected therewith at a point between its ends, a bell crank lever pivoted on said frame, a link pivotally connecting one end of the lever to the adjacent end of the beam, and a block and tackle connection between the remaining ends of said lever and beam respectively.

---

1,564,127. PROTECTIVE DEVICE. ROYAL VINCENT CRAIG, Annadale, Prince Bay, N. Y. Filed June 12, 1925. Serial No. 36,727. 1 Claim. (Cl. 268—2.)

In a device of the class described, the combination with a window, a shield slidably mounted in the side walls thereof, springs for normally holding said shield in a raised position to cover the window opening, a pivotally mounted trigger, co-acting means between said

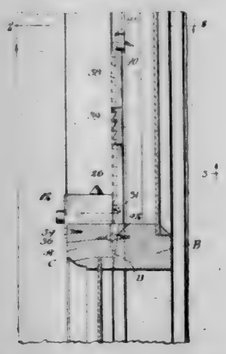
trigger and said shield for holding said shield in a concealed position behind said window, a tail extending from said trigger, a vertically movable treadle bar



in the path of said tail for releasing said co-acting means, and springs for normally holding said treadle bar out of engagement with said tail.

---

1,564,128. SASH LOCK. ROBERT CURTIS, SR., Jersey City, N. J., assignor of one-half to William A. Hager, Jersey City, N. J. Filed May 6, 1925. Serial No. 28,442. 4 Claims. (Cl. 292—175.)

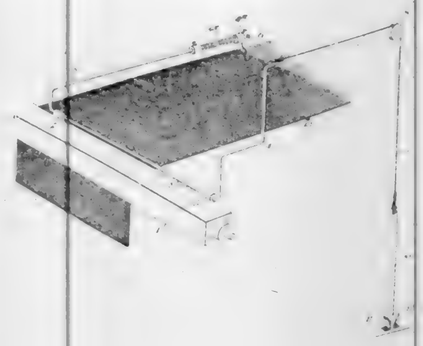


1. A sash lock comprising interengageable locking elements carried respectively by the upper and lower sashes for locking the same in closed or partially closed relation against relative movement to a further opened position and guide means carried by one of said elements for co-acting engagement with the other element to effect the alinement or registry of the elements with each other when out of alinement.

---

1,564,129. THIN-PLACE DETECTOR FOR LOOMS. JAMES MARION DAVIS and CECIL VERNON THOMAS, Newberry, S. C. Filed Jan. 16, 1923. Serial No. 613,079. 1 Claim. (Cl. 139—348.)

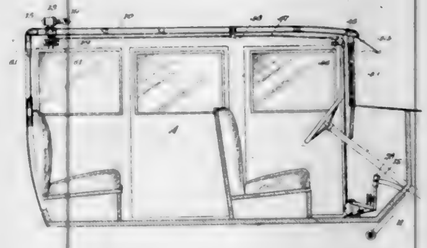
In a means for the purpose described, the combination of a rock shaft carried on the breast beam of a loom, a right angled disposed upstanding arm formed on one end of said rock shaft, a hook formed on the terminal of said right angled disposed upstanding arm, an upstanding portion formed on the oposite end of said rock shaft, a horizontally disposed arm formed on said upstanding portion and having its free end bifurcated, a spring pressed finger pivoted between the bifurcations, a cable fixed to said hook and having a pendent portion, a



weight on the end of said pendent portion and a pair of terminals in an electrical circuit arranged in spaced relation to be crossed by said weight as and for the purpose specified.

---

1,564,130. SIGNAL. JAMES L. DROHEN, Dunkirk, N. Y. Filed June 13, 1924. Serial No. 719,866. 2 Claims. (Cl. 74—81.)



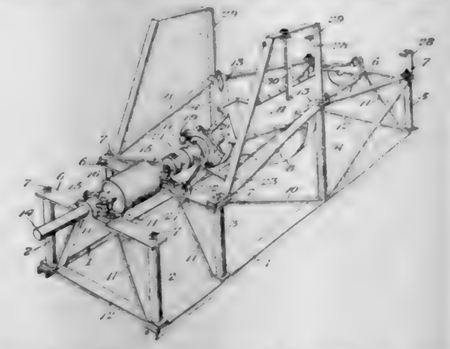
1. A signal operating mechanism including a gear associated with the signal, a toothed pivoted segment meshing with said gear, a sliding rod terminally connected with said segment and operable to control the movements of said signal, a pair of foot operated pedals adapted to be singly actuated, a connection between said pedals and segment, resilient means for automatically retaining said segment and signal to their normal positions when the operating pedal is released, and an adjustable connection between said rod and segment, whereby the throw of said pedal can be varied.

---

1,564,131. PORTABLE FRAME STRUCTURE FOR AUTOMOBILE ENGINES AND POWER-DELIVERING DEVICES. ISAAC A. DUNLAP, Wichita, Kans. Filed Feb. 26, 1924. Serial No. 695,371. 5 Claims. (Cl. 248—14.)

1. A portable frame structure including longitudinal base members spaced apart, vertical supports mounted on each of the base members, intermediate supports

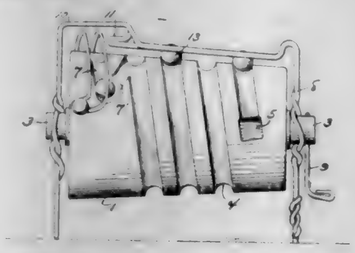
mounted on the base members between the vertical supports, and longitudinal truss rods secured to the upper



ends of the vertical supports and to the upper and lower ends of the intermediate supports for bracing said supports.

---

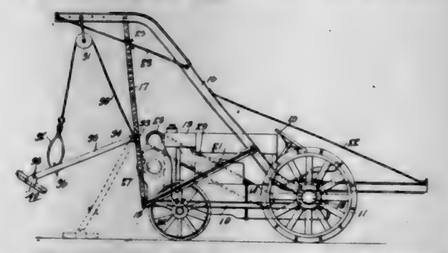
1,564,132. TOY. EDWARD E. FRANCE, Racine, Wis. Filed Jan. 21, 1925. Serial No. 3,857. 3 Claims. (Cl. 46—37.)



1. A device of the class described comprising a supporting frame, a member rotatably mounted therein and having a bore and a spiral groove on its exterior with passages connecting the ends of the grooves with the bore, means permitting the member to be rotated, a spherical member, means for holding the spherical member at the top of the rotatable member and to cause it to engage the spiral groove as the member is rotated and means for catching the spherical member as it leaves one of the holes and directing it into the spiral groove.

---

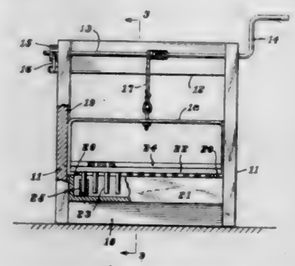
1,564,133. HOISTING MACHINE. LEVING FRASER, Osceola, Ark. Filed June 20, 1925. Serial No. 38,552. 7 Claims. (Cl. 212—145.)



1. The combination of a tractor having a front axle, a rear axle, and means for driving the same, of a drum carried by the tractor, means for driving the drum, a pair of beams secured to the rear axle and extending upward and forward therefrom beyond the front axle, a pulley at the forward ends of said beams, a cable passing from the drum over said pulley, and spuds attached to the forward end of the frame in position to supplant the front wheels for supporting a greater or less portion of the weight of the machine and adapted to contact with parts of the frame for preventing additional forward movement of the tractor, substantially as set forth.

---

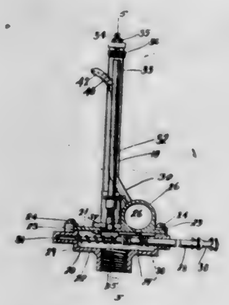
1,564,134. TOP-TORPEDO-FILLING MACHINE. PASQUALE GIANNONE, Norristown, Pa. Filed Jan. 2, 1923, Serial No. 610,241. Renewed Aug. 6, 1925. 2 Claims. (Cl. 86—20.)



1. In a device of the class described, the combination of a framework, a receptacle mounted in said framework, a vertically movable device mounted in said framework, a plate mounted on said vertically movable device and formed with a plurality of nipples on its lower face, a second plate removably supported by the first said plate and adapted to measure one of the ingredients, and means for operating said device to raise both of said plates as and for the purpose set forth.

---

1,564,135. AUTOMATIC GAS CUT-OFF FOR GAS WATER HEATERS. ABRAHAM J. GILDEN, New York, N. Y., assignor to Safety Gas Jet Co., Inc., New York, N. Y., a Corporation of New York. Filed July 23, 1923. Serial No. 653,389. 2 Claims. (Cl. 67—116.)

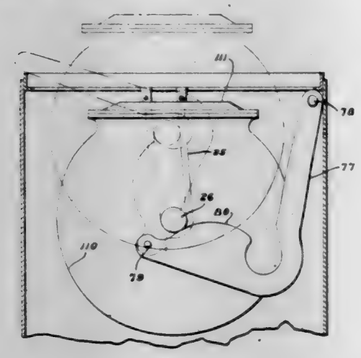


1. A device of the class described comprising a casing, a gas inlet and outlet in said casing, a sliding valve having a recess therein, means for normally holding said valve in a position adjacent said outlet, a thermostatic element having one end extending into said casing and adapted to co-act with the recess in said valve to hold same in an open position, means for rigidly securing the other end of said thermostatic element, said means including an arm extending from said casing for supporting said element, a burner tube having communication with

said outlet and adapted to be interposed between said arm and said thermostatic element to heat the latter for expanding said element into said recess.

---

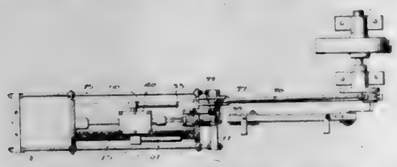
1,564,136. WASHING MACHINE. JOHN J. GRODEN, Philadelphia, Pa. Filed July 22, 1922. Serial No. 576,827. 3 Claims. (Cl. 62—18.)



2. In a washing machine, a casing, guides mounted at the opposite sides thereof, an oscillatory clothes container, trunnions on said container and slidably and rockably mounted in said guides, a substantially L-shaped lever pivotally mounted within said casing and having a cam portion engaging one of said trunnions for raising the clothes container upon movement of the lever in one direction.

---

1,564,137. STEAM ENGINE. JOHN HENRY LIVINGSTON, Holly Ridge, La. Filed Feb. 28, 1922. Serial No. 540,048. 1 Claim. (Cl. 121—50.)

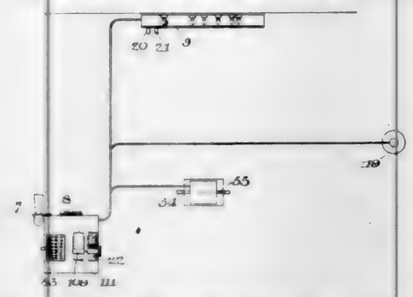


In a steam engine, a reciprocating cylinder, a piston arranged for reciprocatory movement in said cylinder, a crank shaft having crank pins, motion transmission means between the crank shaft and the cylinder, motion transmission means between the crank shaft and the piston, and valve mechanism including a valve and operating means therefor including an operating arm actuated from the cylinder connecting rod, a valve rod connecting with the operating arm, a link block connected with the valve rod, a link adjustably receiving the link block, a pedestal carried by the cylinder upon which the link is fulcrumed and a short rod between said link and the valve.

---

1,564,138. TESTING APPARATUS. ARTHUR J. ROWLAND, Milwaukee, Wis., assignor to The North American Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 12, 1923. Serial No. 624,545. 4 Claims. (Cl. 35—12.)

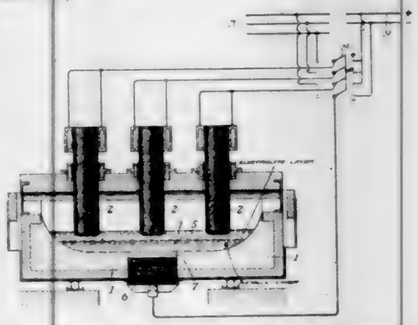
1. In a testing apparatus of the character described, the combination of means for indicating to the person being tested the response required, switch mechanism operable by said person for his response, electrically operated response-recording mechanism, means for visibly indicating to the person being tested his response during his training period, and means for rendering said visible



response indicating means ineffective and for rendering said recording mechanism operative during the test period.

---

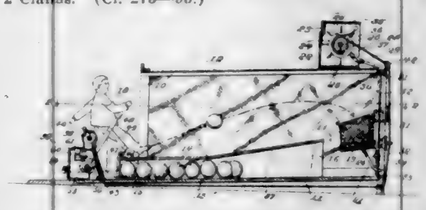
1,564,139. MANUFACTURE OF ALLOY STEELS AND IRONS. BYRAMJI D. SAKLATWALLA, Crafton, Pa. Filed Apr. 8, 1924. Serial No. 704,952. 9 Claims. (Cl. 204—19.)



1. The process of introducing an alloying metal into steel or iron, comprising forming a molten bath of steel or iron and a molten supernatant electrolyte bath containing an unreduced compound of the alloying metal, and reducing the alloying metal from such compound by electrolysis, substantially as described.

---

1,564,140. AMUSEMENT DEVICE. RYUJI SATO, New York, N. Y. Filed Sept. 13, 1923. Serial No. 662,502. 2 Claims. (Cl. 273—95.)



1. In a game apparatus, an inclosure, a receptacle arranged therein and including a pivoted bottom, a plurality of balls adapted to be singly kicked in the direction of the receptacle in an effort to deposit said balls therein, each ball opening the pivoted bottom of the receptacle as it passes through the latter, a scoring device, means automatically operable to actuate the scoring device with each opening of the bottom of said receptacle, and a runway arranged upon the bottom of the inclosure to receive said balls.

1,564,141. PROCESS FOR IMPREGNATING LIVING TREES. CARL SCHMITTUTZ, Bad Kissingen, Germany. Filed Oct. 11, 1924. Serial No. 743,097. 3 Claims. (Cl. 47—58.)

1. A method of impregnating living trees which consists in interrupting the continuity of the bark, and thereafter forcing impregnating liquid into the tree at such pressure as to drive out the sap at the points of interruption, substantially as set forth.

2. A method of impregnating living trees which consists in interrupting the continuity of the bark, thereafter forcing impregnating liquid into the tree at such pressure as to drive out the sap at the points of interruption, and allowing the tree to remain standing until it is dried out whereby the liquid is removed and the impregnating material remains in all parts of the tree, substantially as set forth.

3. A method of impregnating living trees which consists in interrupting the continuity of the bark, thereafter forcing impregnating liquid into the tree at such pressure as to drive out the sap at the points of interruption, and collecting the sap thus forced out of the tree, substantially as set forth.

---

1,564,142. UTILIZING SULPHITE CELLULOSE LYE. CARL GUSTAV SCHWALBE, Eberswalde, Germany. Filed Oct. 17, 1924. Serial No. 744,254. 4 Claims. (Cl. 44—16.)

1. A method of utilizing sulphite cellulose lye, consisting in mixing sulphite cellulose lye with chlorides of magnesium, calcium or sodium and heating the mixture under pressure to a temperature between 150° and 200° C.

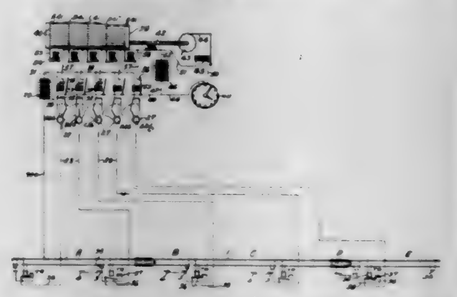
---

1,564,143. HAIR CLIPPER. DUSHAN S. SEKULITCH, Washington, D. C. Filed Oct. 30, 1924. Serial No. 746,816. 8 Claims. (Cl. 30—1.)

1. In a hair clipper, a pair of blades, one being slidable relative to the other, a spring for holding the sliding blade at its limit of movement in one direction, a pair of pivoted handles, a detachable connection between the handles and sliding blade, and means rendered active upon the movement of the handles to separate the pivot points of the handles and operate the sliding blade.

---

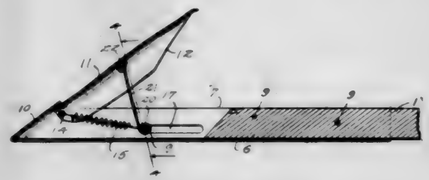
1,564,144. TRAIN-CONTROL SYSTEM. PAUL J. SIMMEN, Eden, N. Y. Filed Mar. 17, 1922. Serial No. 544,489. 17 Claims. (Cl. 246—4.)



12. In a railway train control system, in combination, a trackway divided into blocks, a train control rail for each block arranged on one side of the trackway, a source of current, manually operated elements, one for each block, located at a common remote point for connecting or disconnecting one terminal of the source with the track control rail, and means controlled by the presence of a train upon a block to which the effective operation of the correspondingly manually operated means is subject, thereby to prevent a regulation for clear trackway conditions falsely responsive to a corresponding operation of any of said manually operated elements.

---

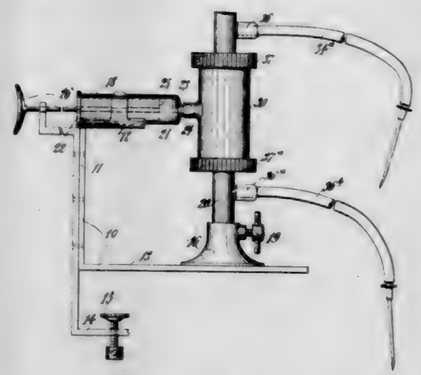
1,564,145. ATTACHMENT FOR STACKER TEETH. HANS L. SONDERUP, St. Paul, Nebr. Filed June 12, 1925. Serial No. 36,710. 4 Claims. (Cl. 214—144.)



1. In an attachment for stacker teeth, an element projecting from the end of a stacker tooth and connected thereto, a guard having its outer end pivotally connected to the element, yieldable means for moving the guard and holding the said guard elevated with respect to the element and operative to be depressed by the weight of the load passing over the guard, and means for arresting the guard in its outward movement to prevent said guard passing a position at right angles to the axis of the element.

---

1,564,146. APPARATUS FOR SURGICAL USES. ANGELO L. SORESI, New York, N. Y. Filed May 17, 1924. Serial No. 713,878. 8 Claims. (Cl. 128—214.)



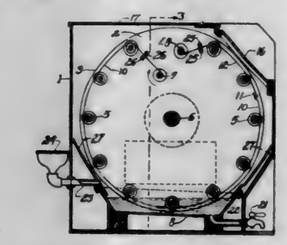
1. An apparatus for surgical uses comprising, a casing having a longitudinal bore therethrough and a transverse bore communicating with said longitudinal bore between its ends, a pump or syringe adapted to be connected with said transverse bore, end members adapted to removably engage the ends of said casing, said end members having bores through them communicating with the longitudinal bore in said casing and providing in conjunction therewith valve cavities, ball valves in said valve cavities for preventing the flow of fluid through said end members and casing in one direction, and inlet and outlet conduits communicating with the bores in the end members.

1,564,147. SINKER. JOHN W. STICKLEY and AARON T. ROSSIGNOL, Washington, D. C. Filed June 28, 1921. Serial No. 481,038. 3 Claims. (Cl. 43—52.)

1. In a device of the character described, a body of heavy material having parallel openings, and a releasing device of bent wire having means for attachment to a line, and having portions adapted to enter said openings, said portions being bent to hold them frictionally in said openings, substantially as set forth.

---

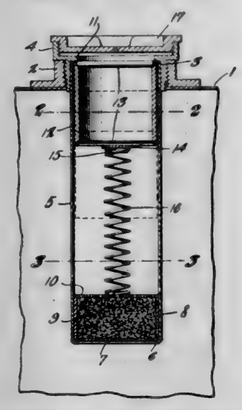
1,564,148. PHOTOGRAPHIC-DEVELOPING APPARATUS. JACOB SUMTER, New York, N. Y. Filed Feb. 3, 1922. Serial No. 533,751. 8 Claims. (Cl. 95—90.5.)



1. In a photographic developing apparatus, the combination of a casing, a revolvable drum in said casing, means for rotatably mounting a film cartridge on the drum, a reel rotatably mounted on said drum, a length of flexible material adapted to be wound on said reel and around said drum, said length having fastening means enabling it to pull on the film, whereby when the reel is rotated the film is caused to be pulled around said drum.

---

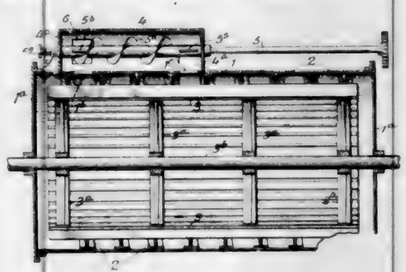
1,564,149. SAFETY DEVICE FOR TANKS. THOMAS THOMAS, Scranton, Pa. Filed June 17, 1925. Serial No. 37,806. 2 Claims. (Cl. 220—86.)



1. In combination with the supply tank for gasoline or other explosive liquids, of a safety filtering spout therefor, including a tubular member removably secured in the filler opening of the tank, an apertured receptacle for a filtering medium at the bottom of the tube, a hollow slidable member at the top of the tube having closely woven wire mesh at the ends thereof, spring means influencing the last mentioned member in an upward direction in the sleeve and a removable closure for the tube.

---

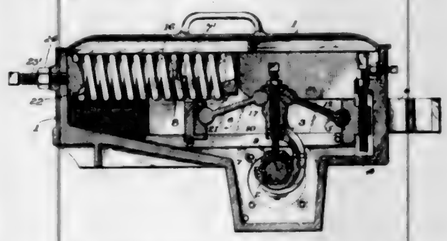
1,564,150. PRESSURE COOKER. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed July 18, 1922, Serial No. 575,879. Renewed Apr. 3, 1925. 21 Claims. (Cl. 126—272.)



1. A pressure cooking apparatus, comprising a cooking chamber in which pressure may be maintained above atmospheric and having a plurality of inlet ports, a tight housing covering the said ports, means in the housing whereby containers fed into the housing may be directed through any selected inlet port into the cooking chamber; and means in the cooking chamber for moving the containers therethrough from the point of entry thereinto to the point of discharge.

---

1,564,151. SELF-OILING HEAD MOTION. CHARLES E. THOMPSON, Denver, Colo., assignor to The Mine & Smelter Supply Company, Denver, Colo., a Corporation of Colorado. Filed May 15, 1919. Serial No. 297,197. 2 Claims. (Cl. 74—14.)



1. A head motion comprising a thrust-yoke, upper and lower thrust-guides, adjustable guide retainers, an eccentric shaft arranged below the thrust-yoke, a vertically adjustable toggle-seat arranged in alignment with said thrust-yoke, a pitman arranged between the inner end of said thrust-yoke and said vertically adjustable toggle-seat, toggles extending between said thrust-yoke and said adjustable seat and the outer end of said pitman, and a spring exerting pressure against the thrust-yoke.

---

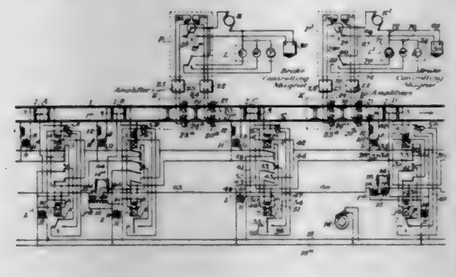
1,564,152. SAMPLE-DISPLAY FOLDER. JOHN M. THOMSON, Nutley, N. J. Filed Apr. 16, 1925. Serial No. 23,728. 2 Claims. (Cl. 35—17.)

1. A sample display folder comprising a back, covers hingedly connected to the longitudinal edges of the back, a display frame hinged at its upper end to the upper end of the back and provided with openings of the configuration of the waist and skirt of a dress, a series of panels hingedly connected together with one panel of the series secured to the back, the faces of alternate panels having secured thereto sample fabrics to be displayed through the openings in the frame when said frame has

been moved into position on a fabric carried by a particular panel, the faces of the panels adjacent the alternate faces being provided with samples of fabric corresponding in design to the main piece of fabric but having a different color scheme.

---

1,564,153. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. RALPH P. TUTTLE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1924. Serial No. 696,841. 1 Claim. (Cl. 246—63.)

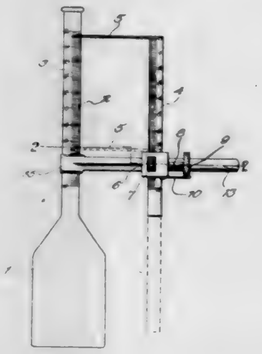


In combination, a stretch of railway track, a track relay having a first winding connected with the rails of the stretch and a second winding, an auxiliary relay having a first and a second winding, means for constantly supplying alternating current to the first winding of said auxiliary relay, a transformer for supplying alternating current to the rails of the stretch, means for supplying the primary of said transformer with alternating current of one relative polarity or the other depending on traffic conditions, means for connecting the second winding of said track relay in parallel with the primary of said transformer, means controlled by said track relay for at times connecting the second winding of said auxiliary relay in parallel with the primary of said transformer, and trackway signaling means controlled by said auxiliary relay.

---

1,564,154. MEASURING INSTRUMENT. ALFRED C. ULRICH, Horicon, Wis. Filed May 31, 1924. Serial No. 717,103. 2 Claims. (Cl. 33—143.)

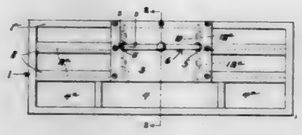
1. A means for ascertaining the butter fat in milk or cream in which a test bottle having a graduated neck is employed, said means comprising a scale graduated to correspond with the graduations on the neck of the test bottle, a finger on the upper end of the scale and at right angles thereto, a block through which the scale passes, means mounted on the block for moving the scale through the block, means on said block for preventing the



accidental movement of the scale through the block, and means for so clamping the block on the test bottle that the scale will be parallel to the neck thereof.

---

1,564,155. BALL RACK. MIKE VARGO, Yukon, Pa. Filed Apr. 24, 1925. Serial No. 25,698. 3 Claims. (Cl. 273—16.)



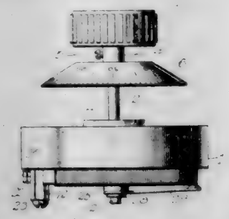
2. In a ball rack, a casing, shelves mounted in the casing at each end thereof and having ball supporting surfaces inclined downwardly and inwardly of the casing, a plate supported in front of the shelves at the inner ends thereof, a yoke slidable through the plate, means for urging the yoke outwardly of the plate, means for limiting outward movement of the yoke, and retaining members carried by the arms of the yoke and positioned to retain balls on the shelves when the yoke is in its normal outermost position, said members being moved out of the path of travel of the balls to permit the latter to be discharged from the shelves when the yoke is forced inwardly through the plate.

---

1,564,156. PROCESS OF MAKING FERROVANADIUM. LOUIS F. VOGT, Washington, Pa., assignor to Standard Chemical Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 26, 1924. Serial No. 758,090. 7 Claims. (Cl. 75—45.)

1. In the manufacture of ferro-vanadium, the steps consisting in forming a molten bath having thereon a slag layer containing vanadium compounds, and spreading on the top of the slag layer finely divided lime-containing fluxing material together with a finely divided silicon-containing reducing agent whereby the mixture fuses and the reducing agent gradually descends through the slag layer reducing vanadium therefrom as it descends.

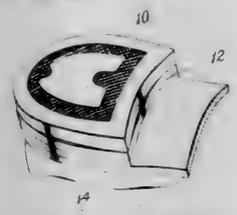
1,564,157. VARIABLE GRID LEAK. LAWRENCE WAINWRIGHT, Chicago, Ill. Filed Apr. 26, 1924. Serial No. 709,185. 2 Claims. (Cl. 201—48.)



1. The method of constructing a high resistance which comprises coating an insulating strip with a high resistance medium, winding said insulating member with a conductor, and removing those portions of said windings of said conductor overlying one edge of said strip.

---

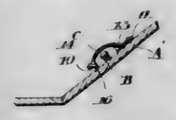
1,564,158. CUSHION HEEL. GEORGE E. WARREN, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 26, 1922. Serial No. 608,908. 5 Claims. (Cl. 36—35.)



1. A rubber heel normally of concavo-convex form deformable to flatness and having an unbroken edge surface of rubber from its tread face to its attaching face, having a relatively thin layer of substantially inextensible material at its attaching face so that the neutral axes of the heel lie approximately at its attaching face.

---

1,564,159. MOTOR-CAR STARTING-SWITCH PROTECTOR. HENRY WATSON and JOHN HENRY WATSON, Vernon, British Columbia, Canada. Filed June 22, 1922. Serial No. 570,224. 2 Claims. (Cl. 74—81.)



1. The combination with the button controlling the starting mechanism of an automobile motor, or the like, a portion of which normally projects through an aperture in the floor of the automobile, of a guard member mounted so that it may be moved into a position to cover or protect said button against being accidentally depressed, and a spring normally holding said member in its operative position.

---

1,564,160. GEAR. WILLIAM H. WEGERT, Racine, Wis. Filed May 14, 1924. Serial No. 713,322. 2 Claims. (Cl. 74—28.)

1. A gear comprising a plurality of toothed sections disposed in end to end relation, one of said sections having a hub extending through and forming the hub for the other of said sections, the end sections forming said gear being secured in fixed relation, a leaf spring secured in a radial recess in said hub, one of said toothed sections having a notch engaged by the end of said leaf

spring and holding the teeth of the said section out of alinement with the teeth of the other sections, substantially as set forth.

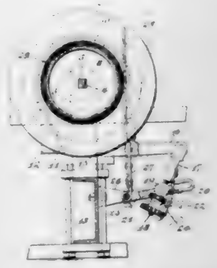
---

1,564,161. METHOD OF PROCEDURE FOR SENSITIZING KINOFILMS FOR POSITIVE COPIES BY MEANS OF SOLUTIONS OF BICHROMATE. ALFRED WEINGARTEN, Berlin, Germany. Filed Jan. 12, 1925. Serial No. 1,989. 1 Claim. (Cl. 95—7.)

A method of sensitizing kinofilms for positive copies, consisting in bathing the colloid in a solution of potassium bichromate, potassium ferro-cyanide and potassium bromide.

---

1,564,162. BEAM TENSION DEVICE FOR KNITTING MACHINES. OTTO C. WIESE, Brooklyn, N. Y. Filed Apr. 10, 1925. Serial No. 22,227. 2 Claims. (Cl. 66—12.)



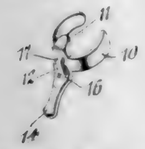
1. In a tension device for knitting machines, a friction device, a pivotally mounted arm connected with said friction device, a rod pivotally connected to said arm, a sleeve slidingly mounted on said rod and a manually actuated threaded member acting against said sleeve and rod for causing a tension on said friction device, a link carrying said sleeve, said sleeve being slidable along said link, a rock shaft rigidly secured to said link and adapted to swing the same so as to move said friction device in such a direction as to reduce the tension thereof, and a feeler arm rigidly secured to said rock shaft and adapted to cause the same to move in proportion to the movement of the knitting machine.

---

1,564,163. STORAGE BATTERY. ELMER HOWARD WILLIAMS, Monessen, Pa. Filed Apr. 21, 1925. Serial No. 24,843. 3 Claims. (Cl. 136—147.)

1. In combination with the plate of a storage battery, a spacer comprising a bar extending along the bottom edge of the plate to support it above the bottom of a battery container, and heads on the bar having slots in which the edge of the plate is fitted, said heads being in outstanding relationship to the sides of the plate and bar providing channels when two or more spacers are assembled in which active material falling from the plates may collect.

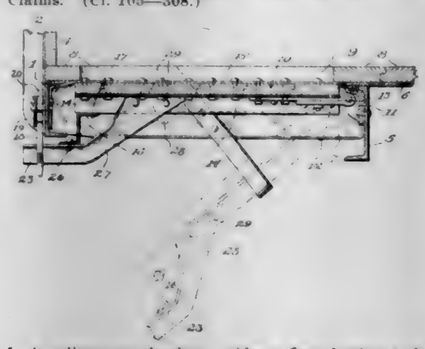
1,564,164. DENTAL CLASP. REGINALD V. WILLIAMS, Buffalo, N. Y. Filed Sept. 2, 1922. Serial No. 585,981. 6 Claims. (Cl. 32—12.)



2. A jointed ready-made dental clasp, comprising a band provided with a loop adapted to receive an anchoring spur, said loop consisting of a tongue formed integral with said band and extending upwardly from the lower edge thereof, the upper end of said tongue being bent toward the band.

---

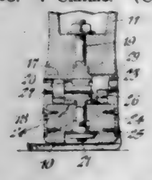
1,564,165. RAILWAY CAR. WILLIAM E. WINE, Toledo, Ohio. Filed June 23, 1923. Serial No. 647,374. 16 Claims. (Cl. 105—308.)



1. A railway car having a side, a floor having a door opening therein, a hinged door for said opening, door supporting means movably mounted upon the car side, a Z-bar stiffening member secured to the under face of said door and terminating adjacent the free edge thereof, and a door arm secured to said stiffening member, said arm being formed with a plurality of flanges one of which is adapted to engage said door supporting means to maintain said door in closed position.

---

1,564,166. ANKLE JOINT FOR ARTIFICIAL LIMBS. CHESTER B. WINN, Buffalo, N. Y. Filed Dec. 29, 1924. Serial No. 758,503. 7 Claims. (Cl. 3—6.)



1. An ankle-joint for artificial limbs, comprising a journal carried by the leg-member and having both convex and concave bearing surfaces, and opposed complemental concave and convex bearing surfaces applied to the foot.

---

1,564,167. WRENCH BLANK AND METHOD OF MAKING THE SAME. WILLIAM P. WITHEROW, Pittsburgh, Pa., assignor to Witherow Steel Company, Neville Island, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Jan. 5, 1922, Serial No. 527,202. Divided and this application filed Apr. 7, 1922. Serial No. 550,522. 6 Claims. (Cl. 76—114.)

1. In the method of making wrenches, the steps consisting in producing a connected series of wrench blanks, each having at least one enlarged head from which a nut-receiving socket is adapted to be formed and also having a handle-forming portion, there being flash along

a major part of the handle-forming portion separating the blanks, removing the flash and cutting away a portion of the head to form a nut-receiving socket, substantially as described.

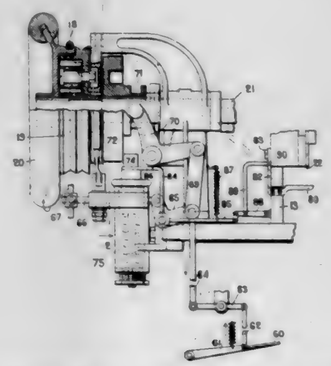
---

1,564,168. PROTECTIVE DEVICE FOR FENCES. ROY W. YOUNG, Elmore, Minn. Filed Mar. 14, 1924. Serial No. 699,255. 3 Claims. (Cl. 256—35.)

3. A brace of the character described formed from a single length of resilient material provided centrally with a loop adapted for engagement upon one wire of a fence and formed at both ends with reflexly extended portions defining hooks engageable with other wires of a fence for holding the wires relatively rigid.

---

1,564,169. SEWING MACHINE. FRANK W. ZALESKI, Boston, Mass., assignor to Reece Shoe Machinery Company, Boston, Mass., a Corporation of Maine. Filed Jan. 23, 1922. Serial No. 531,083. 2 Claims. (Cl. 112—252.)



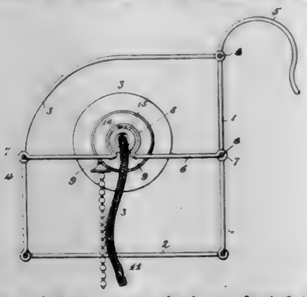
1. In a power driven chain stitch sewing machine an operating shaft, a curved hooked needle, connections from the shaft for reciprocating the needle to penetrate the work and receive the thread and to retract and draw a thread loop through the work, means for presenting the thread to the needle hook in each cycle, stopping mechanism operative at the completion of a seam to stop the machine in position with the needle retracted out of the work, a cutter movably mounted to approach and cut the thread between the hook of the retracted needle and the work, and means operated automatically in the final stitch cycle after the needle has retracted from the work and before the operating shaft comes to a stop to operate the cutter to cut the thread, and thereby release the work.

---

1,564,170. LAMP-SHADE FRAME. KORNEL C. BENGER, New York, N. Y. Filed Apr. 11, 1925. Serial No. 22,410. 4 Claims. (Cl. 240—108.)

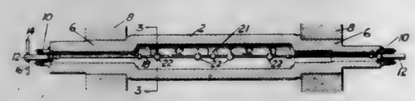
3. As a new article of manufacture, a lamp shade frame provided with an attaching bar having a loop intermediate its ends to receive the attaching nipple of

a lamp socket, said loop being provided with a mouth through which is adapted to be passed the conductor



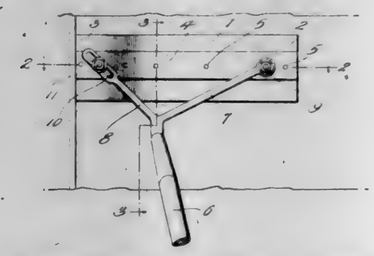
cord of the socket, a cam on the loop adapted to engage the usual set screw on the nipple for forcing the nipple tight against the loop.

1,564,171. MILL-ROLL-COOLING DEVICE. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 16, 1923. Serial No. 651,699. 13 Claims. (Cl. 18—2.)



1. A device for cooling a roll having an annular opening therein comprising means for conducting a cooling fluid into the opening, and means for directing the fluid against the inner surface of the roll and contra to the direction of rotation of the roll.

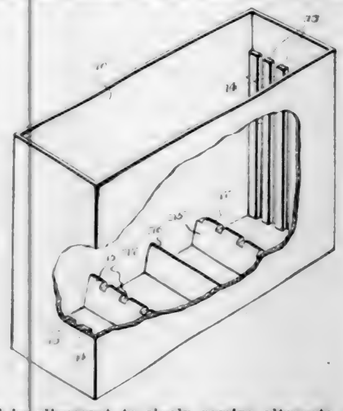
1,564,172. CEMENT TROWEL. EDWARD HARMAN BUSCH, Kendallville, Ind. Filed June 18, 1925. Serial No. 38,047. 3 Claims. (Cl. 94—45.)



1. A cement working tool comprising a resilient plate whose ends are relatively offset and adapted to be extended or retracted by springing the plate into different shapes, a tie member connected to one end of the plate, and means adjustably connecting the other end of said plate with said tie member to hold the plate in any shape to which it is sprung.

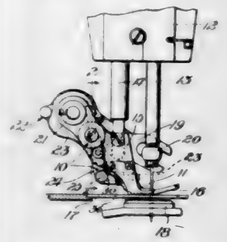
1,564,173. STORAGE-BATTERY COMPARTMENT. SIDNEY CHARLES FORD and WILLIAM ALFRED SHULER, New Orleans, La. Filed Mar. 3, 1924. Serial No. 696,578. 1 Claim. (Cl. 136—166.)

In a battery cell, vertically disposed spaced ribs extending along opposite walls of the cell, the ribs of one wall being offset laterally with respect to the ribs of the opposite wall and defining relatively offset grooves for receiving the edges of the cell elements, spaced vertically disposed ribs extending transversely of the bottom of the cell, and the last mentioned ribs being transversely notched to receive the lower edges of the cell elements, the notches of the transverse ribs being ar-



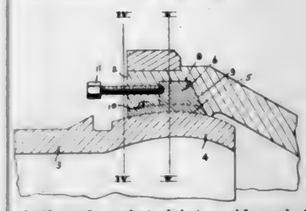
ranged in alignment to singly receive alternate cell elements and the notches of the opposed walls being arranged to receive alternate pairs of cell elements.

1,564,174. SPRING STRUCTURE FOR SEWING MACHINES AND THE LIKE. THOMAS J. HAYES, East St. Louis, Ill., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Apr. 27, 1923. Serial No. 635,006. 6 Claims. (Cl. 267—69.)



1. The combination with a suitable support and a working part of a high speed machine, of a spring structure for moving said working part comprising a wire spring having a butt-coil adapted to be contracted and a working extension therefrom that is connected to said working part, a barrel engaging the exterior only of said butt-coil and snugly investing said coil, and means for securing said barrel to said support.

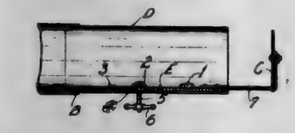
1,564,175. FLEXIBLE PIPE JOINT. CHARLES J. P. HOEHN, San Francisco, Calif., assignor to The Enterprise Foundry Co., San Francisco, Calif., a Corporation of California. Filed Apr. 1, 1924. Serial No. 703,534. 8 Claims. (Cl. 285—91.)



1. In a ball and socket joint, said socket provided with a space adjacent the ball and having pockets opening therefrom adapted to receive packing material,

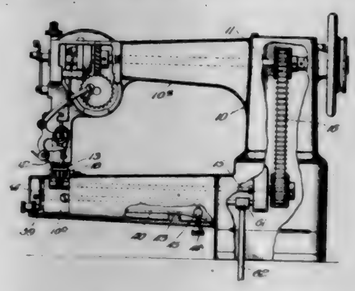
compression means for said material communicating with each pocket and having an axis of compressive movements at all times clear of the ball joint.

1,564,176. FUEL-SAVING DEVICE. FRANK S. MILLER, St. Louis, Mo. Filed Feb. 28, 1925. Serial No. 12,328. 1 Claim. (Cl. 126—285.)



A fuel saving device of the kind described, comprising a sleeve adapted to have one end of same inserted in the stove pipe opening of a flue, a bar reciprocatingly mounted on said sleeve, a member carried by said bar, and proportioned so that it can be introduced through said stove pipe opening and disposed so that it extends substantially parallel to the longitudinal axis of the flue, a manually-operable means for adjusting said bar during the operation of installing the device so as to enable said member to be set in the proper position with relation to the inner end of said sleeve, and means for preventing said bar from being moved in one direction far enough to cause said member to act as a closure for the end of said sleeve.

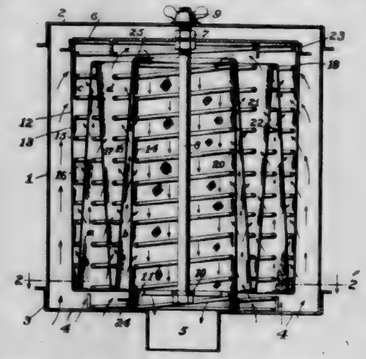
1,564,177. WORK-HANDLING MECHANISM FOR SEWING MACHINES. CHARLES W. MUELLER, St. Louis, Mo., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Apr. 30, 1923. Serial No. 635,458. 25 Claims. (Cl. 112—178.)



1. In a sewing machine, an abutment against which the work is to be pressed, a feed system movable relatively thereto comprising two relatively-movable elements being a clamped member capacitated for movement toward and from the abutment and a feed member capacitated for four-way movement relative to said abutment, yielding means acting on said system to press said elements toward the abutment, a single operating shaft, and means operated from said shaft for imparting to said clamp member and said feed member their respective movements relative to said abutment.

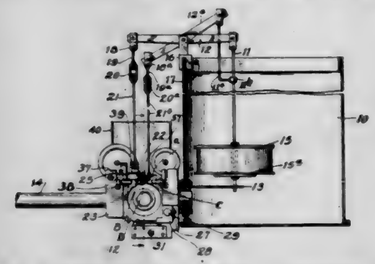
1,564,178. AIR CLEANER FOR AUTOMOBILE ENGINES AND THE LIKE. FREDERICK STRATTNER OREM, Baltimore, Md. Filed May 29, 1924. Serial No. 716,787. 2 Claims. (Cl. 183—71.)

1. In an air cleaner for automobiles, a casing having two opposed supports, a spiral spring seated on one support and extending towards, but free from contact with the other support, a spiral spring seated on said other support and extending towards but free from contact with the first support, said springs being concentric with each other, a tubular fabric supported at its opposite ends on said supports, and having its intermediate portion extending over the said springs in zig-zag form,



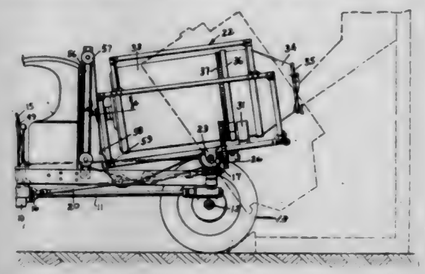
said casing having an inlet and an outlet for air, the said fabric being interposed between the inlet and outlet, substantially as described.

1,564,179. CONTROL FOR PIPES OF TANKS. HERBERT L. RIDENOUR, Hicksville, Ohio. Filed June 15, 1925. Serial No. 37,271. 3 Claims. (Cl. 137—68.)



2. In a control for pipes of tanks, a supporting frame adapted for attachment to a discharge pipe of an oil tank associated with a valve for such pipe, mechanism for moving the valve to an open and a closed position, a suitably operated valve arresting means, a float in the tank the gravity of which communicates motion to the valve arresting means, and an auxiliary device operated by the buoyancy of the float for communicating motion to the valve operating arresting means.

1,564,180. CONCRETE-HANDLING MACHINE. CARL L. WILLARD, Lynwood, Calif. Filed June 4, 1925. Serial No. 34,797. 7 Claims. (Cl. 83—73.)



1. In combination with a self-propelled vehicle, a concrete mixer barrel tiltably mounted upon the vehicle, means for rotating the mixer barrel by the propelling

means on the vehicle whereby the mixer may be operated while the vehicle is traveling, and means operable by the propelling means upon the vehicle for tilting the mixer barrel and returning it to its normal position while the mixer barrel is being rotated.

---

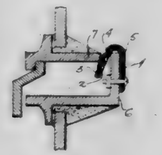
1,564,181. MANUFACTURE OF BRAN FOOD. JOHN LEONARD KELLOGG, Battle Creek, Mich., assignor to Kellogg Company, Battle Creek, Mich., a Corporation of Delaware. Filed Oct. 26, 1922. Serial No. 597,176. 8 Claims. (Cl. 99—11.)

1. A process for the preparation of a bran food, which comprises moistening a mixture of bran and an agent containing diastatic enzymes, converting the bran starches of the moistened mixture into malt sugars, by subjecting the same to heat, and then cooking, drying, disintegrating and toasting the converted product.

6. A bran food consisting preponderantly of bran, malt and malt sugars in a cooked, dried and disintegrated condition.

---

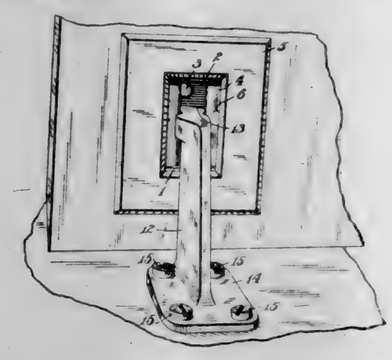
1,564,182. WEATHER STRIP. ALBERT A. MORSE, Chicago, Ill., assignor to Athey Company, a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,277. 2 Claims. (Cl. 20—69.)



1. A weather strip comprising a metal sheath partially folded for straddling an object, whereby two spaced flanges are provided; the longitudinal edges of the metal forming said sheath being spaced apart upon the exterior side of one of said flanges, and a pad confined in said sheath and projecting between said spaced edges.

---

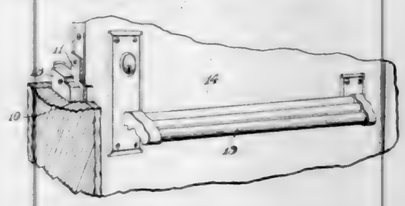
1,564,183. DOOR HOLDER. CARL J. PRINZLER, Indianapolis, Ind., assignor to Vonnegut Hardware Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 15, 1924. Serial No. 732,231. 3 Claims. (Cl. 292—17.)



1. A door holder comprising a cup arranged to be counter-sunk in a door, a U shaped spring having its legs contracted to form clips and its base secured to the bottom of said cup, mounted within said cup, a face plate for said cup, rearwardly extending lugs on the back of said face plate telescoping the sides of the cup, securing means extending through the sides of the cup and said lugs for fastening the plate and cup together and rearwardly extending screw threaded bosses on the rear face of said plate to receive screws for securing the same in position on the door, said screws being inserted from the opposite face of the door.

---

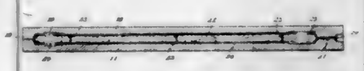
1,564,184. STRIKE FOR DOORLOCKS. CARL J. PRINZLER, Indianapolis, Ind., assignor to Vonnegut Hardware Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 3, 1925. Serial No. 34,657. 1 Claim. (Cl. 292—200.)



A door bolt strike comprising a main body having a rigid strike portion adapted to co-act with a movable lock element, a second strike portion supplementing the first strike portion, and means for yieldingly holding said second strike portion in normal bolt resisting position.

---

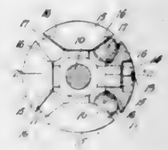
1,564,185. METHOD OF CASTING RADIATOR SECTIONS AND THE LIKE. CHARLES B. SEEM, Williamsport, Pa. Original application filed Oct. 7, 1924. Serial No. 742,141. Divided and this application filed Apr. 27, 1925. Serial No. 26,209. 1 Claim. (Cl. 22—200.)



A method of producing metal castings consisting in first carbonizing the cavities of a metal mold; second placing inserts in the core of the mold adapted to hold the core in position but primarily to act as supporting braces for the cast walls; third heating the mold to prevent chilling; fourth pouring metal into the mold and lastly removing the core from the casting when solid permitting the inserts to remain in the casting.

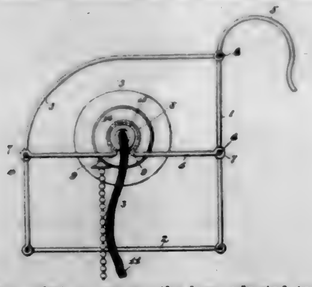
---

1,564,186. FLEXIBLE COUPLING. CLARENCE WINFRED SPICER and GURDON LUCIUS TARBOX, Plainfield, N. J., assignors to Spicer Manufacturing Corporation, a Corporation of Virginia. Filed July 16, 1924. Serial No. 726,358. 5 Claims. (Cl. 64—96.)



1. A flexible shaft coupling comprising two oppositely disposed hub members carrying a plurality of projections, members carried by these projections provided with bowl shaped cavities, balls of rubber or similar material disposed in said cavities and operating to flexibly connect the two parts of the coupling, means to radially move the aforesaid members whereby the compression of the balls may be regulated.

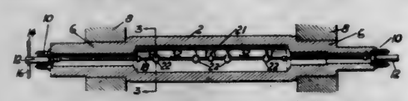
a lamp socket, said loop being provided with a mouth through which is adapted to be passed the conductor



cord of the socket, a cam on the loop adapted to engage the usual set screw on the nipple for forcing the nipple tight against the loop.

---

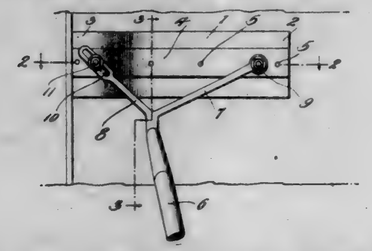
1,564,171. MILL-ROLL-COOLING DEVICE. ROY W. BROWN, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 16, 1923. Serial No. 651,699. 18 Claims. (Cl. 18—2.)



1. A device for cooling a roll having an annular opening therein comprising means for conducting a cooling fluid into the opening, and means for directing the fluid against the inner surface of the roll and contra to the direction of rotation of the roll.

---

1,564,172. CEMENT TROWEL. EDWARD HARMAN BUSCH, Kendallville, Ind. Filed June 18, 1925. Serial No. 38,047. 3 Claims. (Cl. 94—45.)

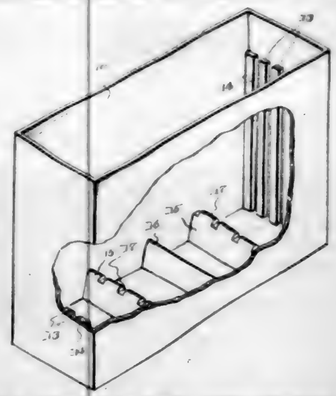


1. A cement working tool comprising a resilient plate whose ends are relatively offset and adapted to be extended or retracted by springing the plate into different shapes, a tie member connected to one end of the plate, and means adjustably connecting the other end of said plate with said tie member to hold the plate in any shape to which it is sprung.

---

1,564,173. STORAGE-BATTERY COMPARTMENT. SIDNEY CHARLES FORD and WILLIAM ALFRED SHULER, New Orleans, La. Filed Mar. 3, 1924. Serial No. 696,578. 1 Claim. (Cl. 136—166.)

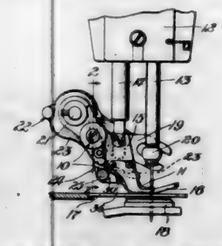
In a battery cell, vertically disposed spaced ribs extending along opposite walls of the cell, the ribs of one wall being offset laterally with respect to the ribs of the opposite wall and defining relatively offset grooves for receiving the edges of the cell elements, spaced vertically disposed ribs extending transversely of the bottom of the cell, and the last mentioned ribs being transversely notched to receive the lower edges of the cell elements, the notches of the transverse ribs being ar-



ranged in alignment to singly receive alternate cell elements and the notches of the opposed walls being arranged to receive alternate pairs of cell elements.

---

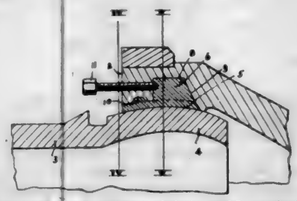
1,564,174. SPRING STRUCTURE FOR SEWING MACHINES AND THE LIKE. THOMAS J. HAYES, East St. Louis, Ill., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Apr. 27, 1923. Serial No. 635,006. 6 Claims. (Cl. 267—69.)



1. The combination with a suitable support and a working part of a high speed machine, of a spring structure for moving said working part comprising a wire spring having a butt-coil adapted to be contracted and a working extension therefrom that is connected to said working part, a barrel engaging the exterior only of said butt-coil and snugly investing said coil, and means for securing said barrel to said support.

---

1,564,175. FLEXIBLE PIPE JOINT. CHARLES J. P. HOEHN, San Francisco, Calif., assignor to The Enterprise Foundry Co., San Francisco, Calif., a Corporation of California. Filed Apr. 1, 1924. Serial No. 703,534. 8 Claims. (Cl. 285—91.)



1. In a ball and socket joint, said socket provided with a space adjacent the ball and having pockets opening therefrom adapted to receive packing material,

each pocket and having an axis of compressive movements at all times clear of the ball joint.

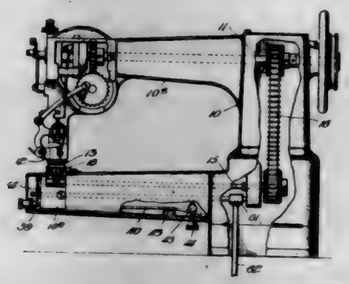
---

1,564,176. FUEL-SAVING DEVICE. FRANK S. MILLER, St. Louis, Mo. Filed Feb. 28, 1925. Serial No. 12,328. 1 Claim. (Cl. 126—285.)

A fuel saving device of the kind described, comprising a sleeve adapted to have one end of same inserted in the stove pipe opening of a flue, a bar reciprocatingly mounted on said sleeve, a member carried by said bar, and proportioned so that it can be introduced through said stove pipe opening and disposed so that it extends substantially parallel to the longitudinal axis of the flue, a manually-operable means for adjusting said bar during the operation of installing the device so as to enable said member to be set in the proper position with relation to the inner end of said sleeve, and means for preventing said bar from being moved in one direction far enough to cause said member to act as a closure for the end of said sleeve.

---

1,564,177. WORK-HANDLING MECHANISM FOR SEWING MACHINES. CHARLES W. MUELLER, St. Louis, Mo., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed Apr. 30, 1923. Serial No. 635,458. 25 Claims. (Cl. 112—178.)



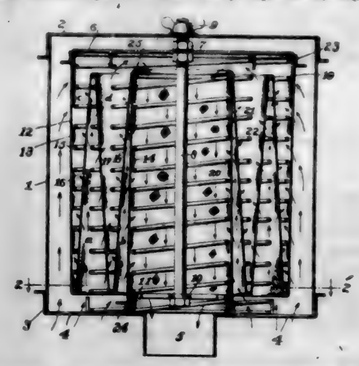
1. In a sewing machine, an abutment against which the work is to be pressed, a feed system movable relatively thereto comprising two relatively-movable elements being a clamped member capacitated for movement toward and from the abutment and a feed member capacitated for four-way movement relative to said abutment, yielding means acting on said system to press said elements toward the abutment, a single operating shaft, and means operated from said shaft for imparting to said clamp member and said feed member their respective movements relative to said abutment.

---

1,564,178. AIR CLEANER FOR AUTOMOBILE ENGINES AND THE LIKE. FREDERICK STRATTNER OREM, Baltimore, Md. Filed May 29, 1924. Serial No. 716,787. 2 Claims. (Cl. 183—71.)

1. In an air cleaner for automobiles, a casing having two opposed supports, a spiral spring seated on one support and extending towards, but free from contact with the other support, a spiral spring seated on said other support and extending towards but free from contact with the first support, said springs being concentric with each other, a tubular fabric supported at its oppo-

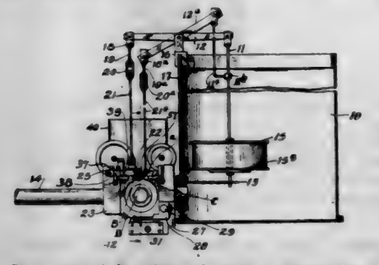
portion extending over the said springs in zig-zag form,



said casing having an inlet and an outlet for air, the said fabric being interposed between the inlet and outlet, substantially as described.

---

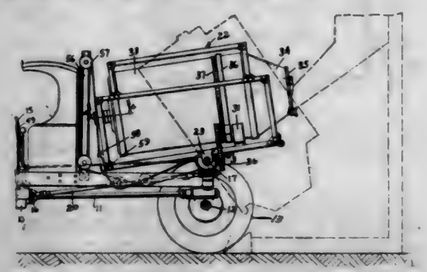
1,564,179. CONTROL FOR PIPES OF TANKS. HERBERT L. RIDENOUR, Hicksville, Ohio. Filed June 15, 1925. Serial No. 37,271. 3 Claims. (Cl. 137—68.)



2. In a control for pipes of tanks, a supporting frame adapted for attachment to a discharge pipe of an oil tank associated with a valve for such pipe, mechanism for moving the valve to an open and a closed position, a suitably operated valve arresting means, a float in the tank the gravity of which communicates motion to the valve arresting means, and an auxiliary device operated by the buoyancy of the float for communicating motion to the valve operating arresting means.

---

1,564,180. CONCRETE-HANDLING MACHINE. CARL L. WILLARD, Lynwood, Calif. Filed June 4, 1925. Serial No. 34,797. 7 Claims. (Cl. 83—73.)



1. In combination with a self-propelled vehicle, a concrete mixer barrel tiltably mounted upon the vehicle, means for rotating the mixer barrel by the propelling

means on the vehicle whereby the mixer may be operated while the vehicle is traveling, and means operable by the propelling means upon the vehicle for tilting the mixer barrel and returning it to its normal position while the mixer barrel is being rotated.

---

1,564,181. MANUFACTURE OF BRAN FOOD. JOHN LEONARD KELLOGG, Battle Creek, Mich., assignor to Kellogg Company, Battle Creek, Mich., a Corporation of Delaware. Filed Oct. 26, 1922. Serial No. 597,176. 8 Claims. (Cl. 99—11.)

1. A process for the preparation of a bran food, which comprises moistening a mixture of bran and an agent containing diastatic enzymes, converting the bran starches of the moistened mixture into malt sugars, by subjecting the same to heat, and then cooking, drying, disintegrating and toasting the converted product.

6. A bran food consisting preponderantly of bran, malt and malt sugars in a cooked, dried and disintegrated condition.

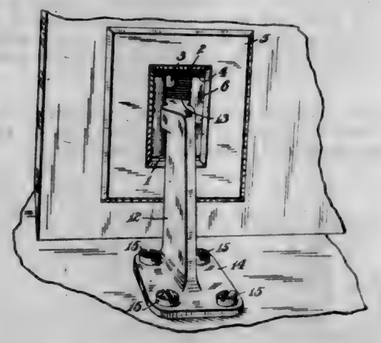
---

1,564,182. WEATHER STRIP. ALBERT A. MORSE, Chicago, Ill., assignor to Athey Company, a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,277. 2 Claims. (Cl. 20—69.)

1. A weather strip comprising a metal sheath partially folded for straddling an object, whereby two spaced flanges are provided; the longitudinal edges of the metal forming said sheath being spaced apart upon the exterior side of one of said flanges, and a pad confined in said sheath and projecting between said spaced edges.

---

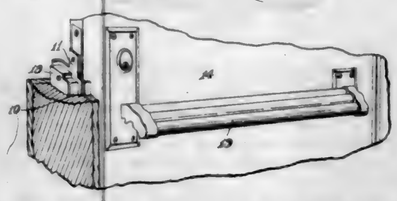
1,564,183. DOOR HOLDER. CARL J. PRINZLER, Indianapolis, Ind., assignor to Vonnegut Hardware Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 15, 1924. Serial No. 732,231. 3 Claims. (Cl. 292—17.)



1. A door holder comprising a cup arranged to be counter-sunk in a door, a U shaped spring having its legs contracted to form clips and its base secured to the bottom of said cup, mounted within said cup, a face plate for said cup, rearwardly extending lugs on the back of said face plate telescoping the sides of the cup, securing means extending through the sides of the cup and said lugs for fastening the plate and cup together and rearwardly extending screw threaded bosses on the rear face of said plate to receive screws for securing the same in position on the door, said screws being inserted from the opposite face of the door.

---

1,564,184. STRIKE FOR DOORLOCKS. CARL J. PRINZLER, Indianapolis, Ind., assignor to Vonnegut Hardware Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 3, 1925. Serial No. 34,657. 1 Claim. (Cl. 292—200.)



A door bolt strike comprising a main body having a rigid strike portion adapted to co-act with a movable lock element, a second strike portion supplementing the first strike portion, and means for yieldingly holding said second strike portion in normal bolt resisting position.

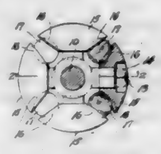
---

1,564,185. METHOD OF CASTING RADIATOR SECTIONS AND THE LIKE. CHARLES B. SEEM, Williamsport, Pa. Original application filed Oct. 7, 1924, Serial No. 742,141. Divided and this application filed Apr. 27, 1925. Serial No. 26,209. 1 Claim. (Cl. 22—200.)

A method of producing metal castings consisting in first carbonizing the cavities of a metal mold; second placing inserts in the core of the mold adapted to hold the core in position but primarily to act as supporting braces for the cast walls; third heating the mold to prevent chilling; fourth pouring metal into the mold and lastly removing the core from the casting when solid permitting the inserts to remain in the casting.

---

1,564,186. FLEXIBLE COUPLING. CLARENCE WINFRED SPICER and GURDON LUCIUS TARBOX, Plainfield, N. J., assignors to Spicer Manufacturing Corporation, a Corporation of Virginia. Filed July 16, 1924. Serial No. 726,358. 5 Claims. (Cl. 64—96.)



1. A flexible shaft coupling comprising two oppositely disposed hub members carrying a plurality of projections, members carried by these projections provided with bowl shaped cavities, balls of rubber or similar material disposed in said cavities and operating to flexibly connect the two parts of the coupling, means to radially move the aforesaid members whereby the compression of the balls may be regulated.

Patents Nos. 1,564,187 to 1,565,238.

# THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 341—No. 2. TUESDAY, DECEMBER 8, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

## ADJUDICATED PATENTS.

(D. C. N. Y.) The Kelner and Worms design patent, No. 43,459, for necktie, *Held* lacking invention. *Franklin Knitting Mills* v. *Gropper Knitting Mills*, 7 F. (2d) 381.

(C. C. A. N. Y.) The Gold patent, No. 886,969, for heating railway cars, *Held* invalid. *Vapor Car Heating Co.* v. *Gold Car Heating & Lighting Co.*, 7 F. (2d) 284.

(C. C. A. Conn.) The Burge patent, No. 930,527, for automatically-adjustable insulator house fixture, *Held* valid and infringed. *Line Material Co.* v. *Brady Electric Mfg. Co.*, 7 F. (2d) 48.

(C. C. A. Del.) The Smith patent, No. 943,280, for process of converting copper matte, *Held* valid and infringed. *United Verde Copper Co.* v. *Peirce-Smith Converter Co.*, 7 F. (2d) 13.

(D. C. N. Y.) The Bruckman patent, No. 1,071,027, for ice-cream-cone machine, claims 2, 3, 7, 23, 25, 33, 34, 35, 36, 64, 66, 67, and 69 *Held* valid and infringed. *McLaren Products Co.* v. *Cone Co. of America*, 7 F. (2d) 120.

(C. C. A. Ohio.) The Greenleaf patent, No. 1,068,069, for detonating device, claim 2 *Held* valid and infringed, claims 1 and 4 *Held* not infringed, and claim 5 *Held* invalid for lack of invention. *Safety Automatic Toy Co.* v. *Edwards Mfg. Co.*, 7 F. (2d) 92.

(C. C. A. Ohio.) The Baker patent, No. 1,095,775, for demountable-tire-carrying rims, claims 1, 2, 6, and 9 *Held* not infringed. *Universal Rim Co.* v. *Firestone Tire & Rubber Co.*, 7 F. (2d) 24.

(C. C. A. Calif.) The Wilson and Sumner patent, No. 1,203,295, for can-heading machine, claims 2 and 4 *Held* valid and infringed. *Angelus Sanitary Can Mach. Co.* v. *Wilson*, 7 F. (2d) 314.

(C. C. A. Pa.) The Ritts patent, No. 1,258,248, for a furnace for steam boilers, claims 1 and 3 *Held* not infringed. *Ladd* v. *W. & H. Walker*, 7 F. (2d) 72.

(C. C. A. N. Y.) The Lane patent, No. 1,300,178, for process for production of moving-picture text in white letters on black background, *Held* valid. *Lane* v. *Craftsmen Film Laboratories*, 7 F. (2d) 288.

(C. C. A. Pa.) The Stock patent, No. 1,339,299, for amusement device, claims 3 and 4, if valid, *Held* not infringed. *Stoehrer & Pratt Dodgem Corporation* v. *Lusse Bros.*, 7 F. (2d) 87.

(C. C. A. Me.) The Lionne patent, No. 1,339,462, for process of protecting white shoes during manufacture *Held* void for want of invention. *Lionne Co.* v. *Cushman-Hollis Co.*, 7 F. (2d) 83.

(C. C. A. Pa.) The Stoehrer patents, for motor-driven-car amusement device, claims 1 and 9 of No. 1,373,108 and claims 1 and 2 of No. 1,467,959 *Held* valid, but not infringed. *Stoehrer & Pratt Dodgem Corporation* v. *Lusse Bros.*, 7 F. (2nd) 87.

(C. C. A. Ohio.) The Hug patent, No. 1,421,237, for subgrading machine, *Held* invalid for lack of invention. *Hug* v. *Lakewood Engineering Co.*, 7 F. (2d) 98.

(C. C. A. R. I.) Finding on conflicting oral evidence that Blanchard patent No. 1,467,468 was not anticipated *Held* not clearly wrong. *Payton* v. *Ideal Jewelry Mfg. Co.*, 7 F. (2d) 113.

(C. C. A. Pa.) The Stoehrer patent, No. 1,478,979, for a system of electrically-charged ceilings and floors for transmitting power to amusement vehicles on the floor, *Held* not to involve invention. *Stoehrer & Pratt Dodgem Corporation* v. *Lusse Bros.*, 7 F. (2d) 87.

## Condition of Applications Under Examination at Close of Business November 27, 1925.

| Room No. | (Total number of applications awaiting action, excluding Trade-Mark Division, 39,462; Trade-Mark Division, 1,937. Oldest new case, May 10, 1925; oldest amended, May 15, 1925. The dates given are 1925.) DIVISIONS, EXAMINERS, AND SUBJECTS OF INVENTIONS. | Oldest new application and oldest action by applicant awaiting office action. New. | Amended. | No. of applications awaiting action. |
|---|---|---|---|---|
| 112 | 1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders. | Sept. 16 | Sept. 18 | 581 |

# DECISIONS IN PATENT AND TRADE-MARK CASES.

## Commissioner's Decisions.

### EX PARTE GILMAN.

*Decided July 25, 1924.*

CLAIMS—COMPREHENSIVE WORDS AND PHRASES—"MEANS," "MECHANISM," ETC.—SECTION 4888, REVISED STATUTES.

Claims drawn to a tool and a single means "for imparting to said tool * * * impacts to cause it to form a hole, and * * * impacts causing the same to move outwardly from said hole" cover all possible means for operating the tool and do not point out appellant's invention with sufficient particularity and distinctness to meet the requirements of section 4888, Revised Statutes. For this reason they are unpatentable.

Note.—This application has resulted in Patent No. 1,548,455, August 4, 1925.

Application for patent.

APPEAL from Examiners in Chief.

HAMMER DRILLS.

Application filed March 25, 1916, Serial No. 86,814.

*Mr. Horace L. Rockwell* for the applicant.

KINNAN, *First Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the final rejection by the Primary Examiner of claims 28 and 29.

The invention relates to a hole-forming device. The particular device disclosed in the application closely resembles that disclosed in appellant's Patent No. 1,126,628. It comprises a pneumatic hammer having a tool-retaining yoke engageable with the tool in front of its chuck-engaging shoulder. In the patent the yoke is for the purpose of preventing the tool from being ejected from the chuck by the reciprocating piston when the tool is out of engagement with the work. In the application the yoke is positioned more closely to the tool shoulder than it is in the patent. This arrangement prevents the shank end of the tool from moving beyond the path of the piston. This is advantageous in withdrawing the tool from a drilled hole, since in said withdrawing operation the tool is subjected to a hammering operation, which tends to loosen it in case it sticks in the hole. Similar mountings for the yokes are disclosed in the patent and in the instant application. The yoke ends are pivotally and yieldingly mounted upon the side rods of the hammer. The yielding means permit the yoke to be driven forward slightly by the tool and then react to force the tool rearwardly. It is this reaction that appellant relies upon for producing the impacts which cause the outward movement of the tool from the hole, as defined in the claims on appeal. The claims read as follows:

28. In a hole forming mechanism, a hole forming tool, and means for imparting to said tool a series of impacts to cause it to form a hole, and during withdrawal from a hole formed, and in the event of sticking in said hole, a series of impacts causing the same to move outwardly from said hole.

29. In a hole forming mechanism, a hole forming tool, and means for imparting to said tool at least one impact to form a hole and during withdrawal from a hole formed at least one impact causing the steel to move outwardly from the hole.

The Examiner held these claims anticipated by the patent to Murphy, No. 834,153, since they do not positively include any structure following the word "means" in line 2. Murphy attaches a collar at the front side of the tool shoulder and yieldingly attaches it by means of springs to another collar fastened on the tool end of his hammer cylinder. His purpose is the same as that of appellant—i. e., to hold the shank end of the tool in the path of the piston during the tool-withdrawing movement, so that the tool will be subjected to a hammering action tending to loosen it in the hole.

Appellant contends that since Murphy's collar is described as tightly clamped on the tool it and the connecting springs can not subject the tool to withdrawing impacts. It is believed that if such impacts occur in the operation of appellant's device they are very small, since the mass of the springs is not relatively great and their momentum would not carry the shoulder-engaging part more than a very limited distance beyond the drill shoulder, and their return impact would be slight. It is believed a similar and even increased effect would take place in the use of Murphy's device. The mass of his collar 18, 19 is relatively greater. Perhaps the abutting instead of tightly clamping connection between the tool and yoke in appellant's device augments these impacts, but the principle of operation is broadly the same in the two devices. In practice even if Murphy's clamp were reasonably tight at first wear would soon take place or some drills would be very slightly smaller, with the result that the drill would soon slip in the collar. The latter has no adjusting means. If the claims set forth any difference, and it is not believed they do, they fail to include any structure by which appellant accomplishes his alleged new result and do not for this reason patentably distinguish over the Murphy patent.

Indeed the claims in substance are drawn to a single means for operating a hole-forming tool in the manner defined. They cover all possible means for so operating the tool and do not point out appellant's invention with sufficient particularity and distinctness to meet the requirements of section 4888, Revised Statutes. *Ex parte Bitner*, 140 O. G. 256; 1909 C. D. 32; *In re Gardner*, 140 O. G. 258; 1909 C. D. 306; 32 App. D. C. 249. They are also unpatentable for this reason.

It is further noted that the appealed claims do not require the tool to be struck by the piston

during the withdrawal movements. They fail to distinguish from what appellant states on page 2 of his brief is an old mode of operation of prior devices—i. e., the running of the motor to set up vibrations as the tool is withdrawn. They are also unpatentable in view of the Gilman patent for this reason.

The decision of the Examiners in Chief is affirmed.

---

EX PARTE LINDSAY.

*Decided November 17, 1924.*

NEW MATTER—CLAIMS NOT SUPPORTED BY ORIGINAL DISCLOSURE.

Where a fabric is first impregnated with a fireproofing solution and then after it dries is treated with a waterproofing solution, and the specification and claims covering the invention contained no suggestion when filed of a composition consisting of ingredients of the two solutions, *Held* that claims covering such a mixture were not supported by the original disclosure.

Note.—This application has resulted in Patent No. 1,523,813, January 20, 1925.

Application for patent.

APPEAL from the Examiners in Chief.

FIREPROOF FABRIC AND PROCESS OF MAKING SAME.

Application filed December 14, 1917, Serial No. 207,116.

*Messrs. Edwards, Sager & Bower* for the applicant.

KINNAN, *First Assistant Commissioner:*

This is an appeal from the decision of the Examiners in Chief affirming the action of the Primary Examiner in finally rejecting claims 14, 15, and 18 to 22, inclusive, and requiring cancellation of the first single-spaced paragraph in the amendment filed on March 6, 1923.

The invention relates to a fireproof fabric suitable for use for various purposes, but particularly for use on airplane frames, and to the process of making the same. The fabric is secured to the frame with the ordinary degree of tightness and is then impregnated with a solution of ammonium phosphate, which renders it fireproof. The impregnated fabric is permitted to dry and is then treated with a solution of cellulose acetate and tricresylphosphate. This coating on drying shrinks the fabric and forms a tough pliable waterproof surface. The application discloses the use of either pyroxlin or cellulose acetate, but its claims involve the latter. It is not necessary to use as much tricresylphosphate with the acetate as with the nitrate. The application states that even none of the tricresylphosphate may be required with the acetate because acetyl cellulose alone is a substance of low inflammability.

The claims on appeal are drawn to mixtures contining more or less of the ingredients used in the separately applied solutions. The following claims will serve as examples:

14. A mixture comprising a cellulose ester and an aromatic phosphate and in close association therewith a fire retarding constituent adapted to give off a fire smothering gas in sufficient quantity to act effectively as a fire retarder.

18. A mixture comprising cellulose acetate and ammonium phosphate.

The principal ground of rejection taken is that the claims are not supported by the original disclosure, although claims 18, 21, and 22, which include only one fireproofing ingredient, were additionally rejected on the British patent to Dime, No. 17,497 of 1898.

The appealed claims are drawn to cover the composition formed by mixing the waterproofing and fireproofing ingredients prior to application to the fabric, as disclosed in the amendatory matter which the Examiner required to be canceled. The original disclosure contains no suggestion of such a composition, but appellant contends that the outer coating mixes to such extent with the previously-applied ammonium phosphate when the two are separately applied that the "mixture" claims on appeal are readable on the coated fabric prepared in the manner originally disclosed. The attempt to read these claims on the original disclosure is believed to require a too strained construction of the word "mixture". It seems clear that there is no such intermingling of the ammonium phosphate with the ingredients of the outer coating as would justify the claiming of the superposed layers as mixtures. It is believed the Examiners in Chief correctly held that the claims on appeal are not supported by the original disclosure and that the first single-spaced paragraph of the amendment filed on March 6, 1923, contains new matter and should be canceled.

It is not considered that claims 18, 21, and 22 patentably differentiate from the reference Dime. As pointed out above, these claims recite only one fire-reducing ingredient, and the ingredients disclosed in the reference are at least the equivalent of those recited in these claims.

Claim 21 was regarded as indefinite. It is broader than the original disclosure. The applicant has not disclosed that any of the large number of known plastic cellulose materials having less inflammability than pyroxylin will be useful for the purposes described, but has only disclosed two substances belonging to this large class. The claim is unpatentable, therefore, for this reason.

Appellant has presented in his brief a claim drawn to an article to overcome the ground of rejection advanced against his "mixture" claims. The claim reads:

An article having a surface of tough, plastic material, composed of cellulose acetate plasticized by an aromatic phosphate, said material containing as a fire retarding agent, ammonium phosphate.

This claim appears patentable over the cited art and supported by the original disclosure. In the absence of new references or reasons presented by the Examiner it will be allowed if presented by proper amendment and before appeal to the court from this decision, if such appeal is to be taken.

The decision of the Examiners in Chief is affirmed.

FITZPATRICK BROTHERS *v.* B. HELLER & COMPANY.

*Decided October 31, 1925.*

1. TRADE-MARKS—ACT OF 1920—PURPOSE OF—MARKS REGISTRABLE THEREUNDER.

In order to place our citizens on the same footing as foreigners with respect to several classes of marks which might lawfully be used, but which were refused registration under the act of 1905, such as descriptive words, geographical words, names of individuals, corporations, etc., the act of March 19, 1920, was passed, providing for registration of trade-marks which were not against public policy and which are forbidden registration under the act of 1905.

2. SAME—SAME—SALIENT FEATURES OF—AUTHORITIES REVIEWED.

It has been held with respect to this act that—

(*a*) A descriptive mark may be registered.

(*b*) A corporation name may be registered.

(*c*) Registrations may be granted without publication for opposition.

(*d*) There is no provision for interferences.

(*e*) Marks may be canceled in a manner similar to cancellation proceedings under the act of 1905.

(*f*) The mark must have been in exclusive use for one year prior to the application for registration.

(*g*) The mark must have been used as a trade-mark.

(*h*) A label is not registrable.

(*i*) Registrations possess substantially all the attributes of registration under the act of 1905 excepting that they do not become prima facie evidence of ownership of the mark.

(*j*) Registrations may be assigned.

(*k*) The decision of the Commissioner of Patents is final.

(*l*) A mark for use on goods of the same descriptive properties and similar to the mark of another may not be registered.

(*m*) A mark may not be registered if it includes the mark of another used on similar goods.

3. SAME—DESCRIPTIVE PROPERTIES—CLEANING AND WASTE-PIPE-OPENING POWDERS.

A powdered mixture of soap and sand intended for cleaning and scrubbing has substantially the same descriptive properties as a waste-pipe opener which is a powder, but very much more vigorous in its action than mere soap, and which is not particularly adapted to cleaning and scrubbing, while the mixture of soap and sand may not open stopped-up drains.

4. SAME—DECEPTIVE SIMILARITY.

Where the subject matter of two marks is the same and to the casual observer there probably will remain more impression of similarity than of difference, the use of both by different owners on the same class of goods would be confusing notwithstanding the fact that one is distinguishable from the other on careful examination.

APPEAL from Examiner of Interferences.

Cancellation No. 1,110 of trade-mark registration of B. Heller & Company issued July 29, 1924, No. 187,334.

WASTE PIPE AND DRAINPIPE.

*Mr. J. H. Jochum, jr.*, for Fitzpatrick Brothers.

*Mr. C. N. Leach* for B. Heller & Company.

FENNING, *Assistant Commissioner:*

Fitzpatrick Brothers appeal from the action of the Examiner of Interferences dismissing their petition to cancel Trade-Mark No. 187,334, registered under the act of March 19, 1920, on July 29, 1924, for waste pipe, drainpipe, and sink opener and cleaner. The mark consists of the words "$1000.00 Guaranteed Ozo Waste Pipe Cleaner," below which in a fancifully-shaped panel appears the picture of a kitchen sink into which a maid standing before a window is shaking a box of registrant's goods. Registrant alleges that it also owns registrations Nos. 144,659, 108,515, 108,514, 111,727, 106,958, by which it has registered various parts of the mark here in issue. One registration, for instance, is merely "Ozo;" another, "$1000.00 Guaranteed."

It appears that petitioners own trade-mark registrations Nos. 107,516, 114,233, 144,215, 145,360. Petitioners particularly rely upon the fact that they manufacture a cleaning powder made up largely of fine sand and soap, which they sell in a package marked "Kitchen Klenzer," a single initial "K" being used for both words, below which is a picture of a kitchen, including a stove, a water boiler, a sink, a clock, and a table on which are some pans and a package of petitioner's goods. Within the kitchen is the representation of a maid looking at her reflection in the polished bottom of a pan. The label was used prior to any date set up by registrant.

[1] Since the certificate of registration here involved was issued under the act of 1920, it is of interest to consider that act. The legislative history of the act is set out in *Ex parte Calumet Steel Company*, 339 O. G. 761. There were several classes of marks which might lawfully be used, but which were refused registration under the act of 1905, such as descriptive words, geographical words, names of individuals, corporations, etc. The courts sometimes give protection to those marks, and in many foreign countries they are registrable marks. In order to place our citizens on the same footing as foreigners with respect to those marks (*Postum Cereal Co.* v. *California Fig Nut Co.*, 313 O. G. 454; 1923 C. D. 43), the act of March 19, 1920, was passed providing for registration of trade-marks which were not against public policy and which are forbidden registration under the act of 1905. (*Ex parte Reo Motor Car Company*, 341 O. G. 4; *Caulk Co.* v. *Garhard Dental Specialty Co.*, 338 O. G. 969; *Ex parte Pitney-Bowes Postage Meter Co.*, 146 MS. Dec. 149.)

[2] (*a*) A descriptive mark may be registered. *Wright* v. *Sar-A-Lee Co.*, 328 O. G. 787; 1924 C. D. 114.

(*b*) A corporation name may be registered. *Certain-teed Products Corporation* v. *Clark*, 337 O. G. 476; *American Stove Co.* v. *Lackawanna Foundry Co.*, 338 O. G. 970; *Ex parte Gallaher, Limited*, 340 O. G. 842.

(*c*, *d*) These registrations are granted without publication for opposition, and there is no provision for interferences with respect to them. *Lincoln Paint and Color Co.* v. *American Paint Works*, 318 O. G. 3; 1924 C. D. 1; *State Oil* v. *Hickok Producing Co.*, 313 O. G. 231; 1923 C. D. 40.

(*e*) They may be canceled, however, in a manner similar to cancellation proceedings under the act of 1905. *Dr. S. A. Richmond Nervine Co.* v. *Dr. Miles Medical Co.*, 313 O. G. 3; 1923 C. D. 36; *Climax Rubber Co.* v. *U. S. Compression Inner Tube Co.*, 313 O. G. 453; 1923 C. D. 41.

(*f*) In order to be eligible for registration under the act of 1920 the mark must have been in exclusive use for one year prior to the application for registration. *Postum Cereal Co.* v. *California Fig Nut Co.*, 313 O. G. 453; 1923 C. D. 43; *Nafziger Baking Co.* v. *Ward Bros.*, 324 O. G. 799; 1924 C. D. 162; *American Printing Ink Co., etc.*, v. *American Printing Ink Co., etc.*, 331 O. G. 486; *American Woodworking Machinery Co.* v. *American Saw Mill Machinery Co.*, 332 O. G. 491.

(*g, h*) In order to be registrable, however, the mark must have been used as a trade-mark. *Ex parte Marret et al.*, 308 O. G. 231; 1923 C. D. 16; *Ex parte Keyless Auto Clock Co.*, 309 O. G. 223; 1923 C. D. 25; *Ex parte Maginley*, 329 O. G. 264; 1924 C. D. 145; *Ex parte Ashaway Line & Twine Mfg. Co.*, 329 O. G. 264; 1924 C. D. 146; *Ex parte Silk Co.*, 329 O. G. 266; 1924 C. D. 150; *Ex parte Greening Nursery Co.*, 340 O. G. 840; *International Shoe Co.* v. *Niagara Shoe Co.*, 340 O. G. 838; *Ex parte Calumet Steel Company*, 339 O. G. 761; *Ex parte Holt*, 340 O. G. 557. A label is not registrable. *Ex parte Standard Oil Co.*, 328 O. G. 785; 1924 C. D. 110.

(*i*) While the original purpose of the bill which subsequently became the act of 1920 was to place the marks on the register for the purpose of allowing them to be registered abroad, there was also included in the law as passed legislation giving to registrations under the 1920 act substantially all the attributes of registration under the act of 1905, excepting that they do not become prima facie evidence of ownership of the mark. *Rouss Inc.* v. *Winchester*, 300 Fed. 706.

(*j*) The registrations of such marks may be assigned. *Coty* v. *Parfums, etc.*, 298 Fed. 865.

(*k*) The decision of the Commissioner of Patents is final, no provision being made by the act of 1920 for appeal to the Court of Appeals of the District of Columbia. *U. S. Compression Inner Tube Co.* v. *Climax Rubber Co.*, 312 O. G. 400; 1923 C. D. 211; 53 App. D. C. 370.

(*l, m*) A mark which is similar to the mark of another on goods of the same descriptive properties may not be registered. *Macy & Co. Inc.* v. *The Macey Co., Inc.*, 295 O. G. 463; 1922 C. D. 2; Opinion of the Solicitor, 277 O. G. 181; 1920 C. D. 89; *Interwoven Stocking Co.* v. *David Harris & Eisner*, 329 O. G. 11; 1924 C. D. 139; *Frolaset, etc., Co.* v. *Boyshform, etc., Co.*, 335 O. G. 539. A mark may not be registered under the act of 1920 if it includes the mark of another used on similar goods. *Ex parte Jacobs & Sons, Inc.*, 336 O. G. 754; *Montevallo Mining Co.* v. *Montevallo-Straven Coal Co.*, 336 O. G. 509.

In the present case we find petitioners urging that the registered mark must be canceled for the reason that it is applied to goods of the same descriptive properties as petitioners' mark and that the registered mark includes as a prominent part substantially the same mark as petitioners use.

[3] Specifically, petitioners urge that their goods, which consist of a powdered mixture of soap and sand intended for cleaning and scrubbing, are materials of substantially the same descriptive properties as the waste-pipe opener of registrant, which is a powder, but very much more vigorous in its action than mere soap, and is not particularly adapted to merely cleaning and scrubbing. I am unable to hold with registrant on this point. Both articles belong in the broad field of cleaning and scrubbing and, following the rule set out by the court of appeals in *E-Z Waist Co.* v. *Reliance Mfg. Co.*, 311 O. G. 709; 1923 C. D. 197; 52 App. D. C. 291, we must resolve doubts of the similarity of goods against the newcomer. It may be that petitioners' goods will not actually open stopped-up drains, and the evidence tends to indicate this, but that is not the controlling question here. There is a reasonable possibility of confusion of reputations among the public using the goods of the two parties. *Oppenheim, Oberndorf & Company, Inc.*, v. *President Suspender Company*, 332 O. G. 5; 8 Fed. (2d) 88. It is not necessary that actual confusion be proved. Some field must be left open for the extension of the business of petitioners.

[4] The picture employed by registrant is distinguishable on careful examination from that of petitioners. Nevertheless, the subject matter is the same, and to the casual observer there probably will remain more impression of similarity than of difference. Following the rule set down by the court of appeals in *Waltke & Co.* v. *Schafer*, 273 O. G. 630; 1920 C. D. 167; 49 App. D. C. 254, we must resolve any doubt we might have in this respect against the newcomer, who is the registrant.

In view of the possibility of confusion the petition for cancellation must be sustained.

The Examiner of Interferences is reversed.

---

EX PARTE THE AMERICAN NEWS COMPANY, INC.

*Decided October 31, 1925.*

LABELS—DESCRIPTIVE OF GOODS—POSSIBILITY OF USE TO DESCRIBE SERVICE.

Where the applicant has presented a label "designed to be used for any other articles of manufacture" within section 3 of the act of June 18, 1874, the mere fact that after the articles of manufacture bearing the label pass out of applicant's possession the label may be used by the purchaser to indicate a library service can not affect his right to copyright protection.

ON APPEAL.

Application for registration of label for bookcases, bookracks, grouped book shelves and cases, racks, receptacles, and groups of shelves filled with books.

*Mr. Charles McC. Chapman* for the applicant.

FENNING, *Assistant Commissioner:*

This is an appeal from the action of the Examiner of Trade-Marks refusing to register as a label for bookracks, grouped book shelves and cases, racks, receptacles, and groups of shelves filled with books a two-colored placard bearing the words "Read Any Good Book Which You Can Rent by the Day or Week, the Readmore Lending Library, the Best Authors, Latest Fiction."

The Examiner's refusal is based on the ground that the specimens sought to be copyrighted are descriptive of services and not of articles of manufacture. It may be that the label includes some suggestion of service. It appears, however, that applicant does not use the label to indicate service rendered by it. Applicant is a distributor of newspapers, magazines, periodicals, and books. The label here involved is placed by applicant at the top of a bookcase. The bookcase is then sold for a cash consideration to a retail merchant. Generally with the bookcase is sold a number of books, on each of which is placed a paper cover, bearing the label. That is the end of the transaction so far as applicant is concerned, although applicant stands ready to furnish additional bookcases bearing the label or additional books bearing the label.

It seems clear that this procedure on the part of applicant indicates that it actually has presented a label "designed to be used for any other articles of manufacture" within section 3 of the act of June 18, 1874. The mere fact that after the articles of manufacture bearing the label pass out of applicant's possession the label may be used by the purchaser to indicate a library service can not affect applicant's right to copyright protection.

The Examiner of Trade-Marks is reversed, and the label will be accepted for registration.

Attention is called to the fact that the application for registration indicates that the label was first published on the first day of October, 1924. The notice of copyright carried by the label reads "Copyright 1925." Since the hearing applicant has filed papers attempting to correct this variation, which papers will be considered by the Examiner before the certificate of registration is issued.

---

## ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,520,556, A. E. Beckwith, Fishing tilt, decided November 16, 1925, claim 1.

Pat. 1,542,071, W. D. McKeon, Socket wrench, decided October 27, 1925, claim 3.

### Interference Notices.

U. S. PATENT OFFICE, *Washington, Nov. 20, 1925.*

*Franklin M. Risk, his assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of J. N. Adams & Co., Buffalo, N. Y., for registration of a trade-mark and trade-mark registered August 29, 1916, No. 112,312, to Franklin M. Risk, 7139 St. Lawrence Avenue, Chicago, Ill., and a notice of such declaration sent by registered mail to said Risk at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Risk, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Nov. 13, 1925.*

*Anne E. Rawlins, her assigns or legal representatives, take notice:*

An interference having been declared by this Office between the application of Fitzpatrick Bros., 1319 West Thirty-Second Place, Chicago, Ill., for registration of a trade-mark and trade-mark registered May 8, 1910, No. 77,755, to Anne E. Rawlins, 2270 South Jefferson Avenue, St. Louis, Mo., and a notice of such declaration sent by registered mail to said Rawlins at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Rawlins, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

### Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Nov. 17, 1925.*

*American Beverage Co., Inc., its assigns or legal representatives, take notice:*

A cancellation proceeding having been instituted by this Office upon the application of Artemas W. Deane, of 129 South Fremont Street, Los Angeles, Calif., to effect the cancellation of the trade-mark registration of American Beverage Co., Inc., Atlanta, Ga., No. 58,908, dated December 25, 1906, and the notice of such proceeding sent by registered mail to the said American Beverage Co., Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said American Beverage Co., Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN, *Acting Commissioner.*

# TRADE-MARKS

## OFFICIAL GAZETTE, DECEMBER 8, 1925.

[VOL. 341. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 165,636. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MECHANICAL MIXERS CORPORATION, New York, N. Y. Filed June 17, 1922.

SPEEDMIXER

*Particular description of goods.*—Electrically-Operated Drink Mixers.

*Claims use* since June 15, 1921.

Ser. No. 176,018. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE FAIR, Chicago, Ill. Filed Feb. 14, 1923.

"PROTEX"

*Particular description of goods.*—Sanitary Belts, Sanitary Aprons, Sanitary Bloomers, Rubber Baby Pants, Rubber Hot-Water Bottles, and Rubber Fountain Syringes.

*Claims use* since Dec. 1, 1922.

Ser. No. 181,408. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) JULIUS LOEWITH, New York, N. Y., assignor to Julius Loewith Inc., New York, N. Y. Filed May 31, 1923.

*Particular description of goods.*—Seeds—Namely, Clover, Grass, Field, Garden, Flower, and Forest-Tree Seeds.

*Claims use* since January, 1914.

Ser. No. 182,767. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) PACIFIC STATES ELECTRIC CO., San Francisco, Calif. Filed July 3, 1923.

"Check" Seal

*Particular description of goods.*—Electrical Apparatus and Fixtures, as Follows: Electric-Lamp Sockets, Lamp Bases and Parts Thereof, Switches and Parts Thereof, Plugs and Sockets and Parts Thereof, Fuse-Plug Cut-Outs and Parts Thereof, Panel Switches, Plugs, Fuses, Fuse Wire, Outlet Boxes and Parts Thereof, Switch Boxes and Parts Thereof, Conduits and Parts Thereof, Terminals, Connecters, Sleeves, Pot Heads, Bells, Buzzers, Gongs, Annunciators, Door Openers, Telephones, Intercommunicating Telephone Systems and Parts Thereof, Fire-Alarm Systems, Sirens, Batteries and Parts Thereof, Spark Coils, Electric-Lighting Fixtures, Brackets and Parts Thereof, Electric Lamps, Electric Flood Lighting Projectors; Electric Irons—Namely, Sadirons, Soldering Irons, Curling Irons; Coffee Percolators, Stoves, Grills, Ovens, Toasters, Electric Ranges, Electric Vacuum Cleaners, Electric Sewing Machines, Electric Drink Mixers, Electric Air Blowers, Electric Motors, Electric Grinders, Drills and Parts Thereof, Electric Fans, Electric Flash Lights, Electric Switch Panels, Transformers, Battery Chargers, Mercury-Arc Rectifiers, Rheostats, Thermostats and Parts Thereof for Operating Electric Switches and the Like; Wire, Bare and Covered; Porcelain and Glass Insulators; Wireless and Radio Equipment Assembled and Complete and Parts Thereof,—Namely, Amplifiers, Vacuum Tubes, Detectors, Tuning Coils, Aerials, and Receiving and Sending Sets.

*Claims use* since Nov. 1, 1921.

Ser. No. 183,087. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) SIGMA NU PHI FRATERNITY (LEGAL), Washington, D. C. Filed July 11, 1923.

ΣΝΦ

*Particular description of goods.*—Fraternity Badges, Lapel Buttons; Scarf, Lapel and Breast Pins, Cuff Links, Tie Clasps, Charms, Finger Rings, Belt Buckles, and Ornamental Shields, All of Precious Metal.

*Claims use* since about 1908.

Ser. No. 184,538. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILLIAM BENNER, Bridgeport, Conn. Filed Aug. 16, 1923.

*Particular description of goods.*—Bread, Biscuits, Cake, Crackers, Cookies, Pies, Dairy Butter, Peanut Butter, Apple Butter, Oleomargarine, Coffee, Cocoa (Ground), Chocolate, Tea, Cereal Coffee, Fresh Milk, Fresh Cream, Evaporated Canned Milk, Condensed Sweetened Milk, Powdered Milk, Ice Cream, Cheese, Pot Cheese, Fresh Eggs; Wheat Flour, Bolted and Unbolted; Prepared Self-Rising Flour; Pancake Flour Prepared in a Combination of Wheat Flour, Corn Meal, Wheat Bran; Buckwheat Flour; Cereal Breakfast Foods Consisting of Ground Wheat, Ground Corn, Oatmeal, Rolled Oats, Rolled Wheat; Rice, Sago, Tapioca, Spaghetti, Noodles, Macaroni, Arrowroot; Canned Fruits, Including Canned Berries, Canned Pineapple, Fruit Preserves in Glass, Pickled Peaches in Glass, Jams, Marmalade, Fruit Jellies; Fresh Apples, Fresh Pears, Fresh Peaches, Fresh Melons, Dried Fruits, Canned Vegetables, Canned Chowder, Canned Pork and Beans, Canned Soups, Canned Plum Pudding, Canned Fig Pudding, Mincemeat, Canned Fruit Salad in Glass, Canned Vegetable Salad in Bulk and Glass Jars, Salad Dressing, Salad Oil Prepared from Peanut Oil and Cottonseed Oil, Olive Oil in Cans and Glass, Cooking Oil Prepared from Cottonseed Oil and Corn Oil; Sauces Consisting of Pepper Sauce, Chili Sauce; Condiments Consisting of Prepared Horse-Radish in Glass, Chow-Chow, Capers; Strained Honey; Sugar, Maple Sugar, Maple Sirup, Sugar Sirup Prepared from Cane Sugar and Maple Sirup, Molasses in Bulk and Cans, Candy; Fruit Butters Prepared from Peaches, Apples, Quinces, and Their Combinations; Nuts in Their Natural State, Also Candied Nuts, Salted Nuts; Pickles in Bulk and Glass, Tomato Catchup, Mushroom Catchup, Mustard, Ground Spices, Olives; Canned Fish, Consisting of Oysters, Clams, Bluefish, Lobster, Tunny Fish; Canned Fowl, Comprising Canned Chicken and Canned Sliced Turkey; Chewing Gum; the Following Meats and Meat Food Products Killed and Dressed on the Farm, Not Shipped in Interstate Commerce, and Marketed Only in This State of Connecticut: Fresh Beef, Fresh Pork, Sausage, Fresh Mutton and Lamb, Corned Beef, Salt Pork, Bacon, Smoked Hams; Canned Meats, as Follows: Corned Beef, Sliced Beef, Neat's Tongue; Roast Mutton, Boiled Ham, Picnic Sausage, Combined Ham and Tongue, Combined Ham and Turkey, Combined Ham and Chicken, Sliced Bacon, Headcheese.

*Claims use* since Mar. 23, 1921.

Ser. No. 185,670. (CLASS 17. TOBACCO PRODUCTS.) PEDRO Y CA., S. EN C., Habana, Cuba. Filed Sept. 11, 1923. Under ten-year proviso.

*Particular description of goods.*—Cigars, Cigarettes, and Cut Tobacco.

*Claims use* since about 1890.

Ser. No. 186,861. (CLASS 15. OILS AND GREASES.) YELLOW CAB MOTOR FUEL COMPANY, Pittsburgh, Pa. Filed Oct. 11, 1923.

*Particular description of goods.*—Gasoline, Benzol, Mixtures of Gasoline and Benzol, Motor Fuels, Lubricating Oils and Greases.

*Claims use* since Nov. 1, 1921.

Ser. No. 186,862. (CLASS 15. OILS AND GREASES.) YELLOW CAB MOTOR FUEL COMPANY, Pittsburgh, Pa. Filed Oct. 11, 1923.

Y-CO

*Particular description of goods.*—Gasoline, Benzol, Mixtures of Gasoline and Benzol, Motor Fuels, Lubricating Oils and Greases.

*Claims use* since Nov. 1, 1921.

Ser. No. 189,712. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FLAPPER NOVELTY COMPANY, Chicago, Ill. Filed Dec. 15, 1923.

Flapper

*Particular description of goods.*—Face Cream, Face Powder, and Rouge.

*Claims use* since Oct. 15, 1923.

Ser. No. 192,917. (CLASS 32. FURNITURE AND UPHOLSTERY.) IMPERIAL FURNITURE COMPANY, Grand Rapids, Mich. Filed Feb. 27, 1924.

The words "Grand Rapids, Mich." are disclaimed by applicant except in connection with the trade-mark as shown.

*Particular description of goods.*—Wooden Tables.

*Claims use* since Feb. 1, 1904.

*Particular description of goods.*—Lettuce.
*Claims use* since June 29, 1925.

---

Ser. No. 222,574. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PERLORA MANUFACTURING COMPANY, Springfield, Mass. Filed Oct. 30, 1925.

PERLORA

*Particular description of goods.*—Tooth Powder.
*Claims use* since Oct. 15, 1925.

Ser. No. 222,666. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHARLES E. CRAIN, doing business as S. & C. Laboratories, San Antonio, Tex. Filed Nov. 2, 1925.

ZEFALON

*Particular description of goods.*—Medicine in Capsule Form for Use in the Treatment of Obesity.
*Claims use* since February, 1925.

---

Ser. No. 222,686. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

THY-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract of the Thymus Gland Containing the Active Principle of That Gland, a Liquid Preparation Used in the Treatment of Arthritis and Rachitis.
*Claims use* since Oct. 14, 1925.

---

Ser. No. 222,687. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

OVARI-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract of the Ovarian Gland, Containing the Active Principle of That Gland, a Liquid Preparation Used in the Treatment of Amenorrhea and the Disturbances Due to the Menopause.
*Claims use* since Oct. 14, 1925.

---

Ser. No. 222,688. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

COR-LU-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract of Corpus Luteum, Containing the Active Principle of the Corpus Luteum, a Liquid Preparation Used in the Treatment of Amenorrhea and the Vomiting of Pregnancy.
*Claims use* since Oct. 14, 1925.

Ser. No. 222,689. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

# ORCHI-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract Containing Active Orchic Substance, a Liquid Preparation Used in the Treatment of Impotence and Sexual Neurosis.

*Claims use* since Oct. 14, 1925.

---

Ser. No. 222,690. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

# PINEA-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract of the Pineal Gland Containing the Active Principle of That Gland, a Liquid Preparation Used in the Treatment of Retarded Mentality in Children.

*Claims use* since Oct. 14, 1925.

---

Ser. No. 222,691. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

# HE-PAR-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, an Extract of the Liver Containing Those Active Principles of the Liver Which Reduce Essential Arterial Hypertension, a Liquid Preparation Used Therapeutically to Reduce Essential Arterial Hypertension.

*Claims use* since Oct. 14, 1925.

Ser. No. 222,692. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELI LILLY & COMPANY, Indianapolis, Ind. Filed Nov. 2, 1925.

# THYRO-MONE

*Particular description of goods.*—Medicine or Pharmaceutical Preparation, Extract Made from Thyroid Gland Containing the Active Principle of That Gland, Liquid Preparation for Use in the Treatment of Cretinism, Myxedema, and Hypothyroidism.

*Claims use* since Oct. 14, 1925.

---

Ser. No. 222,751. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUBIN, INC., Wilmington, Del., and New York, N. Y. Filed Nov. 3, 1925.

# MONBROSIA

*Particular description of goods.*—Perfume, Toilet Water, Face Powder, Talcum Powder, Sachet, Brilliantine, Lotion for the Skin and Hair, Bath Salts, and Dentifrices.

*Claims use* since Sept. 1, 1925.

---

Ser. No. 222,760. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARFUMERIE ST. DENIS, New York, N. Y. Filed Nov. 3, 1925.

# BIRCH BUDS

*Particular description of goods.*—Face Powders, Face Creams, Face Packs, Toilet Waters, Rouges, Perfumes, Hair Tonic, Hair Oils, Dentifrices, Tooth Powders, Talcum Powders, Nail Polishes, Deodorizing Preparations, Bath Salts, Sachets, and Incense.

*Claims use* since Apr. 21, 1925.

# TRADE-MARK REGISTRATIONS GRANTED

[ACT OF FEBRUARY 20, 1905.]

DECEMBER 8, 1925.

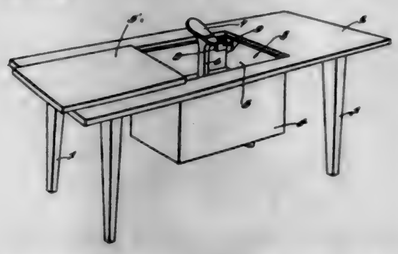
# REISSUES

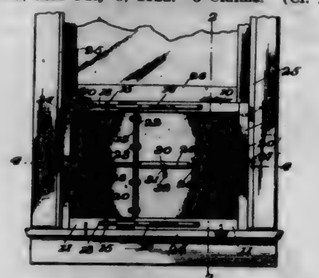
## DECEMBER 8, 1925.

16,221. SHOE-SHINING STAND. CHARLES J. GREEN, Chicago, Ill. Filed Oct. 20, 1925. Serial No. 63,771. Original No. 1,486,240, dated Mar. 11, 1924, Serial No. 487,703, filed July 26, 1921. 4 Claims. (Cl. 15—265.)



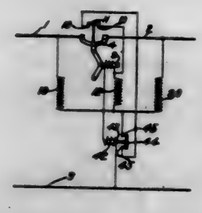
4. In an apparatus of the character described, a housing, a receptacle mounted in the housing for vertical movement therein and fitting snugly the interior of the housing, a foot rest carried by the receptacle and extending upwardly therefrom, and means for releasably securing the receptacle in raised position within the housing.

16,222. WINDOW SCREEN. HORACE R. ELLIS, Meadville, Pa. Filed Jan. 3, 1924. Serial No. 684,240. Original No. 1,442,657, dated Jan. 16, 1923, Serial No. 572,622, filed July 3, 1922. 6 Claims. (Cl. 156—38.)



1. A screen comprising a pair of slidably related sections having overlapping rails, the adjoining side faces of which are flush with each other, rods rigidly secured to the side faces of certain of said rods and each extending a substantial distance beyond the same into overlapping relation with a side face of the adjacent rail, and keepers carried by the side faces of certain of the rails and shaped to slidingly receive the extended portions of said rods.

16,223. ELECTRICAL SYSTEM. JOSEPH N. MAHONEY, Brooklyn, N. Y., and WALTER M. AUSTIN, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 21, 1921. Serial No. 509,415. Original No. 1,368,666, dated Dec. 28, 1920, Serial No. 117,666, filed Aug. 30, 1916. 36 Claims. (Cl. 175—294.)



1. In a system of distribution, the combination with two feeder conductors, a common return conductor, and a circuit interrupter for operatively connecting the feeder conductors together, of means actuated under all conditions, in accordance with the sum of the voltage drops between the respective feeder conductors and the return conductor for controlling the opening and closing of the circuit interrupter.

34. An automatically reclosing circuit breaker comprising a main contact member, a closing coil for effecting automatic movement of said contact member into closed position, means whereby the current in the closing coil is limited to a value sufficent to hold the main contact closed but insufficient to effect its closure from the open position, means whereby said limiting means is temporarily by-passed to permit the closing of the main contact, said means being responsive in operation to a predetermined potential.

# DESIGNS

## DECEMBER 8, 1925.

68,944. DOOR HANDLE. HARRY W. AXFORD and ALBERT DE SHIELDS, San Jose, Calif. Filed Aug. 11, 1924. Serial No. 10,441. Term of patent 3½ years.

The ornamental design for a door handle as shown.

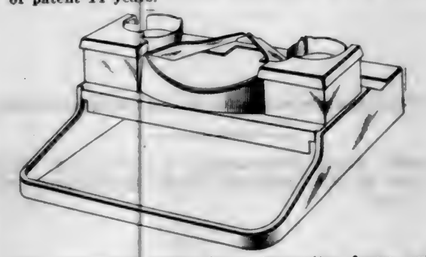
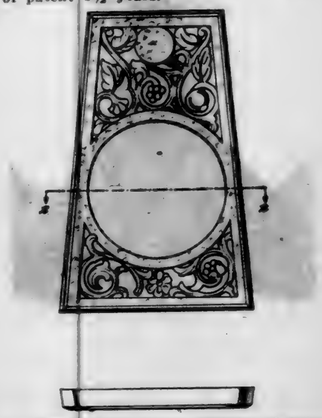
68,967. TYPEWRITER FRAME. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 14, 1925. Serial No. 14,779. Term of patent 14 years.



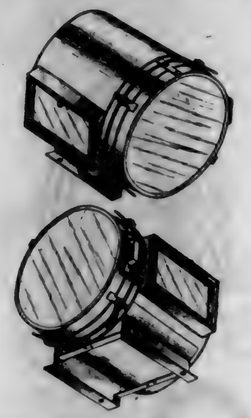
The ornamental design for a typewriter frame, substantially as shown.

68,968. LIGHTING-FIXTURE PART OR SIMILAR ARTICLE. THEODORE HOLSHALB, Brooklyn, N. Y., assignor to The Segar Studios Inc., a Corporation of New York. Filed Sept. 26, 1925. Serial No. 14,917. Term of patent 3½ years.



The ornamental design for a lighting fixture part or similar article substantially as shown.

68,969. HEADLIGHT. LEE B. JONES, Evansville, Ind., assignor to Sunbeam Electric Manufacturing Company, Evansville, Ind., a Corporation of Indiana. Filed Nov. 16, 1921. Serial No. 515,717. Term of patent 14 years.



The ornamental design for a headlight as shown.

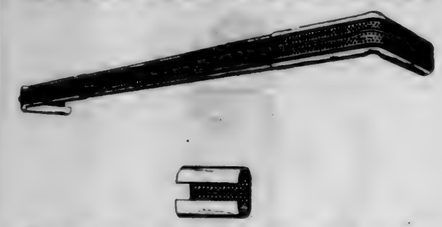
68,970. BOWKNOT WEDDING RING. FELIX P. KINSLEY, St. Louis, Mo. Filed Oct. 12, 1925. Serial No. 15,107. Term of patent 7 years.

The ornamental design for a bowknot wedding ring, as shown.

68,971. CURTAIN ROD OR SIMILAR ARTICLE. CHARLES W. KIRSCH, Sturgis, Mich. Filed July 9, 1925. Serial No. 14,034. Term of patent 14 years.

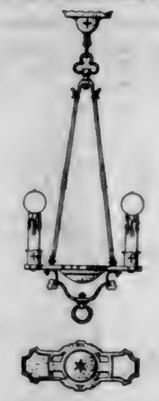
The ornamental design for a curtain rod or similar article as shown.

68,972. CURTAIN ROD OR SIMILAR ARTICLE. CHARLES W. KIRSCH, Sturgis, Mich. Filed July 9, 1925. Serial No. 14,037. Term of patent 14 years.



The ornamental design for a curtain rod or similar article as shown.

68,973. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,610. Term of patent 3½ years.



The ornamental design for a lighting fixture, as shown.

68,974. LIGHTING FIXTURE. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 9,611. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

68,975. WEIGHING-MACHINE CASE. WILLY KRAATZ, Kreuznach, Germany. Filed Oct. 10, 1925. Serial No. 15,083. Term of patent 7 years.

The ornamental design for a weighing machine case, as shown.

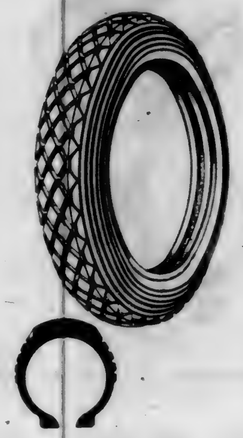
68,976. BIRDCAGE STAND. LEWICKI J. LEON, West Chicago, Ill. Filed Oct. 3, 1925. Serial No. 15,005. Term of patent 14 years.

The ornamental design for a birdcage stand, as shown.

68,977. WEDDING RING. NATHAN LIDZBARSKY, New York, N. Y. Filed Mar. 20, 1925. Serial No. 12,782. Term of patent 3½ years.

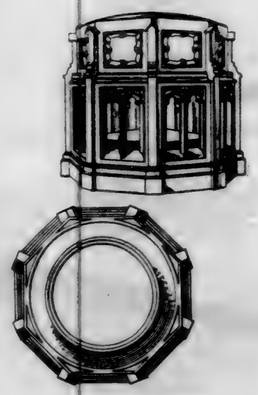
The ornamental design for a wedding ring, as shown.

68,978. TIRE. PAUL W LITCHFIELD, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 26, 1924. Serial No. 10,559. Term of patent 14 years.



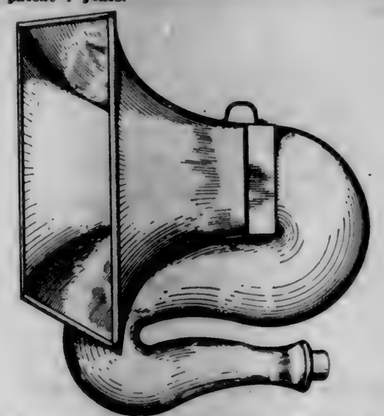
The ornamental design for a tire, as shown.

68,979. FLOWER HOLDER FOR CHURCHES. PAULINE CALDWELL LOCKE, Birmingham, Ala. Filed Sept. 10, 1925. Serial No. 14,749. Term of patent 7 years.



The ornamental design for a flower holder for churches, as shown.

68,980. RADIOHORN. MAX S. MATTHEWS, Los Angeles, Calif. Filed May 4, 1925. Serial No. 13,315. Term of patent 7 years.



The ornamental design for a radiohorn, as shown.

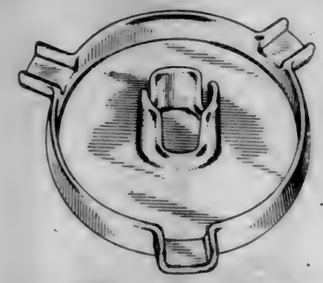
68,981. CONFECTIONERY-VENDING STAND. GEORGE B. MCINROY, Oakland, Calif. Filed July 6, 1925. Serial No. 14,002. Term of patent 7 years.

The ornamental design for a confectionery vending stand, substantially as shown.

68,982. FACE-POWDER BOX. FRANK J. M. MILNE, New York, N. Y., assignor to Cheramy, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 1, 1925. Serial No. 14,680. Term of patent 14 years.

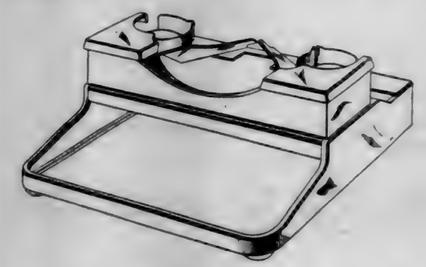
The ornamental design for face powder box as shown.

68,983. ASH TRAY. MAURICE MOSS, New York, N. Y. Filed Oct. 5, 1925. Serial No. 15,024. Term of patent 7 years.



The ornamental design for an ash tray as shown.

68,984. TYPEWRITER FRAME. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 14,595. Term of patent 14 years.

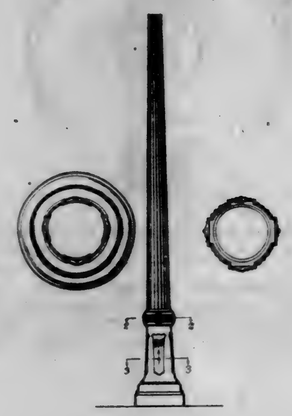


The ornamental design for a typewriter frame substantially as shown.

68,985. RADIOHORN. WLADIMIR J. POLYDOROFF, Chicago, Ill., assignor to Johnson-Williamson Laboratories, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 14,714. Term of patent 3½ years.

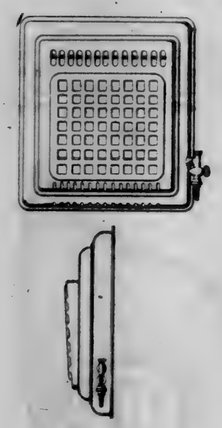
The ornamental design for a radiohorn, as shown.

68,986. LIGHTING STANDARD. HARRY O. RASTETTER, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed July 9, 1924. Serial No. 10,097. Term of patent 14 years.



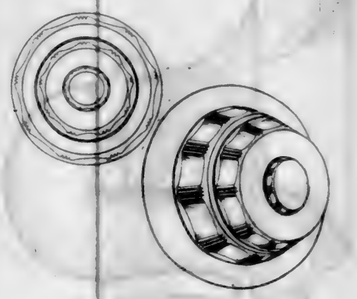
The ornamental design for a lighting standard, as shown.

68,987. HEATING STOVE. GEORGE FOSTER REENOR, Mercer Pa. Filed July 8, 1925. Serial No. 14,019. Term of patent 14 years.



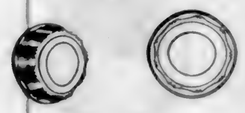
The ornamental design for a heating stove, as shown.

68,988. DIAL KNOB. JOSEPH R. RIEHLE, Bronx, N. Y., assignor to Otto R. Gischow, New York, N. Y. Filed Feb. 25, 1925. Serial No. No. 12,486. Term of patent 14 years.



The ornamental design for a dial knob as shown.

68,989. DIAL KNOB. JOSEPH R. RIEHLE, Bronx, N. Y., assignor to Otto R. Gischow, New York, N. Y. Filed May 9, 1925. Serial No. 13,386. Term of patent 14 years.



The ornamental design for a dial knob as shown.

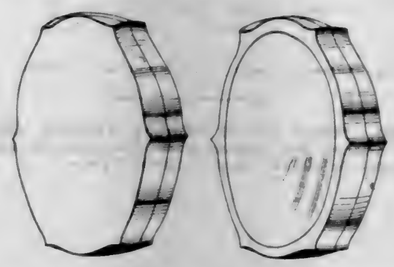
68,990. BODY FRAME FOR CHANDELIERS. MORIS RODOLITZ, Brooklyn, N. Y. Filed Oct. 3, 1925. Serial No. 15,015. Term of patent 3½ years.

The ornamental design for a body frame for chandeliers, substantially as shown.

68,991. BOTTLE. CHAPMAN J. ROOT, Terre Haute, Ind. Filed Oct. 30, 1924. Serial No. 11,229. Term of patent 14 years.

The ornamental design for a bottle as shown.

68,992. VEHICLE HEADLAMP HOUSING. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed Aug. 27, 1924. Serial No. 10,565. Term of patent 14 years.



The ornamental design for a vehicle headlamp housing as shown.

68,993. ROSARY WEDDING RING. ABRAHAM SAGER, Chicago, Ill. Filed Aug. 21, 1925. Serial No. 14,547. Term of patent 14 years.

The ornamental design for a rosary wedding ring, as shown.

68,994. PLATE OR SIMILAR ARTICLE. EMIL L. SCHNEPF, Trenton, N. J., assignor to Scammell China Company, Trenton, N. J. Filed Oct. 18, 1924. Serial No. 11,118. Term of patent 14 years.

The ornamental design for a plate or similar article as shown.

68,995. WEIGHING-MACHINE CASE. PAUL SEITZ, Kreuznach, Germany. Filed Oct. 10, 1925. Serial No. 15,082. Term of patent 7 years.

The ornamental design for a weighing machine case, as shown.

68,996. LAMP. ALBERT ROBERT SENG, Youngstown, Ohio. Filed Sept. 29, 1925. Serial No. 14,942. Term of patent 14 years.

The ornamental design for a lamp, as shown.

68,997. TUMBLER OR SIMILAR ARTICLE. DONALD M. SMITH, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation. Filed Oct. 17, 1925. Serial No. 15,158. Term of patent 14 years.

The ornamental design for a tumbler or similar article, as shown.

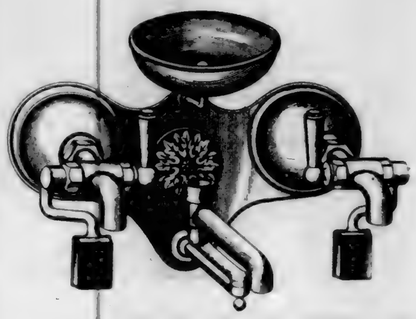
68,998. TUMBLER OR SIMILAR ARTICLE. DONALD M. SMITH, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation. Filed Oct. 17, 1925. Serial No. 15,159. Term of patent 14 years.

The ornamental design for a tumbler or similar article, as shown.

68,999. CHARM OR SIMILAR ARTICLE OF JEWELRY. JAMES W. SNODGRASS, Youngstown, Ohio. Filed Apr. 26, 1924. Serial No. 9,410. Term of patent 8½ years.

The ornamental design for a charm or similar article of jewelry as shown.

69,000. FAUCET SET. EDWARDS B. STUART, Chicago, Ill. Filed Aug. 21, 1925. Serial No. 14,543. Term of patent 14 years.



The ornamental design for a faucet set as shown.

69,001. FRUIT JAR OR SIMILAR ARTICLE. NEVA P. WILCOX, West Newton, Mass. Filed Sept. 12, 1924. Serial No. 10,760. Term of patent 7 years.

The ornamental design for a fruit jar or similar article as shown.

69,002. RING. ROBERT WINBERG, Providence, R. I. Filed July 8, 1925. Serial No. 14,026. Term of patent 3½ years.

The ornamental design for a ring, as shown.

69,003. ORNAMENT FOR RADIATOR CAPS. GEORGE J. ZEIS, Buffalo, N. Y. Filed Oct. 2, 1924. Serial No. 10,953. Term of of patent 3½ years.

The ornamental design for an ornament for radiator caps, substantially as shown.

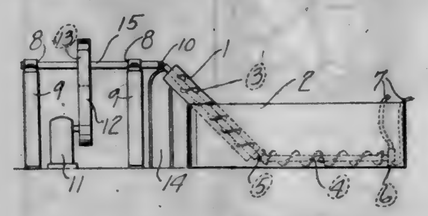
69,004. LOUD-SPEAKER CASING. LE ROY W. STAUNTON, Jackson Heights, N. Y., assignor, by mesne assignments, to Brandes Laboratories Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 12, 1924. Serial No. 11,678. Term of patent 14 years.

The ornamental design for a loud speaker casing, as shown.

# PATENTS

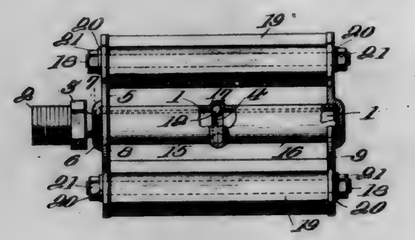
## GRANTED DECEMBER 8, 1925.

1,564,187. DIRT-TANK CLEANER. OTTO G. AHRENS, Karnes, Tex. Filed Sept. 20, 1922. Serial No. 589,382. 1 Claim. (Cl. 212—17.)



A device for removing dirt from tanks, comprising a pipe extended down into the tank; a worm in the pipe; a second worm universally connected to the pipe worm and disposed at the bottom of the tank; a bearing for the free end of the said second worm; wires attached to said bearing and extended outside the tank; and means for rotating the said pipe worm.

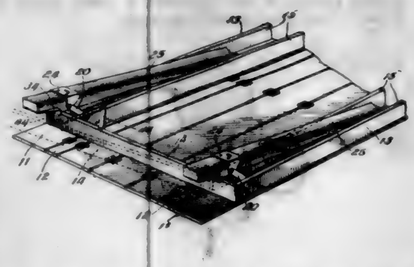
1,564,188. PEDAL FOR BICYCLES, MOTOR CYCLES, AND THE LIKE. THOMAS M. ALLEN, Torrington, Conn., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 8, 1923. Serial No. 673,502. 4 Claims. (Cl. 208—70.)



1. A pedal comprising a pin having an annular groove between its ends, a transversely divided sleeve provided at the abutting ends of its members with annular grooves registering with the pin groove, balls held in the grooves, end plates engaging the outer ends of the sleeve members, and tread members holding the end plates and sleeve members together; the balls in turn holding the sleeve in place upon the axle.

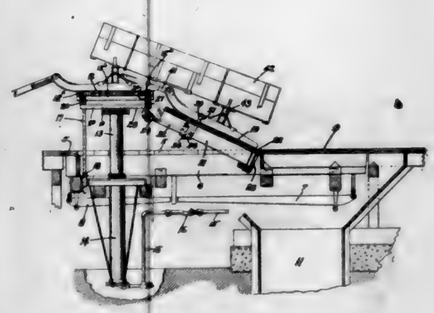
1,564,189. FOLDING TABLE. JOHN R. ANDERSON, Moline, Ill. Filed Jan. 20, 1922. Serial No. 530,516. 3 Claims. (Cl. 45—116.)

1. In a folding table, the combination of a top comprising a plurality of longitudinally extending, hingedly connected sections, and a longitudinally extending member secured to the under side of each of the outermost sections of said top, supporting legs hingedly connected to said outermost sections, means for securing said legs in supporting position, transversely extending members adapted to be engaged and clamped by said legs against the ends of said longitudinally extending members in



engagement with the intermediate sections of said top, and a link pivotally connecting each transversely extending member with one of said longitudinal members.

1,564,190. DUMPING PLATFORM. WALTER G. ANDERSON, Minneapolis, Minn., assignor to Strong-Scott Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 5, 1925. Serial No. 13,325. 11 Claims. (Cl. 214—49.)

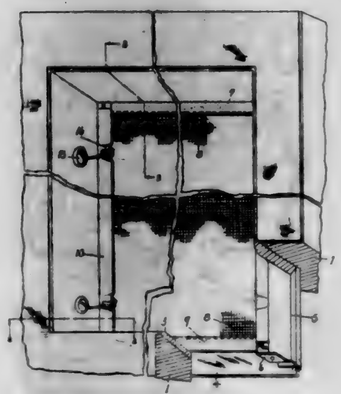


1. A vehicle dumping platform comprising a supporting and raising means for the forward portion of the vehicle, means normally stationary and adapting the apparatus for dumping a wheeled vehicle, but adapted to be moved and form an inclined support for the rear runners of a sled vehicle.

1,564,191. WINDOW SCREEN. ROGER L. AUSTIN and CARYL H. GALL, Lansing, Mich. Filed Oct. 15, 1923. Serial No. 668,614. 4 Claims. (Cl. 156—14.)

4. In a structure of the class described, the combination with a window casing, of chanel-shaped holder members secured to said casing, side pieces for said

screen disposed within said holder members, the top and bottom edges of said screen being without frame members thereby permitting the flexing of the screen to



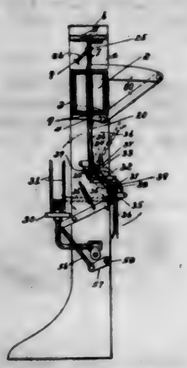
engage and disengage it from said holder members, and springs on said casing engaging said side pieces to yieldingly support said screen.

1,564,192. HYDROPHONE. WALTER H. BARBER, Stoneham, and RICHARD D. FAY, Nahant, Mass., assignors to Submarine Signal Company, Boston, Mass., a Corporation of Maine. Filed May 16, 1921. Serial No. 470,115. 5 Claims. (Cl. 177—386.)

1. A hydrophone comprising a tuned sound-receiving diaphragm of considerable thickness having a microphone button located thereon, said microphone being aperiodic.

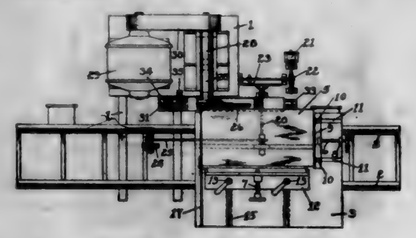
1,564,193. PRESSING MACHINE. WALTER J. BEATTIE, Cohoes, N. Y., assignor to The Beattie Manufacturing Company, Cohoes, N. Y., a Corporation of New York. Filed Nov. 28, 1923. Serial No. 677,569. 13 Claims. (Cl. 223—55.)

1. In a machine of the class described and in combination, a pair of upright pressing members, one movable toward and from the other; means for moving one of said pressing members toward and from the other; a separate blank-supporting guard movable to and from a



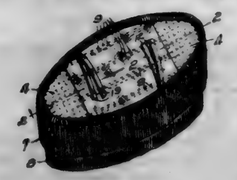
position beneath the opening between said members when separated; and means for moving said guard to and from blank-supporting position.

1,564,194. DRESSING WHEEL FOR EARTHY MATERIAL. WILLIAM G. BERGMAN, Point Place, Ohio. Filed May 26, 1924. Serial No. 715,777. 15 Claims. (Cl. 125—3.),



1. In a dressing machine, a rotatable member, means for rotating the rotatable member, the peripheral portion of the rotatable member being circular in form, a plurality of cutting wheel holders extending across the said peripheral portion, each holder having one end located nearer the center of the rotatable member than the other end, a plurality of cutting wheels supported by each of the holders, the holders being closely positioned relative to each other and the said cutting wheels covering the major part of the said peripheral portion.

1,564,195. DUST MOP. WILLIAM E. BONEWITZ, St. Louis, Mo. Filed Dec. 13, 1924. Serial No. 755,654. 2 Claims. (Cl. 15—229.)



1. A dust mop consisting of an elliptical main piece of fabric, fabric pocket pieces secured to the upper face of the main piece of fabric at the ends thereof to provide

opposed ring receiving pockets, tie strings secured to the upper face of the main piece of fabric, cotton cords secured to the said main piece of fabric and to the upper face of the fabric pocket pieces and the inner edge of each fabric pocket piece being folded under and secured in such position.

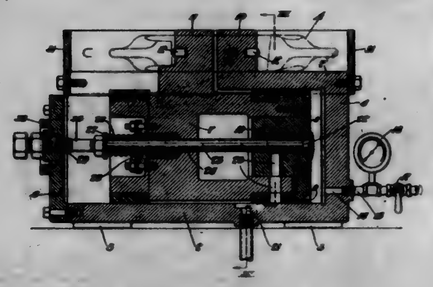
---

1,564,196. SAFETY DEVICE FOR RAILROAD-CAR BRAKE BEAMS. LLOYD J. BROWN, Evanston, Ill., assignor to E. Payson Smith, Springfield, Ill. Filed Mar. 14, 1925. Serial No. 15,694. 8 Claims. (Cl. 85—5.)

1. A safety device of the character described comprising a flat body having an undercut recess from one side edge thereof, and a stop at one end of said body.

---

1,564,197. TESTING APPARATUS. WILLIAM MILTON BROWN, Johnstown, Pa. Filed Feb. 27, 1925. Serial No. 12,058. 8 Claims. (Cl. 265—14.)



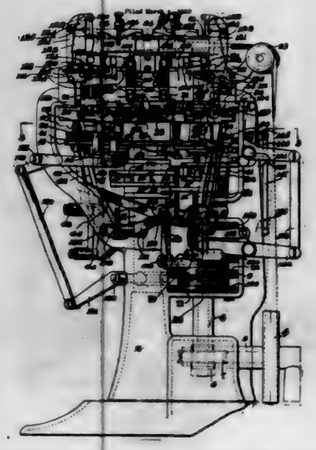
1. A testing machine for testing the tensile strength of forgings, castings, and the like, comprising a cylinder member, a piston member mounted in said cylinder, jaw members on said cylinder and piston members adapted to engage the work piece to be tested, a combined inlet and outlet port for fluid under pressure for operating said piston, a fluid pressure supply pipe connecting with said inlet, a gage connected with said pipe and adapted to indicate a multiple of the pressure of the fluid in said pipe equivalent to the pressure developed by said piston, and a valve connected in said supply pipe for controlling the flow of fluid pressure to said cylinder.

---

1,564,198. BLANK-TREATING MACHINE. IRA C. BUCKMINSTER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 8, 1920. Serial No. 364,174. 67 Claims. (Cl. 69—11.)

1. In a blank treating machine, a feed magazine, a rotary table, means to feed blanks one by one from the magazine to the rotary table, means to secure the blanks on the rotary table, means to measure the blanks and skive them while secured on the rotary table, and means to transfer the blanks from the rotary table to a stacking magazine.

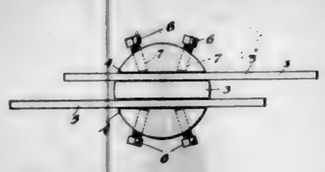
15. A machine of the class described having, in combination, a support for a blank, a cutter for evening the blank adjustable toward and from the support, mecha-



nism for measuring the thickness of the blank, and means for adjusting the cutter in accordance with the determination of the measuring mechanism.

---

1,564,199. SILICA-BRICK PALLET CLEANER. MANCE CANTRELL, East Chicago, Ind. Filed Nov. 15, 1924. Serial No. 750,030. 2 Claims. (Cl. 15—93.)

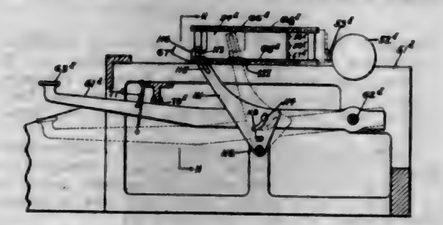


1. In a silica brick pallet cleaner, a shank, a head carried by one end thereof and provided with a plurality of parallel grooves, elongated scraping blades received in the grooves and having their ends projecting a relatively great distance beyond the head and disposed in overlapping relation, and fastening elements passing through the head at opposite sides thereof and engaging the blades to hold the same in position in the grooves and permitting the longitudinal adjustment of the same, the shank being adapted to be received in a rotary tool holder whereby to rotate the blades over the surface of the pallet to scrape silica therefrom.

---

1,564,200. TYPEWRITING MACHINE. CHARLES U. CARPENTER, New York, N. Y., assignor to Dayton Portable Typewriter Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 1, 1921. Serial No. 519,263. 2 Claims. (Cl. 197—25.)

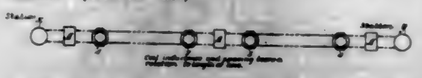
2. In a typewriting machine, the combination with a frame, a platen mounted thereon, a horizontally disposed type element adapted for longitudinal movement towards and away from the platen, a key lever pivoted to the frame to swing about a horizontal axis, a lever having its lower end pivoted to the frame and normally disposed at an oblique angle with respect to the horizontal, the upper end of the lever being directly operatively connected with the rear end of the type element, a laterally extending pin carried by the key lever



intermediate its ends, which slidably and pivotally engage the lever at a point adjacent the pivotal connection between the lever and frame.

---

1,564,201. LOADING SYSTEM. JOHN R. CARSON, Harmon, ALVA B. CLARK, Brooklyn, N. Y., and JOHN MILLS, Wyoming, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed June 4, 1921. Serial No. 474,878. 10 Claims. (Cl. 178—45.)



1. The method of improving the signal transmitting properties of a periodically loaded line, which consists in reducing the inductance of the line per unit of length throughout the line as the length of the line is increased.

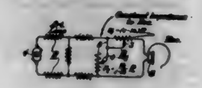
---

1,564,202. METHOD OF PRODUCING WATER-INSOLUBLE MULTICOLORED SCREENS. JENS HERMAN CHRISTENSEN, Holte, Denmark. Filed May 20, 1924. Serial No. 714,553. 1 Claim. (Cl. 95—81.5.)

Method of producing multicolored screens, consisting in dissolving basic dyes and mordants for the said dyes in a suitable solvent, emulsifying the solutions in separate portions of a substantially neutral viscous emulsifying medium, removing the major part of the emulsifying medium through diluting with a suitable solvent for the same and decanting, causing a mixture of the differently colored particles to adhere to a neutral carrier, removing the surplus of the particles, and drying the said carrier with the adhering particles.

---

1,564,203. RECEIVER SHUNT. ALVA B. CLARK, Brooklyn, N. Y., and GEORGE CRISSON, Hackensack, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1923. Serial No. 661,655. 4 Claims. (Cl. 179—175.)

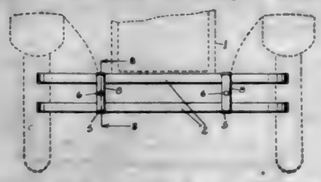


1. In a transmission measuring system, the combination with a line circuit, the impedance of which is substantially pure resistance of a source of alternating current connected therewith, a telephone receiver and a variable receiver shunt connected between the said artificial line and said receiver adapted to vary the current in the said receiver, and having constant impedance when viewed from the said receiver.

---

1,564,204. BUMPER. FRANK J. CLARK, Battle Creek, Mich. Filed Apr. 18, 1925. Serial No. 22,707. 3 Claims. (Cl. 293—55.)

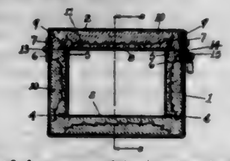
3. In a bumper, the combination of supporting brackets adapted for attachment to a motor vehicle, a pair of bumper bars of wood, spacing blocks disposed between said bars, clamping means comprising a resilient clamp-



ing member engaging both the bars, and clamping bolts arranged through said clamping members, spacing blocks and brackets.

---

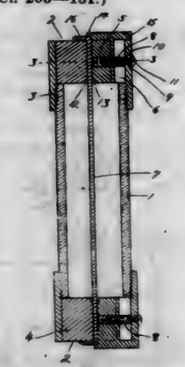
1,564,205. FIREPROOF BOX. FRANK J. CLARK, Battle Creek, Mich. Filed July 2, 1925. Serial No. 41,107. 3 Claims. (Cl. 109—2.)



1. A fireproof box comprising outer body and cover shells of metal, a metal container having projecting flanges at the bottom thereof disposed within said body shell with its walls in spaced relation to the corresponding walls of said body shell, the upper edges of the container walls being in the plane of the upper edges of the body shell, a cover plate having upwardly projecting flanges at its edges adapted to overlap the edges of the container, and fillers of insulating material molded within said body shell around said container and within said cover shell to embrace the flanges of said cover plate and so that the outer side of the cover plate is flush with the edges of the cover, said filler having foraminate reinforcing sheets imbedded therein at the bottom, sides and ends of the container and within said cover shell, such reinforcing material being out of contact with other metal parts.

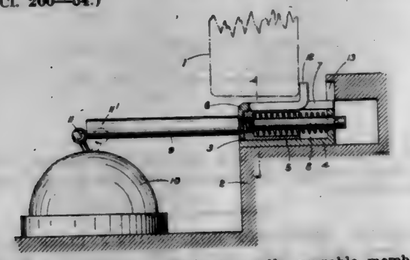
---

1,564,206. RENEWABLE FUSE. ALBERT E. CLARKE, Detroit, Mich. Filed July 2, 1923. Serial No. 649,130. 10 Claims. (Cl. 200—131.)



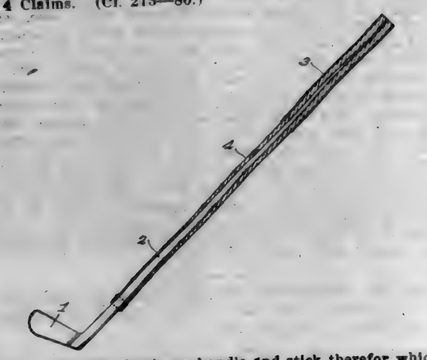
1. In a renewable fuse, the combination with a barrel, of a fuse strip extending longitudinally therewithin, tubes secured to said barrel and projecting beyond the opposite ends thereof, a clamping member permanently secured in the projecting portion of each tube and a cooperating clamping member permanently secured in the projecting portion of each tube and adjustable toward and away from said first-mentioned clamping member to clamp said fuse strip.

1,564,207. CONTROLLING DEVICE FOR ELECTRIC CIRCUITS. JOHN WILLS CLOUD, London, England. Filed Apr. 15, 1923. Serial No. 657,554. 4 Claims. (Cl. 200—54.)



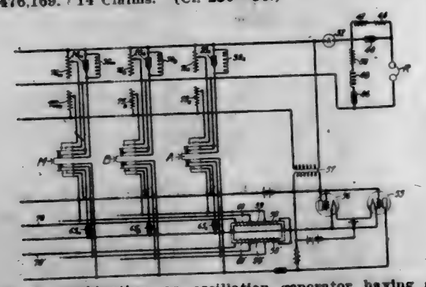
1. The combination with a manually operable member for operating an electric switch, of a movable barrier, a rod movable to engage and shift said member to "off" position, a spring tending to move said rod and thereby said member to "off" position, and an element associated with said rod and operated by the movement of said barrier to its closed position for moving said rod out of engagement with said member.

1,564,208. GOLF CLUB. FRANK P. CONNOLLY, Chicago, Ill. Filed Apr. 24, 1925. Serial No. 25,476. 4 Claims. (Cl. 273—80.)



1. A golf club having a handle and stick therefor which increases gradually in weight toward the head of the club.

1,564,209. ELECTRICAL CIRCUITS FOR THE PRODUCTION OF MUSICAL TONES. IRVING B. CRANDALL, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 9, 1921. Serial No. 476,169. 14 Claims. (Cl. 250—36.)

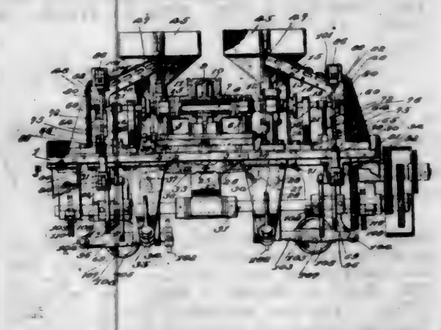


7. In combination, an oscillation generator having a tuned circuit, a plurality of keys for varying a reactance element in said tuned circuit, for changing the oscillation frequency, and means including an adjustable resistance controlled by said keys for varying the amplitude of said oscillations.

1,564,210. MANUFACTURE OF 2-AMINO ANTHRAQUINONE. ORIN D. CUNNINGHAM, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed June 7, 1921. Serial No. 475,817. 5 Claims. (Cl. 260—60.)

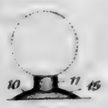
1. The method for the manufacture of 2-aminoanthraquinone, which comprises subjecting anthraquinone-2-sulphonic acid to the action of ammonia water in the presence of a soluble barium salt and of ammonium chloride.

1,564,211. NIPPLE-TAPPING MACHINE. CHARLES W. DAVIS, Torrington, Conn., assignor to Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed July 25, 1921. Serial No. 487,285. 10 Claims. (Cl. 10—130.)



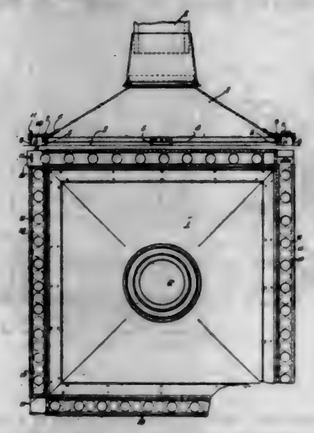
9. A nipple tapping machine including in combination, a horizontally rotating tap, a nipple supporting and clamping member, means for adjusting said clamping member vertically, a co-operating clamping member for rigidly gripping and holding the same while being tapped, yielding means for raising said upper clamping member, a yieldingly operated lever for forcing said upper clamping member downwardly into engagement with the nipple, said yielding means for operating the lever including a rotating cam, a lever operated thereby, a link connecting the cam operated lever with a lever for actuating the clamping member, said link comprising two members with a spring interposed between said members and the means for varying the tension on said spring.

1,564,212. GOLF TEE. WILLIAM MORE DECKER, Buffalo, N. Y. Filed Nov. 24, 1924. Serial No. 751,734. 4 Claims. (Cl. 273—33.)



1. A flexible golf tee, comprising a reversible dome-shaped base and a ball-supporting post mounted on the base and projecting above its elevated top in one position of the base and extending below said top in the reversed position of the base.

1,564,213. APPARATUS FOR HEATING STREET PAVEMENTS. CHARLES T. DENNEN, Chicago, Ill. Filed Apr. 10, 1924. Serial No. 705,444. 4 Claims. (Cl. 126—271.1.)



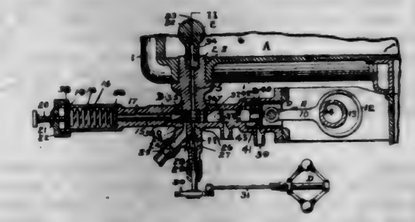
1. In a device of the character described, a hood for directing a fluid against a surface, a substantially vertical curtain secured to said hood and spaced from the edge thereof and adapted to contact with said surface, and means disposed between the edge of said hood and said curtain to regulate the escape of said fluid.

1,564,214. PRODUCTION OF M-AMINO-P-CRESOL-METHYL-ETHER. CLARENCE G. DERICK, THOMAS H. LEAMING, and WALTER M. RALPH, Buffalo, N. Y., assignors to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,428. 13 Claims. (Cl. 260—130.5.)

8. The method of producing m-amino-p-cresol-methyl-ether, which comprises subjecting m-nitro-p-cresol to methylation in the presence of an excess of caustic soda, and subjecting the resulting mixture, while still hot, to reduction by adding thereto a sodium sulfide as reducing agent, and finally recovering the m-amino-p-cresol-methyl-ether from the reduction mixture.

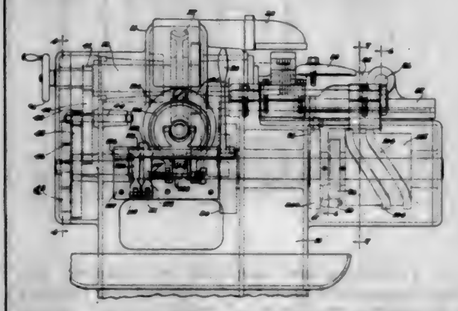
13. The method of producing m-amino-p-cresol methyl ether, which comprises subjecting m-nitro-p-cresol methyl ether to reduction with an alkali metal sulfide in the presence of water.

1,564,215. INJECTOR. GEORGE F. DILLIG, Pittsburgh, Pa. Filed May 9, 1918, Serial No. 233,445. Renewed Apr. 24, 1924. 3 Claims. (Cl. 128—140.)



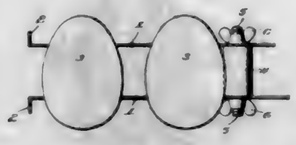
1. A fluid pump comprising a differential cylinder, a differential piston working in said cylinder, an inlet port for the larger cylinder bore adapted to be uncovered by the outward stroke of the piston, a discharge port for the smaller cylinder bore, and a passage in said piston adapted to connect said discharge port with the larger bore at substantially the completion of the inner stroke of the piston.

1,564,216. AUTOMATIC FORMING LATHE. JOHN A. DOANE, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed July 1, 1922. Serial No. 572,140. 20 Claims. (Cl. 82—2.)



1. A lathe comprising in combination, a base, a work supporting and rotating spindle thereon, a plurality of tools adapted to engage and operate on work mounted on said spindle, cam means mounted on a main cam shaft to control the movements of said tools, a starting lever for the lathe adapted to engage a driving clutch, automatically operating mechanism to stop operation of said lathe when each of the tools has completed its operation, said mechanism comprising a spring pressed plunger adapted to be released by means on the main cam shaft and adapted to disengage the driving clutch and engage a brake member.

1,564,217. EGG TRAY. HARRISON G. DOTTERER, Kokomo, Ind. Filed Mar. 30, 1925. Serial No. 19,427. 2 Claims. (Cl. 119—48.)

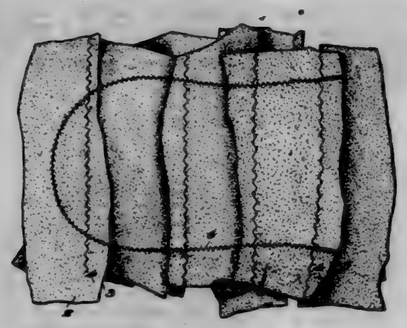


1. An egg tray comprising a pair of spaced plates provided with registering holes adapted for reception of the ends of the eggs adapted to be clamped between said plates, said plates being provided with angularly disposed marginal flanges extending outwardly in opposite directions, and spacing means between the plates including means for connecting the plates together in assembled relation.

1,564,218. METHOD OF CONTROLLING CHEMICAL REACTIONS. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company. Filed Dec. 8, 1920. Serial No. 429,081. 6 Claims. (Cl. 260—48.)

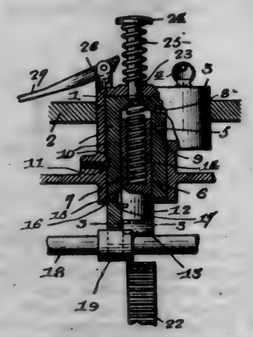
1. In a method of making indoxyl and its derivatives, the steps which consist in intermixing a phenyl-glycine body with a caustic alkali, melt, and including in the mixture a neutral hydrocarbon oil adapted to be vaporised at a temperature between that at which such caustic alkali is molten and that at which decomposition of such phenyl-glycine body sets in.

1,564,219. POLISHING MITT. CHARLES C. DRUDING, Philadelphia, Pa., assignor to Druding Brothers Company, Philadelphia, Pa. Filed June 16, 1925. Serial No. 37,546. 2 Claims. (Cl. 15—227.)



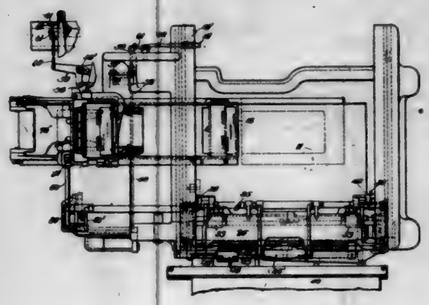
1. A polishing mitt comprising two composite side walls arranged flat against each other and each including a plurality of small strips of flexible polishing material secured together at their adjacent edges in overlapped relation to provide polishing flaps, said side walls being united by a marginal row of stitching extending along the side edges and across the outer end of the polishing mitt in spaced relation with the marginal edges of the said walls to provide projecting marginal polishing flaps.

1,564,220. LOCKING DEVICE FOR MOTOR VEHICLES. ALBERT DUMAS, Sorel, Quebec, Canada, assignor to Dumas Transmission Lock & Machinery Company Limited, St. Joseph de Sorel, Quebec, Canada. Filed Mar. 14, 1924. Serial No. 699,320. 1 Claim. (Cl. 70—90.)



In combination with a pair of shifter rods and an automobile gear disposed at one side of the rods, a locking device disposed at the other side of the rods and comprising a slidable member adapted for locking engagement with said rods, a toothed member carried by said slidable member and adapted for engagement with said gear, said slidable and toothed members being substantially co-extensive towards the rods, and means for locking said slidable member in adjusted positions, whereby the slidable member may be engaged with the rods independently of the engagement between the toothed member and the gear.

1,564,221. SAFETY DEVICE FOR PRINTING AND ADDRESSING MACHINES. JOSEPH S. DUNCAN, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1920. Serial No. 383,616. 41 Claims. (Cl. 101—56.)



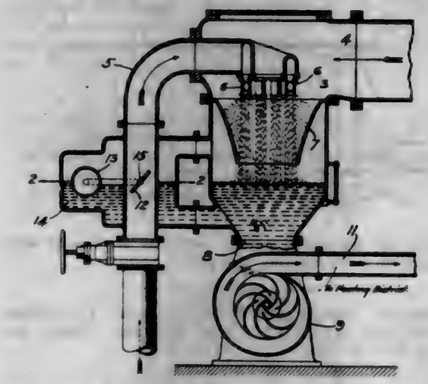
1. In a printing machine, the combination of a printing form, an impression roller, one of said elements being movable relative to the other to obtain a printing impression, said roller having a non-impression position and also an impression position, means for feeding a sheet to be printed into printing position, and safety means for preventing the roller from moving from its non-impression position into its impression position, if the feeding means does not feed a sheet to printing position.

1,564,222. WRENCH. CHARLES L. DUNLAP, Medina, Ohio. Filed Mar. 24, 1924. Serial No. 701,538. 1 Claim. (Cl. 81—185.)

In combination with a wrench comprising a shank having an integral jaw at one end, a U-shaped supplemental jaw member adapted to fit into the aforesaid integral jaw, means to retain said jaws in the same plane, and a spring plate carried by the intermediate portion of the supplemental jaw and tensioned to spring inwardly of the supplemental jaw toward the integral jaw for frictionally engaging t side of the integral jaw of the wrench to hold the supplemetal jaw in place.

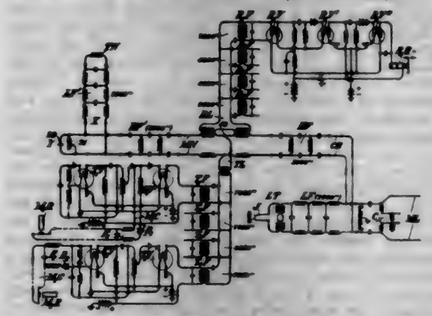
1,564,223. CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 8, 1915. Serial No. 6,835. 7 Claims. (Cl. 261—70.)

1. In combination with a jet condenser, a hot well having a lateral extension, a conduit for delivering cooling water to the condenser and passing through said lateral extension, a valve in said conduit within the extension, and a float responsive to variations in level of the water in the hot well for controlling said valve, said



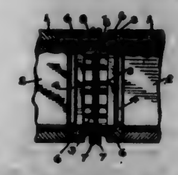
float being connected to the valve wholly within the lateral extension of the hot well so that leakage around the connection will pass directly into the hot well.

1,564,224. MODULATING APPARATUS FOR TELEGRAPH SIGNALS. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 29, 1919. Serial No. 314,075. 20 Claims. (Cl. 178—50.)



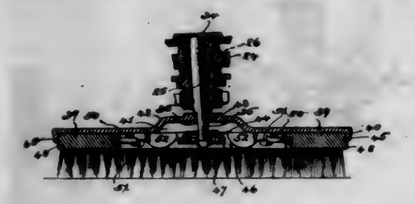
6. In high frequency multiplex telegraphy in which high frequency waves are varied in accordance with low frequency signaling impulses, the method of reducing interference between neighboring high frequency channels which comprises reducing the abruptness of the signal variations in the modulated high frequency waves.

1,564,225. GASKET. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1921. Serial No. 517,199. 1 Claim. (Cl. 288—1.)



A coupler gasket for engagement with a counterpart gasket having a thin flexible arcuate portion with a free edge normally facing radially outward, the flexible portion curling rearwardly upon engagement with a counterpart gasket and the free edge moving forward to meet the free edge of the counterpart gasket at the instant of separation of the gaskets, whereby moisture collection between the gaskets is expelled upon separation of the gaskets.

1,564,226. BRUSH HEAD FOR ROTARY SCRUBBING MACHINES. WALTER SCOTT FINNELL, Hannibal, Mo. Original application filed Oct. 28, 1917, Serial No. 198,088. Divided and this application filed Apr. 20, 1922. Serial No. 555,714. 4 Claims. (Cl. 15—180.)



2. In a brush-head for rotary scrubbing machines the combination with a plate having an inwardly inclined depending flange at its outer edge, of a brush having a back with an inclined groove at one edge to receive the inclined flange of the plate and a cam pivotally carried at the under side of the plate for engaging the brush-back and pressing the grooved edge thereof against the inclined flange of the plate.

1,564,227. SHOCK ABSORBER. ERNST FLENTJE, Cambridge, Mass. Filed Mar. 26, 1924. Serial No. 702,145. 8 Claims. (Cl. 188—89.)

1. In a shock absorber, the combination with a cylindrical casing, of a shaft situated axially thereof and having rigid therewith a radial vane or partition, a stationary radial partition separate from the casing and extending from said shaft to the peripheral wall of the casing, said stationary partition having on each side curved flanges engaging the peripheral wall and also having a by-pass port therethrough, and a screw-threaded member extending through the wall of the casing and into the radial partition and operating both to assist in holding the partition in place and to regulate the effective area of the by-pass port.

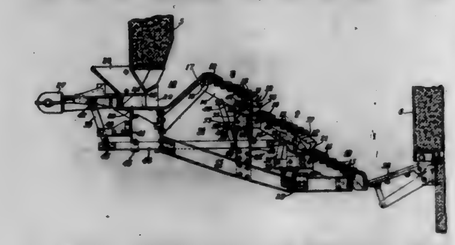
1,564,228. TESTING CIRCUITS. HARVEY FLETCHER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1921. Serial No. 525,904. 7 Claims. (Cl. 179—175.)

2. A testing circuit comprising an instrument to be tested, a standard instrument, a distortionless network comprising a series resistance, a shunt resistance and

a potentiometer resistance, means for connecting said network alternately with said instruments, and means for comparing the operation of the instruments when so connected.

---

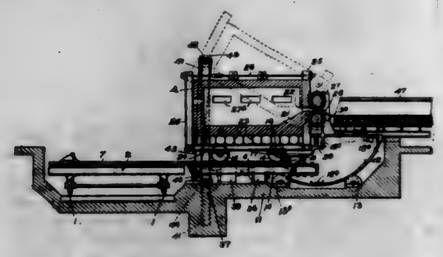
1,564,229. MECHANICAL STOKER. ROBERT A. FORSMAN, Essington, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 22, 1920. Serial No. 390,855. 14 Claims. (Cl. 110—44.)



1. In a furnace stoker, a longitudinal overfeed grate unit having a plurality of fixed inclined sections spaced to provide a recess between adjacent sections, means for supplying fuel to the overfeed grate, and a fuel moving member pivotally mounted in said recess between adjacent sections and adapted to be oscillated toward the front and rear of the furnace.

---

1,564,230. APPARATUS FOR MAKING SHEET GLASS. FREDERICK GELSTHARP, Tarentum, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Jan. 23, 1922. Serial No. 531,056. 5 Claims. (Cl. 49—3.)

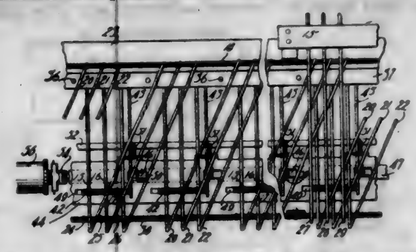


5. Apparatus for forming sheet glass, comprising a tank supported on wheels and carrying a glass bath, and having a passage through its wall, a tilting carrier adapted to receive a tank and provided with a pair of water cooled driven rolls in opposition to said passage, and a leer for receiving the sheet formed between the rolls, the carrier having its axis of tilting coincident with the axis of rotation of the lower roll.

---

1,564,231. TELEPHONE SWITCH. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,464. 8 Claims. Cl. 179—27.5.)

1. In a switching device, a multiple contact arrangement comprising a continuous conductor bent into a form approximating a helix, means for anchoring said conductor at a plurality of similarly situated points, and



means for selectively moving particular sections of said conductor for contacting purposes.

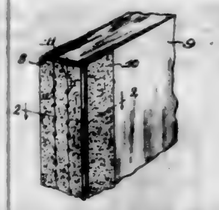
---

1,564,232. SPORTING SHOE. DANIEL J. GOLDEN, Brockton, Mass. Filed July 22, 1925. Serial No. 45,153. 3 Claims. (Cl. 36—31.)

1. A sporting shoe comprising an insole having the usual form at its fore portion whereby it is adapted to be engaged by stitches uniting the fore portion of an upper thereto, and a reduced rear portion whose margin is formed to lie within the stitches uniting the rear portion of the upper to the rear portion of the usual insole, an upper lasted on the fore portion and on the reduced rear portion of the insole, a two-part outsole composed of a relatively thick and stiff tap member and a relatively thin and flexible rear member constituting a shank and heel piece, said members overlapping each other and their overlapping portions united to each other, stitches uniting the fore portion of the upper to the tap and the fore portion of the insole, and stitches formed outside the margin of the reduced rear poriton of the insole and uniting the rear portion of the upper to the relatively flexible rear member of the outsole, the insole permitting the usual lasting of the upper and forming a continuous bridge across the joint formed by the overlapping portions of the outsole members, the reduced rear portion of the insole being free from attaching stitches so that the flexibility of the rear member of the outsole is not impaired by the insole.

---

1,564,233. BOOKBINDER. CHARLES GOLDSTEIN, Chicago, Ill. Filed May 1, 1924. Serial No. 710,355. 3 Claims. (Cl. 281—23.)



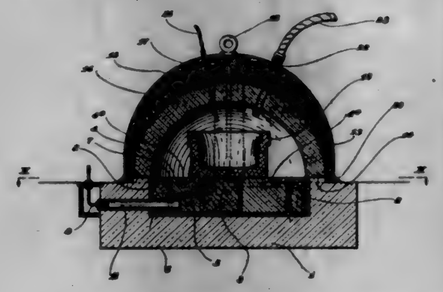
3. A binder comprising a separable cover and filler, a channel along the back section of said cover, a flexible strip applied along the back edge of said filler, a relatively stiff strip flexibly connected with said flexible strip and means for locking said parts in connected position.

1,564,234. TRANSFER INK. EMILE GORCY, Montreal, Quebec, Canada. Filed Nov. 10, 1924. Serial No. 749,083. 2 Claims. (Cl. 134—34.)

2. An ink adapted to be transferred under heat, containing 49 parts of mutton fat, 14 parts of black soap and coloring matter.

---

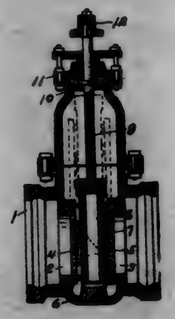
1,564,235. PROCESS AND APPARATUS FOR MELTING AND FINING GLASS. ALFRED L. HARRINGTON, Rosslyn Farms, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 5, 1923. Serial No. 678,598. 10 Claims. (Cl. 204—64.)



1. A process of producing glass which consists in preliminarily fusing a glass batch in a pot, transferring the pot with the molten glass to an electric furnace and finishing the operation including the fining in such furnace.

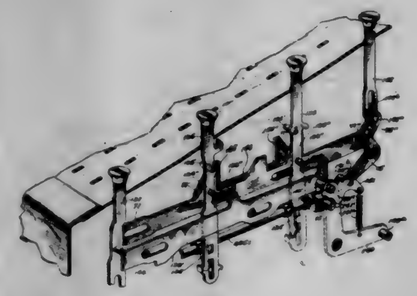
---

1,564,236. GATE-VALVE MECHANISM. GODFREY H. HARRIS, Kansas City, Mo. Filed Dec. 10, 1923. Serial No. 679,743. 2 Claims. (Cl. 251—71.)



1. In a valve mechanism, a casing having a port, a valve for closing said port, a sleeve having an interiorly threaded open end and a closed opposite end, a member having means for engaging and lifting said valve and provided with an oblique portion at its lower end, a second member having an oblique portion engaging the oblique portion of the other member and movable with said valve and adapted to engage the casing to limit its closing movement and having means for engaging and forcing said valve to the closed position when moved in one direction by the first named member, the latter being secured to and movable with said sleeve, and a stem extending through the wall of the casing and rotatable therein and having a threaded portion fitted in the open end of said sleeve.

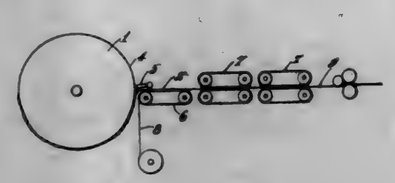
1,564,237. ACCOUNTING MACHINE. AMOS H. HAWLEY, Norwood, Ohio, assignor, by mesne assignments, to Remington Arms Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1918. Serial No. 263,625. 11 Claims. (Cl. 235—60.)



1. In an accounting machine, the combination of accounting mechanism, a main actuator therefor, manipulative keys for predetermining the operation of the accounting mechanism, lock means to hold said keys in operated positions, a release device for said lock means, a total key to control totaling action of the accounting mechanism, and means to interfere with the release operation of the release device and controlled by the total key.

---

1,564,238. ASBESTOS INSULATING MEDIUM. JOHN ALLEN HEANY, New Haven, Conn., assignor, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Massachusetts. Filed Jan. 30, 1920. Serial No. 355,117. Renewed Apr. 28, 1925. 7 Claims. (Cl. 117—35.)



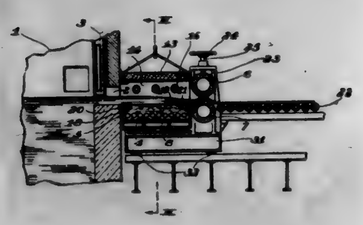
1. The process of treating materials in preparation for the manufacture of yarn which consists in combining the cleaning of crude asbestos, and the incorporating therewith of cotton, by picking apart the asbestos material and the cotton fibers and mixing them in a flocculent condition.

---

1,564,239. PRODUCTION AND ISOLATION OF ALKALI SALTS OF AROMATIC SULPHONIC ACIDS. HOMER W. HILLYER, Farmington, Conn., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 8, 1920. Serial No. 349,239. 7 Claims. (Cl. 260—159.)

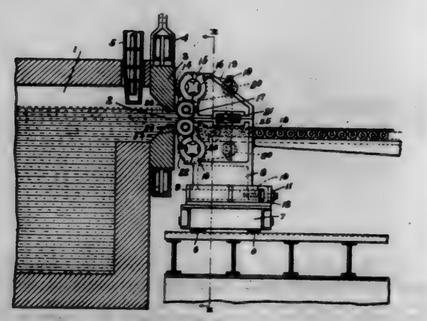
2. The method of producing sodium salts of aromatic sulphonic acids, which comprises treating a solution containing a calcium salt of the sulphonic acid with sodium chloride, whereby the sodium salt of the sulphonic acid is formed by double decomposition and is precipitated out of the solution.

1,564,240. PROCESS AND APPARATUS FOR MAKING SHEET GLASS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed Feb. 5, 1925. Serial No. 7,037. 18 Claims. (Cl. 49—33.)



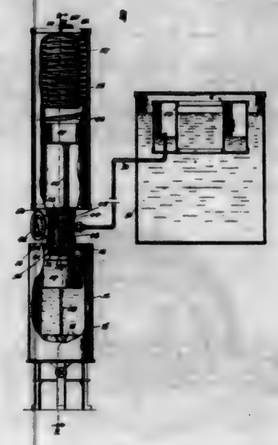
9. The combination with a glass tank having an outlet slot, of a molten bath of metal in position to receive the glass from the slot of a width greater than said slot, a pair of sizing rolls, at least one of which is driven, located at the forward end of said metal bath, a cover over said bath, means for applying heat intermediate said cover and the bath, and temperature regulating means for said bath.

1,564,241. APPARATUS FOR MAKING SHEET GLASS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed Feb. 5, 1925. Serial No. 7,039. 9 Claims. (Cl. 49—33.)



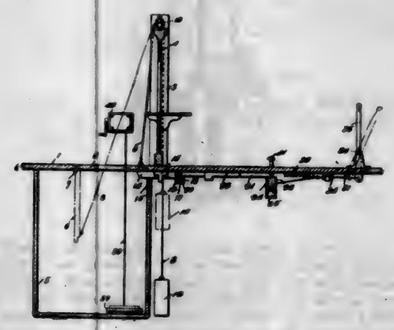
6. The combination with a glass tank having an outlet slot, of a pair of driven forming rolls in opposition to said slot with the pass thereof under the head pressure of the glass in the tank, a pair of supporting rolls engaging said forming rolls along the sides thereof opposite said pass, adjustable swinging arms in which the forming rolls are journalled, pivoted to swing around the axes of rotation of the forming rolls, so as to vary the width of said pass, means for adjusting said arms and maintaining them in adjusted position, means for driving the supporting rolls, and driving connections between the supporting rolls and forming rolls.

1,564,242. APPARATUS FOR REFRIGERATION. BRADFORD B. HOLMES, New York, N. Y. Filed Feb. 18, 1922. Serial No. 536,170. 7 Claims. (Cl. 62—5.)



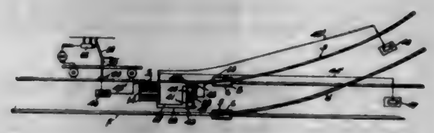
1. In a refrigerating machine, the combination of a boiler; a condenser; a volatile liquid in said boiler and condenser; an evaporator also containing such volatile liquid; an ejector interposed between the boiler and condenser and connected with said evaporator to draw vapor from the evaporator and discharge it into the condenser; means for periodically stopping the action of the jet of the ejector; and means for supplying condensate to the discharge end of the ejector during the periods of jet inaction to permit condensate to feed back to the evaporator.

1,564,243. BURGLAR TRAP. GUS IVORY, Jonesboro, Ark. Filed Nov. 1, 1924. Serial No. 747,390. 2 Claims. (Cl. 43—59.)



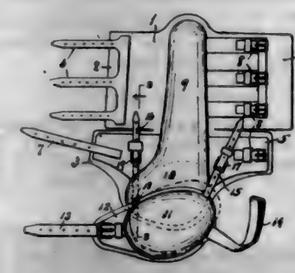
1. In a device of the class described, a floor, a trap door hinged to the floor, spaced slidably supported latches engaged with one edge of the trap door to hold it closed, levers fulcrumed intermediate their ends, the latches being connected with the outer ends of the levers, a slidably mounted operating member connected to the inner ends of the levers, yieldable means for actuating the operating member to disengage the latches from the trap door, mechanism for actuating the operating member from a remote point, a retainer engaged with the operating member, and means for operating the retainer from a remote point.

1,564,244. RAILWAY SWITCH. HARRY G. JOHNSTON, Plains, Mont. Filed Oct. 26, 1921. Serial No. 510,541. 4 Claims. (Cl. 246—232.)



1. In combination with main track sections and curved track sections intersecting with the main track sections, rotary switch blocks disposed at the said intersection of the curved tracks with the main track, each rotary switch block comprising a substantially quarter cylindrical member having opposite flat surfaces, a straight groove formed in one surface whereby the sections of the main track may be longitudinally alined, a curved groove formed in the other surface of the block whereby one of the straight sections of the main line may be alined through the groove with the curved section of the track, each switch block being provided with a tangentially extending arm, operating rods connected to the arm, a crank shaft connected to the operating rod, and means to impart a movement to the crank shaft whereby both of the said blocks may be simultaneously rotated when the shaft is actuated.

1,564,245. HORSE BOOT. JAMES D. KELLER, of Detroit, Mich. Filed Jan. 12, 1925, Serial No. 1,862. Renewed Oct. 17, 1925. 3 Claims. (Cl. 54—82.)

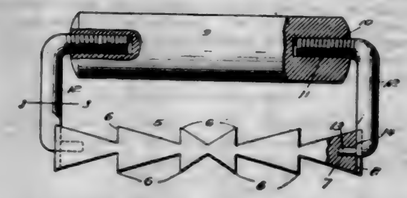


1. A horse boot comprising an upper section having a pad adapted to cover the ankle joint and flexible means whereby this section may be attached to the leg, a lower section embodying a pad adapted to cover the pastern joint and the lower end of the upper pad, and a flexible connection between the two sections comprising a strap having a short pivot section adjacent the front of the pads and a longer strap supporting the rear end of the lower section and permitting it to swing upward.

1,564,246. PRESSURE GAUGE. WILLIAM HARDY KELLY, Charlotte, N. C. Filed Mar. 27, 1925. Serial No. 18,815. 4 Claims. (Cl. 73—31.)

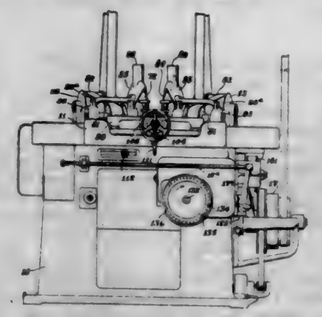
1. The combination of a pressure gauge; a connection for said gauge having a constriction throttling the flow of fluid under pressure to and from the gauge; and a movable clearing stem within said constriction and arranged to be moved by the flow of fluid therethrough.

1,564,247. SCRAPING TOOL. JAMES R. KILMARTIN, Washington, D. C., assignor of one-half to Patrick Harvey, Washington, D. C. Filed Dec. 27, 1924. Serial No. 758,413. 2 Claims. (Cl. 15—236.)



1. A scraping tool of the class described comprising a block-like body provided with a plurality of transversely extending longitudinally spaced cutting edges on its top and bottom, a handle, and connecting members detachably connected with the opposite ends of the handle and the opposite ends of said body for permitting said body to be reversed to dispose the cutting edges of either the top or bottom for use.

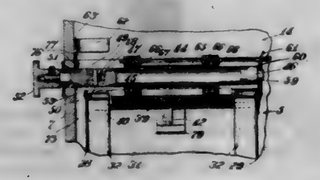
1,564,248. GEAR-CUTTER GRINDING MACHINE. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,029. 45 Claims. (Cl. 51—52.)



1. A machine tool comprising in combination, a base, a work holding table movable thereon along, a lead screw operatively connected to said table whereby rotation thereof is adapted to move said table, means to periodi-

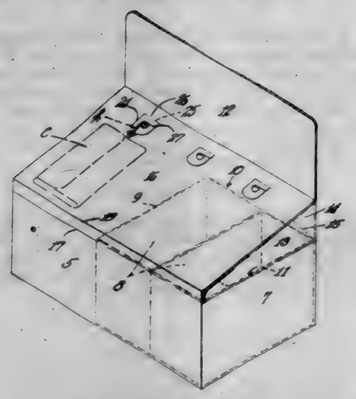
cally rotate said lead screw to successively move said table a plurality of predetermined distances in a straight line, means to move said tool into and out of work engagement while said table is stationary, and means to vary the amount of movement of said table with each periodic movement.

1,564,249. PAPER AND ENVELOPE DISPENSING APPARATUS. FRANK R. LACY, Chicago, Ill., assignor to Emil H. Seeman, Chicago, Ill. Filed Aug. 13, 1921. Serial No. 491,976. 5 Claims. (Cl. 211—8.)



1. In a dispensing device, a housing, a container in said housing having parallel inclined end walls, a vertically operable tray in said container, means for raising the tray, said tray carrying a plurality of superposed sheets, a rotary shaft on said container above the tray, a friction wheel on said shaft and adapted to engage successively said sheets and deliver the same through a suitable opening in said housing, said shaft having a hinge joint therein and extending through the housing and means on the outer end of the shaft for manipulating the same.

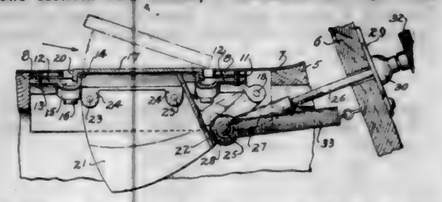
1,564,250. DISPLAY BOX. RUSSELL A. LAMBERT, Springfield, Mass. Filed Feb. 13, 1924. Serial No. 692,609. 9 Claims. (Cl. 206—44.)



1. In a display box, an inner cover and an outer cover hinged to opposite walls of the box, and foldable bracing means connecting the inner cover to other opposite walls of the box, said outer cover adapted to be inserted between said foldable bracing means when the inner cover is open to hold the latter thus positioned by preventing collapse of said foldable bracing means.

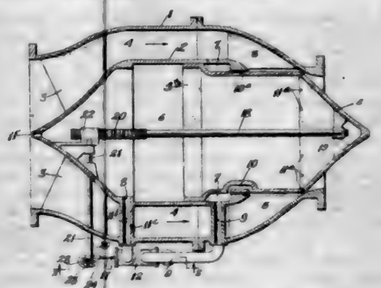
1,564,251. COWL VENTILATOR. PETER N. LANDINE, Milford, Conn. Original application filed Sept. 9, 1922, Serial No. 587,190. Divided and this application filed June 14, 1923. Serial No. 645,283. 4 Claims. (Cl. 98—22.)

1. In a cowl ventilator, a frame having a drain channel thereon, a second frame to be secured to said first mentioned frame for holding part of a sheet metal cowl between said frames, a ventilator cover pivotally



mounted on one of said frames and seating on one side of said drain channel, and means for actuating said ventilator cover.

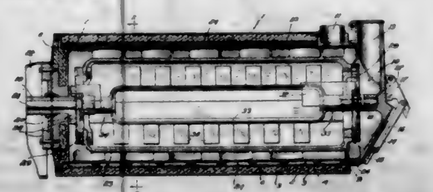
1,564,252. DIFFERENTIAL PLUNGER VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor, by direct and mesne assignments, to The William Cramp & Sons Ship & Engine Building Company, a Corporation of Pennsylvania. Filed Nov. 4, 1921. Serial No. 512,762. 14 Claims. (Cl. 137—139.)



4. The combination of a plunger valve having cylindrical and annular operating chambers to each of which pressure is supplied through openings provided in the internal structure of the valve, and a control valve devoid of pressure connections and having exhaust connections for said chambers substantially as described.

14. The combination with a casing and a hollow valve therein formed of a stationary part and a movable plunger seating against said casing, and means for operating said valve comprising a fluid pressure chamber within said plunger and an opening connecting the interior of said plunger to the fluid way, said opening being located slightly up-stream from the seat between the plunger and the body of the casing.

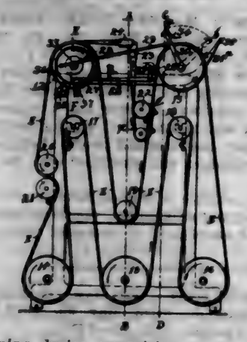
1,564,253. ICE-CREAM FREEZER. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1922. Serial No. 596,261. 3 Claims. (Cl. 259—6.)



1. In a device of the class described, material agitating means comprising an inner dasher having a substantially rectangular rigid frame structure enclosing an unobstructed central space, outwardly extending radial

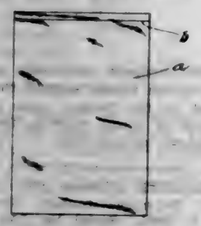
blades formed on the side members of said frame structure, endwardly extending shafts mounted on the end members of said frame structure, an outer dasher of substantially rectangular rigid frame structure enclosing a space arranged to receive said inner dasher, bearings in the end members of said outer dasher adapted to operatively receive said shafts, and radial blades formed on the side members of said outer dasher.

1,564,254. LAP-FORMING APPARATUS. GUILLAUME CLEMENT LAURENCY and MARCEL VIGIER, London, England. Original application filed May 26, 1921, Serial No. 472,850. Divided and this application filed Nov. 22, 1923. Serial No. 676,464. 1 Claim. (Cl. 19—155.)



A lap-forming device comprising an apron formed by an endless band, the movement of which is displaced transversely in a continuous manner to form a lap with parallel fibres having from the beginning to the end of its formation the same thickness over all its width and comprising over all its surface and throughout its thickness fibres taken up at regular intervals and at different places over the whole width of the machine, and mechanism for automatically breaking said lap when it reaches a predetermined thickness.

1,564,255. BAG. EDWARD P. LEA, South Orange, N. J., assignor to The Riegel Sack Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 26, 1923. Serial No. 647,795. 3 Claims. (Cl. 139—420.)

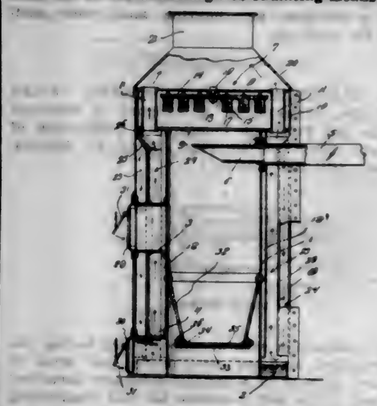


1. A bag of textile material for cement and the like having for its upper open end a selvage edge of the fabric in which is woven a warp thread or threads of relatively large size.

1,564,256. PIPELESS FURNACE. HENRY LECHLEITNER, Akron, Ohio. Filed Apr. 14, 1925. Serial No. 23,016. 2 Claims. (Cl. 126—113.)

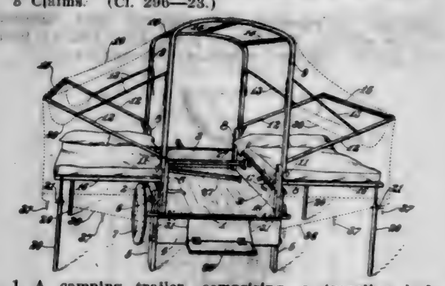
1. In a furnace of the class described, a casing, a shell located in said casing, said shell being hollow and disposed vertically, a bottom connected with the lower end of the shell, said bottom being fashioned to provide a water containing pan, an air heating drum at the top

of said shell, said drum, shell and pan being a single unit, and a heat absorbing and radiating means located in



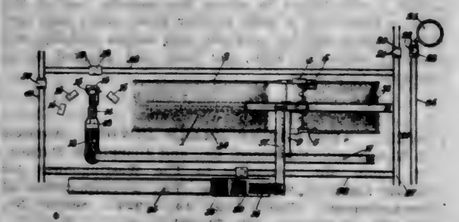
said drum and comprising a casting embodying cells in which heat absorbing coils are confined.

1,564,257. CAMPING TRAILER. WILLIAM A. LIPPMAN, St. Louis, Mo. Filed May 2, 1921. Serial No. 466,197. 8 Claims. (Cl. 296—23.)



1. A camping trailer, comprising, a traveling body having a room floor, an arch arranged at each end of and spanning said body and pivoted thereon to swing towards and from one another, whereby said arches may be extended vertically or collapsed to a horizontal position upon the body, an arm permanently pivoted to the leg of each arch and movable from a position therealong when the arch is collapsed to a position extending transversely therefrom when the arch is extended vertically, and a cover arranged to be supported by said arches and said arms, adapted to provide with said body a camp room.

1,564,258. SANDSLINGER MACHINE. ALEXIUS LOUGHEAN, Brooklyn, N. Y. Filed Sept. 1, 1923. Serial No. 660,468. 10 Claims. (Cl. 22—20.)

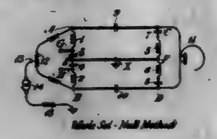


1. The combination of a stationary sandslinger with means for conveying sand thereto from a sand pile, a dumping place for molds, and means for re-forming the

sand pile as it is consumed comprising a sand conveyor for removing sand from said dumping place to the sand pile, and a conveyor for conveying sand from sand-slinger to the sand pile.

---

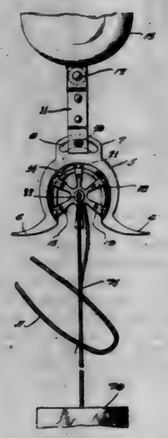
1,564,259. ELECTRICAL TESTING SYSTEM. RALPH G. MCCURDY, Cresskill, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 30, 1921. Serial No. 525,953. 7 Claims. (Cl. 199—175.)



1. The combination with a composite set having two similar grounded branches constituting two arms of a Wheatstone network of a variable resistance connected with one end of the said composite set, and constituting the two ratio arms of the network, a current indicating device connected with the other end of the composite set and a grounded source of varying potential connected with the contactor of the said variable resistance.

---

1,564,260. ANTISWEEPING DEVICE FOR MINES. JOHN MCGINN, Washington, D. C. Filed June 13, 1924. Serial No. 719,853. 3 Claims. (Cl. 102—3.)



1. In an anti-sweeping device for mines, an anchoring cable, an anchor to one end of which said cable is connected, a star wheel to which the opposite end of the cable is connected, a body member upon which said star wheel is mounted for rotation, and means slidably and pivotally connected with said body and adapted to be connected to a mine.

---

1,564,261. AUTOMOTIVE BRAKE DEVICE. ANDREW C. MATHIESON, Edgewood, Pa., and JOSEPH M. DAPRON, St. Louis, Mo., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 14, 1924. Serial No. 731,988. 6 Claims. (Cl. 74—81.)

1. The combination with mechanism for controlling the brakes, a yielding resistance for opposing movement of said mechanism, and a manually controlled device for operating said mechanism, of means for disconnecting said mechanism from operative engagement with said manually controlled device after a predetermined move-

ment thereof, the further movement of said manually controlled device being free of said mechanism and said yielding resistance.

---

1,564,262. FOOD MANUFACTURE. HOWARD S. MELLOTT, Morenci, Mich. Filed Dec. 16, 1922. Serial No. 607,425. 7 Claims. (Cl. 99—11.)

1. A process of preparing a food product which comprises concentrating milk, adding chocolate flavor thereto, warming the resultant mixture and homogenizing while warm, cooling said mixture and adding sweetening material to the same, the resultant product being subsequently sealed in a container and sterilized with heat and agitation.

6. A water soluble sterilized homogenous liquid food product embodying milk solids, vegetable solids including chocolate, and sweetening in excess of thirty-five percent by weight.

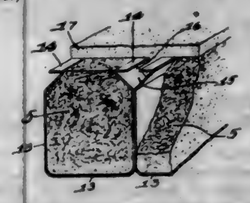
---

1,564,263. SIGNPOST. WILLIAM FREDERICK MOODY, Romsey, England. Filed May 25, 1925. Serial No. 32,774. 4 Claims. (Cl. 40—145.)

1. An improved signpost comprising adjustable standards, slidable, cup-like flanges secured thereto, triangular fittings mounted on the flanges, signs mounted on the triangular fittings in spiral stepwise formation in relation to the standard, as described.

---

1,564,264. CONCRETE FLOOR AND CEILING CONSTRUCTION. RICHARD MURRAY, New York, N. Y. Filed Nov. 17, 1924. Serial No. 750,275. 7 Claims. (Cl. 72—66.)

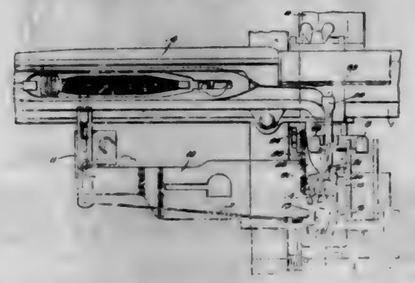


1. A beam of the class described composed of an elongated body of concrete and a binder of fibrous material imbedded in and constituting part of said body, steel

wool imbedded in said body as a binder and filling, a reinforcing beam imbedded in said concrete body, and a metal facing for the major portion of said body.

---

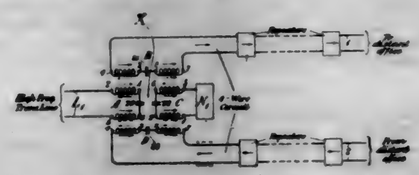
1,564,265. FILLING-FEELER MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1921. Serial No. 492,733. 7 Claims. (Cl. 139—230.)



1. A loom having, in combination, a lay adapted to carry a shuttle, a shuttle box, a filling feeler mechanism comprising a feeler, a latch, connections between the feeler and latch, means tending to move the feeler to cause its filling feeling end to move toward the butt of a bobbin in the shuttle, a controller for preventing such movement of the feeler, the shuttle box being provided with a part adapted to engage the controller, and thereby release the latch and feeler when the shuttle is boxed on the filling feeler side of the loom.

---

1,564,266. ELECTRICAL TRANSFORMER. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 29, 1921. Serial No. 481,319. 8 Claims. (Cl. 179—170.)

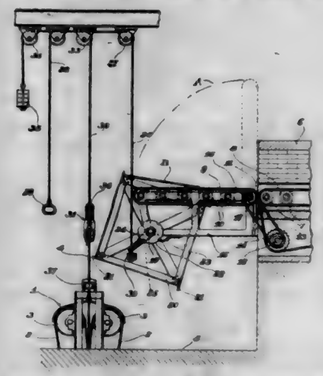


1. In a signaling system, the combination with a line circuit of a balancing network circuit, an input circuit, an output circuit and a transformer arrangement adapted to electrically connect all of said circuits and to transmit readily currents of frequencies above a certain limit.

---

1,564,267. APPARATUS FOR HANDLING GLASS SHEETS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 16, 1924. Serial No. 693,240. 7 Claims. (Cl. 49—8.)

5. The combination with a vertical sheet glass drawing machine, of a counterbalanced clamping device above the machine adapted to engage the upper edge of the sheet cut from the continuous sheet being drawn and move upwardly therewith and give it support during and after the cutting off operation, a driven carrier extending laterally from a position at one side of the machine, and a transfer frame pivoted beneath the end of the carrier adjacent the machine having a plurality of similar faces arranged around the axis of the frame for engaging the flat sides of the glass sheets which are cut from said continuous sheet, supporting means projecting



laterally from one edge of each of said faces for engaging the lower edge of said sheets, and means for rotating the frame so that the sheets placed thereon are raised and carried over the carrier and lowered thereon.

---

1,564,268. APPARATUS FOR USE IN CIPHERING AND DECIPHERING. JOÃO PINTO PESSÔA, Rio de Janeiro, Brazil. Filed Sept. 6, 1923. Serial No. 661,283. 4 Claims. (Cl. 35—13.)

1. An apparatus for use in ciphering and deciphering messages and the like comprising a case, a pair of concentric rings mounted within the case and having the letters of the alphabet marked on each ring, a disc member mounted concentrically within the said rings and having a circular series of numbered recesses therein, a pointer permanently secured on the disc and indicating one or other of the letters on one of the rings, a hollow shaft carrying said disc member, means whereby the hollow shaft is rotated in the operation of the apparatus, a spindle mounted in the hollow shaft and capable of both rotary and endwise movement therein, a pointer secured on said spindle and engaging one or other of the said recesses and indicating one or other of the letters on the other ring, means for retaining the spindle in such an endwise position that the latter pointer is retained in a recess, means whereby the spindle is shifted to release the pointer from the recess and whereby the spindle may be rotated to bring it into position for engagement with a different recess.

---

1,564,269. INTRAORAL X-RAY FILM AND SCREEN HOLDER AND POUCH. MICHAEL PEYSER, Jericho Turnpike, Long Island, N. Y. Filed Jan. 31, 1922. Serial No. 532,980. 2 Claims. (Cl. 250—84.)

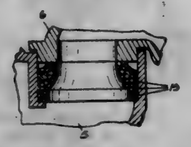
2. In X-ray in dental and oral work a double intensifying screen and the screens placed facing each other,

each of the screens being securely enveloped in celluloid and sealed hermetically, the celluloid containers being

held together by a suitable binding at one end, a thin sheet of non-penetrable metal being inserted in the one envelope back of such screen.

---

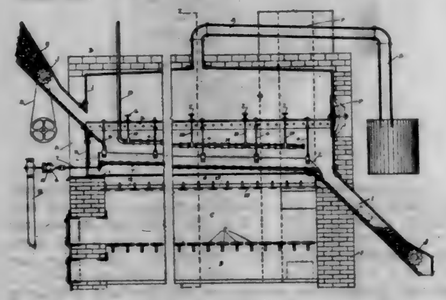
1,564,270. FLEXIBLE PIPE. JOHN HENRY PHILLIPS, Jr., Jackson, Mich. Filed Apr. 13, 1922. Serial No. 552,143. 10 Claims. (Cl. 288—1.)



1. As an article of manufacture, a cylindrical annular gasket having an outwardly tapering bore with a cylindrical portion at the inner end thereof, and a plurality of annular peripheral grooves of downwardly tapering cross section, the inner edge of the inner groove terminating adjacent the inner end of the gasket, the outer corner of the gasket being chamfered.

---

1,564,271. OIL-SHALE RETORT. JOHN T. POPE, Salt Lake City, Utah. Filed Oct. 24, 1922, Serial No. 596,562. Renewed June 29, 1925. 3 Claims. (Cl. 202—14.)

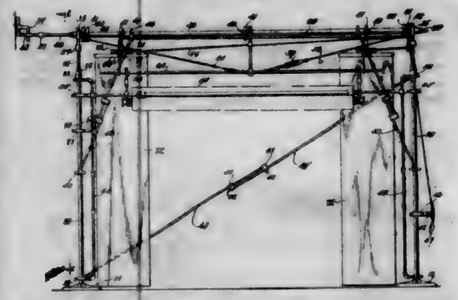


1. In an oil shale retort the combination of a sheet metal casing having a furnace thereunder; an angle iron frame secured to the sides of said casing; a grid composed of inverted T-irons and fire brick slabs placed between the furnace and said sheet metal casing; an inclined metal table suspended from said frame; means to reciprocate said table longitudinally; a perforated steam rack spaced above said table; means to conduct superheated steam to said steam rack; chutes to conduct crushed shale to and from said table; rotatable roller gates to control the passage of crushed shale through said retort; and a pipe line to conduct gas from said casing.

---

1,564,272. THEATRICAL STAGE. WILLIAM E. PRICE, Hartsdale, N. Y. Filed Oct. 7, 1922. Serial No. 592,938. 6 Claims. (Cl. 272—22.)

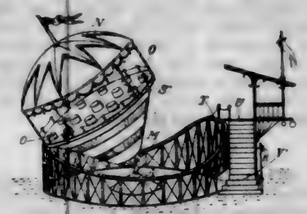
1. In a portable scenery frame adjustable to various sizes of length, width and height, cylindrical members, and means for removably securing said members together comprising a V-shaped gripping member, a T-shaped gripping member, means for reversibly pivoting said T-shaped member to one end of the V-shaped member to accommodate cylindrical members of various di-



ameters, teeth in both of said gripping members adapted to engage one of the cylindrical members, and a single tightening means at the other end of said V-shaped member.

---

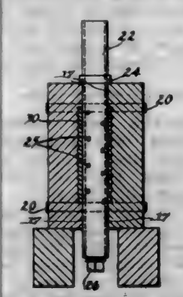
1,564,273. ROUNDABOUT AFFECTING THE SHAPE OF A GIANT TOP. ETIENNE PROST, Marseille, France, assignor to Henri Girard, Marseille, France. Filed Feb. 7, 1923. Serial No. 617,523. 1 Claim. (Cl. 272—50.)



An amusement apparatus comprising a roundabout shaped like a giant top, an entrance and exit platform, an undulating track formed with a depression for receiving the roundabout and facilitating the stoppage thereof alongside said platform, and a peripheral edge on the roundabout for engaging and rolling upon the said track.

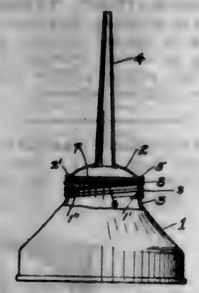
---

1,564,274. METHOD OF AND MEANS FOR CASTING ARTICLES. CHARLES CLAFLIN RAND, Lombard, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1923. Serial No. 667,109. 12 Claims. (Cl. 25—129.)



1. The method of casting an article, which consists in directing a slip against the wall of a mold cavity from a position within the cavity.

1,564,275. OIL CAN. JOHN J. RITTER, Urbana, Ohio, assignor to The W. B. Marvin Manufacturing Company, Urbana, Ohio, a Corporation of Ohio. Filed May 13, 1925. Serial No. 29,855. 2 Claims. (Cl. 221—56.)



1. In an oil can, a body portion having a threaded neck provided with an internal annular flange at its outer end, a cap having a spout and provided with a circumferential flange, said flange having a plain upper cylindrical portion and a lower threaded portion to engage the neck, and an insertable member having a check valve located in the said upper cylindrical portion of said flange.

---

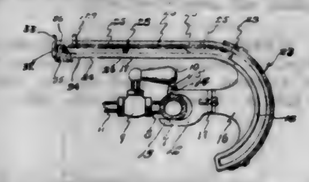
1,564,276. FIRE KINDLER. WILLIAM T. ROBERTSON, Montgomery, Ala. Filed Sept. 18, 1924. Serial No. 738,522. 1 Claim. (Cl. 158—10.)

In a fire kindler, a casing, a filler in said casing, a handle comprising a plurality of wires bound together to provide a hand grip, said wires having their forward ends spaced laterally to form lateral tines and a central tine, said lateral tines having laterally extended end portions, and said central tines having an upwardly extended end portion providing attaching prongs, said prongs being extended through one wall of said casing and embedded in the filler to secure the casing and handle together.

---

1,564,277. STOPCOCK SHIELD. SAMUEL ROLLAND, Flint, Mich. Filed Jan. 5, 1925. Serial No. 598. 7 Claims. (Cl. 126—42.)

1. A shield of the class described, adapted for use with a gas stove, having a feed pipe comprising a clamping member adapted for engagement on said pipe; channel bearing guide members formed arcuate, adjacent one end; a web formed on said guide members adjacent said arcuate end; means for connecting said web to said clamping members; a permanently arranged shield, mounted on said arcuate portion; and a movable shield



mounted in said guide members and adapted for movement in one position, for rendering the stop-cocks of the stove with which used, inaccessible.

---

1,564,278. BUMPER FOR MOTOR VEHICLES. CHARLES G. ROSS, Chicago, Ill., assignor of one-half to William L. Ross, Chicago, Ill. Filed Apr. 21, 1924. Serial No. 707,960. 27 Claims. (Cl. 293—55.)

26. In a bumper construction of the class described, a resilient bar formed into a loop of triangular formation and having its ends pivotally connected.

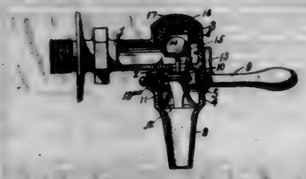
---

1,564,279. BUMPER FOR MOTOR VEHICLES. CHARLES G. ROSS, Chicago, Ill., assignor of one-half to William L. Ross, Chicago, Ill. Filed Apr. 21, 1924. Serial No. 707,961. 34 Claims. (Cl. 293—55.)

1. A bumper of the class described comprising, in combination, unitary transversely extending supporting means, impact means connected at its respective extremities to the extremities of said supporting means, and a bowed resilient buffer bar interposed between and having its extremities pivotally connected to one of and its medial portion bearing against the other of said means.

---

1,564,280. FAUCET. ALFRED G. SCHMIDT, Baltimore, Md., assignor, by mesne assignments, to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Mar. 25, 1922. Serial No. 546,937. 5 Claims. (Cl. 277—27.)

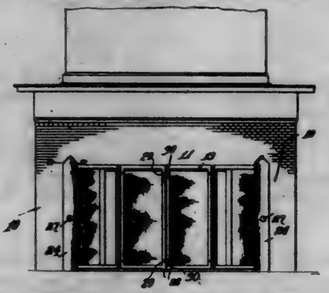


1. A faucet having a median partition provided with upper and lower valve-seats adjacent to upper and lower valve chambers, a rotatable nozzle having therein a valve-closer adapted to seat against the lower valve-seat, a valve guided to seat against the upper valve-seat, and a removable plug in the faucet having a guide for the valve projecting into the upper valve chamber.

5. A vertically disposed faucet having a median partition provided with upper and lower valve-seats, a valve-chamber above the partition and a horizontally disposed liquid conduit connected to the valve-chamber, a valve in the chamber normally disposed considerably above its

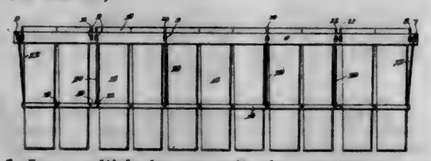
seat to present no obstruction to the flow of liquid, and a rotatable nozzle having therein a valve-closer adapted to seat against the lower valve seat.

1,564,281. FIREPLACE AND SCREEN. JAMES SUTCHFIELD, Portland, Oreg., assignor of one-half to Thomas J. Quirk, Portland, Oreg. Filed July 28, 1924. Serial No. 728,749. 3 Claims. (Cl. 126—292.)



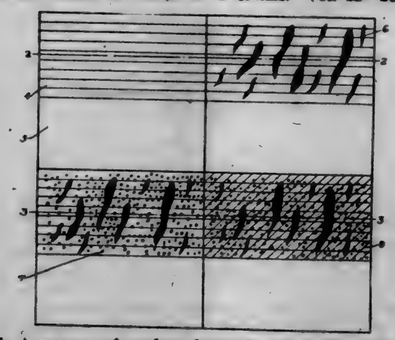
1. The combination with a fireplace having a recess in its face, of a foldable screen movable into and out of the recess, means in the recess engaged by one of the screen sections for guiding the screen into and out of the recess, means associated with the guiding means for limiting the outward movement of the screen from the recess, and a resiliently held closure for the recess.

1,564,282. ICE CAN. THOMAS SHIPLEY, York, Pa. Filed May 31, 1924. Serial No. 717,078. 7 Claims. (Cl. 220—1.)



1. In a multiple ice can unit, the combination of a plurality of ice cans; a main frame in which said cans are sustained near their tops; and a sub-frame surrounding and spacing said cans near mid-height thereof.

1,564,283. PROCESS FOR CREATING A LEATHER EFFECT. CHARLES S. SINCLAIR, Cincinnati, Ohio, assignor to The R. F. Johnston Paint Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 15, 1923. Serial No. 662,811. 2 Claims. (Cl. 41—26.)

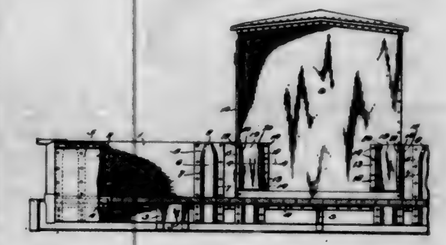


1. A process of surface decoration comprising the application of a ground color to a given surface, applying a design over the ground surface, and stippling over the ground surface after the application of a design.

1,564,284. GRAY CAST IRON AND THE PROCESS FOR ITS PRODUCTION. KARL SIPP, Mannheim, Germany, assignor to the Firm Heinrich Lanz, Mannheim, Baden, German, a Copartnership. Filed May 15, 1924. Serial No. 713,605. 8 Claims. (Cl. 75—1.)

1. The process of producing gray cast iron which comprises preparing a casting mixture and introducing therein nickel in an amount sufficient to effect, in conjunction with the silicon present therein, the precipitation of the graphite required.

1,564,285. COMPARTMENT FREIGHT CAR. ALFRED H. SMITH, New York, N. Y. Filed June 9, 1920. Serial No. 387,518. 6 Claims. (Cl. 105—366.)



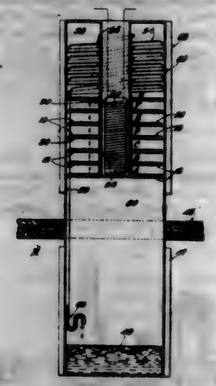
1. The combination of a car having side and end walls and stakes secured to the inner face of said side walls, of a plurality of independent freight compartments adapted to be positioned on said car, and locking means on the compartment to interlock with said stakes as the compartments are placed in position in the car, whereby the compartments are securely anchored in the car.

1,564,286. ROTARY MOTOR. BRUCE E. SMITH, Windsor, Ontario, Canada. Filed Apr. 17, 1922. Serial No. 553,682. 3 Claims. (Cl. 123—16.)

1. A rotary motor comprising a two part rotor having its parts axially spaced and adjustable toward each other, a rotor casing forming with said rotor adjoining compression and explosion chambers and having an annular interior projection and a pair of sealing rings secured to said rotor at each end thereof and projecting outwardly beyond the rotor into engagement with said projection upon the rotor casing.

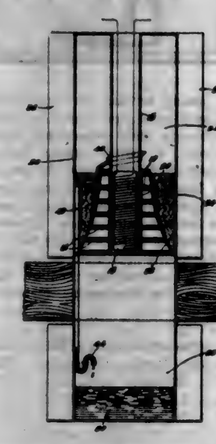
1,564,287. METHOD AND APPARATUS FOR HANDLING GASES AND VAPORS. CHARLES G. SMITH, Medford, Mass., assignor to Raytheon Manufacturing Company, Cambridge, Mass., a Corporation of Massachusetts. Filed May 19, 1922. Serial No. 562,282. 18 Claims. (Cl. 230—18.)

1. In an apparatus of the character described, a pump unit comprising a pair of plates disposed adjacent to each other in face to face relation, each said plate having an aperture registering with the aperture in the



other plate and means whereby one of said plates is heated and whereby the other of said plates is cooled.

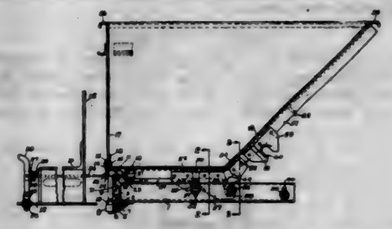
1,564,288. APPARATUS FOR HANDLING GASES AND VAPORS. CHARLES G. SMITH, Medford, Mass., assignor to Raytheon Manufacturing Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1922. Serial No. 580,923. 15 Claims. (Cl. 230—18.)



1. In apparatus of the character described, means including a pair of members at different temperatures and in spaced relation to each other for pumping a gaseous medium in response to said temperature difference, means whereby said member of higher temperature is heated, and means for supporting a cooling liquid in heat transfer relation to said member of lower temperature.

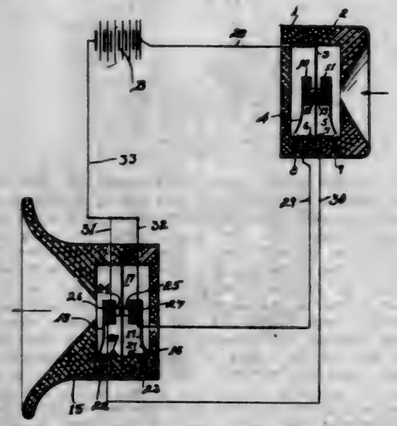
1,564,289. AUTOMATIC DUMP BODY. RALPH E. SMITH, JOHN C. GAY, and ROY J. ARNOLD, Galion, Ohio, assignors to The Galion Metallic Vault Company, Galion, Ohio, a Corporation of Ohio. Filed Feb. 16, 1925. Serial No. 9,580. 6 Claims. (Cl. 298—10.)

5. In combination, side rails, transverse rods located at spaced intervals therein, broad bearing members supporting said rods in said side rails, a dump body, a plurality of spaced rocking jaws on either side of the bottom and rear wall of the body, said jaws having broad bearing faces adapted to rest on said transverse rods



adjacent the said rails on either side of the body, means to position the body when in horizontal position and supported at its forward end on the side rails.

1,564,290. TELEPHONE APPARATUS. STUART F. SMITH, San Francisco, Calif. Filed May 8, 1922. Serial No. 559,158. 4 Claims. (Cl. 179—1.)



1. In a telephone apparatus sending and receiving diaphragms, microphone transmitting apparatus on both sides of the sending diaphragm, a pair of electromagnets on opposite sides of the receiving diaphragm, means to transmit current from both sides of the sending diaphragm to both sides of the receiving diaphragm, and means to adjust the position of the sending apparatus with respect to the diaphragm adjacent the same.

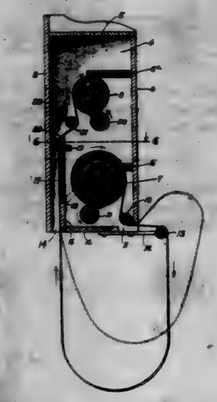
1,564,291. METHOD OF PREPARING MOTION-PICTURE TITLES. LELAND H. STANFORD, Okmulgee, Okla. Filed Oct. 28, 1922. Serial No. 597,574. 2 Claims. (Cl. 88—16.)

2. The method of preparing descriptive titles in motion picture films, said method consisting in the enlargement of a frame of said film, the execution of lettering on said enlargement, the reproduction of a series of said lettered enlargements, the reduction of said lettered en-

largements to their original size, and the introduction of said lettered enlargements into said film in a position directly preceding the frame from which said enlargements were prepared.

---

1,564,292. TOWEL CABINET. GEORGE A. STEINER, Salt Lake City, Utah, assignor to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed June 24, 1922. Serial No. 570,703. 2 Claims. (Cl. 45—32.)



1. A towel holder comprising a support for the clean and soiled towel rolls, feed rolls having a driving connection between them and with which said towel rolls contact respectively, the clean towel roll being near the bottom of said holder and the soiled towel roll near the top thereof, the lower portion of said holder having an opening through which the web of clean towel is fed to the user, and the rear of said holder having a gate hinged to swing forwardly as a towel is being inserted but normally held upright to form with the back of the casing, a passage through which the soiled towel web is fed to the soiled towel roll, a tension roll mounted beneath and in the rear of the soiled towel roll and in front of which the web of soiled towel is conducted from said passage to the soiled towel roll and means to prevent the end of the soiled towel from being inserted back of the tension roll.

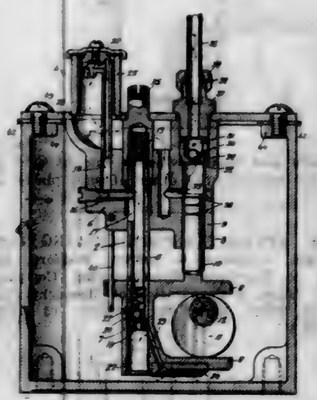
---

1,564,293. BRUSH HEAD AND HANDLE CONNECTION. HERBERT M. STURGIS, Kansas City, Mo. Filed Nov. 14, 1924. Serial No. 749,815. 3 Claims. (Cl. 300—1.)

2. A connection for fastening handles to brushes, comprising two members, one of which is adapted to be fastened to the brush and the other to the handle, one member consisting of a single bar bent intermediate its ends to provide two arms, one at an obtuse angle to the other, one arm being doubled back to form an open loop, the bar having a notch at one end adjacent to the open loop, the other arm being doubled back to provide a closed handle engaging loop, the second end of the bar extending beyond the end of the closed loop terminating in a pawl to engage the notch, the open loop being engageable with the other member.

---

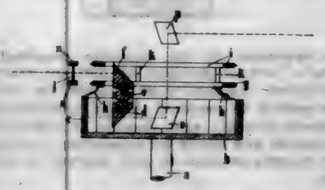
1,564,294. LUBRICATOR. FLOYD L. SWANBERG, Milwaukee, Wis., assignor, by mesne assignments, to S. F. Bowser and Co., Inc., Fort Wayne, Ind., a Corporation of Indiana. Filed Sept. 27, 1920. Serial No. 412,920. 46 Claims. (Cl. 184—27.)



1. Lubricating means having in combination a reservoir; a plurality of lubricators therefor; each lubricator comprising a supporting plate removably fastened to the top of the reservoir, a pump casing fastened to the plate and depending therefrom into the reservoir, a circulating pump, a force feed pump, one pump having a stationary piston and a movable cylinder and the other a movable piston and a stationary cylinder, the stationary piston extending into an opening in the pump casing and the stationary cylinder being formed in the casing, and a member extending through the plate and adjustably supporting the stationary piston.

---

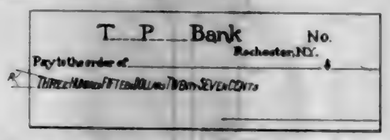
1,564,295. CINEMATOGRAPHIC APPARATUS. WALTHER THORNER, Berlin, Germany. Filed Sept. 12, 1922. Serial No. 587,668. 6 Claims. (Cl. 88—16.8.)



1. A cinematographic apparatus comprising in combination a rotatable ring of reflectors having their reflecting surfaces on the inside of the ring, a guide for a film strip, a transporting wheel for the film coaxially with and axially displaced to said reflector ring and in firm connection therewith, an objective and further optical means including reflectors within the path of light rays between said film guide and reflector ring, said further optical means provided between the film guide and the reflector ring in addition to the objective adapted to compensate the image reversion produced by the objective in the direction of the rotation of the reflector ring.

---

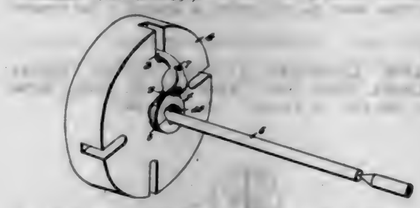
1,564,296. CHECK. CHARLES G. TIEFEL, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y. Filed Mar. 26, 1920. Serial No. 368,503. 3 Claims. (Cl. 283—9.)



2. A check having the amount printed thereon in words arranged in a line without more space between the words than between the letters of the words, the letters of each word being spaced apart and formed to make all of the words the same in length regardless of the number of letters in the various words, and having the letters of each word graduated in height from one end to the other to bring letters of different sizes into juxtaposition at the word ends and make the separate words of the amount easily distinguishable.

---

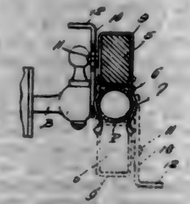
1,564,297. LATHE DOG. ANTON VALTMAN, Coleraine, Minn. Filed July 1, 1924. Serial No. 723,555. 1 Claim. (Cl. 82—41.)



A lathe dog comprising a body having a work receiving opening therein with an L-shaped arm carried by the top thereof, one member of said arm extending radially from said body and the other member projecting laterally to form the lathe engaging finger, the radially extending member of said arm having a socket opening through the outer end thereof with a bore connecting said socket with said opening, and a work-clamping screw threaded in said bore and having its head housed and completely protected within said socket, said screw and arm operating to evenly balance the dog.

---

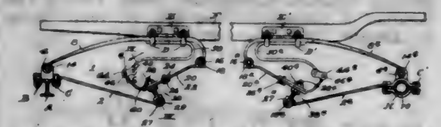
1,564,298. ATTACHMENT FOR GAS RANGES. JOHN E. WALTER, Baltimore, Md. Filed Feb. 6, 1925. Serial No. 7,301. 2 Claims. (Cl. 126—42.)



1. An attachment of the class described including an elongated bar, spring clips on the bar for attaching the same to the supply pipe of a gas range, a sleeve slidable on the bar, and a hook on the sleeve for engaging a branch extending from the supply pipe so as to hold the bar in an operative position.

---

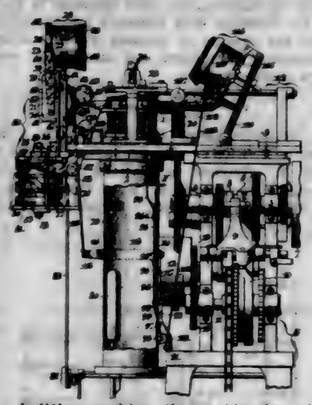
1,564,299. SHOCK-ABSORBING SPRING. ELMER E. WELSH, Lawrence, Kans. Filed May 22, 1925. Serial No. 32,093. 7 Claims. (Cl. 267—46.)



1. In spring means for motor vehicles, a relatively rigid member fixed at one end to an axle of said vehicle and free at its opposite end, a spring fixed intermediate its ends to the vehicle chassis and operably connected at one end to the fixed end of said rigid member, and yieldable restraining means connected to the free end of said rigid member and to the spring and embodying means swingable through arcs of different radii to check the flexing of said spring.

---

1,564,300. TRANSFER MECHANISM FOR KNITTING MACHINES. LOUIS N. D. WILLIAMS, Ogontz, Pa. Filed May 10, 1923. Serial No. 637,955. 22 Claims. (Cl. 66—22.)



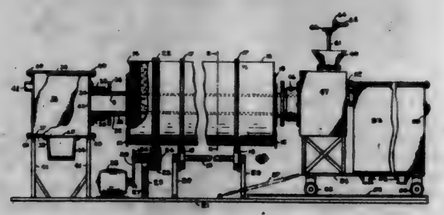
1. In a knitting machine, the combination of a needle cylinder, a transfer ring with points for individually penetrating the loops of the terminal course of fabric on the needles, non-penetrating means for engaging said loops and preventing them from being withdrawn from the points incidentally to dislodgment of the ring from the needles during transfer.

---

1,564,301. CURTAIN RING AND CLIP FOR SUSPENDING CURTAINS AND THE LIKE. ARCHIBALD WILSON, Pietermaritzburg, Natal, South Africa. Filed Dec. 11, 1924. Serial No. 755,827. 1 Claim. (Cl. 156—21.)

A combined curtain ring and clip, comprising, a strip of spring metal formed in a ring with its ends projecting radially from the ring, opposed matching rectangular notches in the edges of the strip near its ends, a button integrally stamped in the strip at one end, a button receiving socket in the other end of the strip, the button and socket interengaging and being held in place by the spring of the strip after the notched portions have been interengaged.

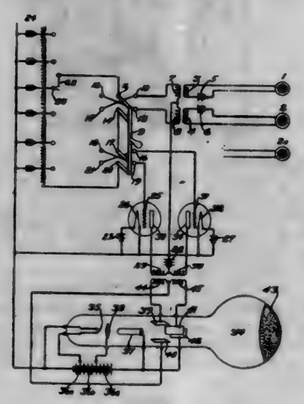
1,564,302. APPARATUS FOR MAKING ANHYDROUS METALLIC CHLORIDES. FREDERICK T. WOHLERS, Hasbrouck Heights, N. J., assignor to The Anhydrous Metallic Chlorides Corporation, Dover, Del., a Corporation of Delaware. Filed Dec. 17, 1921. Serial No. 523,016. 25 Claims. (Cl. 204—64.)



1. In an apparatus for making anhydrous metallic chlorides, the combination of a rotary uniformly heated fused silica reaction chamber, means for feeding the mixture or compound carrying the metallic element into said chamber in a uniform manner, means for regulating the feeding of chlorine into said chamber in an amount sufficient to combine with elements present in the solid feed which are capable of forming metallic chlorides at the temperature maintained and means for condensing the vapors of the reaction.

---

1,564,303. SYSTEM FOR LOCATION OF A SOURCE OF WAVE ENERGY. PETER IRVING WOLD, Schenectady, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 18, 1921. Serial No. 462,076. 10 Claims. (Cl. 177—336.)

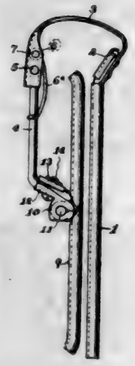


1. In a system of the character described, a plurality of impulse transmitters, and means including a cathode ray tube for visually indicating the relative intensities of the impulses transmitted thereby.

---

1,564,304. WINDSHIELD CLEARER. SAMUEL C. WOLFE, Angola, Ind., assignor to Fernald Manufacturing Company, North East, Pa., a Corporation. Original application filed June 6, 1917, Serial No. 173,146. Divided and this application filed Oct. 14, 1922. Serial No. 594,422. 4 Claims. (Cl. 15—251.)

1. An attachment for windshield clearers of the type having a wiper mounted for reciprocation over the outer surface of the windshield glass and an operating arm located adjacent the inner surface of the glass, said attachment comprising a bracket adapted to be detachably applied to the operating arm, and an auxiliary wiper carried by the bracket and movable relative thereto so



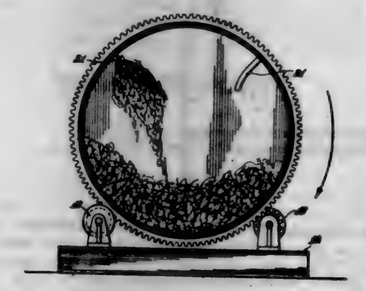
that it can adjust itself for proper engagement with the inner surface of the windshield glass, both sides of the windshield glass being adapted to be cleared at the same time when the attachment is applied to the clearer.

---

1,564,305. AUTOMATIC MAIL-BOX SIGNAL. MARTEN FANDERS, Diller, Nebr. Filed Dec. 26, 1923. Serial No. 682,816. 2 Claims. (Cl. 232—35.)

2. A signal device for rural mail boxes comprising a support which is adapted to be secured to the mail box, said support having an upper and a lower projecting ear each of which is provided with an aperture, an actuating rod pivoted to both of said ears in the apertures thereof, said actuating rod having a laterally projecting portion between said ears, a tension spring connecting the laterally projecting portion of said actuating rod to said support, and an adjustable signal element carried by said actuating rod at its upper extremity, the upper of the laterally projecting ears being bendable into the path of the lateral projection on said actuating rod, the door of the mail box normally serving as the abutment for the lateral projection of the actuating rod when the signal is in its nonsignal position, the arrangement being such that when the upper ear is bent downwardly, the bent-down portion of the upper ear will serve as an abutment to limit the pivotal movement of the actuating rod to half of a revolution and when the ear is not bent down the support will serve as an abutment to limit the pivotal movement to three-quarters of a revolution.

1,564,306. PROCESS OF MIXING WOOL WASTE AND GREASE. FRED C. FANTZ, St. Louis, Mo., and ERNEST G. RATHBONE, Tacoma, Wash., assignors to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Nov. 17, 1919. Serial No. 338,639. 2 Claims. (Cl. 87—9.)



1. The process of impregnating a fibrous-carrier with a grease component which consists in mixing said carrier and grease component together with a rotary motion while at the same time subjecting the mass to a shredding or combing action.

---

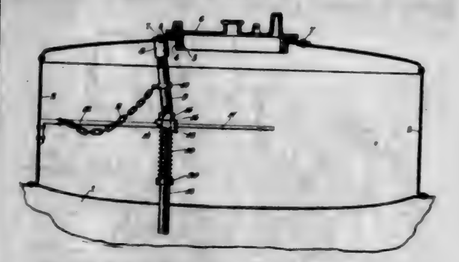
1,564,307. CREEPER ATTACHMENT FOR SHOES. ANTONIO FERRO and ANTONIO MATIESA, New York, N. Y. Filed Jan. 15, 1925. Serial No. 2,508. 2 Claims. (Cl. 36—68.)

1. In a creeper attachment for shoes, a base plate formed of an intermediate instep section and sole and heel sections hinged thereto, means for securing the creeper upon a shoe, sets of ground-engaging spurs depending from the sole and heel sections with the pointed ends of each set extending in different directions to prevent forward, backward and lateral slipping movements, the sets of spurs being outwardly directed at each side of the sole and heel, and forwardly and rearwardly directed at the front and rear ends respectively of the sole and heel and ribs depending from the sole and heel sections defining areas in which the sets of ground-engaging spurs point in different directions and terminating inwardly of the outer ends of the spurs.

---

1,564,308. VALVE-OPERATING DEVICE FOR TANK CARS. EZRA R. GUDEMAN, Baltimore, Md., and GEORGE JOSEPH MACK, Brooklyn, N. Y., assignors to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Feb. 12, 1921. Serial No. 444,554. 15 Claims. (Cl. 137—21.)

1. A valve operating mechanism for tank cars and the like comprising a valve opening rod, and an adjustable screw-threaded pipe coupling adapted to be inserted in the path of movement of the rod to prevent positively



any upward motion thereof when the valve is closed, said coupling being operable from the dome of the car.

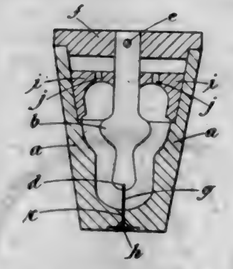
---

1,564,309. SHEET GRIPPER. CHARLES W. HARROLD, Cleveland, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 28, 1924. Serial No. 702,546. 22 Claims. (Cl. 271—79.)

13. A sheet-gripper comprising a plurality of gripper fingers and a single means for actuating the several fingers in sequence.

---

1,564,310. PROCESS FOR MOLDING RUBBER ARTICLES. FORDYCE CHARLES JONES, London, England. Filed May 15, 1922. Serial No. 561,180. 1 Claim. (Cl. 18—58.)



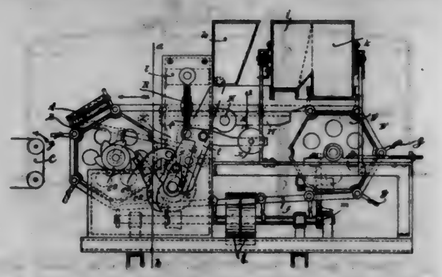
The method of molding rubber or rubber-containing articles consisting of pouring layers of self-vulcanizing rubber-containing solutions of different strength into the space between the exterior mold and an interior core to obtain requisite contours and thicknesses of the resulting molded article, and allowing the same to gel while confined within said space.

---

1,564,311. AUTOMATIC TILE-MAKING MACHINE. VIKTOR WIKKULA, Helsingfors, Finland. Filed Mar. 21, 1924. Serial No. 700,795. 5 Claims. (Cl. 25—43.)

1. An automatic tile making machine, comprising, in combination, an endless traveling member adapted to form molds, means for imparting a step-by-step movement to

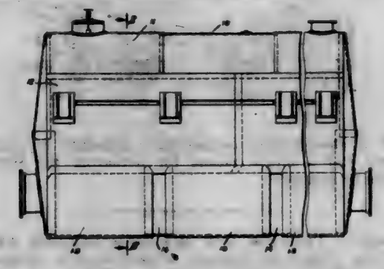
said member, said means being adapted to raise the member alternately at opposite ends thereof, a rockable table supported beneath a portion of said member and means



for rocking said table coincidently with the raising of the traveling member whereby the table and that portion of the traveling member immediately overlying the table are always in approximate parallelism.

---

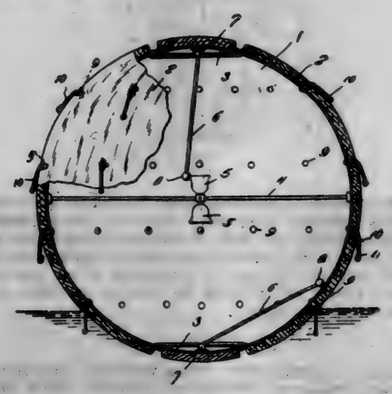
1,564,312. STILL. PAUL YOUNG, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed June 5, 1920. Serial No. 386,878. 8 Claims. (Cl. 122—238.)



1. A coke still having a still bottom formed of spaced still bottom plates, and interposed relatively yieldable flat expansion sheets.

---

1,564,313. AQUATIC AMUSEMENT DEVICE. DON L. ALGER, Avalon, Calif. Filed May 21, 1925. Serial No. 31,947. 5 Claims. (Cl. 9—11.)



1. An aquatic amusement device of the kind described comprising a substantially spherical float, the surface of which is cushioned, and a multiplicity of hand grips distributed over the surface of the float.

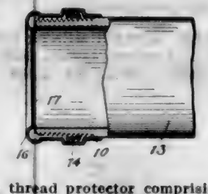
---

1,564,314. CONSTRUCTION AND ARRANGEMENT OF COLLAPSIBLE JETS. PAUL ARNON, Tulsa, Okla. Filed Apr. 16, 1924. Serial No. 706,932. 9 Claims. (Cl. 103—233.)

1. A collapsible jet comprising a ported tubular body portion, a sleeve valve reciprocating in said body to close the ports when in lowered position and open said ports when in upper position, means formed integral with the body for limiting the upward movement of the valve, and an adjustable stop for limiting the downward movement.

---

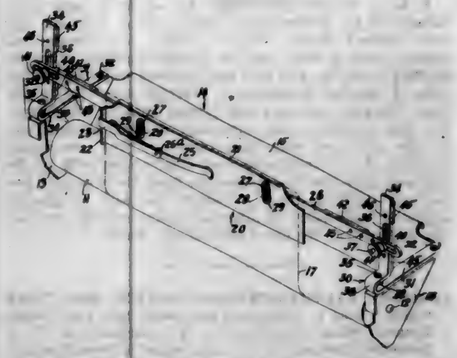
1,564,315. PIPE-THREAD PROTECTOR. HENRY W. AVERY, Cleveland, Ohio. Filed Feb. 5, 1923. Serial No. 617,156. 6 Claims. (Cl. 137—91.)



6. A pipe thread protector comprising a sleeve having on the interior and between the ends thereof an annular recess, and a section of coiled wire loosely seated in the recess and constrained by the sleeve to rotate therewith when the protector is screwed onto and off a pipe.

---

1,564,316. TYPEWRITING MACHINE. FRED BECKER, Buffalo, N. Y., assignor to Underwood Typewriter Company, New York, N. Y. a Corporation of Delaware. Filed Aug. 9, 1921. Serial No. 490,863. 25 Claims. (Cl. 197—127.)



1. In a typewriting machine, in combination, a platen, a platen-frame, an aligning table at the delivery side of the platen, a bar secured to said table and having longitudinal slots at its ends, brackets extending upwardly

from the ends of the platen-frame, pins extending through said brackets and said slots, and means, including adjustable stops on said bar, to determine a left-hand position of said table for one part of the work and a right-hand position thereof for another part of the work, thereby enabling a rapid adjustment from one of said positions to the other.

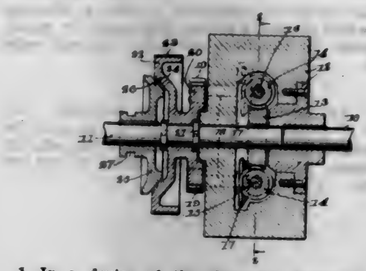
---

1,564,317. APPARATUS OR MACHINE FOR HANDLING HIDES. ROBERT BLADES, Chicago, Ill. Filed July 12, 1923. Serial No. 651,023. 10 Claims. (Cl. 198—179.)

4. In an apparatus of the class described, a horizontally traveling conveyer, hide carriers, means for supporting and impelling said hide carriers over said conveyer, and means for stopping a hide carrier at a predetermined point for allowing said conveyer to reverse the hides.

---

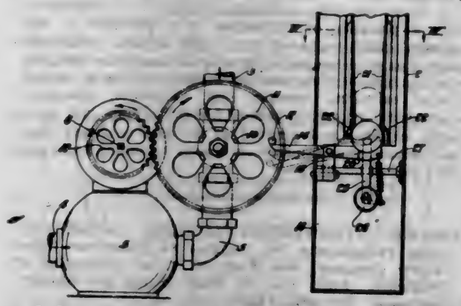
1,564,318. GEARING. JOSEPH E. BOWER, Dancy, Wis. Filed June 29, 1921. Serial No. 481,181. 2 Claims. (Cl. 74—34.)



1. In a device of the character described, the combination of driven and driving shafts, a worm wheel fixed to one of said shafts, a casing fixed to the other of said shafts, a pair of worms in said casing meshing with said worm wheel, a pair of stub shafts in said casing extending parallel to the axis of rotation thereof, bevel gearing between each stub shaft and one of said worms, a control gear rotatable about an axis substantially coincident with the axis of said casing, and a gear on each stub shaft meshing with said control gear.

---

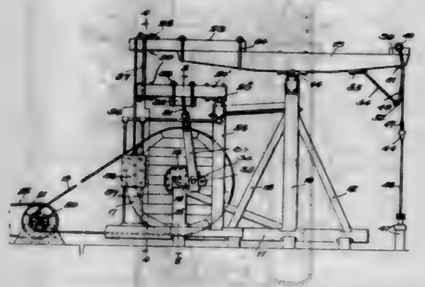
1,564,319. COIN-CONTROLLED MECHANISM. THADDEUS S. BRIGHTWELL, Braddock, Pa. Filed May 21, 1924. Serial No. 714,858. 4 Claims. (Cl. 194—3.)



3. In a coin controlled dispensing apparatus, a control lever fulcrumed intermediate its ends and adapted to be locked against movement by a coin engaging one end thereof, a coin chute adapted to guide coins downwardly against said lever, coin controlled means for preventing movement of said coin, said means being releasable by a second coin entering said slot, and means for moving said first named coin from its position on said control lever, thereby releasing said lever.

---

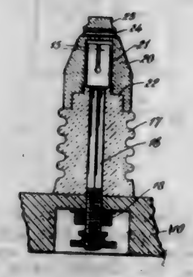
1,564,320. PUMP RIG OR JACK. HAROLD CALLAHAN, Independence, Kans. Filed May 10, 1924. Serial No. 712,283. 2 Claims. (Cl. 74—14.)



1. A standard pump or jack, comprising an upstanding post, a walking beam pivoted near its center upon the post, pumping means connected with one end of the walking beam, a bearing arranged upon one side of the post and in general vertical alinement with the opposite end of the walking beam, a transverse shaft held within the bearing, a crank carried by the shaft, and means to drive the shaft; in combination with an extension beam secured to the end of the walking beam above said shaft and serving to increase the length of one arm of the walking beam, a standard disposed between said shaft and said post, a supplemental walking beam having its inner end pivotally connected with said standard and projecting outwardly toward the outer end of the extension beam, a link pivotally connecting the outer end of the supplemental end of the walking beam and the outer end of the extension beam, and a pitman connected with the supplemental walking beam between its ends and connected with the crank.

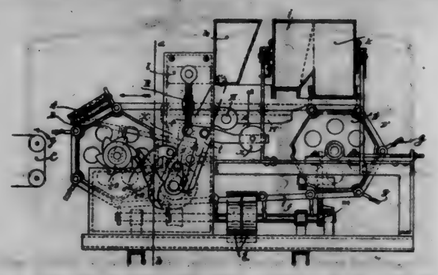
---

1,564,321. INSULATING COVER FOR SWITCH TERMINALS. JOHN A. CAMERON, Mount Vernon, N. Y. Filed Oct. 31, 1922. Serial No. 598,056. 4 Claims. (Cl. 200—168.)



1. An insulating cover for switch terminals comprising a closed cap of insulating material having a socket extending inwardly from one end and adapted to receive and entirely cover a switch terminal.

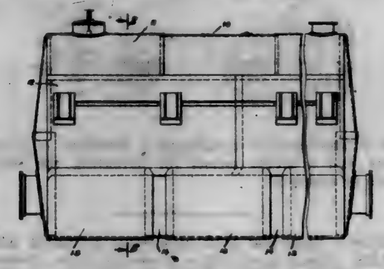
said member, said means being adapted to raise the member alternately at opposite ends thereof, a rockable table supported beneath a portion of said member and means



for rocking said table coincidently with the raising of the traveling member whereby the table and that portion of the traveling member immediately overlying the table are always in approximate parallelism.

---

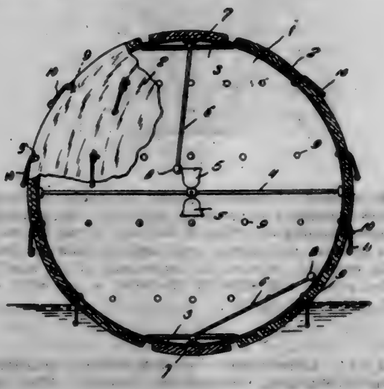
1,564,312. STILL. PAUL YOUNG, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed June 5, 1920. Serial No. 386,878. 8 Claims. (Cl. 122—233.)



1. A coke still having a still bottom formed of spaced still bottom plates, and interposed relatively yieldable flat expansion sheets.

---

1,564,313. AQUATIC AMUSEMENT DEVICE. DON L. ALDER, Avalon, Calif. Filed May 21, 1925. Serial No. 31,947. 5 Claims. (Cl. 9—11.)



1. An aquatic amusement device of the kind described comprising a substantially spherical float, the surface of which is cushioned, and a multiplicity of hand grips distributed over the surface of the float.

1,564,314. CONSTRUCTION AND ARRANGEMENT OF COLLAPSIBLE JETS. PAUL ARSON, Tulsa, Okla. Filed Apr. 16, 1924. Serial No. 706,932. 9 Claims. (Cl. 103—233.)

1. A collapsible jet comprising a ported tubular body portion, a sleeve valve reciprocating in said body to close the ports when in lowered position and open said ports when in upper position, means formed integral with the body for limiting the upward movement of the valve, and an adjustable stop for limiting the downward movement.

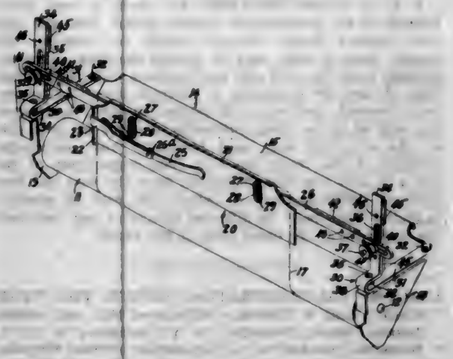
---

1,564,315. PIPE-THREAD PROTECTOR. HENRY W. AVERY, Cleveland, Ohio. Filed Feb. 5, 1923. Serial No. 617,156. 6 Claims. (Cl. 137—91.)

6. A pipe thread protector comprising a sleeve having on the interior and between the ends thereof an annular recess, and a section of coiled wire loosely seated in the recess and constrained by the sleeve to rotate therewith when the protector is screwed onto and off a pipe.

---

1,564,316. TYPEWRITING MACHINE. FRED BECKER, Buffalo, N. Y., assignor to Underwood Typewriter Company, New York, N. Y. a Corporation of Delaware. Filed Aug. 9, 1921. Serial No. 490,863. 25 Claims. (Cl. 197—127.)



1. In a typewriting machine, in combination, a platen, a platen-frame, an aligning table at the delivery side of the platen, a bar secured to said table and having longitudinal slots at its ends, brackets extending upwardly

from the ends of the platen-frame, pins extending through said brackets and said slots, and means, including adjustable stops on said bar, to determine a left-hand position of said table for one part of the work and a right-hand position thereof for another part of the work, thereby enabling a rapid adjustment from one of said positions to the other.

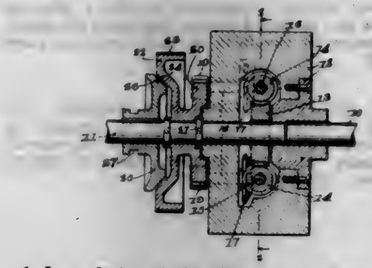
---

1,564,317. APPARATUS OR MACHINE FOR HANDLING HIDES. ROBERT BLADES, Chicago, Ill. Filed July 12, 1923. Serial No. 651,023. 10 Claims. (Cl. 198—179.)

4. In an apparatus of the class described, a horizontally traveling conveyer, hide carriers, means for supporting and impelling said hide carriers over said conveyer, and means for stopping a hide carrier at a predetermined point for allowing said conveyer to reverse the hides.

---

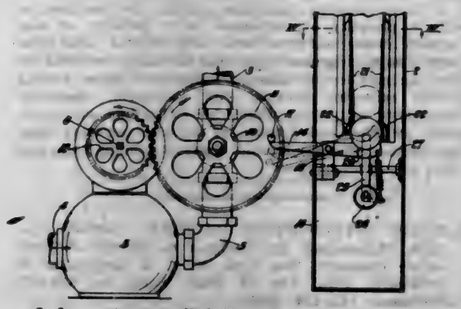
1,564,318. GEARING. JOSEPH E. BOWER, Dancy, Wis. Filed June 29, 1921. Serial No. 481,181. 2 Claims. (Cl. 74—34.)



1. In a device of the character described, the combination of driven and driving shafts, a worm wheel fixed to one of said shafts, a casing fixed to the other of said shafts, a pair of worms in said casing meshing with said worm wheel, a pair of stub shafts in said casing extending parallel to the axis of rotation thereof, bevel gearing between each stub shaft and one of said worms, a control gear rotatable about an axis substantially coincident with the axis of said casing, and a gear on each stub shaft meshing with said control gear.

---

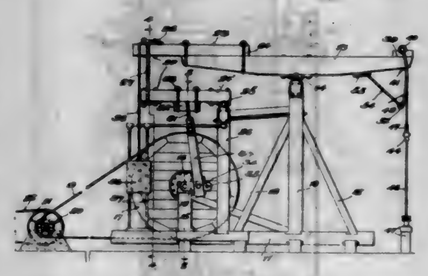
1,564,319. COIN-CONTROLLED MECHANISM. THADDEUS S. BRIGHTWELL, Braddock, Pa. Filed May 21, 1924. Serial No. 714,858. 4 Claims. (Cl. 194—3.)



3. In a coin controlled dispensing apparatus, a control lever fulcrumed intermediate its ends and adapted to be locked against movement by a coin engaging one end thereof, a coin chute adapted to guide coins downwardly against said lever, coin controlled means for preventing movement of said coin, said means being releasable by a second coin entering said slot, and means for moving said first named coin from its position on said control lever, thereby releasing said lever.

---

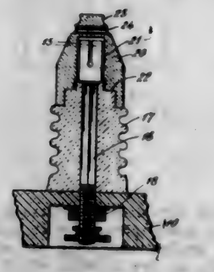
1,564,320. PUMP RIG OR JACK. HAROLD CALLAHAN, Independence, Kans. Filed May 10, 1924. Serial No. 712,283. 2 Claims. (Cl. 74—14.)



1. A standard pump or jack, comprising an upstanding post, a walking beam pivoted near its center upon the post, pumping means connected with one end of the walking beam, a bearing arranged upon one side of the post and in general vertical alinement with the opposite end of the walking beam, a transverse shaft held within the bearing, a crank carried by the shaft, and means to drive the shaft; in combination with an extension beam secured to the end of the walking beam above said shaft and serving to increase the length of one arm of the walking beam, a standard disposed between said shaft and said post, a supplemental walking beam having its inner end pivotally connected with said standard and projecting outwardly toward the outer end of the extension beam, a link pivotally connecting the outer end of the supplemental end of the walking beam and the outer end of the extension beam, and a pitman connected with the supplemental walking beam between its ends and connected with the crank.

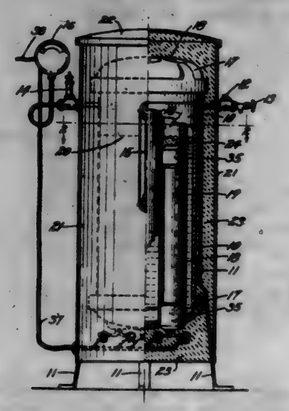
---

1,564,321. INSULATING COVER FOR SWITCH TERMINALS. JOHN A. CAMERON, Mount Vernon, N. Y. Filed Oct. 31, 1922. Serial No. 598,056. 4 Claims. (Cl. 200—168.)



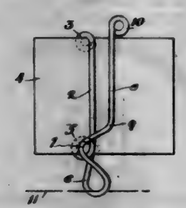
1. An insulating cover for switch terminals comprising a closed cap of insulating material having a socket extending inwardly from one end and adapted to receive and entirely cover a switch terminal.

**1,564,322. ELECTRICALLY-HEATED STEAM BOILER.** CARLETON W. CAMPBELL, Denver, Colo., assignor, by mesne assignments, to Moll Manufacturing Company, a Corporation of Colorado. Filed Sept. 15, 1924. Serial No. 737,820. 1 Claim. (Cl. 219—38.)



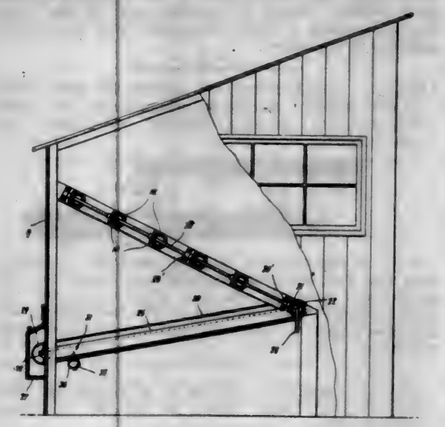
In an electrically heated steam boiler a vertically arranged pressure container; bands surrounding said container; legs secured to said bands and arranged to support said boiler; a jacket surrounding and spaced from the boiler, said jacket being open at its lower extremity and closed at its upper extremity, and heat insulating material filling the space between said jacket and said container.

**1,564,323. WIRE FRAME.** HABID CHAMANDY, Toronto, Ontario, Canada. Filed Apr. 29, 1925. Serial No. 26,601. 3 Claims. (Cl. 40—11.)



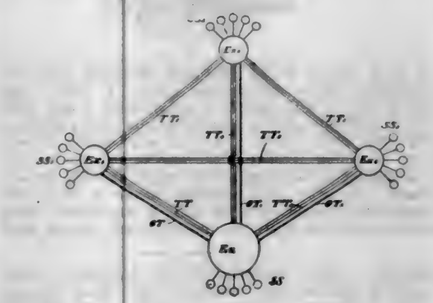
1. As a new article of manufacture, a wire frame made from a single piece of wire and comprising a ticket-holding portion embracing an arm provided at each end with an eye between which and said arm a ticket is intended to be held, and a clamping portion embracing a spring-eye integrally formed with the adjacent eye of said holding portion and with which is integrally formed a loop which is held by said spring-eye in co-operative relationship to said ticket-holding portion.

**1,564,324. SANITARY CHICKEN ROOST.** WILLIAM F. CHRISTOPHER, La Porte City, Iowa. Filed Mar. 24, 1925. Serial No. 17,973. 8 Claims. (Cl. 119—25.)



1. A roost structure comprising perches, a dropping board below said perches, a scraper, and means for mounting the scraper for circuitous movement over and under said board.

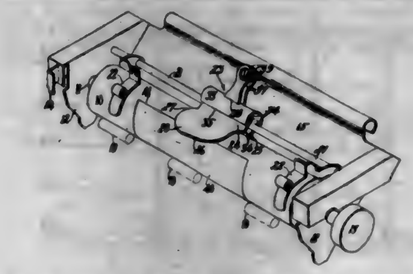
**1,564,325. TELEPHONE-EXCHANGE SYSTEM.** EDWARD E. CLEMENT, Washington, D. C., assignor, by mesne assignments, to The North Electric Manufacturing Company. Filed July 15, 1907. Serial No. 383,875. 81 Claims. (Cl. 179—27.)



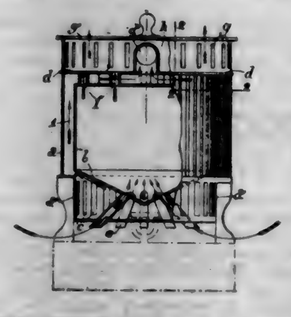
1. In a telephone exchange system, the combination with a plurality of exchanges, of a plurality of subscribers' lines connected with each of said exchanges, each of said exchanges comprising automatic switches for effecting connections between subscribers' lines, talking trunks extending between said exchanges, operators' equipments comprising means for controlling said automatic switches and grouped at an office separate from said exchanges and operators' trunks extending from said office to said exchanges.

**1,564,326. TYPEWRITING MACHINE.** SAMUEL COLLINS, Philadelphia, Pa., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 27, 1923. Serial No. 659,437. 8 Claims. (Cl. 197—185.)

1. In a detachable card-holder for typewriting machines, the combination of a split sheet-metal cylinder, preferably made of spring steel, a pair of sheet-metal tongues shaped to fit the surface of the platen of a typewriting machine, and a pair of finger-plates, said tongues being placed facing each other in the split cylinder and held in position by the insertion of the finger-plates passed through separate slots in the split cylinder, and arranged and shaped to grip the paper-finger rod of a typewriting machine for the purpose specified.

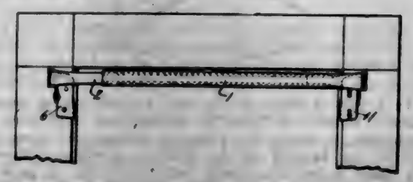


**1,564,327. HEATING APPARATUS.** FLORIMOND JOSEPH COUCKE, Lyon-Villeurbanne, France. Filed Aug. 2, 1924. Serial No. 729,691. 1 Claim. (Cl. 126—90.)



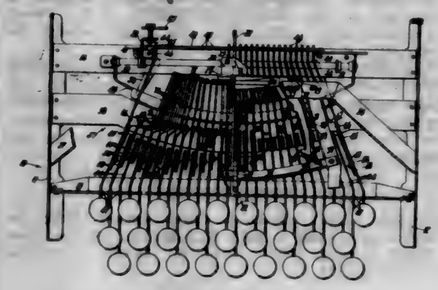
In a heating apparatus, a burner, an external corrugated casing, an inner cylindrical casing concentric therewith having a cone-shaped portion directed toward said burner and spaced from said external casing so as to form an annular duct for the gases of combustion, a compartment formed by a transverse partition in the external casing and the inner casing disposed over the top of the heater, an exhaust pipe in communication with said compartment, pipes entering the cone shaped portion to supply outside air thereto for heating and said compartment having passageways therethrough for the discharge of the heated air.

**1,564,328. COMBINED SHADE AND CURTAIN FIXTURE.** WILLIAM S. CUTTING, Cheboygan, Mich. Filed June 9, 1923. Serial No. 644,368. 1 Claim. (Cl. 156—24.)



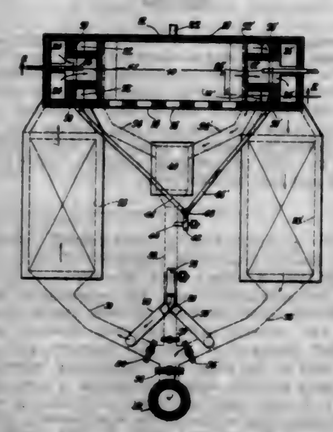
A curtain fixture comprising a strip of sheet metal arcuately curved near one end and provided with a plane plate portion, oppositely disposed ears formed at the opposite edges of the plate portion and below the curved portion of the strip the upper edge of the lower ear at one side of the plate portion being located below the lower edge of the upper ear at the opposite side edge of the plate portion.

**1,564,329. TYPEWRITING MACHINE.** WILLIAM A. DOBSON, Bridgeport, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 15, 1923. Serial No. 639,068. 29 Claims. (Cl. 197—22.)



1. The combination in a typewriting machine including a frame and a platen, of a type-action including a plurality of radial key-levers, a type-bar segment of short radius, a plurality of type-bars pivoted in said segment and normally cumbent in a substantially conical plane with the lowermost type-bars in practically a horizontal plane, a plurality of bell-cranks pivoted in an arc in a horizontal plane of greater radius than said segment and of lesser extent than the outermost key-levers, said bell-cranks having upwardly-extending arms bent inwardly at progressively sharper angles as they approach the outer limits of the type-action, operative connections between said type-bars and said bell-cranks, and means co-operative between said key-levers and said bell-cranks for actuating said bell-cranks.

**1,564,330. OPEN-HEARTH FURNACE.** WALDEMAR DYRSSEN, New York, N. Y. Filed June 28, 1923. Serial No. 648,253. 14 Claims. (Cl. 122—7.)



8. In combination, an open hearth furnace having means for introducing air and fuel at each end of the furnace, a boiler adapted to be heated by the waste gases from the open hearth furnace, flues connecting the ends of the furnace with said boiler and means for introduc-

ing a jet of gas or air under pressure at such a point between the melting chamber of the furnace and the boiler that a suction is created on the waste gases which are withdrawn from the melting chamber so that there will be substantially no passage of gas through the flue leading from the boiler to the end of the furnace where the fuel and combustion air enter.

---

1,564,331. PROCESS FOR OXIDIZING OILS. ALFRED EISENSTEIN, Leitmeritz, Czechoslovakia, assignor of one-half to the firm Georg Schicht, A.-G., Aussig, Czechoslovakia. Filed Jan. 18, 1921. Serial No. 438,243. 6 Claims. (Cl. 87—12.)

1. Process of oxidising oils with unsaturated bonds which consists in mixing the oil with an auxiliary substance capable of congealing at the oxidation temperature, exposing the mixture to the action of an oxidising agent, and then separating the oxidised product from the said auxiliary substance by liquefying the latter.

---

1,564,332. MOP. ELIAS J. ELIAS, Omaha, Nebr., assignor of one-half to Albin N. Osterholm, Omaha, Nebr. Filed Apr. 27, 1925. Serial No. 26,273. 3 Claims. (Cl. 15—150.)

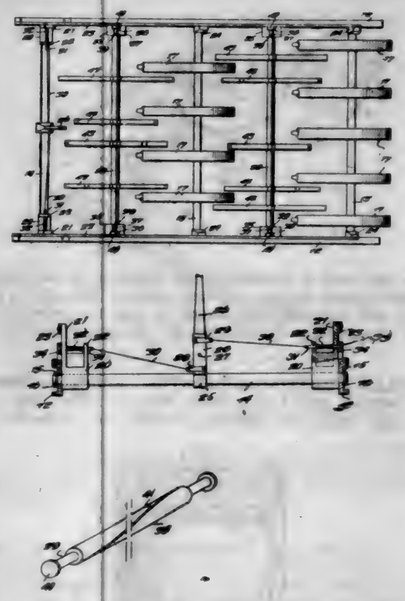
1. A mop comprising a metallic loop of approximately rectangular form having a sleeve for receiving a handle, a metallic pressure-frame approximately of U-shape disposed within and having its opposed arms pivotally connected with said loop, and a pair of helical springs each being connected with said loop and an arm of the pressure-frame to normally press said frame toward a part of the loop for securing a flexible wiper between said loop and said pressure-frame.

---

1,564,333. AGRICULTURAL IMPLEMENT. WASHINGTON J. ENGLE, Urbana, Ill. Filed Feb. 5, 1923. Serial No. 617,123. 5 Claims. (Cl. 55—104.)

1. In an agricultural tool, the combination with a frame having side members, of rock shafts journaled therein and carrying earth agitating elements, an end rock shaft journaled in the side members and having crank heads at its ends, link connections between said crank heads and the other rock shafts, a lever pivoted on the end rock shaft to swing longitudinally of said shaft, holding arcs secured to the side members alongside the crank heads, securing bolts in said crank heads adapted to engage the holding arcs, and connections between the lever and belts.

2. In an agricultural tool, the combination with a frame, including side bars, of rock shafts journaled on the side bars and carrying earth agitating implements, and rotary members journaled on the side members and having cleaning fingers that operate alongside the earth agitating implements.

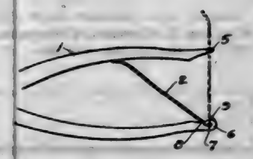


4. In an agricultural tool, the combination with a frame, including side bars, of rock shafts journaled on the side bars and carrying earth agitating teeth, rotary shafts journaled on the side members and having spiral keyways, and cleaning fingers having hubs surrounding the shafts and having keys in the keyways, said fingers being adapted to successively engage the ground and thereby turn the shafts, said fingers operating alongside the teeth.

5. In an agricultural tool, the combination with a frame, including side members, of rock shafts journaled on the side members and carrying earth agitating implements, keepers carried by said side members, and rotatable cleaning fingers for the implements having gudgeons that detachably engage in the keepers.

---

1,564,334. PLIER LOCK. ALBERT L. EWING, Seattle, Wash. Filed Feb. 20, 1924. Serial No. 694,128. 1 Claim. (Cl. 294—41.)



In a pair of pliers or the like, a strap having means therein whereby it may be caught and held over a projection, a means for pivotally holding the strap to one of the handles of the pliers, a shoulder adjacent the pivot point, which will hold the strap in such a position that it will engage the inner surface of the other one of the plier handles to resiliently hold it outward, and a projection on the end of the said latter handle to engage the strap.

1,564,335. FUSE MEDIUM. FREDERICK A. FELDKAMP, Newark, N. J. Filed Sept. 26, 1924. Serial No. 740,104. 9 Claims. (Cl. 200—135.)

1. A composite metallic fuse material consisting of a mass of metallic particles possessing relatively high specific conductivity bonded together by a low melting point metal.

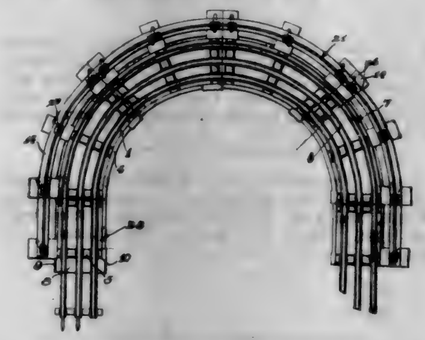
---

1,564,336. SALT AND PEPPER SHAKER. WALTER M. FISCHBACH, Milwaukee, Wis. Filed Sept. 19, 1923. Serial No. 663,600. 3 Claims. (Cl. 65—45.)

1. A shaker having a top provided with a circular groove, the groove having a shallow portion, the ends of which constitute stop elements, a cover pivoted on the top concentric with the groove, and a flange depending from the cover and fitting in the groove in the top, said flange having an interrupted portion passing through the shallow portion of the groove whereby to define cooperating stop elements to limit the pivotal movement of the cover, the cover and the top being provided with like drain openings.

---

1,564,337. GUARD-RAIL STRUCTURE FOR TOY RAILWAY TRACKS. WALTER M. FISCHBACH, Milwaukee, Wis. Filed Aug. 19, 1924. Serial No. 732,973. 19 Claims. (Cl. 238—10.)



1. The combination with a toy railway track, of a guard rail extending in elevated position beside and in spaced relation to the track in position for sweeping engagement by the body of a car traveling upon the track.

---

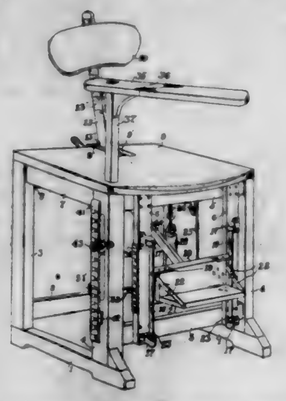
1,564,338. DROP WEIGHT FOR KNOWLES LOOMS. THOMAS F. FOLEY, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 26, 1925. Serial No. 58,730. 7 Claims. (Cl. 139—77.)

1. In a loom pattern mechanism having a harness lever and an operating connector removably attached thereto, a drop weight operating normally to hold the connector and lever in operative relation, a cup formed on the drop weight having a recess therein, a device carried by the

weight to partially cover the recess, and a rod having an enlarged portion to lie within the recess and held against removal by the device.

---

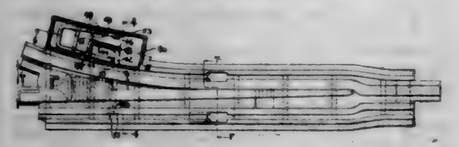
1,564,339. MEASURING CHAIR. CHELSEA C. FRASER and JOSEPHINE A. GOSS, Grand Rapids, Mich. Filed Apr. 28, 1923. Serial No. 633,935. 16 Claims. (Cl. 33—174.)



15. In a structure of the class described, the combination of a frame provided with a seat, of a footrest mounted on said frame for vertical adjustment relative to said seat, and an arm rest mounted on said frame for vertical adjustment relative to said footrest, said footrest and arm rest being provided with coacting distance indicating means, for the purpose specified.

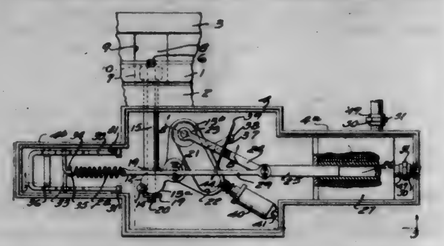
---

1,564,340. SWITCH AND THE LIKE. MAURICE C. GARLICK, Easton, Pa. Filed Aug. 22, 1923. Serial No. 658,696. 12 Claims. (Cl. 246—442.)



3. In railway track members, such as switches, frogs and the like, a permanent housing adapted to be carried by cross-ties or the like, having a recess in its upper surface with a flat horizontal bearing portion, a removable wearing member of high wear resisting properties having a flat horizontal undersurface and adapted to be received in said recess, and wedge means for removably holding said members in such relative position with their flat bearing surfaces in firm contact, said housing comprising side bars and cross-connecting bars cast into an integral structure.

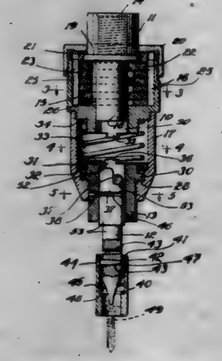
1,564,341. ELECTRICALLY-OPERATED SWITCH. MAURICE C. GARLICK, Easton, Pa. Filed Oct. 29, 1923. Serial No. 671,514. 8 Claims. (Cl. 246—230.)



1. In an electrically operated switch, a pivoted switch tongue, a lever having an elongated slot in one arm, means for connecting the opposite arm thereof with the switch tongue, a flanged wheel in said slot, a one-throw electromagnetic device, a link connecting same with the wheel, an expansion spring connected to the electromagnetic device and adapted to be put under tension by its throw while the lever is being turned by the electromagnetic device through a partial turn, and adapted by its recoil to impart a further turning movement to the lever, whereby lateral movement of the switch tongue is completed.

---

1,564,342. PORTABLE POWER-DRIVEN TOOL. JAMES J. GEBHARDT and OSCAR P. WODACK, Chicago, Ill., assignors to Wodack Electric Tool Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1923. Serial No. 622,696. 7 Claims. (Cl. 144—32.)

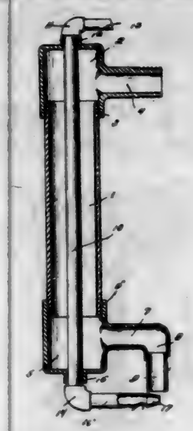


1. A device of the class described having, in combination, a driving member connected with a source of power, a tool-holding member slidably and rotatably mounted in said member, normally disengaged coacting clutch members on said driving member and tool holding member respectively, and resilient means positioned in said driving member to bear against said tool holding member only when it is moved inwardly for engagement of the clutch members.

---

1,564,343. VACUUM OIL BURNER. WILLIAM R. GIBSON, Mansfield, La. Filed Oct. 24, 1924. Serial No. 745,648. 1 Claim. (Cl. 158—75.)

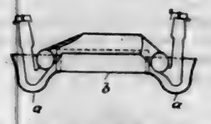
A vacuum oil burner comprising a cylindrical casing, a head on the upper end thereof, a tubular lateral extension associated with the head comprising an atomizing fluid inlet, an additional head on the lower end of the casing, a tubular extension associated with the last mentioned head and providing an outlet for the atomizing fluid, a discharge pipe in the outer end of the tubular extension providing an outlet, an oil pipe extending centrally through the casing and through said head, a



supply pipe associated with the upper end thereof, and an oil discharge nozzle on the lower end of the oil pipe, the outer end of the nozzle being disposed in communication with the outer end of the discharge pipe.

---

1,564,344. QUARTZ LAMP. FRITZ GIRARD, Hanau-on-the-Main, Germany. Filed Aug. 24, 1921. Serial No. 494,981. 3 Claims. (Cl. 250—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a quartz lamp in combination, two pole chambers, a lighting tube extending substantially longitudinally intermediate said chambers, a metal cap below each pole chamber and a protective trough permeable to ultra violet rays supported by said caps and partly surrounding said tube.

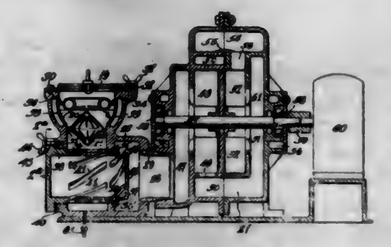
---

1,564,345. INTERFERENCE-REDUCING SYSTEM. PHILIP GOLDSTONE, Woodhaven, N. Y., assignor to Gibbs & Hill, New York, N. Y., a Partnership. Filed Sept. 10, 1921. Serial No. 499,811. 13 Claims. (Cl 171—97.)

11. An electrical railway system comprising a supply circuit, a distribution circuit including a trolley conductor, a track conductor and a feeder conductor, and a three-winding transformer having a single primary winding connected across said supply circuit, the junction-point of the secondary windings being connected to said track conductor and an outer terminal of said secondary windings being respectively connected to said feeder conductor and said trolley conductor, the impedances of the windings of said transformer being so related to the impendances of said conductors and to each other and the flow of currents being such that the inductive interference effect of said distribution circuit upon a parallel intelligence-communication conductor is substantially zero.

---

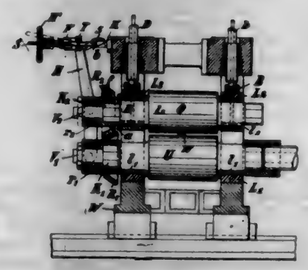
1,564,346. GAS AND VAPOR MIXER FOR HEATING FURNACES. THOMAS W. GREEN, Philadelphia, Pa. Filed Jan. 18, 1924. Serial No. 687,159. 16 Claims. (Cl. 183—106.)



1. In a mixing device for fluid with air, an inlet chamber having an adjustable air inlet opening, a fluid discharge into said chamber, a heating casing about the chamber, means for supplying preheated air for said casing adapted to discharge into the lower part of the chamber to mix the heated air with the air and vapor of the chamber, a control valve providing admission about its circumference and an exhauster adapted to draw the mixture from said chamber through said valve.

---

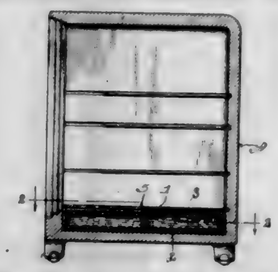
1,564,347. DRIVING MEANS FOR THE IDLE ROLLS OF ROLLING MILLS. RICHARD HEIN, Witkowitz, Czechoslovakia. Filed Apr. 13, 1923. Serial No. 631,892. 9 Claims. (Cl. 80—54.)



8. The combination in a rolling mill of a secondary or idle roll with an axially displaceable frictional bevel gear on said roll, a driving roll, a frictional bevel gear connected therewith, rings on said gears, a pair of levers pivotally connected with the rings, a cross-bar interconnecting the two levers, standards supporting the rolls, a threaded spindle attached to a standard and affording a sliding seat to the cross-bar a bracket on said standard serving as an intermediate means for connecting the spindle with the standard, a nut with a handle on said spindle, a pin and slot connection between the bracket and the spindle and a spiral spring interposed between the nut and the cross-bar substantially as described and for the purpose set forth.

---

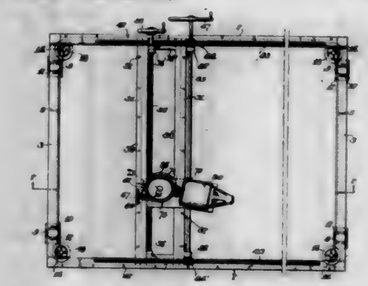
1,564,348. CONTENTS-PRESERVING DEVICE FOR SAFES. WILLIAM H. HILL, Cleveland, Ohio. Filed May 3, 1924. Serial No. 710,884. 2 Claims. (Cl. 109—8.)



1. The combination of a safe or the like having a relatively shallow receptacle beneath the contents holding compartment thereof, and a perforate partition wall therebetween, and a container of frangible material resting in said receptacle and adapted to have a liquid permanently sealed therein.

---

1,564,349. FLOOR-PLANING MACHINE. JOHN EDGAR HIBBS, Langhorne, Pa., assignor to Automatic Machinery and Equipment Company, a Corporation of Delaware. Filed Sept. 25, 1924. Serial No. 739,759. 4 Claims. (Cl. 144—2.)



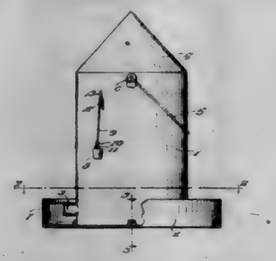
1. A floor planing machine comprising an open frame, casters adapted to support the frame for movement over the surface to be planed, an elevating screw adjacent each corner of the frame and having a foot disposed below the frame, said screws being adapted, when suitably adjusted, to raise the weight of the frame from the casters and transfer it to their respective feet resting on said surface and to bring the frame to a horizontal position irrespective of irregularities in said surface, transversely extending ways within the frame movable longitudinally thereof, means for moving the ways, a housing slidable on the ways transversely of the frame, means for sliding the housing on the ways, a vertically extending cutter spindle rotatably mounted in the housing, means for effecting vertical adjustment of the spindle with respect to the frame, means for locking the spindle in predetermined adjusted position, means carried by the housing for driving the spindle, and a cutter mounted on the lower end of the spindle for rotation in a horizontal plane.

---

1,564,350. WATER FOUNTAIN. JOHN V. HJERTBERG, Maiden Rock, Wis. Filed May 6, 1925. Serial No. 28,455. 1 Claim. (Cl. 119—77.)

A drinking fountain comprising a pan having a bottom and an upstanding wall, a container removably seated in said pan and resting upon the bottom thereof, abutments carried by the bottom of said pan and adapted

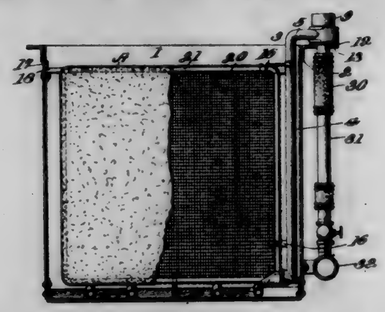
to engage the lower end portion of said container to retain the container spaced from the walls of said pan, each abutment being formed from a strip bent intermediate its length to provide an upstanding head to engage said container and superimposed leaves constituting a shank



and secured to the bottom of said pan, an outlet spout extending from the lower end portion of said container and disposed intermediate the depth of said pan when the container is seated therein, and a removable closure for said spout.

---

1,564,351. FILTERING APPARATUS. WERNER HORN, New Orleans, La. Filed Apr. 4, 1921. Serial No. 458,227. 4 Claims. (Cl. 210—153.)

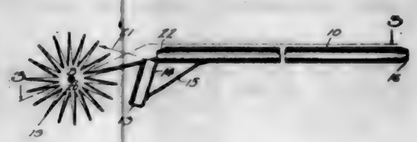


1. A filtering apparatus including a tank, a series of filter leaves within said tank, a holder for each leaf extending along one side of the tank and forming a support for the filter leaves and having communication therewith, said holders removably supported on the tank the arrangement of the parts being such that a filter leaf and holder may be removed from the tank without interrupting the operation of the apparatus, a manifold, and valve controlled means for independently connecting each of the holders to the manifold.

---

1,564,352. TOY. JENS A. JENSEN, Belden, Nebr. Filed Dec. 6, 1924. Serial No. 754,236. 1 Claim. (Cl. 46—14).

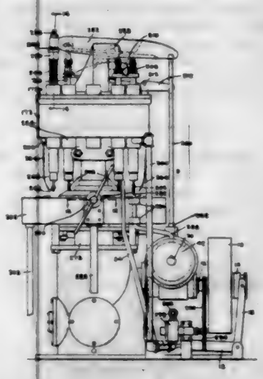
In a toy, a blowing tube, a whistle pipe formed of a section of the tube, partially severed from the tube, and bent laterally thereof, said pipe having an end wall formed of a portion of the tube partially cut away therefrom and bent to close the free end of the pipe, a pair of arms secured to the tube extending beyond the discharge end thereof in a plane perpendicular to that of the tube and pipe, inwardly bent, opposed trunnions on the ends of said arms, a wind wheel having a hub receiving said trunnions, the arms being disposed so as to mount the wheel in the plane of the tube and pipe, said wheel having triangularly shaped vanes, the inner portions of which are of least width and disposed substantially in the plane of the wheel, and the outer portions of which are of greatest width and twisted to lie in planes substantially perpendicular to the wheel, the whistle pipe being disposed at an obtuse angle to the tube, and the open end thereof being disposed in a plane intersecting the axis of the tube beyond the discharge end thereof, the tube being provided with a lip inclined toward the



open end of the whistle pipe, and the parts being so arranged that gentle blowing upon the tube will produce a current of air vibrating the column of air in the whistle pipe, and directed toward the inner portions of the vanes, while forceful blowing upon the tube will produce a current of air deflected toward the outer portions of the vanes and thereby exerting more effective action against the vanes, tending to rotate the wheel.

---

1,564,353. CHUCKING MACHINE. EDWARD E. JOHNSON, St. Paul, Minn. Filed Apr. 1, 1922. Serial No. 548,700. 11 Claims. (Cl. 29—38.)



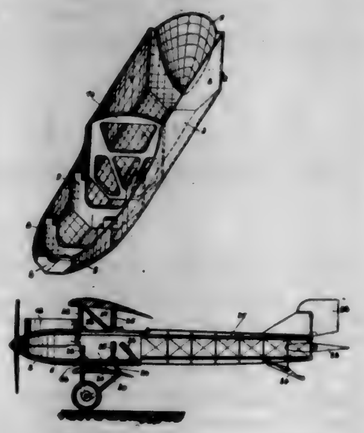
1. A chucking machine comprising spindles in spaced relation for carrying screw-threading tools, a rotatably mounted turret, work-holding devices mounted on said turret spaced from each other the angular distance between successive threading tools, means whereby said work-holding devices are given a half rotation each time while said turret is rotated the angular distance between the successive threading tools, means for moving said turret step-by-step to bring articles held by said work-holding devices in succession underneath said threading tools, and means for causing said spindles to rotate first in one direction and then in the other.

---

1,564,354. ARMORED AEROPLANE. HUGO JUNKERS, Dessau, Germany. Filed June 28, 1920. Serial No. 392,591. 5 Claims. (Cl. 244—30.)

1. Fuselage for armored flying machines, consisting of two parts, a substantially stream line front portion

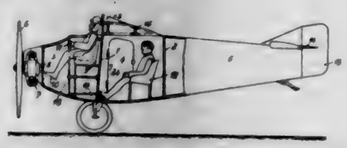
of polygonal shape and which is composed of armor plate, and an unarmored tail portion, the armor plates



constituting the front portion being joined to each other at obtuse angles and being bent in a single direction to converge in forward direction.

---

1,564,355. FLYING MACHINE. HUGO JUNKERS, Dessau, Germany. Filed Feb. 2, 1921. Serial No. 441,965. 4 Claims. (Cl. 244—30.)



1. In a flying machine of the monoplane type in combination, a supporting plane, a fuselage, a motor, a driver's seat and a compartment for the accommodation of the useful load, all disposed in said fuselage, said motor and seat substantially in front of said plane, said compartment substantially between vertical planes extending through the front and rear edges of said supporting plane, respectively, the tail of said fuselage being arranged to counterweigh said motor and a driver.

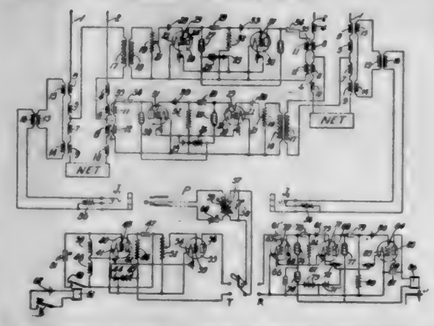
---

1,564,356. ADENOTOME. ISAAC DEE KELLEY, JR., St. Louis, Mo. Filed June 4, 1923. Serial No. 643,264. 6 Claims. (Cl. 128—309.)

1. An adenotome, the distal end of which on its upper side is provided with an oblong hood rectangular in cross section and adapted to deflect, hold off, and protect tissues which are not to be disturbed, which hood is open at both ends and is adapted to leave the operative field in full view in use.

---

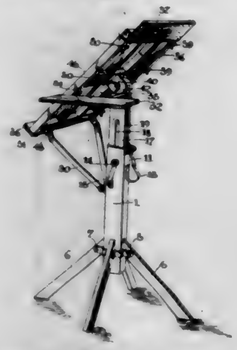
1,564,357. MONITORING SYSTEM. BURTON W. KENDALL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 5, 1919. Serial No. 321,900. 43 Claims. (Cl. 179—15.)



1. A carrier current signaling system comprising a line having coupling-coil line windings and a net circuit for balancing said line, a monitoring circuit symmetrically associated with said line windings, and carrier current signal transmitting and receiving apparatus for connection to said circuit.

---

1,564,358. DRAFTING TABLE. PHILIP KLEIN, Mansfield, Ohio. Filed Nov. 28, 1922. Serial No. 603,840. 5 Claims. (Cl. 45—110.)



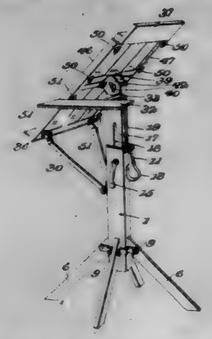
2. A table comprising a top, a movable pedestal having a groove, a slotted plate fitted above the groove providing a channel therebehind, means pivotally mounting the top upon the movable pedestal, bracing means extending from the top to said pedestal, a bracket to which the other end of the bracing means is pivoted having plural means moving in the slot to prevent turning of the bracket, clamping means having a head sliding in the channel and passing through to enable adjustment from the outside of the bracket, a hollow stationary pedestal receiving the movable pedestal, and clamping means for fixing relative adjustments of the two, said stationary pedestal having a slot permitting passage of the bracket should the movable pedestal be adjusted so low as to bring the bracket within the limits of the stationary pedestal.

---

1,564,359. DRAFTING TABLE. PHILIP KLEIN, Mansfield, Ohio. Original application filed Nov. 28, 1922, Serial No. 603,840. Divided and this application filed Aug. 31, 1923. Serial No. 660,399. 3 Claims. (Cl. 45—131.)

1. A table including a top composed of a pair of frames, a pedestal, a bearing by which the top is piv-

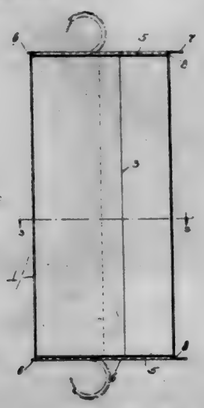
otally mounted on the pedestal, a yoke forming part of said bearing and including flanges to engage adjacent stiles of the frames, bolts carried by one of the frames



and adapted to pass through the yoke, thumb screws on the bolts to clamp the yoke to the frames in the center of the top, and means at the ends of the frames to secure them together there.

---

1,564,360. METAL CONTAINER. LOUIS M. KREGELIUS, Cleveland, Ohio, assignor to The United States Platers Supply Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 18, 1920. Serial No. 366,752. 2 Claims. (Cl. 220—48.)

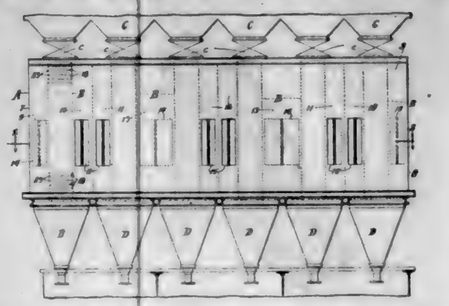


1. A wholly removable container for slowly solidifying material comprising removable end plates, a body portion formed of a cylinder of sheet metal, of greater height than the diameter of said end plates joined to said end plates and providing an underlapped portion of substantial width, a sealing element applied to the outer edge of said cylinder along a line of the body of said cylinder spaced from the other edge, said underlapped portion being free over the remaining area thereof, whereby cutting the outer ply will free the sheet material from said contents.

---

1,564,361. FUEL DRIER. HENRY KREISINGER, Piermont, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 3, 1924. Serial No. 741,316. 13 Claims. (Cl. 34—34.)

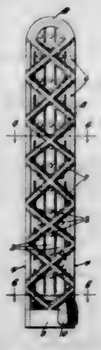
1. A drier for drying fuel comprising an encasing structure, a fuel inlet and a fuel outlet, heated means forming a conduit through which the fuel is passed and dividing the encasing structure into two chambers, a



gas inlet in one of said chambers, a gas outlet in the other chamber and means for setting up a current of gas through the fuel as it is being dried.

---

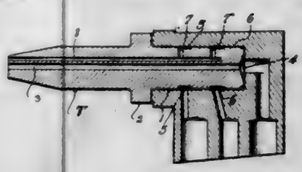
1,564,362. BURNER MANTLE. CHARLES M. LOEPVE, St. Louis, Mo., assignor to Cottonwood Fiber Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 2, 1925. Serial No. 12,598. 5 Claims. (Cl. 126—92.)



1. The combination with a radiant refractory open frame of a baffle arranged transversely of the inner portion of the frame and adjacent to the lower end thereof.

---

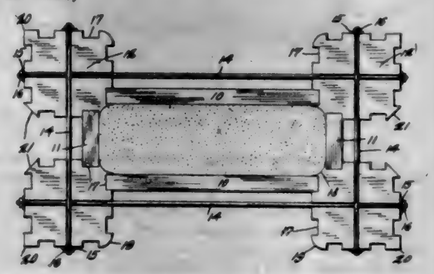
1,564,363. TORCH TIP. CHARLES A. MILLER, Covington, Ky., assignor to The Welders Supply & Mfg. Co., Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1925. Serial No. 17,299. 3 Claims. (Cl. 158—27.4.)



2. As a new article of manufacture, a tip for a cutting torch formed of one piece of material and having a central bore therethrough for the passage of a cutting gas, one end portion of the tip being insertible within the torch, said end portion being threaded and provided at longitudinally spaced points along said threaded portion with annular recesses to provide chambers when the tip is in applied position, and jet openings leading from the outer or working end of the tip, each of said chambers having ports in communication with said openings for the passage of either an oxidizing gas or a heating gas, said threaded portion at all points therealong aside from the recesses being of substantially the same diameter, the end of the bore remote from the working end being enlarged to form a chamber when the tip is applied.

---

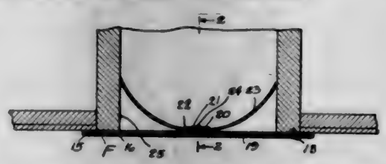
1,564,364. MOLD. SCOTT A. MORROW, Tyler, Tex., assignor of one-third to Harry Wren, Tyler, Tex. Filed Mar. 16, 1925. Serial No. 15,886. 3 Claims. (Cl. 25—121.)



1. A mold comprising side walls and end walls, corner posts detachably engaging the edges of the side and end walls and forming corners for the mold and means connecting the corner posts to hold the mold parts in position.

---

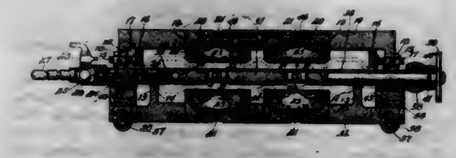
1,564,365. SCREENING DEVICE. ALFRED A. NEWNHAM, Pasadena, Calif. Filed Oct. 18, 1924. Serial No. 744,416. 2 Claims. (Cl. 126—310.)



1. A screening device comprising a frame having an opening therein, a screen in spanning relation to the opening, flanges on the frame embracing the screen for securing the latter in spanning relation to the opening, a strip extending across the opening and engaged by said flanges, said strip being slotted, a flange on the strip and an arched leaf spring extending through the slot and between the strip and flange, said flange being folded over the leaf spring and strip and secured thereto.

---

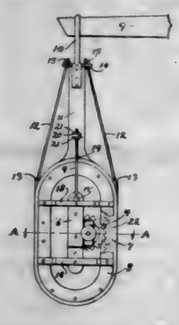
1,564,366. DIES FOR AND METHOD OF FORMING HOLLOW RUBBER ARTICLES. JOHN H. OVERTON, Trenton, N. J. Filed Mar. 19, 1924. Serial No. 700,252. 27 Claims. (Cl. 18—36.)



2. A method of making hollow rubber articles which consists in disposing between two cavitary dies two confronting sheets of stock, forcing the dies toward each other to bring the margins of the stock into air-tight engagement with each other, causing the stock to enter the die cavities by fluid pressure, disposing gas-forming material within the depression in the lower sheet of the stock while the sheets of stock are in contact with each other, and then continuing the movement of the dies toward each other to thereby bring the sheets into adhering contact at the cutter edges of the dies and cut out the article from the surplus stock.

---

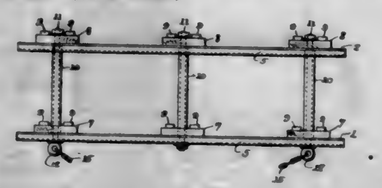
1,564,367. CONNECTION ROD FOR OIL-WELL WALKING BEAMS. WILLIAM F. REICHKE, Wichita, Kans., assignor, by direct and mesne assignments, of one-half to E. C. Meier, Wichita, Kans., and one-half to Perry A. Hoefer, Ponca City, Okla. Filed July 3, 1923. Serial No. 649,260. 2 Claims. (Cl. 74—4.)



1. A walking beam connecting rod including a rack loop, a pinion rotating by motive power and arranged within the loop, a guiding plate mounted within the loop with substantial parallelism with the rack teeth of the same and maintaining the pinion in mesh with the teeth of the said loop rack, an elongated plate carried by the pinion and provided in its edge with rollers arranged to engage the edge of the said guiding plate, said elongated plate having pivotal movement on an axis coinciding with that of the pinion, transverse supporting bars extending across and bracing the loop rack and supporting the said guiding plate, an adjusting rod connected to said guiding plate for maintaining the same in proper position with relation to the loop rack, a bar for connecting the loop rack to a walking beam and brace rods located at opposite sides of the bar and connecting the outer end of the same with the sides of the loop rack.

---

1,564,368. ROAD DRAG. THOMAS E. SHERIDAN, Shenandoah, Iowa. Filed July 17, 1925. Serial No. 44,281. 1 Claim. (Cl. 37—143.)



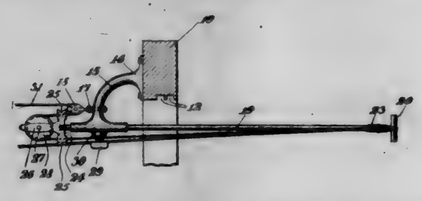
A scraper comprising bars, blocks on the corresponding surfaces of the bars, a tubular spacer extended through the block of one bar and abutting against the said bar, the spacer passing through the other bar and abutting against the block of that bar, a securing device extended through the spacer, and through the blocks and the bars, securing elements connecting the blocks with the bars, and blades attached to the bars and covering the securing elements at one end.

1,564,369. METHOD OF CASTING COPPER. LEONARD SHIPLEY, Dundalk, Md., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed June 20, 1924. Serial No. 721,191. 4 Claims. (Cl. 22—200.)

1. The method of casting copper shapes which comprises pouring the molten copper into open molds and immediately covering the molds closely enough to prevent free contact of atmosphere while permitting escape of the occluded gases and during a time sufficient to prevent surface oxidization, rapid cooling and sudden degasification of the copper.

---

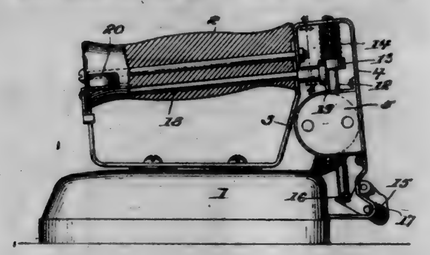
1,564,370. WASH-LINE SUPPORT. HARRY SJÖBLOM, Brooklyn, N. Y. Filed Dec. 19, 1923. Serial No. 681,459. 1 Claims. (Cl. 68—3.)



A line support comprising a bracket having a base fixed to a support, a curved arm extending from the base, and a guide head at the end of said arm disposed at a right angle to the base, a pulley block mounted on said arm adjacent the head, a rod slidable through said head, a cross handle on one end of said rod to adjust the same, means carried by said head to hold the rod when adjusted, a second pulley block carried by said rod adjacent and below said handle, an extension fixed on the opposite end of said rod, a pulley rotatably mounted in said extension, and a pair of oppositely disposed line guides formed on said extension, said guides leading a line from the first named pulley block around the pulley, thence to the second named pulley block and eventually outward in parallel with the entering portion.

---

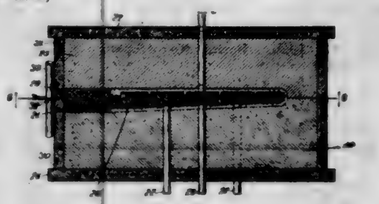
1,564,371. ELECTRIC IRON. JOHN W. SLATE and HERBERT L. MITCHELL, High Point, N. C. Filed Jan. 29, 1924. Serial No. 689,315. 1 Claim. (Cl. 219—25.)



An electric iron comprising a frame at the rear end thereof, a switch carried by the frame, a vertically arranged rod connected with the switch for actuating the same when the rod is reciprocated, a shoulder on the rod, a spring engaging the shoulder and the top of the rod for holding the rod in a position with the switch open, a plate pivoted to the frame and having a cam part engaging the bottom of the rod, a step on the plate for limiting its movement by the rod, said plate extending beyond the frame so that when the iron is supported by the frame the plate will be moved inwardly and thus raise the rod to close the switch, a rod passing through the handle of the iron, an arm on one end of said rod engaging the shoulder on the first arm and a thin finger member on the front end of the rod passing through the handle of the iron.

---

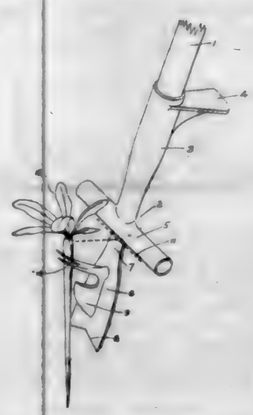
1,564,372. METHOD OF CASTING HOLLOW ARTICLES. EDWIN E. SMEETH, Chicago, Ill. Filed Dec. 22, 1924. Serial No. 757,497. 9 Claims. (Cl. 22—200.)



1. The method of casting hollow articles in a flask comprising a drag and a cope which consists in forming a mold cavity containing a core disposed horizontally, with means projecting into the hold cavity for positioning the core, turning the flask to carry the core to an upright position, withdrawing said core positioning means from the mold cavity, and making the cast with the core in an upright position.

---

1,564,373. WEEDER. EDWARD ARCHIBALD SMITH, Vancouver, British Columbia, Canada. Filed Feb. 16, 1924. Serial No. 693,382. 5 Claims. (Cl. 25—132.)

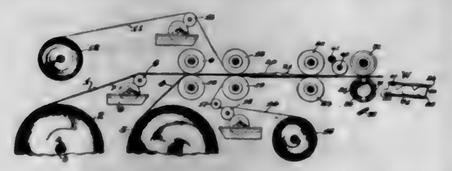


1. A weeder comprising a blade mounted upon an operating shaft, an extracting fork extending at right angles from the blade, and a cross bar for limiting the depth of the cut of the blade.

---

1,564,374. CORE OR WINDER FOR FABRIC STRIPS AND METHOD OF MAKING SAME. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor to Lightship Cloth Board Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 21, 1922. Serial No. 538,289. 15 Claims. (Cl. 93—1.)

1. A method of producing core boards on winders for fabrics, comprising advancing continuous webs of cardboard body material, bringing the webs together in facial contact, advancing continuous strips of edge-binding paper adjacent to the longitudinal edges of the combined body webs, supplying adhesive for securing the binding strips, and applying the binding strips to the combined body webs with a portion of each strip con-



cealing and smoothly overlying one longitudinal edge of the combined body webs and with marginal portions of the binding strip overlying and adhesively secured to adjacent margins of the webs.

---

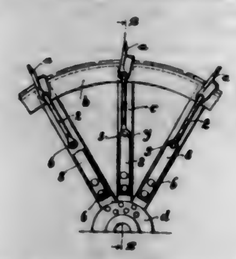
1,564,375. DENTAL PASTE. JOSEPH L. SMITH, Denver, Colo. Filed June 30, 1923. Serial No. 648,801. 5 Claims. (Cl. 106—6.)

1. A vehicle for temporary tooth fillings and the like comprising beeswax and a substance having the characteristics of petroleum jelly.

5. An improved dental paste consisting of beeswax 1 part, petroleum jelly 3 parts, calcined magnesia 1 part, sodium biborate 1 part, and sodium bicarbonate 2 parts.

---

1,564,376. CLAWED DRIVING WHEEL FOR MOTOR PLOWS, TRACTORS, AND THE LIKE. ROBERT SOHNER, Vienna, Austria. Filed Mar. 3, 1925. Serial No. 12,918. 10 Claims. (Cl. 301—44.)

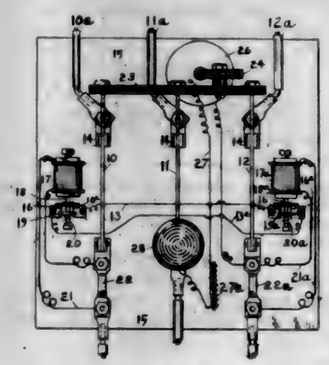


8. A wheel for motor plows and the like comprising a felloe, claw members adapted to be mounted on said felloe, and having lugs adapted to extend radially of the wheel and directed towards the center, apertured spokes, securing means comprising members having a portion adapted to pass through said lugs and apertured spokes and another portion adapted to extend substantially radially of the wheel and directed towards the wheel centre, and locking means comprising spring plates secured to said spokes and provided with pins at their free ends adapted to engage and hold the radially extending portions of said securing members.

---

1,564,377. RELEASE FOR ELECTRIC SWITCHES OR STOPS FOR MOTORS. MILLARD COLE SPENCER, East Orange, N. J., assignor to Crocker-Wheeler Company, Ampere, N. J., a Corporation of New Jersey. Filed Nov. 5, 1920. Serial No. 421,904. 1 Claim. (Cl. 175—294.)

In a release for electric switches, a main circuit, a conductor in the main circuit having the property of increasing in resistance when heated, a relay magnet in a shunt around the conductor and the action of which is delayed by the said conductor, a self-opening switch connected with the main circuit, a holding magnet for restraining said switch from opening and having a circuit connected with the main circuit, and a normally open relay switch in shunt with the holding magnet circuit and closed by the relay magnet when the said



conductor is sufficiently heated to force enough current through the relay magnet to cause it to operate the relay switch, thereby short-circuiting said holding magnet and de-energizing it so as to release the self-opening switch.

---

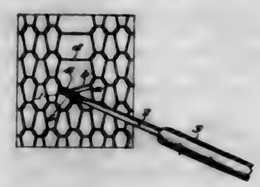
1,564,378. BLEACHED AND DYED FURS AND THE LIKE. HYMAN STEIN, Arverne, WILLIAM E. AUSTIN, New York, and IRVING LIBBOWITZ, Brooklyn, N. Y., assignors to Stein Fur Dyeing Co. Inc., New York, N. Y., a Corporation of New York. Filed May 3, 1924. Serial No. 710,830. 24 Claims. (Cl. 8—2.)

1. As an article of manufacture, an unbleached fur skin or the like suitable for bleaching and being impregnated with a solution of a protecting agent to protect the skin against harmful oxidation during a subsequent bleaching operation.

16. As an article of manufacture, a bleached fur skin or the like the fibres of which contain a protecting agent converted from a lower to a higher state of oxidation by hydrogen peroxide, said protecting agent having served to protect said skin from excessive oxidation under the action of the hydrogen peroxide.

---

1,564,379. NEEDLE AND ITS METHOD OF USE. FRANK C. STEPHENS, Washington, D. C., assignor, by mesne assignments, to The Stelos Company, Inc., a Corporation of Delaware. Filed Sept. 25, 1923. Serial No. 664,720. 15 Claims. (Cl. 66—3.)



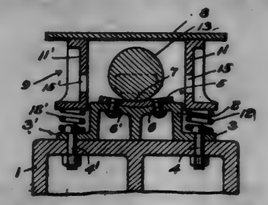
1. A needle having a hook and a side-guard extending in proximity to said hook.

---

1,564,380. ROLLER SIDE BEARING. ARNOLD STUCKI, Pittsburgh, Pa. Filed June 10, 1924. Serial No. 719,071. 7 Claims. (Cl. 308—226.)

1. A side bearing for railway cars comprising a tubular floating cage having a passageway extending completely

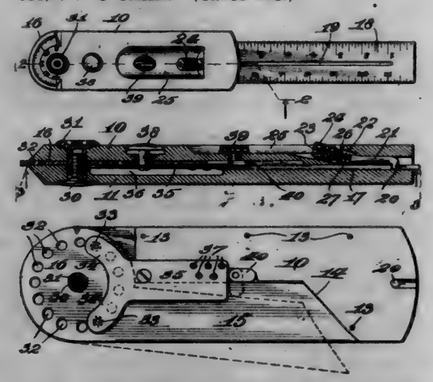
therethrough open at both its top and bottom, a lower supporting bearing movable independently of the cage



and forming a unit supported separately from the cage, and a roller operatively engaging the said bearing and housed within the cage.

---

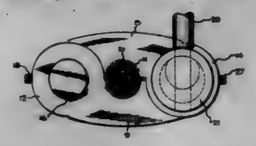
1,564,381. COMBINATION TRY-SQUARE, MITER SQUARE, AND COMPASS. SWAN O. THORELL, Los Angeles, Calif. Filed July 26, 1923. Serial No. 653,873. 8 Claims. (Cl. 33—93.)



8. In a combination tool, a body having a centrally disposed longitudinally extending pocket, a try square blade for sliding and pivotal movement at one end of said body and adapted to occupy said pocket while not in use, said body being provided at its opposite end with a slot that extends along one side of said body, a miter blade pivotally connected to the slotted end of the body and adapted to occupy the slot in the side thereof while not in use and means for locking said miter blade to said body in different adjusted positions.

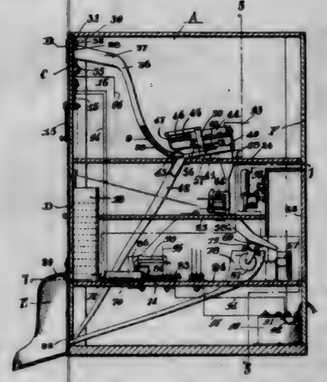
---

1,564,382. CLAMP. ISAACK A. TREIMAN, Seattle, Wash. Filed Aug. 14, 1924. Serial No. 731,942. 6 Claims. (Cl. 24—114.5.)



2. A clamp embodying two clamping members having interfitting lugs on both ends and having means for receiving a cable therebetween, a pivot pin extending through the interfitting lugs at one end of said clamping members and a clamping pin extending through the interfitting lugs of the clamping members at the other end, said clamping pin having an eccentric portion for drawing said two clamping members together when said clamping pin is turned.

1,564,383. COIN-CONTROLLED VENDING MACHINE. GARLAND SLATER VARCOE, Fenelon Falls, Ontario, Canada. Filed July 14, 1923. Serial No. 651,514. 16 Claims. (Cl. 194—10.)



9. In a vending machine of the character described and in combination with a suitable casing having coin slots therein adapted to receive coins of different denominations and provided with merchandise holding means and change-giving means and means for ejecting the merchandise carried in the casing and means for receiving the change and merchandise when ejected, a plurality of coin chutes connected to said slots and communicating through a series of coin detectors and with coin receiving tubes, electrically operated change-giving mechanism in combination with storage means carried in said chutes.

---

1,564,384. APPLIANCE FOR SECURING CAPS ON STICKS OR THE LIKE. KONRAD FREIHERR VON THÜNGEN, Schloss Zeitlofs, Germany. Filed Aug. 3, 1925. Serial No. 47,870. 11 Claims. (Cl. 273—71.)

1. Appliance for securing caps on sticks or the like, comprising bands adapted to be placed across said cap, means for exerting tension on said bands and means for holding said bands to the sides of said cap.

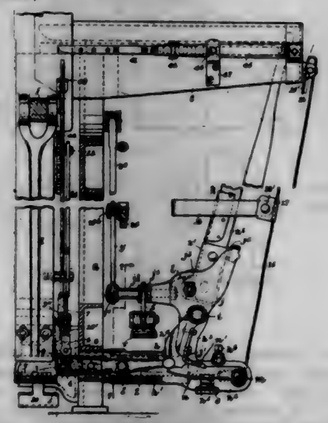
---

1,564,385. CONCENTRATED ENZYMIC SUBSTANCE AND METHOD OF PREPARING SAME. SELMAN A. WAKSMAN, New Brunswick, N. J., assignor to Jacques Wolf & Co., Passaic, N. J., a Corporation of New Jersey. Filed Aug. 11, 1922, Serial No. 581,236. Renewed Feb. 28, 1925. 7 Claims. (Cl. 195—20.)

1. The process of preparing an enzymic substance which comprises lixivating a fungus-impregnated culture medium, soaking in the liquid extract a fresh mass of fungus-impregnated culture medium, and drying the mixture.

---

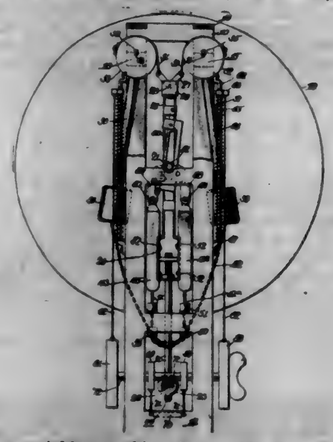
1,564,386. LOOM. WILLIAM S. WELLS, South Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 31, 1923. Serial No. 615,988. 7 Claims. (Cl. 139—145.)



7. A loom picking mechanism including a cockable spring-pressed picking member, means to hold the same cocked, means to move said mechanism to cocked position, and back and forth moving mechanism to trip the first-named mechanism including a coupling device and a device with which said coupling is engageable, said coupling being movable transversely of the path of movement of the latter mechanism so as to clear the other device and one of said devices having a notch in which the other is engageable and adapted to oppose such lateral movement of the coupling device when once engaged with the other device.

---

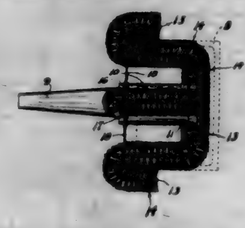
1,564,387. AUTOMATIC WEIGHING MECHANISM. JOHN W. WESLEY, Chicago, Ill. Filed Mar. 17, 1924. Serial No. 699,632. 13 Claims. (Cl. 265—62.)



1. In a weighing machine, the combination of a platform, an indicator, means for actuating the indicator when an object is arranged upon the platform, and means for controlling the actuation of the first mentioned means and indicator, and means cooperating with said controlling means which is operable after said controlling means reaches a certain position, said cooperating means including a plurality of weights of different weights which are successively brought into operation upon the action of the second mentioned means to control the actuation of said indicator.

---

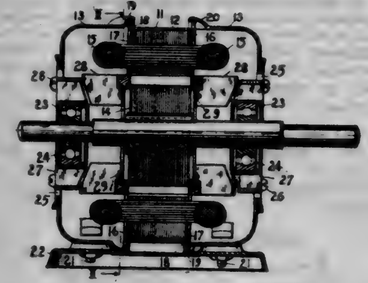
1,564,388. CLEANING BRUSH FOR BUTTER JARS. OLAF WESTVIG, Minneapolis, Minn. Filed Aug. 17, 1922. Serial No. 582,397. 6 Claims. (Cl. 15—56.)



2. A cleaning device comprising a head, means for rotating said head about a central axis, radial brush arms extending across the end of said head, said arms extending outward from said head, then being bent to extend parallel to the axis thereof, the ends of said arms being bent outward from said parallel portions.

---

1,564,389. DYNAMO-ELECTRIC MACHINE. SCHUYLER SKAATS WHEELER, Bernardsville, N. J.; Amy Sutton Wheeler, executrix of said Schuyler Skaats Wheeler, deceased, assignor to Crocker-Wheeler Company, Ampere, N. J., a Corporation of New Jersey. Filed Oct. 12, 1922. Serial No. 593,992. 2 Claims. (Cl. 171—252.)



1. A dynamo-electric machine comprising a stator, winding-shields attached to each side of the stator by a series of bayonet-joint connections with nozzles at each bayonet-joint which are directed across the rim of the stator, and means for blowing air through the nozzles.

---

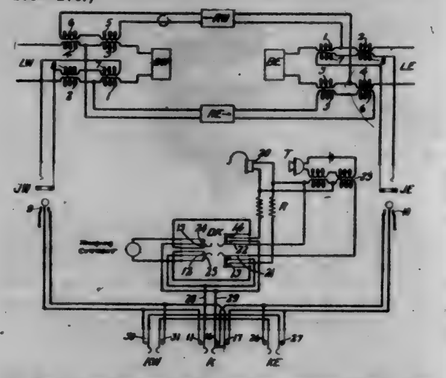
1,564,390. STEAM LOCOMOTIVE AND SIMILAR VEHICLE. ROBERT HARBEN WHITELEGG, Manchester, England. Filed Feb. 3, 1925. Serial No. 6,624. 7 Claims. (Cl. 105—37.)

1. A locomotive comprising two coupled and operatively interconnected power driven units one of said units comprising a boiler and reciprocating piston engines and the other of said units comprising a steam turbine, traveling

wheels, transmission gearing for driving said traveling wheels, a condenser to which the turbine exhausts, means for coupling the two units and causing steam from either the reciprocating piston engines or boiler or both of the first unit to drive the turbine on the other unit.

---

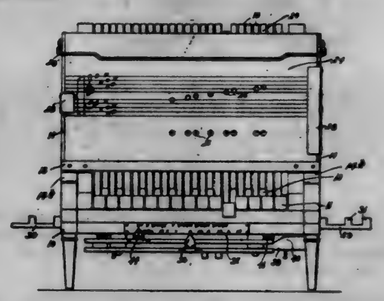
1,564,391. TELEPHONE-REPEATER MONITORING SYSTEM. RAY SETH WILBUR, Lyndhurst, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1921. Serial No. 478,494. 8 Claims. (Cl. 179—170.)



1. In a monitoring and signaling system for a telephone repeater station, said repeater station having line sections interconnected through oppositely directed repeaters, a balanced repeater coil for each of the interconnected line sections, and monitoring and signaling coils each comprising an extra winding inductively related to the line windings of said repeating coil but out of conductive relation to the line circuit, said system comprising telephone talking and signaling sets and circuit arrangements for connecting said sets to the monitoring coil of one line section or ofeach of a plurality of line sections for signaling or talking over said line section or sections.

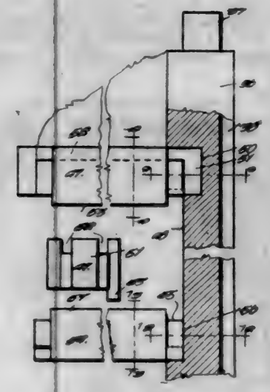
---

1,564,392. MECHANISM FOR TEACHING PIANO. JOSEPH H. WILLIAMS, Independence, Kans. Filed Feb. 1, 1924. Serial No. 689,951. 9 Claims. (Cl. 84—478.)



7. The combination with a piano, of a plurality of charts representing musical scales, means associated with the keys of the piano for indicating upon the charts the position of the notes of the scale played, selective means whereby all of the keys except the keys of the particular scale indicated may be locked against movement and means for controlling the selective locking means.

1,564,393. BUILDING CONSTRUCTION. DON H. YORK, Washington, D. C. Filed Sept. 19, 1924. Serial No. 738,608. 4 Claims. (Cl. 20—2.)



1. In a building structure, the combination with a set of spaced upright frame members having inner and outer grooves, certain of said members having mortices between the grooves, of substantially horizontal transverse frame members having inner and outer grooves and terminal extensions including tenons that fit in the mortices and thereby support said transverse frame members, and inner and outer panels filling certain of the spaces defined by said members and having their margins engaged in the grooves of the upright and transverse frame members.

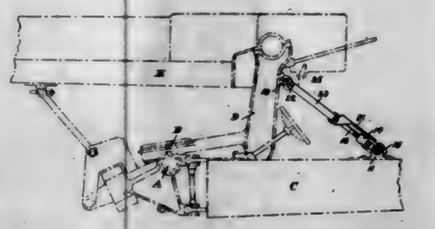
---

1,564,394. UNBURNED REFRACTORY BRICK. ROBERT YOUNGMAN, Pittsburgh, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a Corportion of Pennsylvania. Filed Feb. 29, 1924. Serial No. 696,105. 5 Claims. (Cl. 106—9.)

1. An unburned refractory brick composed of calcined magnesite, chrome ore, and sodium silicate.

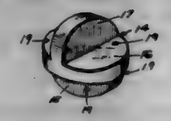
---

1,564,395. TRAVELING LOCK FOR GUN CARRIAGES. HARRY C. ZIMMERMAN, Washington, D. C. Filed Aug. 25, 1924. Serial No. 734,059. 6 Claims. (Cl. 89—40.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



6. A lock for gun carriages including a support, an adjusting element carried by the support, a carriage engaging element, and means connecting the carriage engaging element to the adjusting element operable to move the engaging element into and out of engaging position.

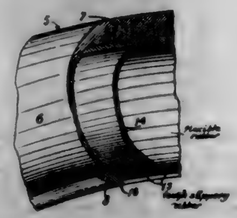
1,564,396. FUEL-SUPPORTING MEANS. NICHOLAS J. ZUBULIN, Minot, N. Dak. Filed Jan. 16, 1925. Serial No. 2,883. 2 Claims. (Cl. 126—168.)



1. The combination with a furnace embodying a fire box and its grate, of separate rolling fuel supporting elements arranged upon the grate, each element embodying a flat disk and a pair of segments secured to the opposite sides of the disk, affording segmental passages.

---

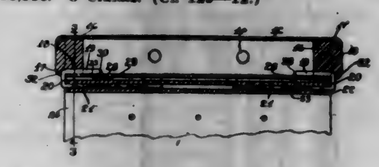
1,564,397. PNEUMATIC TUBE. GEORGE F. ARMSTRONG, Rutherford, N. J. Filed May 29, 1923. Serial No. 642,237. 2 Claims. (Cl. 152—13.)



1. An inner tube for tires including a flexible rubber tube having secured to the inner periphery so as to form an integral part thereof, a protecting layer constituting a tire flap, said flap forming layer composed solely of a homogeneous rubberized compound equally expandible both longitudinally and transversely with the tube, more resistant to abrasion than the flexible tube, being stiffer than the flexible tube and said compound containing a material which gives to the tire flap a slippery, exposed surface.

---

1,564,398. LOOSE-LEAF BINDER. HUBERT AUBURN, Cincinnati, Ohio. Filed Mar. 26, 1925. Serial No. 18,586. 3 Claims. (Cl. 129—12.)

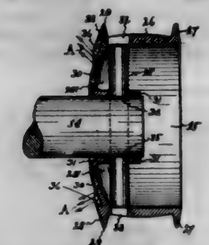


1. In a device of the class described the combination of a tubular housing having a perforation therein, a hinge plate having a bore along its one edge adjacent the housing, a U-shaped hinge pin having a hook formed at the end of one arm, the said arm being received in the housing and the hook being received in the perforation in the housing, the other arm being received in the bore in the hinge plate, a plug received and frictionally held in the tubular housing, the plug and hook preventing lateral and longitudinal displacement of the hinge pin.

---

1,564,399. PULLEY. WILLIAM J. ANDREWS, East Lyme, Conn. Filed Nov. 27, 1923. Serial No. 677,264. 4 Claims. (Cl. 64—17.)

1. A combined cranking and belt pulley comprising a hub, and annular rim having peripheral flanges, and a web or imperforate back connecting said hub and rim, said web or back having an annular fluid collecting recess or pocket on its outer side between the hub and rim, said recess being adjacent to the flange and outwardly flaring and so constructed, arranged and adapted



to intercept and collect a fluid creeping up on the outer side of said web or back from the hub towards the rim and throw said collected fluid from the pulley during the rotation of said pulley.

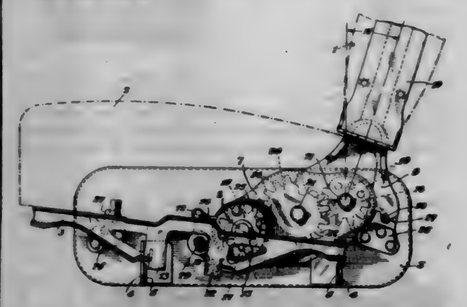
---

1,564,400. CAR COUPLER. REX G. AVERILL, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 29, 1924. Serial No. 728,870. 6 Claims. (Cl. 213—100).

1. A pair of coupler heads each comprising a body member and holding means for holding the heads in a coupled relation, means to yieldingly hold the said holding means in a coupled relation, engaging pulling faces on each holding means, each pulling face being provided with a transverse groove to receive means on the opposite head to limit and lock the holding means against relative lateral movement.

---

1,564,401. CAR SEAT. ALFRED B. BELL, Philadelphia, Pa., assignor to the American Motor Body Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Nov. 9, 1923. Serial No. 673,691. 6 Claims. (Cl. 155—101.)



1. In a car seat, the combination with a seat end, a reversible back standard, a shiftable seat rocker, a throw member pivotally connected with said seat end and with said back standard, and a connection between said throw member and said rocker whereby pivotal movement of

said throw member on said seat end effects shifting of said rocker, of means establishing and maintaining a bearing engagement between said seat end, said throw member and said back standard, said means comprising stationary teeth carried on said standard, stationary teeth carried on said end plate, and a member pivotally mounted on said throw member and having teeth in mesh with the said stationary teeth on said standard and seat end.

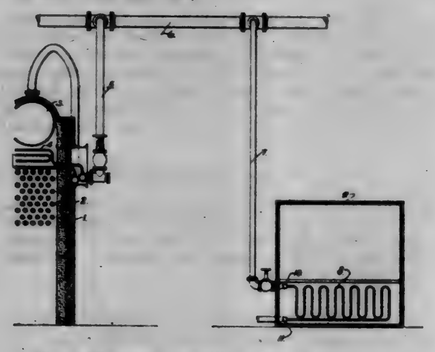
---

1,564,402. BRIDGE FOR DIAPHRAGM VIOLINS. GLENN D. BOTHWELL, Springport, Mich., assignor of one-third to Guy J. Bothwell, London, Ontario, Canada. Filed Feb. 26, 1923. Serial No. 621,270. 2 Claims. (Cl. 84—296.)

1. In a stringed instrument, a sound-box having a diaphragm, strings extending across said sound-box, a bridge supporting said strings adjacent said diaphragm, a flexible support for one end of said bridge, permitting vibratory movement of the latter, and a support for the opposite end of said bridge pivotal about an axis substantially parallel to the strings and engaged with said diaphragm to impart to the latter the vibrations of said bridge.

---

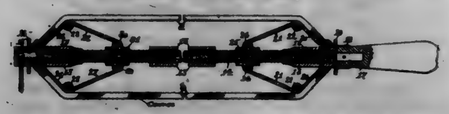
1,564,403. METHOD FOR HEATING WITH SUPERHEATED STEAM. BENJAMIN BROIDO, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Apr. 18, 1923. Serial No. 631,945. 4 Claims. (Cl. 237—81.)



1. The process of heating with steam, comprising superheating the steam and passing it through the heating apparatus at such velocity that the walls of said apparatus in contact with said steam are maintained in a dry state during the normal operation of the process.

---

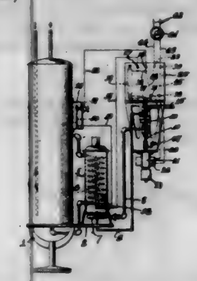
1,564,404. RAZOR STROP. FREDERIC M. BURDITT, Newton Center, Mass. Filed Mar. 13, 1922. Serial No. 543,258. 4 Claims. (Cl. 51—208.)



4. In a strop for razors, knives and like instruments, in combination, a supporting frame, an endless strap connected therewith, expansible and contractible members located on opposite sides of the supporting frame cooperating with said strap to support the material length thereof between the same, and a common actuating device carried by the supporting frame and operatively connected with said expansible and contractible members for laterally moving the strap to stretch it between said expansible and contractible members.

---

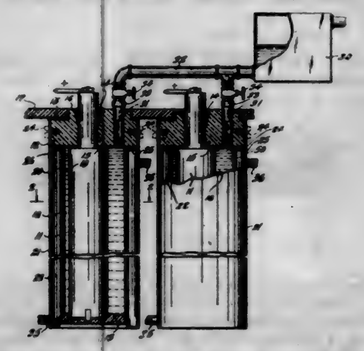
1,564,405. ELECTRICALLY-CONTROLLED GAS WATER HEATER. HERBERT W. CHRISTIAN, Detroit, Mich. Filed June 30, 1923. Serial No. 648,856. 5 Claims. (Cl. 236—33.)



5. In a water heating apparatus wherein a thermostatic switch is in an electric controlling circuit of the apparatus, and a valve is controlled by the circuit, means to prevent arcing of said thermostatic switch, said means including a thermostatic device placed in a shunt circuit by operation of said valve to prevent arcing of said thermostatic switch, said thermostatic device being operatable to break the shunt circuit after the operation of said thermostatic switch.

---

1,564,406. ELECTROLYTIC CELL. MARTIN W COWLES, Fairfield, Conn. Filed May 2, 1924. Serial No. 710,572. 16 Claims. (Cl. 204—58.)



1. An electrolytic cell comprising a plurality of individual units, each unit comprising an anode and a cathode spaced from each other, and means for feeding an electrolyte to the space between the anode and cathode of each unit independently of the other units.

---

1,564,407. TYPEWRITING MACHINE. CLARENCE M. CREWS, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 672,489. 51 Claims. (Cl. 197—126.)

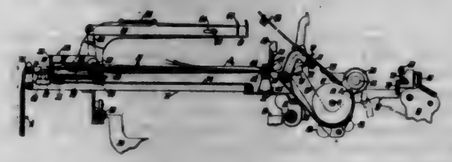
1. In a typewriting machine, the combination with a revoluble platen, of a carbon-carrier sufficiently flexible

to be fed around the platen with the work-webs and carbons, and arranged to be shifted in line-feed direction

relatively to the work-webs to strip the carbons from the typed form-sections.

---

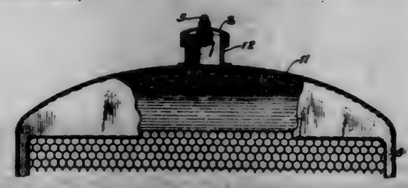
1,564,408. TYPEWRITING MACHINE. CLARENCE M. CREWS, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. N. Y., a Corporation of Delaware. Filed Nov. 15, 1923. Serial No. 674,839. 19 Claims. (Cl. 197—126.)



1. In a typewriting machine having a revoluble platen, means for presenting to the platen a composite web of work-plies and interleaved carbons, including a carbon-carrier or holder, said machine constructed to permit the straightening out of the web preparatory to stripping the carbons, a web-severing device comprising a draw knife movable transversely of the web, and a work-support, said work-support being normally out of use, but the work-support and the draw knife being brought into co-operative web-severing relation at the operation of the machine to straighten out the web.

---

1,564,409. EMERGENCY INDICATOR FOR AUTOMOBILES. LEWIS W. EGGLESTON, Buffalo, N. Y. Filed Oct. 13, 1921. Serial No. 507,524. 19 Claims. (Cl. 116—114.)



15. A device of the character described comprising a stem, a cup member secured centrally to said stem at a lower portion thereof and extending upwardly therefrom and in spaced relation thereto, a second cup member similarly secured to an intermediate portion of said stem and extending downwardly into said first named member in spaced relation thereto, said stem having a reduced portion extending above said second named member, and a cap secured thereon, said stem and said cap having a passage therethrough forming an outlet extending from the interior of said second named member, substantially as specified.

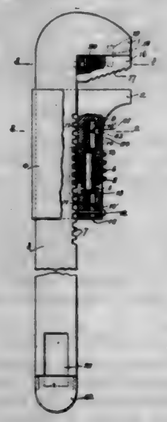
---

1,564,410. MANUFACTURING SOLID CALCIUM NITRATE. CARL EYER and ROBERT GRIESSBACH, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed June 29, 1925. Serial No. 40,449. 6 Claims. (Cl. 23—102.)

4. As a new article of manufacture, solid calcium nitrate containing in molecular distribution a small amount of an ammonium salt.

---

1,564,411. WRENCH. JOHN H. FONES, Oakland, Calif. Filed Oct. 6, 1924. Serial No. 742,022. 4 Claims. (Cl. 81—158.)



1. A wrench, comprising a pair of jaws, a rack-bar fixed to one jaw, a sleeve carrying the other jaw and receiving the rack-bar, said sleeve having a cutout portion therein and having longitudinal recesses in the end walls of the cutout portion, a worm in the cutout portion normally engaging the rack-bar, a rod projecting through the worm, mounted in the recesses and having lateral movement in the recesses, springs in the recesses engaging both ends of the rod and holding the worm in normal engagement with the rack-bar, said worm having interlocking engagement with one wall of the cutout portion, whereby longitudinal as well as lateral movement of the worm is required to release it from engagement with the rack and a spring normally pressing said worm into its interlocking position.

---

1,564,412. NONVIBRATORY VENTILATOR CLOSURE. MILTON FRANKLE, Des Moines, Iowa. Filed Mar. 19, 1925. Serial No. 16,814. 3 Claims. (Cl. 98—22.)

1. In a ventilator closure, the combination with the cowl at the front part of an automobile, said cowl being provided with an aperture, and a collar having an upright, laterally grooved wall and mounted on the cowl outwardly of the margin of said aperture, of an elastic ring removably mounted in said groove and held therein by its inherent elasticity, and a hingeably mounted lid

having a downwardly projecting, endless flange and adapted to be swung downwardly to dispose its flange outwardly of said groove into close engagement with the

outer circumferential side of said elastic ring, to prevent admission of air and the rattling of the closure by either lateral or vertical movement of the flange against the collar.

---

1,564,413. PROCESS OF ELECTROPLATING METALLIC CADMIUM AND ELECTROLYTIC BATH THEREFOR. CLAYTON M. HOFF, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 17, 1924. Serial No. 686,898. 11 Claims. (Cl. 204—1.)

1. Process of electrodepositing cadmium which comprises preparing an alkaline solution containing a compound of cadmium, a compound of ammonia and a cyanide and electrolyzing said solution.

---

1,564,414. CADMIUM PLATING. CLAYTON M. HOFF, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 6, 1924. Serial No. 742,073. 12 Claims. (Cl. 204—1.)

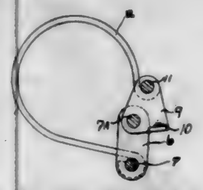
1. A composition adapted for use in the electrodeposition of cadmium comprising a cadmium compound, a material which tends to prevent the co-plating of zinc with cadmium, an alkaline agent, a cyanide, and a material which tends to improve the quality of cadmium platings.

---

1,564,415. FASTENING DEVICE FOR SHIELDS. HARRY HOISINGTON, Davenport, Iowa. Filed Nov. 22, 1924. Serial No. 751,719. 10 Claims. (Cl. 89—36.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

9. In combination with a main shield for guns, a top shield foldable thereon, and a fastening device for holding the top shield raised when in one position of adjustment and lowered when in another position of adjustment.

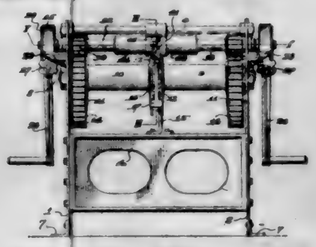
1,564,416. SHACKLE FOR SPRINGS. WILLIS L. HOLLOWAY, Cleveland, Ohio, assignor, by mesne assignments, to The Union Trust Company, trustee, Cleveland, Ohio. Filed Aug. 11, 1924. Serial No. 731,377. 12 Claims. (Cl. 267—46.)



6. A shackle for automobile springs comprising an anchor, a link pivoted thereto and spring means carried solely by the said anchor and said link to resist pivotal movement of the link with respect to the anchor.

---

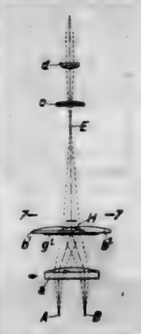
1,564,417. WINCH. DAMASE JACQUES, Detroit, Mich. Filed Aug. 28, 1923. Serial No. 659,067. 7 Claims. (Cl. 254—184.)



1. A winch comprising a frame work, drums in said frame work, said drums having confronting braking heads, a driving mechanism for said drums, said driving mechanism including independent shafts and a clutch mechanism by which said shafts may be operated in synchronism, and a brake lever operatable between said drum heads and adapted to contact therewith.

---

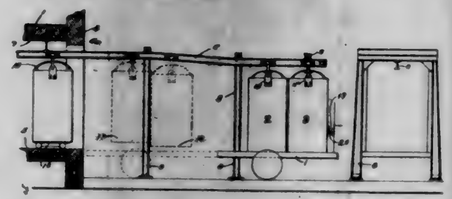
1,564,418. DOUBLE-IMAGE MICROSCOPE. ALBERT KÖNIG, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Mar. 19, 1924. Serial No. 700,373. 9 Claims. (Cl. 88—39.)



1. In a microscope for measuring distances optical means adapted to produce an image of each of the extreme points of the distance to be measured, means adapted to alter the distance apart of the two images in a direction parallel to the said distance, means adapted to separate from the rays, emerging from the said extreme points, such rays that the principal rays of the two pencils formed thereby emanate in parallel to each other from the said extreme points and perpendicular to the direction of the said distance, and an indicating device adapted to indicate the distance apart of the said two images in a direction parallel to the said distances.

---

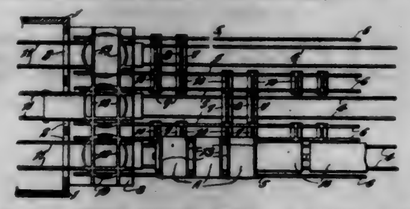
1,564,419. METHOD AND APPARATUS FOR TRANSFERRING CONTAINERS. HENRY W. KIRCHNER, St. Louis, Mo. Filed Jan. 27, 1922. Serial No. 532,245. 8 Claims. (Cl. 214—38.)



1. In an overhead carrier device, a track, a trolley thereon, load suspending elements on said trolley, and a load engaging bracket rigid with said trolley and adapted to contact with a load at spaced points to prevent tilting of the latter relative to said trolley.

---

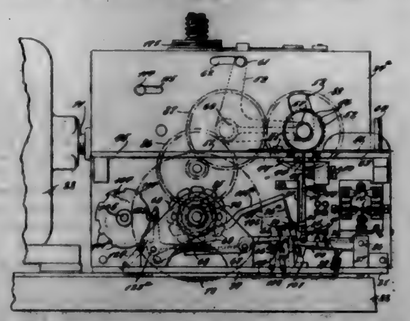
1,564,420. FREIGHT-HANDLING SYSTEM. HENRY W. KIRCHNER, St. Louis, Mo. Filed June 6, 1923. Serial No. 643,728. 36 Claims. (Cl. 214—38.)



1. In a freight transfer system, a carrier, freight containers adapted to be carried thereby, and a series of tracks crossing each other and located above the height of the carrier floor, said containers being provided with caster-like members for moving over said tracks.

---

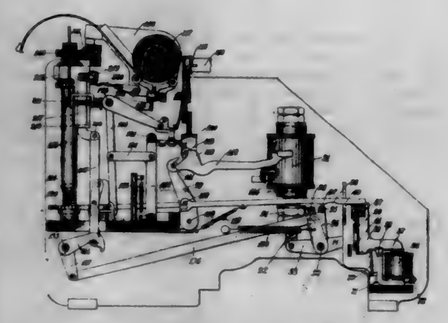
1,564,421. PRINTING TELEGRAPH. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 22, 1920. Serial No. 432,564. 9 Claims. (Cl. 178—23.)



1. The combination with a telegraph printer, of a selector, means for controlling said selector, responsive to line impulses and including a plurality of movable members and a rotatable member cooperating with said movable members and arranged to permit them to move successively, and additional means operating in response to a line impulse of one characteristic to restrain said members and in response to a line impulse of a different characteristic to permit movement of said members, said selector comprising electro-magnetic devices and contacts controlled by said members and, in turn, controlling said electro-magnetic devices.

---

1,564,422. PRINTING TELEGRAPHY. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor, by mesne assignments, to Morkrum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed Jan. 21, 1922. Serial No. 530,880. 96 Claims. (Cl. 178—27.)



1. The combination with selector magnets, of a controlling magnet, and means controlled by said selector magnets for preventing operation of the armature of said controlling magnet.

---

1,564,423. MANUFACTURE OF BENZANTHRONE DERIVATIVES. ARTHUR LÜTTRINGHAUS and HUGO WOLFF, Mannheim, and HEINRICH NERESHEIMER, Ludwigshafen-on-the-Rhine, Germany, assignors to Badische Anilin- & Soda-Fabrik, Ludwigshafen-on-the-Rhine, Germany, a Corporation of Germany. Filed Apr. 26, 1923. Serial No. 634,848. 5 Claims. (Cl. 260—61.)

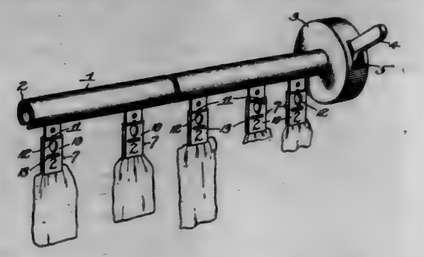
1. In the manufacture of benzanthrone derivatives, converting a benzanthrone compound into condensation products (which are not vat coloring matters) by treating the benzanthrone compound with an alkaline condensing agent at a more moderate temperature than that leading to vat coloring matters.

---

1,564,424. CLASP. JOSEPH H. LYNCH, Asbury Park, N. J. Filed Feb. 7, 1925. Serial No. 7,551. 3 Claims. (Cl. 29—260.)

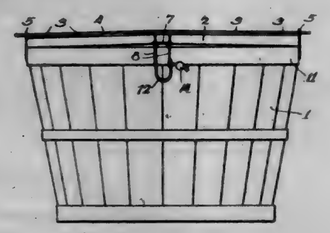
1. A clasp formed of two equilateral rectangular legs spring-hinged together at one end, and a slidable locking piece guided on one leg and having turned-in flanges adapted to engage under projections on the other leg when in locked position, both the legs having orifices presenting a free opening through the clasp.

1,564,425. LAUNDRY TAG AND HOLDER. JOSEPH H. LYNCH, Asbury Park, N. J. Filed June 24, 1925. Serial No. 39,287. 7 Claims. (Cl. 40—19.5.)



7. In apparatus for assembling laundry, the combination of identification tags having an enlarged end, a tag holder comprising an inner and an outer tube both slotted at the lower portion and adapted to form an opening narrower than the extended end of the tag when in one position and to allow the opening to be increased so as to permit the enlarged end of the tag to pass freely through the slots in the tube when in another position.

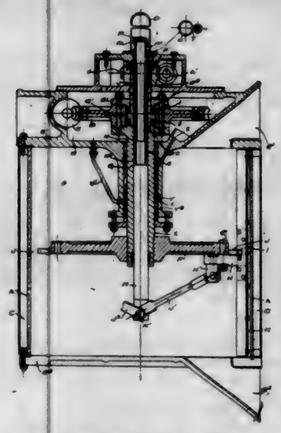
1,564,426. COVER FASTENER. EDWARD FRANCIS MCGARVEY and OLIVER MATTHEW JAMES, Dayton, Tenn. Filed July 21, 1924. Serial No. 727,126. 12 Claims. (Cl. 217—124.)



1. A basket and cover therefor, handles for the basket, means for engaging said handles to hold the cover down, and securing devices applied to the outer edges of the cover and the rim of the basket at opposite sides between the two handles, said devices being separately attachable to the basket and cover, so that the device at one side is independent of the device at the other side, so that said devices are applicable to baskets of different sizes, comprising means which are adjustable to the cover when upwardly bulged or separated from the rim of the basket, adapted to permit forcible depression of the two sides of the cover, after said devices are applied thereto, and adapted to be bent into shape to hold the cover in its forcibly depressed position at opposite sides thereof.

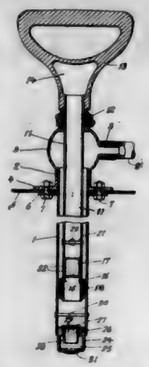
1,564,427. GRINDING, REFINING, AND MIXING MACHINE. JOHN MCINTYRE, Portobello, Midlothian, Scotland, assignor of one-half to James Milne and Son Limited, Edinburgh, Scotland. Filed Feb. 18, 1924. Serial No. 693,686. 8 Claims. (Cl. 83—4.)

1. In a grinding and mixing machine a cylinder, a tubular shaft mounted in a bearing in the cylinder and having a wheel arranged in the cylinder, a spindle longitudinally movable in the bore of the tubular shaft, a free ring on said wheel and in said cylinder, rockers pivotally mounted on said wheel and provided with pins which are slidable in radial slots with which the free ring is provided, and pivotally connect the rockers to said ring, grinding elements on said rockers arranged to engage the inner periphery of the cylinder, connections between the rockers and the spindle, means to rotate



the tubular shaft with its wheel and rockers, and means to longitudinally adjust the spindle to thereby adjust the grinding elements with respect to the inner periphery of the cylinder.

1,564,428. PUMP. PETER GRAHAM MACGREGOR, Pequannock, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed June 26, 1922. Serial No. 570,894. 3 Claims. (Cl. 103—178.)

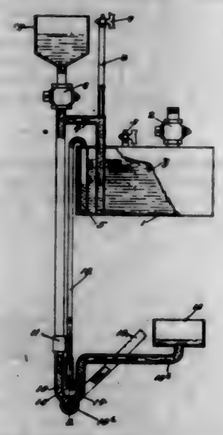


1. A pump comprising a cylinder having an inlet end provided with an inlet aperture, a valve for said aperture, a piston arranged within said cylinder, a hollow piston rod having an open end secured to and projecting through said piston and provided with a port leading from the interior of said rod to the active piston area of said cylinder for establishing communication between the inlet end of said cylinder and the active piston area of said cylinder through said piston, and a reciprocatory one-way valve arranged within said piston rod and adapted to move longitudinally thereof to open said port when said piston rod is moved in one direction whereby communication between the inlet end of said cylinder and the active piston area is established through said port and said open end of said rod and to close said port when said piston rod is moved in an opposite direction whereby communication between the inlet end of said cylinder and the active piston area is severed.

1,564,429. OVERSHOE AND PROCESS OF MANUFACTURING THE SAME. WARREN MACPHERSON, Cambridge, and ERNEST W. DUNBAR, Hudson, Mass., assignors to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 28, 1924. Serial No. 709,368. 4 Claims. (Cl. 36—45.)

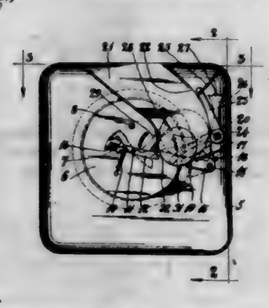
1. An overshoe of the arctic type comprising a rubber bottom and a cloth upper, said upper including outer and inner plies of fabric secured together, fastening means secured between said plies at one of the front edges of said upper to facilitate the fastening of the shoe about the ankle of the wearer, and a binder protecting the edge of one of said plies, the edge of the other ply being located slightly inside of the bound edge of the first ply.

1,564,430. DEVICE FOR MAINTAINING LIQUID LEVELS. WALTER J. MADORELL, Minneapolis, Minn. Filed Jan. 30, 1925. Serial No. 5,802. 16 Claims. (Cl. 137—68.)



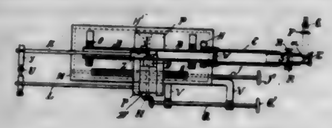
1. The combination with a liquid-containing supply tank, of a siphon connected thereto and having a long leg depending therefrom, a trap to one side of which the long leg of said siphon is connected, and a liquid receptacle connected to the other leg of said trap, said trap containing a liquid that is heavier than the liquid contained in said supply tank and discharged therefrom through said siphon.

1,564,431. COIN-CONTROLLED CLOCK. CHARLES MALOUF and NICHOLAS MALOUF, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,576. 3 Claims. (Cl. 194—61.)



1. In a coin controlled clock, a casing, a winding shaft, a spring tensioned latch for normally preventing the turning of the winding shaft, a coin chute, a movable stop member disposed in alinement with said coin chute for receiving a coin, a pivoted arm arranged to forcibly engage the coin and to cause the movement of the stop member, whereby the coin is brought into engagement with the latch, and cooperating means connected with said arm and said latch for causing a further movement of the latch as said arm is moved.

1,564,432. DEVICE FOR TESTING GUN BARRELS AND THE LIKE. ADOLF MARCUSE, Berlin-Charlottenburg, and HERMANN WANSCHAFF, Berlin, Germany, assignors to the Firm "Pag" Aktiengesellschaft für Industrie und Technik, Basel, Switzerland. Filed Aug. 24, 1921. Serial No. 494,787. 7 Claims. (Cl. 88—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A device for testing gun-barrels and like articles comprising a mirror adjustable lengthwise in the barrel, an eye-piece arranged exteriorly of the barrel in such a position as to permit the interior of the barrel to be inspected, means for throwing rays of light into the interior of the barrel and against said mirror, and a stationary examination mark located between said eye-piece and said mirror.

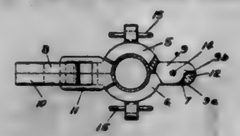
1,564,433. GAS-PURIFYING COMPOSITION. ROSCOE P. MASS, Wilkinsburg, Pa., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 2, 1922. Serial No. 565,429. 2 Claims. (Cl. 252—2.)

1. A composition for removing ammonia from gases, comprising activated charcoal impregnated with an anhydrous copper salt.

1,564,434. CASING ELEVATOR. ELMER R. MAXWELL, Bradford, Pa. Filed Sept. 18, 1924. Serial No. 738,394. 4 Claims. (Cl. 294—90.)

1. A casing elevator comprising a pair of curved jaw members of corresponding heights, a transversely apertured hinge forming extension projecting directly from

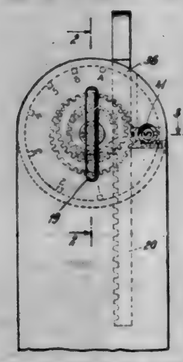
the curved portion of one jaw, a hinge forming extension on the other jaw passing through the aperture in the extension of the first and having a projecting tongue for



engagement with a portion of the first extension, a pivot passed through said extensions, and means for detachably connecting the other ends of the jaws.

---

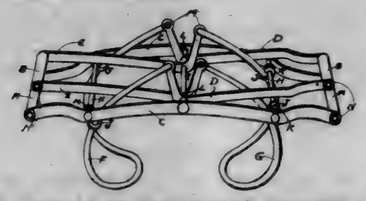
1,564,435. FILM WINDING AND STOP MECHANISM. JAMES A. MAY, Astoria, N. Y. Filed Mar. 24, 1922. Serial No. 546,256. 41 Claims. (Cl. 242—71.)



5. In film feeding mechanism, a take up spool, a stem connected thereto, a plurality of independently operable means for rotating said take up spool, and means driven by and surrounding said stem for automatically arresting the rotation of the spool when lengths of film such as the lengths required for successive exposure have been wound thereon.

---

1,564,436. SACK TONGS. CALVIN A. MESSINGER, Lanark, Ill., assignor of one-half to Edward S. Nicholas, Lanark, Ill. Filed May 12, 1924. Serial No. 712,655. 12 Claims. (Cl. 294—16.)

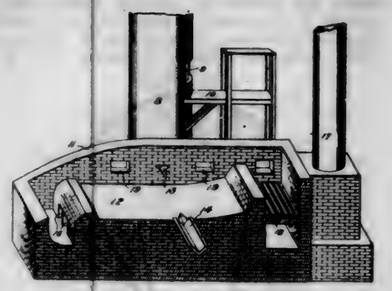


1. A device of the class described, comprising a frame having a handle at each end, two pairs of movable L-shaped levers which oscillate on a central transverse rod of said frame, and two U-shaped jaws pivotally hung from the end of the shorter leg of said levers, the jaws extending below the frame.

---

1,564,437. PROCESS OF MAKING MALLEABLE-IRON CASTINGS. WILLIAM J. MILES, Jr., Middletown, Ohio. Filed Jan. 10, 1920. Serial No. 350,665. 3 Claims. (Cl. 75—27.)

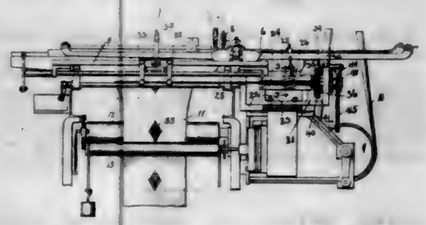
2. The process of refining iron in the manufacture of malleable iron castings which comprises melting the impure iron and removing certain of the impurities in a cupola, causing the molten iron to run from the cupola



directly upon the hearth of an air furnace striking the same in a fine stream, at the same time excluding the atmosphere from contact with said stream of molten iron.

---

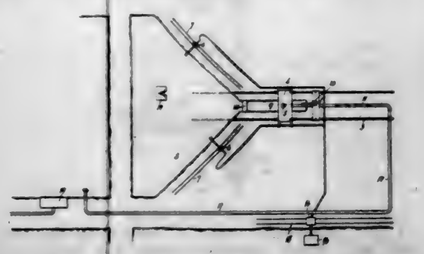
1,564,438. ATTACHMENT FOR KNITTING MACHINES. JOHN MULLER, Brooklyn, N. Y. Filed Oct. 20, 1923. Serial No. 669,832. 7 Claims. (Cl. 66—12.)



1. In combination with the yarn carriers and operating mechanism of a knitting machine, yarn carrier stoppers, a pair of parallel connecting rods attached to each of the stoppers, a single right and left hand threaded rod having blocks movable thereon connected to each of the said rods, and means cooperating between the threaded rod and the operating mechanism to actuate the blocks and the connecting rods at predetermined intervals and space the yarn carrier stoppers during the operation of the machine.

---

1,564,439. METHOD AND APPARATUS FOR THE WORKING OF PEAT BOGS AND THE LIKE. MARIUS IB NYEBOE, Copenhagen, Denmark. Filed July 13, 1925. Serial No. 43,429. 10 Claims. (Cl. 37—3.)



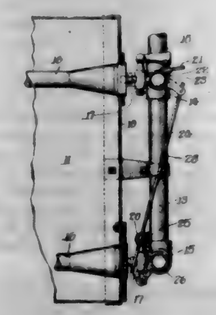
1. A method of working peat bogs or the like, comprising the steps of sinking a pile bridge into the bog; excavating the peat at opposite sides and in front of such bridge; and moving along said bridge machinery for withdrawing the excavated peat.

1,564,440. COLLAPSIBLE-TUBE HOLDER. CHESTER A. PERKINS, South Bend, Ind. Filed May 14, 1924. Serial No. 713,267. 8 Claims. (Cl. 221—60.)

1. A collapsible tube holder comprising a frame, oppositely disposed spring arms carried by said frame, a yoke slidably mounted on said spring arms, inwardly extending gripping jaws carried by the lower ends of the spring arms and adapted to grip opposite sides of the discharge spout of a collapsible tube, and means for supporting said frame.

---

1,564,441. SAFETY DEVICE FOR GAS RANGES. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed July 5, 1924. Serial No. 724,238. 6 Claims. (Cl. 126—42.)

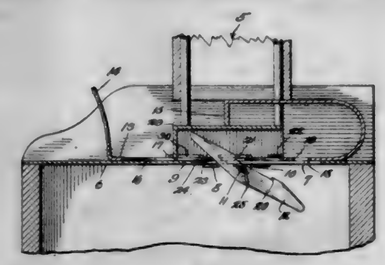


1. A gas oven having, in combination, an oven chamber, upper and lower burners, valves therefor, two feed pipes for said burners located respectively adjacent the valves, two stop plates mounted for swinging movement respectively about the axes of said pipes, and means connecting said stop plates and adapting them for simultaneous movement, the arrangement being such that when either valve is in open position the other stop plate is positioned so as to hold its valve in closed position.

---

1,564,442. VENDING MACHINE. SAMUEL E. PURDUM, Macomb, Ill. Filed May 25, 1925. Serial No. 32,800. 1 Claim. (Cl. 194—93.)

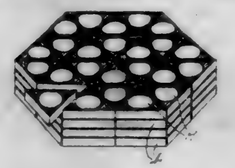
In a check-control device, a base plate, an ejector plate slidably mounted on the base plate and having a coin receiving opening, a locking arm pivotally supported under the base plate, the ends of said arm adapted to engage



the ejector plate to restrict movement thereof, and said locking arm adapted to be moved to its inactive position by a coin carried by the ejector plate.

---

1,564,443. GAME. THERESA F. RABOLD, Montclair, N. J. Filed Apr. 23, 1925. Serial No. 25,423. 6 Claims. (Cl. 273—137.)



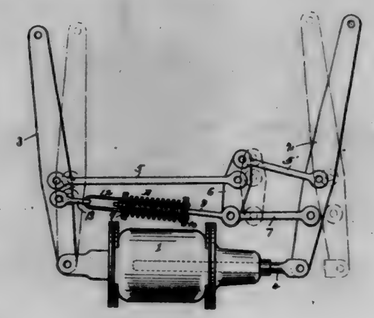
1. A game comprising a plurality of pieces each having three spaces defined thereon, and said spaces each having means therein to indicate one of the four principal activities of life.

---

1,564,444. GOLF-CLUB SHAFT. MILTON B. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Aug. 4, 1924. Serial No. 730,012. 2 Claims. (Cl. 273—80.)

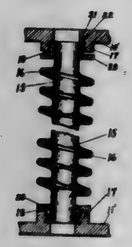
2. A golf club shaft comprising a series of sections extending longitudinally of the shaft, and having their meeting edges in convergent planes, and glued together, said shaft having a bore extending axially thereof, and a compressible filling of fibrous or textile material in said bore, and upon which the inner parts of the sections bear and by which it is radially compressed in assembly, substantially as described.

1,564,445. SLACK TAKE-UP AND BRAKE-RELEASE MECHANISM. CHARLES H. READ, Pittsburgh, Pa. Filed June 15, 1922. Serial No. 568,473. 11 Claims. (Cl. 188—198.)



5. A slack take up and brake release mechanism for railway vehicles, comprising a primary and a secondary set of levers, a connecting element divided into two parts, the said parts being arranged on different horizontal planes.

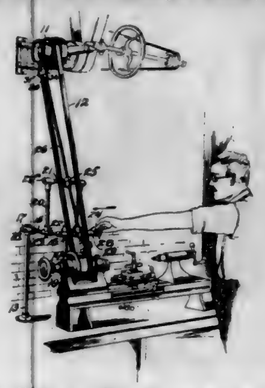
1,564,446. RADIATOR. HARRY E. RHOADS, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 6, 1919. Serial No. 269,898. 4 Claims. (Cl. 257—129.)



1. In a device of the class described, in combination, an upper and a lower header of a radiator, a seat formed in the bottom wall of said upper header and a second seat formed in the top wall of the said bottom header, annular screw threaded projections surrounding said seats, a radiating tube extending between said headers and adapted to be placed in communication therewith at either end, and a lateral flange formed on each end of said radiator tube and adapted to bear against its adjacent header, and a union or nipple surrounding said tube at either end thereof and provided with screw-threaded means to engage the corresponding projection to bind said flange against said seat, said tube being formed throughout a substantial portion of its length with peripheral corrugations of a depth sufficient to permit the tube to be contracted to clear one of said annular projections.

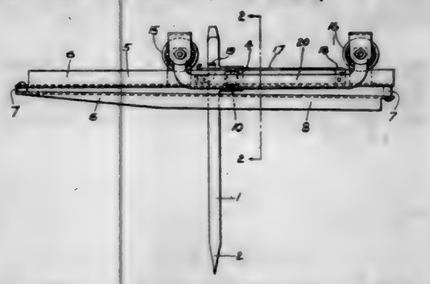
1,564,447. BELT SHIFTER. ROBERT E. RICHTER, Newark, N. J. Filed Apr. 7, 1924. Serial No. 704,594. 1 Claim. (Cl. 64—4.)

A belt shifter comprising a stand formed of posts, a horizontal U-shaped frame secured to the posts and adjustable vertically and horizontally thereon, a vertical U-shaped frame secured to the horizontal frame, slides on the cross arms of the U-shaped frames, a rod se-



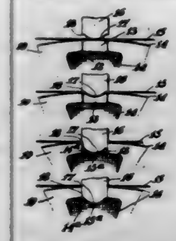
cured in the slides, a collar on each end of the arm and having a limited rotation on the rod and a belt engaging loop on each collar.

1,564,448. SAW GUIDE. LAURENT ROGET, Stave Falls, British Columbia, Canada. Filed Nov. 6, 1924. Serial No. 748,147. 7 Claims. (Cl. 143—163.)



7. A device of the character described comprising a saw support, means carried by said support for guiding the movement of a saw blade thereon, means pivotally connected with said support for attaching same to the trunk of a tree, and a spring connected between the support and the attaching means at the said pivot and serving to resist turning movement of the support in either direction with respect to the attaching means.

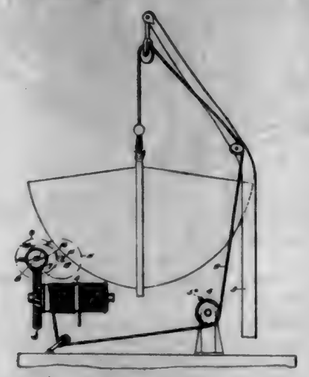
1,564,449. SECURING ARMATURE COILS. GORDON B. SAYRE, Syracuse, N. Y. Filed Nov. 29, 1924. Serial No. 752,898. 6 Claims. (Cl. 171—206.)



1. The combination with an armature having recesses with peripheral throats narrower than the recesses, of coils in said recesses, and insulating strips

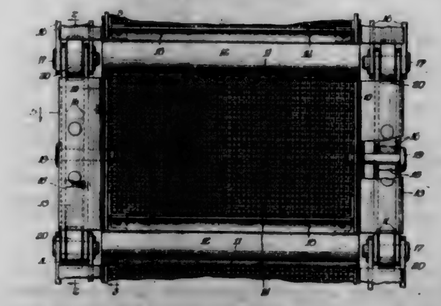
extending the full length of the throats and overlapping the inner walls thereof so as to lie between the coils and the outer recess walls thereby sealing the throats for their full length.

1,564,450. DAVIT. ANE P. SCHAT, The Hague, Netherlands. Filed Dec. 26, 1919. Serial No. 347,638. 4 Claims. (Cl. 9—22.)



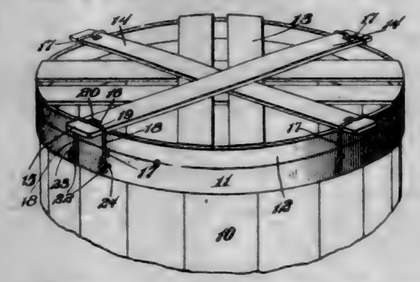
1. In a device of the character described, a davit having a rope; a boat connected to the outer end thereof; a drum for the hauling end of the rope; and a member supported on the deck of the ship at a point in the path of the rope between the davit and the drum, said member having a friction surface with the hauling part of the rope passed around said surface and held in frictional engagement therewith by the tension in the rope, said member having freedom of rotation in the direction of the travel of the rope when the rope is wound upon the drum, and having means for locking it against rotation in the opposite direction; whereby to automatically introduce frictional resistance in the part of the rope between the davit and the drum during the outward movement of the rope from the drum, and to permit the free movement of the rope as it is wound upon the drum.

1,564,451. TRAVELING SCREEN. BERNHARD SCHROEDER, Chicago, Ill., assignor to Sargent & Lundy, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed Dec. 26, 1924. Serial No. 758,047. 4 Claims. (Cl. 210—174.)



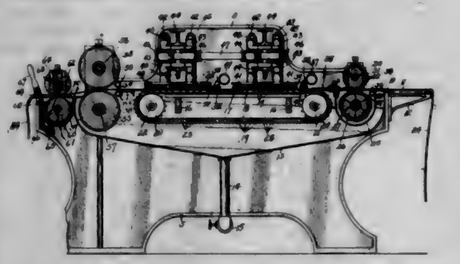
1. A traveling screen comprising a pair of spaced double-linked chains, a row of frames disposed between the chains, screens on said frames, and means for securing the screens on the frames and for securing the screens and the frames to the chains comprising bars having outwardly extending flanges on the ends of the screens which flanges lie against the lateral edges of adjacent pairs of links, attaching members secured to the flanges and disposed between the links, and pins passing through said members and both links of each double-link for rigidly but detachably securing the screens to the chain links.

1,564,452. VEGETABLE OR FRUIT BASKET. EDWARD M. SEIFERT, Rutherford, N. J. Filed Feb. 7, 1925. Serial No. 7,667. 4 Claims. (Cl. 217—124.)



1. In combination with a basket and a top therefor, the top including a diametrically extending brace the ends of which project beyond the sides of the top and are provided inwardly of the outer wall of the top with openings, retaining elements for the top comprising U-shaped elements arranged at diametrically opposed points upon the basket and having the ends of the arms thereof pivotally connected with the basket and the bights thereof adapted to seat upon the upper surface of said cross braces, said bight portions having formed thereon a hook for engagement in the adjacent opening of the cross braces.

1,564,453. RUG-CLEANING MACHINE. PASCAL J. SHAMPAY, Chicago, Ill. Filed Mar. 18, 1920. Serial No. 366,926. 12 Claims. (Cl. 15—40.)

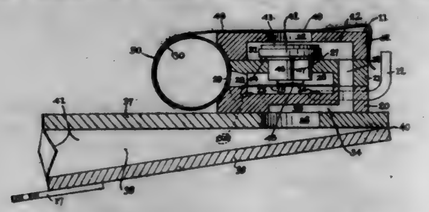


3. A cleaning machine comprising a movable table having grooves in its upper side; points extending upwardly from the table and adapted to enter a rug on the latter; scrubbing elements above the table adapted to operate on a rug on said table; and stripping means extending into said grooves for stripping the rug off said points as such rug leaves the table.

1,564,454. PLAYER PNEUMATIC. EARL R. SMITH, Cleveland, Ohio. Filed July 12, 1924. Serial No. 725,597. 1 Claim. (Cl. 84—55.)

In a piano player, a vacuum chest provided with a series of apertures, a pneumatic arranged to have one end abut said chest and provided with a duct through said end arranged to register with one of said apertures, and with a vent emerging to atmosphere through the top

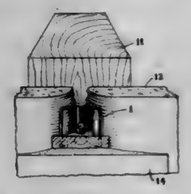
of said pneumatic and a spring metal clip extending from the remote end of said pneumatic along the top of said pneumatic over the end of said vent to beyond the abutting end thereof, apertured opposite the end



of said vent to prevent closing said vent and engaging the remote side of said chest to quickly detachably and resiliently hold said pneumatic in position firmly abutting said chest.

---

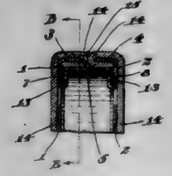
1,564,453. WALL-BOARD FASTENER. MARK S. STANBRO, Buffalo, N. Y. assignor to The Beaver Products Company, Inc., a Corporation of New York. Filed Jan. 21, 1925. Serial No. 3,779. 6 Claims. (Cl. 72—118.)



1. A wallboard fastener comprising a central portion provided with extending flanges adapted to take the configuration of the edges of the wallboard as it is being secured in position by the attaching means.

---

1,564,456. CASE FOR INCLOSING MEASURING TAPES AND SIMILAR ARTICLES. JOSIAH T. TAYLOR, Bangor, Me., assignor, by mesne assignments, to Haven Sawyer, Bangor, Me. Filed Nov. 6, 1922. Serial No. 599,217. 10 Claims. (Cl. 220—1.)

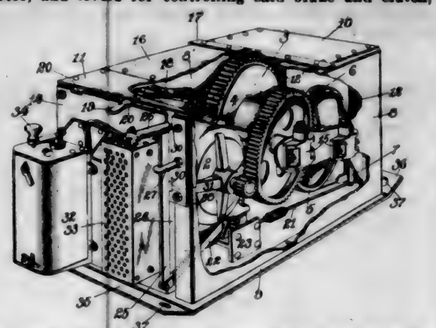


1. A case for the uses described, comprising two flanged caps, a liner U-shaped in cross section, and ears struck up from the faces of the caps to secure the caps to the liner.

---

1,564,457. HOIST. THOMAS O. WERNER, Bangor, and ERIK W. MIKAELSON, Easton, Pa., assignors to Treadwell Engineering Company, Easton, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1921. Serial No. 521,339. 5 Claims. (Cl. 254—187.)

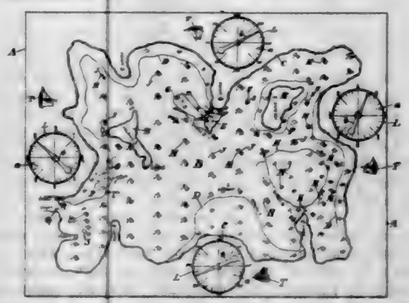
1. A hoist, comprising a cable drum shafting therefor, an electric motor, gear connections between said motor and drum for driving the drum, a clutch through which the driving connection between said motor and drum is controlled, a brake for said drum, a casing substantially enclosing the aforesaid parts of the hoist and forming bearings for the drum shafting, a controller for said motor, and levers for controlling said brake and clutch,



said levers projecting through said casing, and said controller and levers being mounted closely adjacent to each other at one side of said casing.

---

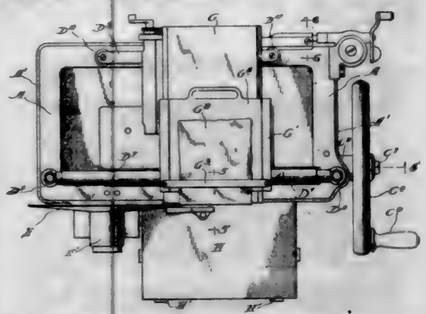
1,564,458. GAME. ROBERT R. WHITING, Darien, Conn. Filed May 4, 1925. Serial No. 27,653. 4 Claims. (Cl. 273—134.)



1. In a game, a game board having a predetermined complete course of travel, a relatively shorter complete optional course of travel, and hazards associated only with said relatively shorter complete optional course of travel.

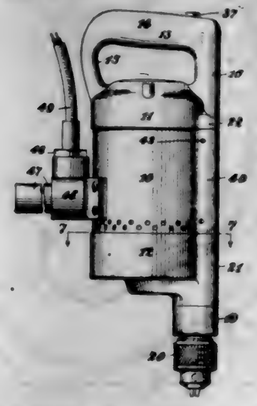
---

1,564,459. SLICING MACHINE. WALLACE B. WOLFF, Chicago, Ill. Filed Dec. 22, 1924. Serial No. 757,307. 14 Claims. (Cl. 146—102.)



1. A slicing machine comprising in part a drive shaft and a rotary knife, a frame adapted to support the moving and rotating parts, and a housing for said frame, structurally independent thereof and removably secured thereto, comprising an upper and a lower housing member, the upper member overhanging and overlapping the lower member but out of contact therewith.

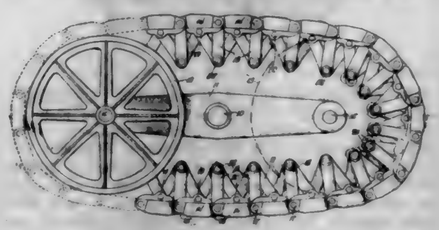
1,564,460. DRILL. FRANK L. YOUNG, Windsor, Conn., assignor, by mesne assignments, to Goodell Pratt Company, a Corporation of Massachusetts. Filed Sept. 7, 1923. Serial No. 661,384. 14 Claims. (Cl. 77—4.)



1. A power driven drill including a cylindrical casing for the prime mover, said casing being provided at one end with a spindle bearing sleeve eccentric in respect to the casing and of smaller diameter, a portion of said sleeve extending beyond the periphery of the casing, a drill spindle, and a drill chuck of approximately the diameter of the sleeve, the two planes tangent to the casing and sleeve intersecting at approximately a right angle.

---

1,564,461. VEHICLE. ISAAC H. ATHEY and ARTHUR R. SCHWARZKOPF, Chicago, Ill., assignors to Athey Truss Wheel Co., Chicago, Ill., a Corporation of Illinois. Original application filed Feb. 1, 1923, Serial No. 616,894. Divided and this application filed Jan. 24, 1925. Serial No. 4,391. 5 Claims. (Cl. 305—10.)

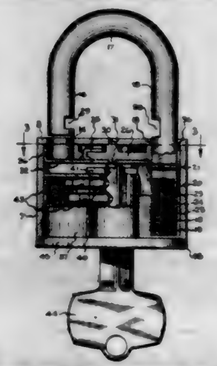


1. A vehicle track chain formed of a plurality of shoes, each comprising a tread member having hinge lugs projecting from the opposite sides thereof, pintles for pivotally connecting the hinge lugs of adjacent shoes, a lug extending inwardly from each tread member, a pivot pin carried by each of said lugs, inwardly extending compression links pivotally mounted on said pintles, pivot pins carried by the inner ends of said compression links, and truss links pivotally mounted on each of said first-named pivot pins and having slotted connections with the last-mentioned pivot pins of adjacent tread members.

---

1,564,462. PADLOCK. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Dec. 8, 1923. Serial No. 678,909. 8 Claims. (Cl. 70—108.)

1. A padlock embodying a hollow housing having a closed top end and an open bottom end, a partition member disposed adjacent said top end and cooperating therewith to form a narrow chamber for the reception of latch mechanism, a plug member arranged to fit within said housing and to extend from the bottom end thereof to said partition, said plug having a bore extending downwardly to a point near its bottom end, a J-shaped shackle having its longer leg arranged to fit slidably within the bore in said plug said shackle leg having a bearing that extends throughout substantially the entire length of said plug and a spring urging said shackle outwardly.



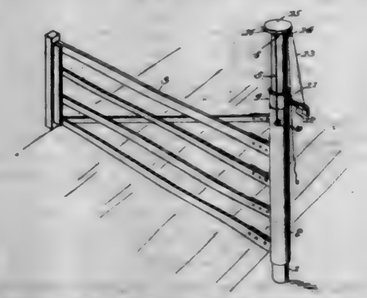
---

1,564,463. THROW MECHANISM FOR PIN-TUMBLER LOCKS. FRANK ELLISON BEST, Seattle, Wash., assignor to Frank E. Best, Inc., Seattle, Wash., a Corporation of Washington. Filed Nov. 29, 1924. Serial No. 752,917. 12 Claims. (Cl. 70—46.)

1. Lock throw mechanism embodying a disc, expansible snap ring means on the periphery of said disc and key plug engaging means projecting from one side of said disc.

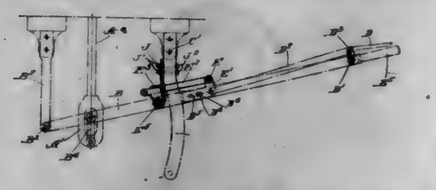
---

1,564,464. GATEPOST. JOHN FRANCIS BOWLES, Cavendish, Idaho. Filed July 31, 1922, Serial No. 578,687. Renewed June 5, 1925. 5 Claims. (Cl. 39—14.)



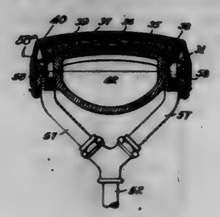
1. In combination, a hollow gate post, a vertically movable gate pivotally mounted on said post, manually controlled means for regulating the vertical movement of the gate, and a single means including a force exerting member arranged in said post and connected to said gate for automatically closing the same and for elevating said gate when the manually controlled means is actuated.

1,564,465. AUTOMATIC DRIFTING CONTROL. WILLIAM T. BENTHERTON and ROBERT R. BUSH, Chicago, Ill. Filed Nov. 5, 1924. Serial No. 747,968. 10 Claims. (Cl. 74—39.)



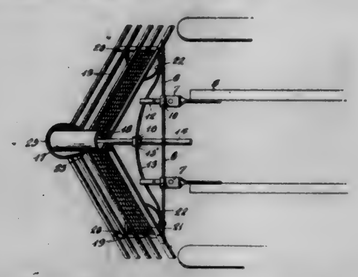
1. A throttle control for locomotive engines comprising a manually operated lever, a quadrant, a latch on said lever adapted to engage said quadrant, a secondary lever positioned upon said lever and adapted to actuate said latch, and automatic means necessitating the manipulation of the secondary lever to permit complete throttle valve closure.

1,564,466. GARMENT PRESS. BLUFORD W. BROCKETT, Cleveland Heights Village, Ohio, assignor, by direct and mesne assignments, of one-half to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio, and one-half to Metropolitan Trust Company, trustee, New York, N. Y., a Corporation of New York. Filed June 19, 1920. Serial No. 390,170. 25 Claims. (Cl. 68—9.)



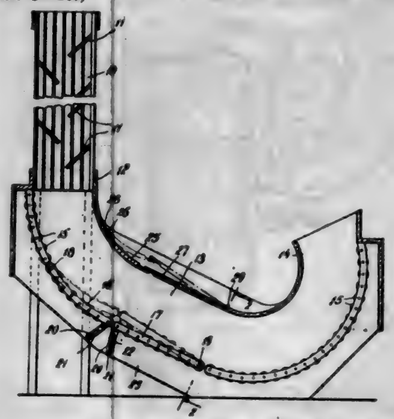
1. In a garment press, a garment supporting member, a body of padding on said member, and means for passing a gaseous medium through only the upper portion of said padding.

1,564,467. FENDER OR BUMPER. HENRY L. CLABAUGH, Cleveland, Ohio. Filed Mar. 23, 1925. Serial No. 17,649. 9 Claims. (Cl. 293—48.)



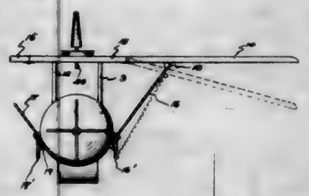
2. A fender of the character described comprising, a transverse supporting bar, a substantially V-shaped buffer arranged in advance of the supporting bar, a forwardly bowed spring bar disposed between the bar and buffer and having its ends connected to the end portions of the supporting bar, and a connecting rod retaining the spring bar and buffer in fixed relation and having slidable connection with the supporting bar.

1,564,468. APPARATUS FOR TREATING TEXTILE MATERIALS. WILLIAM L. CONRAD, Boston, Mass. Filed Mar. 21, 1924. Serial No. 700,979. 10 Claims. (Cl. 8—19.)



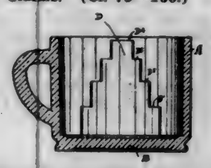
5. Apparatus for treating textile material comprising a stack, a chute communicating with the stack and having an upwardly turned receiving end and an upwardly turned delivery end, the bottom of the chute being adjustable to a plurality of positions and means for fixedly retaining the bottom in its adjusted positions.

1,564,469. AEROPLANE. HENRY M. COSBY, Flint, Mich. Filed Apr. 13, 1925. Serial No. 22,649. 1 Claim. (Cl. 244—25.)



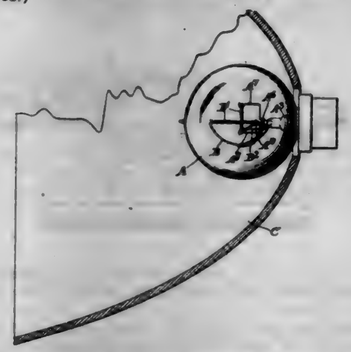
An aeroplane of the class described, comprising a main body portion; a wing mounted on said body portion having its central portion fixed relatively to said main body portion and its extremities swingable relatively thereto; a shaft projecting transversely of said main bdy portion; an arm connecting each of said swinging extremities eccentrically of said shaft, said wings being adapted for swingable movement upwardly and downwardly upon the rotation of said shaft.

1,564,470. MEASURING CUP. ALVIE C. CRIMMEL, Hartford City, Ind. Filed Oct. 29, 1923. Serial No. 671,457. 3 Claims. (Cl. 73—166.)



1. A measuring vessel having its wall provided with an integral pyramidally-shaped panel extending over a portion of the inner surface in low relief and having an altitude with reference to the floor of the vessel to indicate the measure of the vessel contents, said panel being of step-like formation, to permit of the retraction of the plunger by which the vessel is pressed in the mold, and the horizontal edges of the said steps constituting measuring indications at various altitudes.

1,564,471. ELECTRIC LIGHT. CHARLES W. DAKE, Chicago, Ill. Original application filed Feb. 23, 1923, Serial No. 620,561. Divided and this application filed Feb. 29, 1924. Serial No. 695,893. 3 Claims. (Cl. 240—41.)

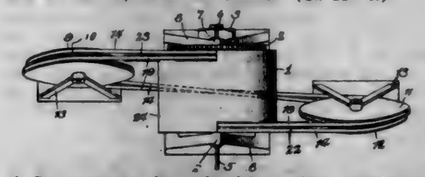


1. The combination with a reflector having a focal axis and a focal point, of a single continuous luminous filament extending in part along the focal axis both in front of and behind the focal point and located in part in a plane perpendicular to the axis and intersecting it at the focal point.

1,564,472. WASHING MACHINE. MICHAEL E. DALY, Cincinnati, Ohio, and JAMES H. TAYLOR, Red Bank, N. J., assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 30, 1921. Serial No. 456,806. 5 Claims. (Cl. 220—41.)

1. In a washing or like machine, a cylinder adapted for operation within an outer structure and provided with an opening, a sliding door for said opening, and interengaging means between said door and cylinder including an inclined portion arranged when the door is closed to move and seat the same and prevent the formation of a gap or crevice along the edge of said opening.

1,564,473. PROCESS AND APPARATUS FOR VULCANIZING ARTICLES. JOHN L. G. DYKES, Chicago, Ill. Filed Oct. 25, 1922, Serial No. 596,834. Renewed Oct. 26, 1925. 13 Claims. (Cl. 18—6.)

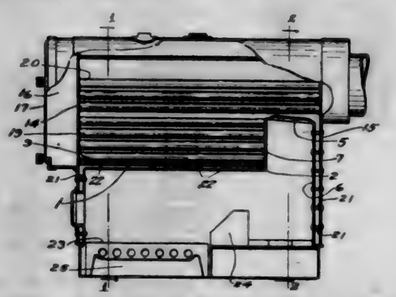


1. In apparatus for vulcanizing rubber articles, the combination of means including an endless belt wound spirally to establish a spiral path of travel for the stock from which the desired article is to be made, means for feeding the stock to said spiral path of travel, means in the form of a belt traveling spirally over the stock, and means for heating the stock to vulcanizing temperature while traveling in said path.

1,564,474. AUDIPHONE. CHARLES FENSKY, St. Louis, Mo. Filed Feb. 4, 1924. Serial No. 690,642. 3 Claims. (Cl. 181—23.)

1. An audiphone comprising a rigid hermetically sealed elongated hollow member having an integral enlargement at one end, the end of said member opposite said enlargement adapted to be inserted in the interior ear and terminate at or near the malleus, said hollow member capable of vibrating in unison with sound waves striking the enlargement.

1,564,475. STEEL HEATING BOILER. FRANK J. FLAJOLE, Seattle, Wash. Filed Oct. 24, 1922. Serial No. 596,575. 3 Claims. (Cl. 122—74.)



1. In a boiler having a fire box and fire tubes above the fire box, an outer shell being formed of steel plate and being bent inward at a point midway between the fire box and the tube section, an inner plate forming a fire box with the upper part bent to form the upper half of a circle and constructed so that a space will be left between it and the outer shell, stay-bolts between this plate and the outer shell, another plate bent to form the lower half of a circle above the fire box, said plate having openings through it and having its edges welded to the outer shell, a connection between the bottom of this plate and the top of the plate forming the fire box, an opening in the top of the fire box at the rear of the boiler formed by splitting the plate forming the fire box a short distance from the rear end and bending the edges upward, a corrugated plate forming the top of this section at the rear and being connected to the edges of the former plate and to a tube plate at the front, another plate forming the rear of the fire box being connected to the plate forming the fire box and to the corrugated plate and having a space between it and the outer shell, stay-bolts between this plate and the outer shell, and a welded connection between the lower ends of all the plates forming the inner shell and the outer shell.

1,564,476. HIGH-FREQUENCY ALTERNATOR. CHARLES SAMUEL FRANKLIN, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 21, 1921. Serial No. 479,361. 11 Claims. (Cl. 171—252.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

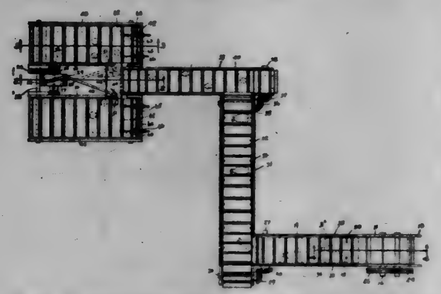
1. A high frequency alternator having a member provided with relatively short teeth arranged in lines parallel to the axis of the machine and having windings interwoven with teeth of said lines and a second member rotatable relatively thereto having a plurality of relatively long teeth making an oblique angle with the lines of teeth of said first member.

7. A high frequency alternator having a stator member provided with relatively short teeth arranged in lines

parallel to the axis of the machine and a rotor having a plurality of relatively long teeth thereon and arranged in the form of a skew gear.

---

1,564,477. AUTOMATIC BOTTLE CONVEYER AND FEEDER FOR LEERS. WILLIAM W. GLASS, Gas City, Ind., assignor, by direct and mesne assignments, to John F. Sparks and Willard C. Johnson, both of Summitville, Ind. Filed Jan. 11, 1924. Serial No. 685,592. 8 Claims. (Cl. 198—33.)

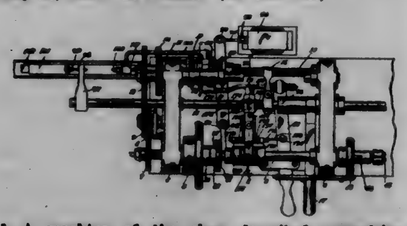


1. In an automatic bottle conveyer for leers, the combination of a chute open at its upper end, a platform pivotally supported adjacent and normally closing the open end of the chute, and a bladed transfer mechanism pivotally supported in said chute and closing the bottom thereof and adapted to receive bottles discharged into said chute from said platform.

6. A device of the character described, including a divided leer, an arm pivotally supported between the leer divisions, a platform beneath said arm, means for erecting bottles on the platform, a conveyer discharging bottles to the platform for engagement by the erecting means and subsequent engagement by the swinging arm for alternate discharge to the leer divisions, a guard positioned beneath the conveyer and adjacent the platform for preventing jamming of the bottles between the platform and the conveyer, and a common driving connection operating said swinging arm in timed relation with the timed relation movement of said leer conveyers.

---

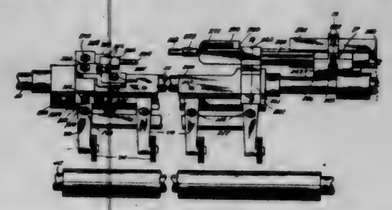
1,564,478. WINDING MACHINE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1922, Serial No. 552,565. Renewed May 16, 1925. 26 Claims. (Cl. 242—10.)



1. A machine of the class described comprising a winding spindle, reciprocating means for feeding a strand of wire thereon in layers to form a coil, and means for shifting the winding spindle longitudinally a predetermined distance during the feeding operation of said reciprocating means and at the beginning of each layer.

---

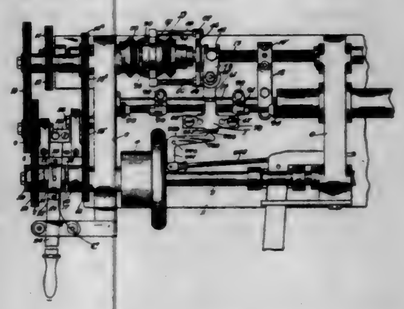
1,564,479. WINDING MACHINE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1922, Serial No. 565,630. Renewed July 21, 1924. 32 Claims. (Cl. 242—10.)



1. A machine of the class described comprising a winding spindle, reciprocating means for feeding strands of wire thereon in layers to form a coil, and means including frictional means for shifting said reciprocating means in the same direction in which the layers are being wound on the coil during the feeding operation of said reciprocating means.

---

1,564,480. WINDING MACHINE. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1924. Serial No. 683,923. 13 Claims. (Cl. 242—10.)



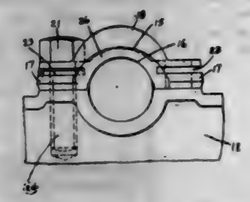
1. A machine of the character described including a winding shaft, a reciprocating shaft having a to and fro movement, guide means associated with said reciprocating shaft for guiding and feeding strands of wire to said winding shaft, means for rotating said winding shaft to wind said strands of wire in layers on said winding shaft, reversing mechanism and trip mechanism controlled by said reciprocating shaft for causing the operation of said reversing mechanism to cause the to and fro movement of said reciprocating shaft, and means for shifting said guide means a predetermined degree in the direction of travel of said reciprocating shaft.

---

1,564,481. ADJUSTABLE BEARING FOR INTERNAL-COMBUSTION ENGINES. CLAUDE J. HAYWARD, Brasil, Ind. Filed Apr. 20, 1925. Serial No. 24,496. 1 Claim. (Cl. 308—167.)

An adjustable bearing construction including a body portion having a shaft receiving groove and a flange abuttable laterally positioned face and an ear projecting from the body portion including an elongated and bolt receiving opening, the elongation being parallel to the

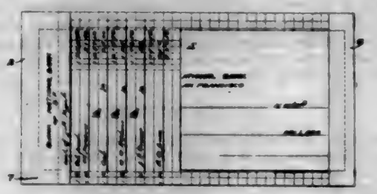
groove longitudinal axis, said ear having a slot substantially transverse to said opening and communicating therewith, a bolt receiving washer receivable by said



slot, and a clamping bolt receivable by the ear elongated opening and washer for anchorage in adjustable position by clamping action of the washer and the slotted ear.

---

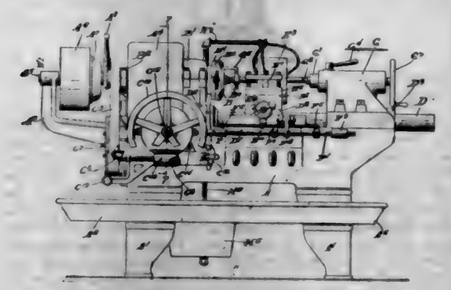
1,564,482. CHECK HOLDER AND RECORD. JAMES H. HJUL, San Francisco, Calif. Filed Feb. 4, 1924. Serial No. 690,457. 14 Claims. (Cl. 281—21.)



1. A check holder comprising a sheet having a plurality of spaced slits therein and readily removable checks passing through the slits and lying partly on opposite sides of the sheet, said checks being unattached to the sheet, said checks adapted to be readily withdrawn through the slits.

---

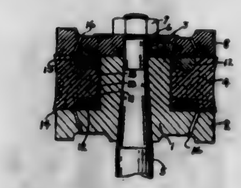
1,564,483. LATHE. WILLIAM C. KENYON, Rockford, Ill., assignor to The Rockford Machine Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 10, 1920. Serial No. 422,992. 5 Claims. (Cl. 82—2.)



1. In an engine lathe a plurality of tool carriages a driving shaft normal to the lathe axis having a plurality of gears thereon, a rack in mesh with one of them and directly connected to one of the carriages, a shaft parallel with the lathe axis, a mitre gear thereon in mesh with the other gear and a rack carrying the second carriage and a gear mounted on the second shaft adapted to drive the rack to move the second carriage in a direction normal to the direction of the movement of the first.

---

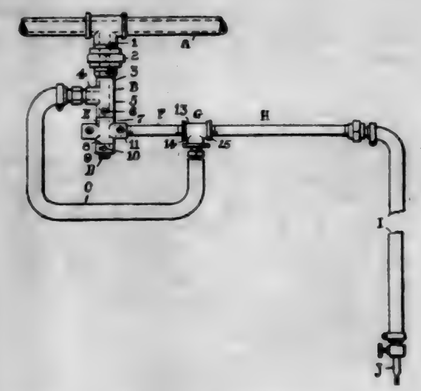
1,564,484. PACKING RING FOR PUMP PISTONS. EUGENE KIBELA, San Antonio, Tex. Filed Jan. 17, 1925. Serial No. 3,104. 6 Claims. (Cl. 74—109.)



1. In a pump piston, a piston body having a central annular recess forming a seat, a packing ring of compressible material therein, and means to prevent radial movement of said ring in its seat, said ring being concaved longitudinally on its outer periphery to form outwardly extending lips at each end thereof.

---

1,564,485. SWIVEL JOINT FOR TUBES USED FOR CONDUCTING LIQUIDS AND FLUIDS. WILLIAM PAUL MCCANDLESS, Pittsburgh, Pa. Filed Mar. 21, 1925. Serial No. 17,255. 6 Claims. (Cl. 285—9.)



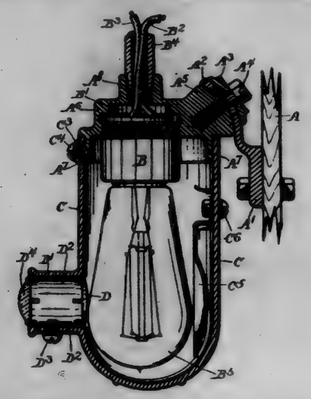
1. In a swivel-joint structure for the purpose described, the combination of a T-fitting in fixed relation to the source of supply of the fluid or liquid to be conducted, said T-fitting being provided with a substantially right-angled passage having its one end in communication with said supply, a second fitting rotatably mounted in relation to said T-fitting and turning on an axis at right angles to the axis of the discharge end of said passage, a second T-fitting carried by said second named fitting but without tubular communication therewith, and a flexible hose connecting the outlet end of the passage of said first named T-fitting with the stem of said second T-fitting.

---

1,564,486. CAB LAMP. CRAWFORD P. MCGINNIS and CHARLES W. DAKE, Chicago, Ill., assignors to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 5, 1923. Serial No. 678,586. 3 Claims. (Cl. 240—7.1.)

1. A cab lamp comprising a base on which a light source may be mounted, a rigid, opaque housing closely

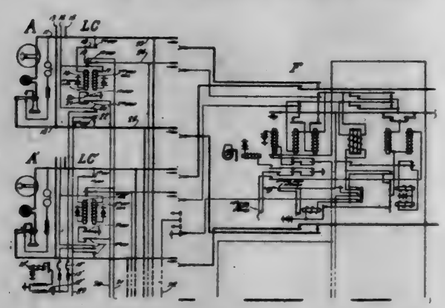
surrounding the light source and removably mounted on the base, a cylindrical projection from one side of the housing and a lens cell removably mounted therein, a re-



flector adjustably mounted within the housing on the wall thereof behind the light source and in line with the lens cell.

---

1,564,487. AUTOMATIC TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1923. Serial No. 637,931. 11 Claims. (Cl. 179—18.)

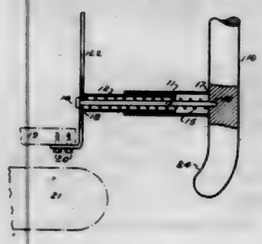


1. In a telephone system, a group of lines, a group of finder switches for extending said lines when calling, a loop starting circuit extending through all said finders in series, a line relay in each finder directly controlled over said starting circuit, contacts on each relay for extending said circuit to the next finder, a start wire common to said lines, and a distributer switch intervening between said start wire and said loop circuit by means of which the common start wire can be associated with said loop circuit at a plurality of different points.

---

1,564,488. AUTOMOBILE BUMPER. EMIL NASTRI, Brooklyn, N. Y. Filed Aug. 12, 1922. Serial No. 581,372. 1 Claim. (Cl. 293—55.)

An automobile bumper adapted to face to the front or rear, comprising a fender or bumper-rod extending from one longitudinal side of the vehicle to the other provided at either end with end portions bent toward the vehicle so as to slip easily by any obstruction met; a hollow annular tubular securing-member rigidly secured at its forward end, adjacent to either end of such fender or bumper-rod; a reversely faced hollow annular tubular securing member reciprocatingly located within each of the like hollow annular members secured to the bumper-rod, and reciprocating easily one within the other; a central stop-rod, rigidly secured at its forward end to the rear side or face of the bumper-rod and passing at its extreme rearward end through a small hole formed in and through a suitable stop-plate carried by the body of the vehicle, such stop-rod being provided at its extreme end



where it passes through the stop-plate with an enlarged retaining-head 14, which is in abutment with the stop-plate, only when such stop-rod is in the extreme forward position shown in Figure 1; and a coil-spring member extending from the stop-plate to the adjacent abutting surface of the bumper-rod, surrounding the stop-rod and carried within the reversely open ended hollow annular tubular securing members.

---

1,564,489. POURING SPOUT. WILLIAM NEIL, Chicago, Ill., assignor to Wm. Neil & Co., Chicago, Ill. Filed June 25, 1924. Serial No. 722,225. 2 Claims. (Cl. 221—28.)

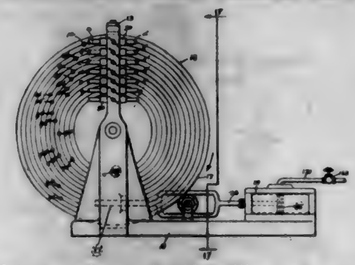
1. A spout formed of a sheet of material which is bent to form a tube through which liquid may be poured from a receptacle with which the spout is associated, said sheet being also formed to provide a longitudinally arranged air passage, one end of which opens into that end of the tube from which the liquid is emitted to thereby cause any liquid entering the passage to be discharged through the discharge end of said spout and a tubular element, one end of which is inserted into one end of said passage and extends therefrom with its opposite end terminating in spaced relation to a part of the spout to allow liquid to pass over said last mentioned end of the tubular element.

---

1,564,490. AUTOMATIC MACHINE FOR MAKING CONCRETE BLOCKS. LAYTON M. PARKHURST, Indianapolis, Ind. Filed Oct. 24, 1924. Serial No. 745,708. 7 Claims. (Cl. 25—41.)

1. Apparatus for manufacturing concrete blocks and the like having a mold, means for feeding material into the mold, tamper mechanism for tamping the material

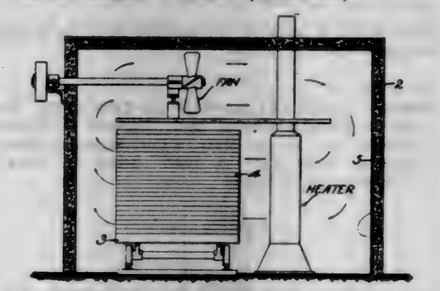
in the mold, a finish plate for closing the top of the mold, means actuated by fluid under pressure for independently operating the tamper mechanism and moving



said plate in and out of said position, and means for automatically operating said tamper mechanism and finish plate in the desired sequence and timing.

---

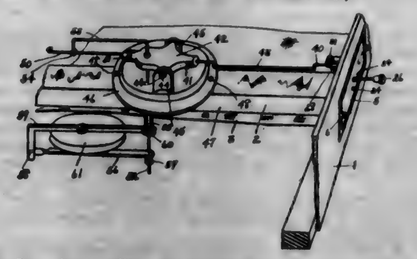
1,564,491. EVAPORATOR. CLAUDE REES and CHARLES F. HINE, San Francisco, Calif. Filed Oct. 9, 1922. Serial No. 593,390. 1 Claim. (Cl. 34—19.)



An evaporator for food products comprising a house of concrete, bricks, hollow tiles or other absorbent material in which the food product is dried by contact with warm moisture-laden air, a heater for raising and maintaining the temperature of the air, means for passing the heated air over the food product to remove the moisture therefrom and means for maintaining the moisture content of the air by preventing the absorption of the moisture by the absorbent material, comprising a coating of non-absorbent material on the surfaces of the house exposed to the moisture-laden air.

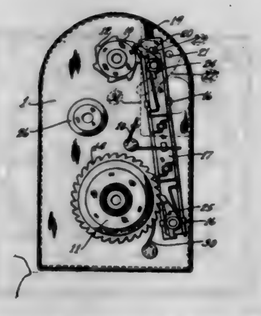
---

1,564,492. HEAT SPILLER FOR INCUBATORS. HENRY W. RICHARDSON, Little Falls, N. Y., assignor to Percy D. Peters, Little Falls, N. Y. Filed June 7, 1924. Serial No. 718,666. 6 Claims. (Cl. 236—4.)



1. In a heat spiller for incubators, a door adapted to open for the exit of hot air from said incubator, thermostatic means for controlling the movements of said door, and yielding means connecting said thermostat with said door to aid in prolonging the life of said thermostat.

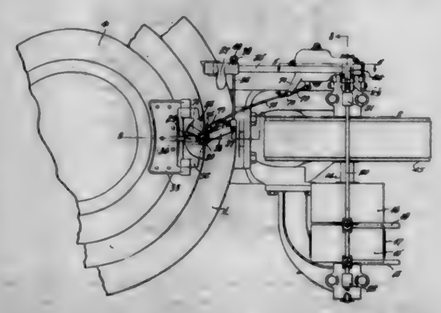
1,564,493. SAVINGS BANK. SAMUEL ROSENTHAL, St. Louis, Mo., assignor to National Coin Calendar Corporation, a Corporation of Missouri. Filed Apr. 10, 1922. Serial No. 551,414. 2 Claims. (Cl. 194—94.)



1. A savings-bank comprising a casing having a coin-slot and an elongated pin-slot, in combination with a dial mounted for rotation upon the casing, and means for rotarily actuating the dial upon the insertion of a coin into the casing through the coin-slot, said means including a bar slidable upon the outer surface of the casing, a pin on the bar projecting through the pin-slot, a pawl mounted upon the bar adapted for actuating engagement with the dial, and a bell-crank lever pivoted for oscillation upon the under surface of the casing and having one slotted arm in constant bar actuating engagement with said pin, the other arm being disposed adjacent said coin-slot for actuating engagement by the inserted coin.

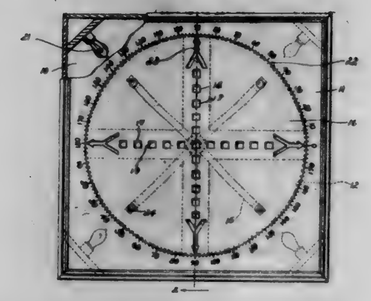
---

1,564,494. SAFETY COVER FOR CENTRIFUGAL MACHINES. JOSEPH B. SANDO, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 30, 1921. Serial No. 526,045. 2 Claims. (Cl. 192—136.)



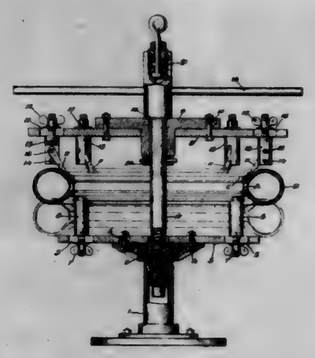
1. In a centrifugal extractor, the combination of a rotatable basket, a guard cover for said basket, centrifugal means for automatically locking said cover closed, driving means directly connected to said centrifugal means for operating the same, and connections between said driving means and said basket and including a centrifugally controlled clutch adapted to effect driving connection between said driving means and said basket when said driving means attains a predetermined speed, the parts being so arranged that said centrifugal means locks the cover closed prior to the rotation of said basket and unlocks said cover only after the rotation of said basket has ceased.

**1,564,495. ASTIGMATIC TESTING DEVICE.** CHARLES SHERARD, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 12, 1922. Serial No. 631,523. 4 Claims. (Cl. 88—20.)



1. In a device of the character described, a disc having two lines of separated squares crossing each other centrally of the disc, means for pivoting the disc at its center, a circular scale surrounding the outer edges of the disc, and a pointer on the disc adapted to indicate on the scale the amount of movement of the disc about its pivot.

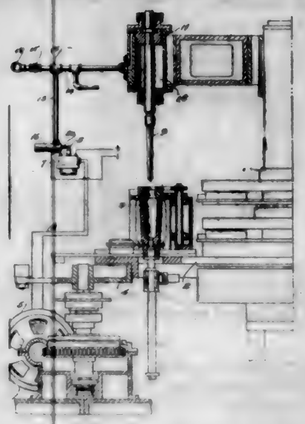
**1,564,496. TIRE-REMOVING MECHANISM.** CHRISTIAN STAUGAARD, Detroit, Mich. Filed Dec. 15, 1921. Serial No. 522,585. 4 Claims. (Cl. 157—6.)



1. In a tire removing mechanism of the class described, a rim supporting device; a tire removing device having a plurality of pivotally supported tire engaging members spaced apart from one another and having free ends adapted to engage a tire carried by a rim; and means for moving one of said devices relative to the other and in a direction at right angles to the planes of said tire and rim.

**1,564,497. SAFETY MECHANISM.** THOMAS STENHOUSE and DAVID STENHOUSE, Washington, Pa., assignors to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Aug. 29, 1923. Serial No. 660,057. 12 Claims. (Cl. 49—38.)

1. The combination with a machine comprising parts operated from one source of power, other parts co-operating therewith and operated from another source of power, of means rendering inoperative the first mentioned source of power by the shutting off of the second-mentioned source of power.

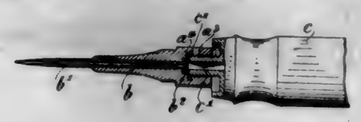


**1,564,498. SANITARY NAPKIN OR THE LIKE.** ERROLD B. THOMAS, Newton, Mass., assignor to Thomas Products, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 13, 1925. Serial No. 15,241. 5 Claims. (Cl. 128—290.)

1. In a sanitary napkin, a multiplicity of superposed, thin webs of wood cellulose forming a pad portion which is readily disintegrable after use, and an additional soft, flexible thin sheet of substantially similar material suitably moisture-proofed and laid upon said pad portion without positive attachment thereto, affording no obstruction to the disintegration of the said pad portion, and being itself capable of disposal in the same manner as the said pad portion, whereby a moisture proofed flexible and non-irritating pad readily distintegrable almost in its entirety, and all capable of similar disposal after use, is provided.

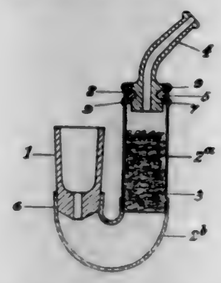
4. That method of making an absorbent pad particularly adapted for hygienic and surgical purposes which consists in superposing a multiplicity of film-like sheets of wood cellulose of relative large area, in applying moisture-proofing material to a sheet of similar but desirably less tenuous wood cellulose, in laying said moisture-proofed sheet when drained but moist upon said multiplicity of sheets whereby the moisture proofing material is prevented from permeating more than one or a small plurality of the adjacent sheets, and in dividing said sheets transversely into pads of the desired size.

**1,564,499. HYPODERMIC NEEDLE.** HERMAN TROPP, New York, N. Y., assignor to William Brody & Co., New York, N. Y. Filed July 9, 1923. Serial No. 650,508. 1 Claim. (Cl. 128—22.)



The combination with a syringe barrel having a threaded nipple, of a needle carrying shank having a threaded recess therein adapted to receive said nipple, said recess ending in a flat surface, and provided with an annular groove immediately adjacent said flat surface thereby allowing a perfect contact between the nipple and the flat surface of the recess, said flat surface being provided with a recess, and a washer adapted to be arranged therein.

**1,564,500. SMOKER'S PIPE.** EUGÈNE VAN DE VOORDE, Bremen, Germany. Filed Aug. 31, 1921. Serial No. 497,294. 1 Claim. (Cl. 131—12.)

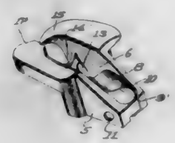


A smoker's pipe, comprising a bowl, a mouth piece formed near one end with a groove, a tubular portion extending between the bowl and the mouth piece, said tube-like portion being of heat conductive material and substantially of uniform diameter, a resilient washer fitted in the groove in the mouth piece and engaging the inner surface of the tubular portion, said tubular portion being formed with a groove above and below the resilient washer, springs mounted in the last mentioned grooves to hold the resilient washer against displacement, and a metallic heat diffuser in the tube-like portion to conduct the heat of the smoke to the tube-like portion for radiation.

**1,564,501. METHOD OF MANUFACTURING LUBRICATING OILS.** JAMES W. WEIR, Fillmore, Calif., assignor of one-half to John C. Black, Destrehan, La. Filed Mar. 21, 1922. Serial No. 545,538. 3 Claims. (Cl. 196—147.)

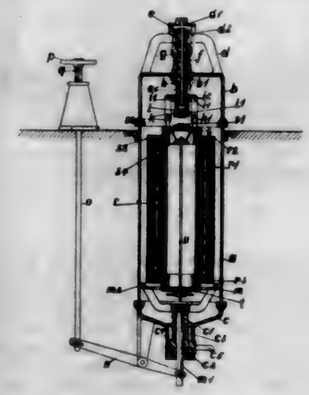
1. The method of refining lubricating oil stocks, which comprises treating the oil with sulphuric acid, settling and removing the major portion of the sludge, then adding a comminuted solid absorbent material, heating the mixture to a temperature sufficient to decompose the remaining sludge and liberate sulphur dioxide therefrom, and separating the adsorbent material with the matters adsorbed thereon from the oil stock.

**1,564,502. AUTOMATICALLY-THREADING SHUTTLE FOR LOOMS.** GEORGE H. WILLARD, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 31, 1925. Serial No. 19,601. 5 Claims. (Cl. 139—223.)



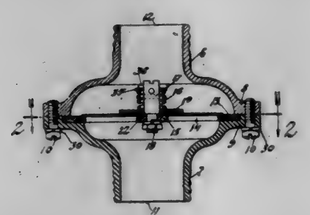
1. An automatically threading loom shuttle having an open top thread passage extending longitudinally thereof, a side delivery eye communicating with the thread passage, a thread casting and guiding device in the thread passage constructed and arranged to cast the thread upwardly and out of the thread passage on the occurrence of an overthrow of the thread as the shuttle is arrested at the end of its flight, and means at the forward end of the thread passage for intercepting the loop or overthrow of thread to prevent complete unthreading of the shuttle.

**1,564,503. CENTRIFUGAL MACHINE FOR TREATING TEXTILES WITH LIQUID AND GASES.** HEINRICH WOLFER, Ludwigshafen-on-the-Rhine, Germany, assignor of one-half to Obermaier & Cie., Neustadt-on-the-Haardt, Germany. Filed Dec. 8, 1924. Serial No. 754,571. 7 Claims. (Cl. 8—19.)



6. A centrifugal machine for treating textiles with liquid and gases, comprising a closed vessel, a hollow vertical shaft supported rotatably in the upper part of said vessel, a perforated drum adapted to be wound with the materials to be treated, means for suspending said drum on said shaft vertically inside the vessel so that it will be rotated by the shaft and so that it can adjust itself about the suspension point and effect its own centration, a vertically adjustable support arranged in the lower part of the vessel and adapted to receive and centre the drum previous to the suspension of the same, means for withdrawing the support after the suspension, and means for maintaining the duct of the shaft in communication with the interior of the drum during the operation.

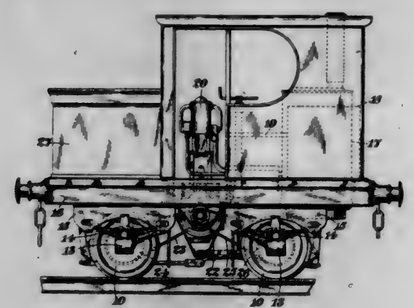
1,564,504. THERMOSTATIC CONTROL DEVICE. HARRY T. WOOLSON, Detroit, Mich. Filed June 1, 1925. Serial No. 33,889. 10 Claims. (Cl. 236—34.)



1. In a device of the class described, a casing, a plate positioned therein, and means on said plate for controlling the flow of liquid through said casing at a pre-determined temperature and a pre-determined pressure.

---

1,564,505. SELF-PROPELLED VEHICLE. STEPHEN EVANS ALLEY, London, England. Filed May 25, 1925. Serial No. 32,764. 8 Claims. (Cl. 105—104.)

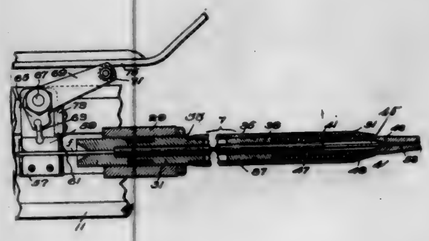


1. A steam-propelled vehicle comprising in combination a plurality of running-wheel axles, a vehicle chassis, a steam engine unit comprising a cylinder and a crankshaft, which unit is mounted on the chassis at a situation which, viewed in plan, is between two running-wheel axles and has the cylinder in the unit substantially out of the horizontal and the crankshaft at the lower end of said unit, a chain and chain wheels for directly driving the vehicle from the crankshaft without the interposition of a counter-shaft, the chassis overhanging beyond a running-wheel axle of the vehicle, a steam boiler mounted on said overhanging portion in such a position that its bottom fittings are exposed and freely accessible and can be detached and lowered beyond the said running-wheel axle, and means for weighting the chassis at its other end.

---

1,564,506. NEEDLE LOOM. GEORGE B. AMBLER, Leominster, Mass., assignor to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Aug. 5, 1924. Serial No. 730,156. 19 Claims. (Cl. 139—130.)

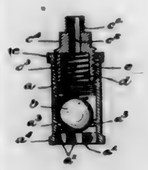
14. In a needle loom in combination with the needle, means for clamping the filling thereto comprising a jaw over which the filling leads, a cooperating movable jaw, an operating lever having an arm extending toward



said latter jaw and a strut interposed between said jaw and said arm and having its ends pivotally received in recess therein.

---

1,564,507. AIR VALVE FOR INTERNAL-COMBUSTION ENGINES. HENRY BARKER, Birkenhead, England, assignor of one-third to Thomas Barker and Alonza D. Bergen, both of Savannah, Ga. Filed Aug. 30, 1922. Serial No. 585,270. 1 Claim. (Cl. 251—121.)

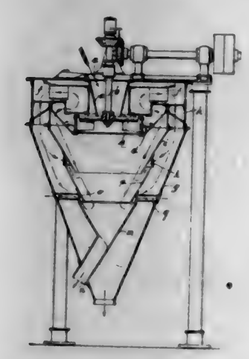


An air supply valve for internal combustion engines, comprising a hollow valve-body portion formed with an internal valve-seat spaced a distance from the adjacent end of the body portion, a closure-cap extending partially up into the space beneath the valve seat and formed with borings to form in conjunction with the space between the cap and valve-seat an air cushion for the valve, a ball-valve resting on the valve seat and projecting through the seat into the space between it and the closure-cap, an adjustable plug fitted in the upper portion of the valve-body and axially bored with two diameters, and a compression spring fitting in the larger diameter bore of the plug and bearing against the ball-valve.

---

1,564,508. BLAST SIFTER. EMIL LUDWIG HERMANN BAUERMEISTER, Altona-Ottensen, Germany. Filed May 12, 1924. Serial No. 712,837. 2 Claims. (Cl. 209—37.)

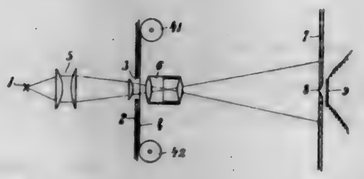
1. A blast sifter for separating ground material comprising a plurality of truncated conical sifting receptacles positioned one above the other a perforated ring formed as a hit-and-miss gate intermediate consecutive conical receptacles, a screen within the sifting receptacles, a rotatable spreading disk within the screen, a mantle inclosing the sifting receptacles, revolving exhauster blades within the mantle for causing circulation of air impregnated with sifting material fed to the spreading disk and driven through the screen, and pipes connecting the sifting receptacle with the atmosphere to regenerate the



air within the apparatus, the pipes being attached to the inclosing mantle and reaching up to the lower end of a hit-and-miss gate.

---

1,564,509. APPARATUS FOR REPRODUCING SOUNDS PHOTOGRAPHICALLY RECORDED ON A FILM. SVEN A. SON BERGLUND, Stockholm, Sweden. Filed Apr. 25, 1923. Serial No. 634,523. 1 Claim. (Cl. 179—100.1.)

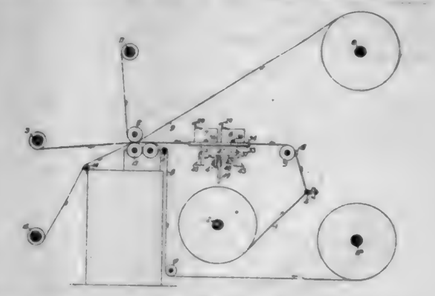


Apparatus for reproducing sounds recorded photographically on a film, comprising a cinematograph having means for continuously feeding the film and adapted to produce a magnified image of the film record, a screen for taking up said image disposed at a distance from the cinematograph and having a transverse narrow slit through which a part of the light rays pass, a cell sensitive to light behind said slit and connected into an electric circuit containing means for reproducing sounds in accordance with the variations of current produced in said circuit by the light rays striking the cell.

---

1,564,510. METHOD OF AND MACHINE FOR INKING RIBBONS. CHARLES W. BERRY, Bridgeport, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Feb. 25, 1924. Serial No. 694,860. 19 Claims. (Cl. 91—43.)

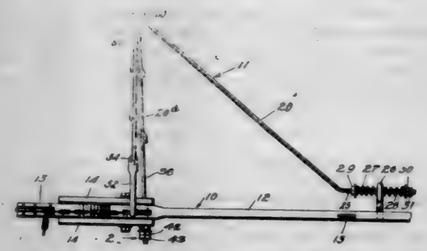
3. In a machine for inking ribbons at different parts in the length thereof with inks having different characteristics, the combination of means for feeding the ribbon through the machine, means for applying ink of one characteristic to the ribbon throughout the width thereof at one portion of the length of the ribbon and means for discontinuing the application of such ink and simultaneously applying an ink having a different characteristic at another portion in the length of the ribbon



and throughout the width thereof and alternately varying the inking of the ribbon in the manner stated as often as desired without arresting the feed thereof.

---

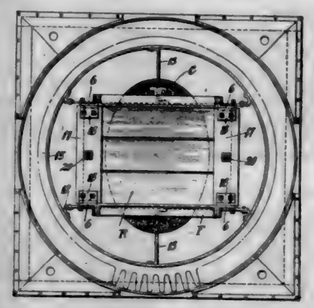
1,564,511. SUPPORTING MEANS FOR TOOLS. WILLIAM L. BESSOLO, Clearwater, Calif. Filed Oct. 4, 1922. Serial No. 592,364. 12 Claims. (Cl. 255—35.)



1. In combination with a tongs, a plurality of supporting members connected with the tongs at spaced points and connected together at a point spaced above the tongs, one of the supporting members being adjustably resiliently connected with the tongs.

---

1,564,512. TRANSFORMER FRAME. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Dec. 22, 1920. Serial No. 432,388. 4 Claims. (Cl. 175—86.)

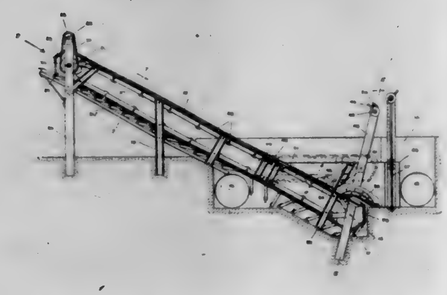


1. In a transformer, the combination of a laminated core formed of inner and outer layers and connecting portions, two side frames each consisting of angle pieces,

one side of each piece extending outward from the laminæ and at an angle thereto and the other side lying flat against and parallel to the laminæ and overhanging the outer edges thereof, and a series of halts around said core connecting the overhanging edges with said side frames and acting to clamp the frames together against the laminæ.

---

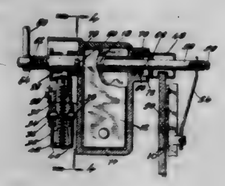
1,564,513. CONVEYER. EDWARD A. BOLE, Long Beach, Calif. Filed June 2, 1924. Serial No. 717,336. 9 Claims. (Cl. 210—198.)



1. A conveyer including an endless conveyer member having screens hinged to swing outwardly, and means arranged to discharge fluid outwardly through said screens at the discharge portion of the conveyer to swing the screens outwardly and to simultaneously dislodge foreign matter therefrom.

---

1,564,514. WINDSHIELD CLEANER. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 12, 1923. Serial No. 612,207. 9 Claims. (Cl. 15—253.)

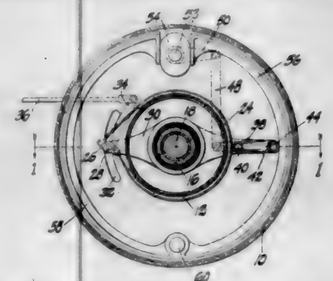


1. A windshield cleaner comprising, in combination, a wiper for cleaning a windshield glass, a fluid pressure operated piston connected to said wiper for moving the wiper back and forth, a valve controlling the operation of said piston, a single device for moving the wiper away from the glass and to one end of its stroke and for closing the valve, and means for releasably holding the wiper in the position to which it is moved by said device.

---

1,564,515. BOOSTER BRAKE. FERDINAND A. BOWER, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 21, 1923. Serial No. 664,067. 5 Claims. (Cl. 188—135.)

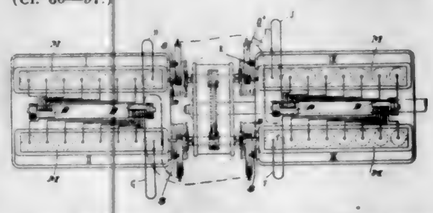
1. A vehicle comprising, in combination, a wheel having inner and outer brake drums, a contractable external braking device encircling the inner drum, an expansible braking device within the outer drum and movable into frictional engagement therewith, one of said devices having a limited movement with its drum, driver controlled means for applying the movable braking device



to its drum, and a connection operated by movement thereof for applying the other braking device to the other drum.

---

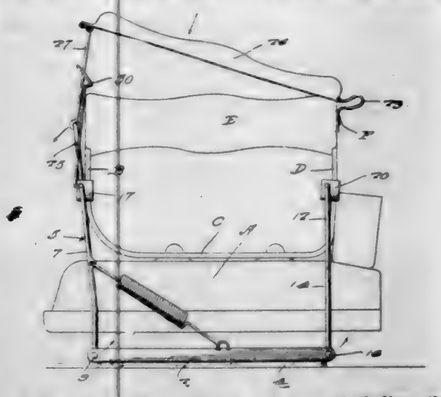
1,564,516. DEVICE FOR THE AUTOMATIC COUPLING AND UNCOUPLING OF ENGINES OPERATING UPON A COMMON PROPELLER. LOUIS BREGUET, Paris, France, assignor to Société Anonyme des Ateliers d'Aviation Louis Breguet, Paris, France. Filed Dec. 22, 1921. Serial No. 524,211. 6 Claims. (Cl. 60—97.)



1. An arrangement for coupling a plurality of motors to a common shaft, comprising, in combination, means for determining the relative angular position of the cam shafts of said motors, and means for connecting each motor separately with said common shaft.

---

1,564,517. AUTOMATIC STAND FOR SADIRONS. WALTER BERNARD BROLIN, Boston, Mass. Filed May 26, 1925. Serial No. 33,011. 4 Claims. (Cl. 68—27.)

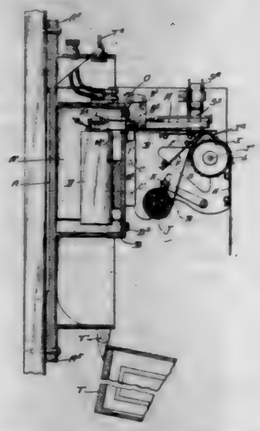


1. In combination with a sad iron including the handle, and the supporting uprights therefor, of a stand for the sad iron comprising a pair of base bars,

front and rear frames pivotally connected at their lower ends to the respective ends of the bars, said frames straddling the iron, means for detachably securing the frame to the uprights, and means associated with the stand for holding the base bars in an operative position whereby the sad iron is supported in a raised position.

---

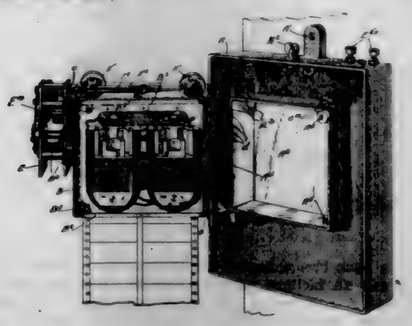
1,564,518. RECORDING METER. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 756,435. 8 Claims. (Cl. 234—5.5.)



3. In a recording instrument comprising a meter pointer movable in a horizontal plane and means for intermittently depressing the latter, the improved means for supporting and advancing a record strip comprising a feed roll and guide of inverted trough-like shape above the feed roll and forming a straight edge over which a record sheet is drawn sharply downward by the feed roll, said straight edge and pointer cooperating to form a record impression on the record strip when the pointer is depressed.

---

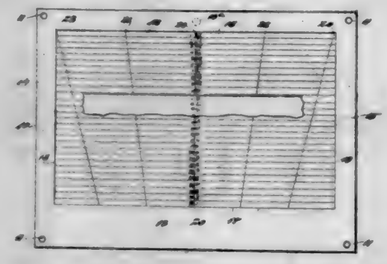
1,564,519. METER. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1924. Serial No. 756,475. 3 Claims. (Cl. 234—5.5.)



1. In an electrical recorder, the combination with a sensitive electrical meter having a deflecting pointer, of a housing for said meter comprising a base adapted to be secured to a supporting structure, a member normally extending across the front of said base and having said meter secured to its rear side and being formed with a slot through which the meter pointer projects, recording mechanism co-operating with the meter pointer and secured to the front side of the last mentioned member, and a hinge connection between said base and said member permitting the latter to be swung away from the base to render said meter accessible.

---

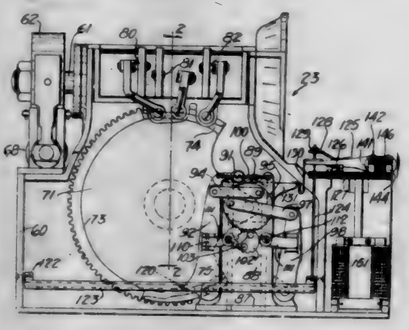
1,564,520. BUTTONHOLE INDICATOR. ELLIS BROWNSTEIN, Baltimore, Md. Filed July 13, 1920. Serial No. 395,963. 2 Claims. (Cl. 33—1.)



1. An indicator for determining spaced distances on goods by workmen, comprising a plate or card, there being a diagram inscribed thereon comprising a series of equally spaced parallel lines and a second series of converging lines intersecting the lines of the first series, the points of intersection of said two series of lines along any one of the parallel lines being adapted to be used to designate desired spaces on the goods substantially as shown and described.

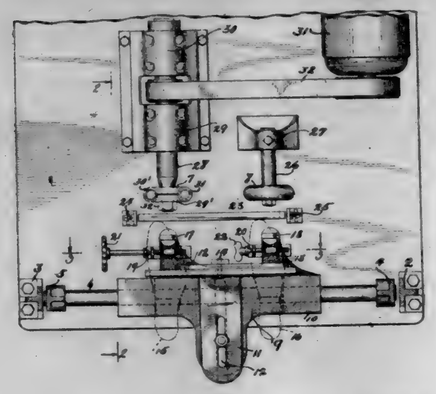
---

1,564,521. ELEVATOR-DOOR-OPENING MECHANISM. FREDERICK F. BRUSH and LUTHER E. GROAT, Los Angeles, Calif., assignors to Elevator Safety Appliance Co., Los Angeles, Calif., a Corporation of California. Filed Apr. 25, 1923. Serial No. 634,475. 24 Claims. (Cl. 187—52.)



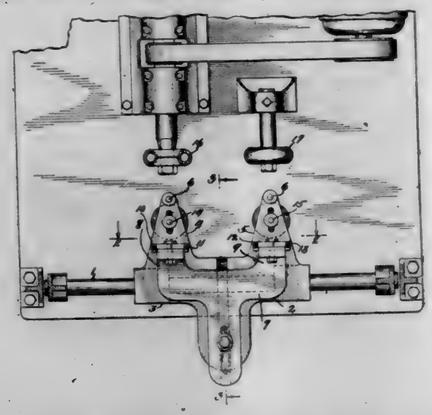
9. In an elevator: a car; a building structure in which said car moves; a door opening mechanism carried on the car; means carried on said car for inhibiting the operation of said mechanism; a ferrous member carried on said car forming a portion of a magnetic circuit; a ferrous member carried on said structure and so placed as to complete said magnetic circuit when said car is at or near a floor; means carried on said car for energizing said magnetic circuit; and parts so constituted as to remove said inhibition from said mechanism upon the completion of said circuit.

1,564,522. MACHINE FOR FINISHING THE TOE OF LASTS. WILLIAM J. BURKE and HENRY G. CLAUSING, Portsmouth, Ohio. Filed Jan. 10, 1923. Serial No. 611,834. 2 Claims. (Cl. 144—278.)



1. In a machine of the class described, a chuck for holding a last and a model, jaws adjustably mounted on said chuck, said jaws being spaced a fixed distance from each other, one of said jaws engaging a portion of the last and the other a portion of the model, a pair of fixed jaws also carried by said chuck one of said fixed jaws engaging the last and the other the model and a pair of movable clamping jaws carried by said chuck and movable into and out of last and model engaging positions, said last named jaws engaging the last and the model on the side opposite to the jaws first mentioned.

1,564,523. MACHINE FOR FINISHING THE TOE AND INSOLE OF LASTS. WILLIAM J. BURKE and HENRY G. CLAUSING, Portsmouth, Ohio. Filed Jan. 10, 1923. Serial No. 611,835. 4 Claims. Cl. 144—278.)

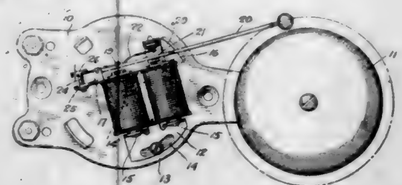


1. In combination a chuck, a support carried thereby for supporting a last block on the chuck, adjustable supports, said adjustable supports being adjustable relative to the first mentioned support to adapt the chuck for last blocks of different sizes, and a securing member adapted to engage the underside of the last to hold the same in place upon said supports.

1,564,524. ACCUMULATOR GRID OR PLATE. JAMES MCDONALD BURNETT, Weston-by-Welland, England. Filed May 6, 1924. Serial No. 711,466. 1 Claim. (Cl 136—66)

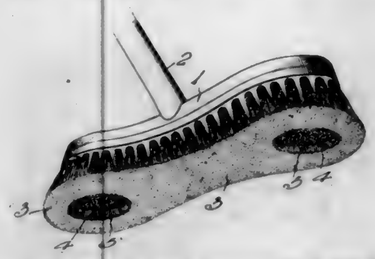
An accumulator plate comprising a plurality of individual unit plates of soft lead, formed each with edge grooves and correlated so that said grooves co-operate to form a hidden network of communicating and intersecting channels running throughout the extent of said accumulator plate, and a concealed framework of rigid conducting material cast within said communicating and intersecting channels and thereby rigidly securing said unit plates together, whereby the whole exposed surface of said accumulator plate is of soft lead but the strength thereof resides in the rigid concealed framework.

1,564,525. ELECTRIC VIBRATOR. JOSEPH O. CADIEUX, Meriden, Conn., assignor to The Connecticut Telephone & Electric Company, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 28, 1921. Serial No. 511,140. 2 Claims. (Cl. 177—7.)



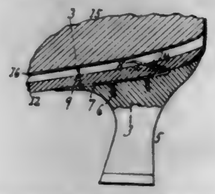
1. In an electric vibrator, an electromagnet, a yoke carried thereby, an armature pivotally carried by said yoke, a spring member secured to said armature, an adjusting screw passing through one end of said spring and adjustable in said yoke, and a stationary contact also carried by said yoke and co-acting with the opposite end of said spring.

1,564,526. PUSH BROOM. ALBERT A. CALLAIS, Plaquemine, La. Filed Apr. 30, 1925. Serial No. 26,990. 1 Claim. (Cl. 15—159.)



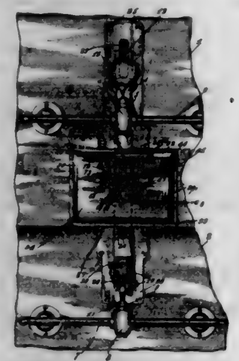
In a push broom having a horizontally elongated rigid back and an inclined handle extending from the central portion of said back; a compact mass of soft bristles projecting downwardly from said back and having two continuous-walled recesses from said back to the lower surface of the mass, said recesses being near the ends of said mass but spaced inwardly from the sides and ends of such mass, and stiff members in said recesses secured to the broom back and terminating in a plane spaced above the lower surface of said mass of soft bristles, said stiff members being adapted to slide along a floor being swept to carry the weight of the aforesaid back thereby relieving the soft bristles of such weight and preventing distortion of said soft bristles.

1,564,527. HEEL FASTENER. MARK CANGEN, Brooklyn, N. Y. Filed Aug. 18, 1924. Serial No. 732,715. 7 Claims. (Cl. 36—34.)



1. A heel fastener having a hook for engagement with a slitted sole, and a prong made to clinch the sole.

1,564,528. LOCKING ATTACHMENT. JOSEPH CARTELLI, Brockton, Mass. Filed June 24, 1925. Serial No. 39,278. 7 Claims. (Cl. 70—127.)

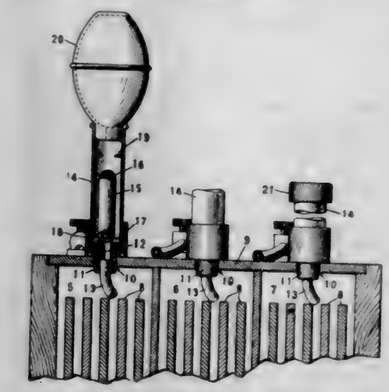


1. A locking attachment for the purpose set forth comprising the combination with a shiftable locking element for a fuel supply and a shiftable controller for an ignition system, of a permutation locking mechanism including a locking arm for said element and a combined shifting and locking member for said controller.

1,564,529. DISH DISPENSER. WILLIAM F. CARTER, Kansas City, Kans. Filed Nov. 12, 1923. Serial No. 674,353. 2 Claims. (Cl. 211—16.)

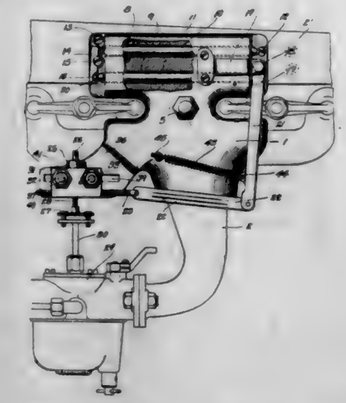
1. A dish dispenser provided with a container having a dish discharge opening, a dish insertion opening above said dish discharge opening, a closure for said dish insertion opening, and a dish supporting member having a rearwardly and downwardly extending supporting surface having a depression at its front portion the rear edge of which depression is above and spaced apart from the lower edge of said dish discharge opening.

1,564,530. STORAGE BATTERY. EDWARD C. CLIFFORD, New York, N. Y. Filed July 19, 1922. Serial No. 575,920. 11 Claims. (Cl. 265—45.)



1. The combination with a storage battery cell having a hollow plug communicating with the interior thereof, of a hydrometer receptacle secured to said plug, said plug being provided with a tube communicating with the electrolyte within the battery.

1,564,531. VALVE-OPERATING MECHANISM. WILLIAM E. CONCANNON, Kansas City, Mo., assignor of one-half to Thomas G. Concannon, Emporia, Kans. Filed Sept. 12, 1923. Serial No. 662,196. 4 Claims. (Cl. 123—124.)

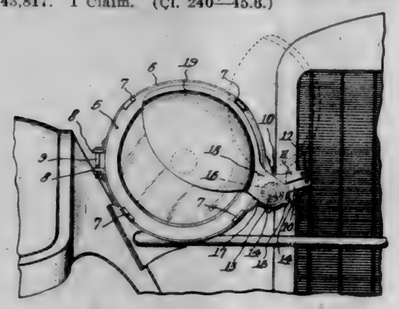


1. In a device of the class described, a plurality of parallel co-operating longitudinally expansible thermostatic elements having movement compounding means between them and valve actuating mechanism actuated by said elements, said valve actuating mechanism comprising a bracket, a pivoted lever arm on the bracket having an offset bearing against one end of one of the expansible thermostatic elements, a link connected to the lever arm, a spring connected to the lever arm and an-

chored at one end, a rack connected to the link, a laterally adjustable bracket, a stem mounted in the bracket, a pinion on the stem engaging the rack and means on the stem for engagement with the needle valve of a carburetor.

---

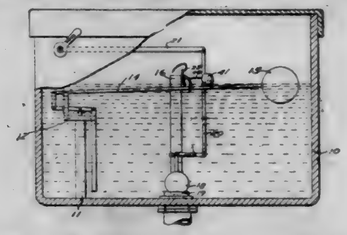
1,564,532. AUTO HEADLIGHT. HERBERT A. CORLISS, Grants Pass, Oreg. Filed July 15, 1925. Serial No. 43,817. 1 Claim. (Cl. 240—45.6.)



A headlight shield comprising a supporting band, means for securing the band to a headlamp, a bracket member carried by the band and having an arm formed with a guide opening, a shield pivotally mounted on the bracket, an arm having a lateral extension, forming a part of the shield, a flexible member connected with the lateral extension and passing through the guide opening, said flexible member adapted to be operated to move the shield to its active position, and a coiled spring for returning the shield to its inactive position.

---

1,564,533. VALVE-CONTROL MECHANISM. HERMAN R. CUNNINGHAM, Glendale, Calif. Filed Mar. 8, 1924. Serial No. 697,721. 7 Claims. (Cl. 137—104.)

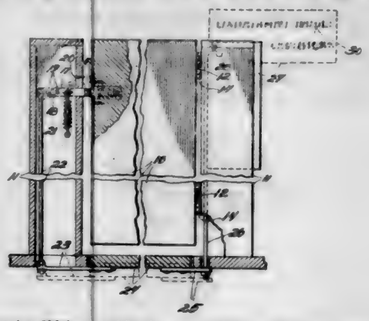


6. In a flush tank, a container, a water inlet, an outlet, an overflow pipe, a valve for controlling said water inlet, a lever for operating said valve, a float mounted on said lever, and an arm pivotally mounted on said lever, said arm comprising a substantially L-shaped member having a re-entrant portion on one limb of the L, said re-entrant portion including a hump, an auxiliary float, a support for said auxiliary float, means on said support for engaging the hump to hold the lever depressed when the auxiliary float is in its lower position and additional means for engaging the re-entrant portion to release said first mentioned means when the auxiliary float is raised.

---

1,564,534. GATE CONSTRUCTION FOR STORES. JULIUS CYTRON, Tulsa, Okla. Filed Nov. 13, 1922. Serial No. 600,744. 2 Claims. (Cl. 211—8.)

2. A gate construction for stores comprising, in combination, an entrance gate, a sign panel mounted adjacent said gate for vertical movement into and out of display position and maintained by gravity in lowered position, a tread-operated device located opposite the approach to the gate, and connections actuated by said device for automatically unlatching said gate and simultaneously lifting said sign panel into display position, the return movement of said panel into lowered position tending through its connection with said tread-operated device, to restore the latter to initial position.



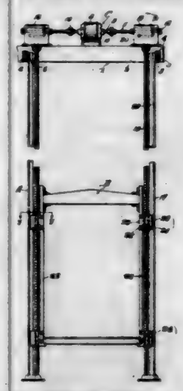
---

1,564,535. OIL GAUGE. ERNEST DAVIS, Chicago, Ill. Filed June 11, 1923. Serial No. 644,769. 1 Claim. (Cl. 221—26.)

In an oil gauge having a pivotally mounted spout, means for moving the spout on its pivotal support, comprising an arm extending radially from the pivotal center of the spout, a rod pivotally connected with the outermost end of the arm at one end and having its opposite end projected through a stationary member, a hand grip disposed on the outermost end of the rod, and a spring for yieldingly maintaining the rod in a position whereby the spout extends in a substantially vertical position.

---

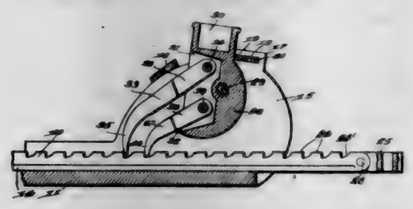
1,564,536. ELEVATOR HOIST. HAROLD ALTON DAVIS and PAUL SILAS NEWCOMER, Fostoria, Ohio. Filed Feb. 14, 1924. Serial No. 692,715. 1 Claim. (Cl. 187—24.)



In a device of the kind described, a pair of vertically disposed spaced T-irons, a pair of vertically disposed screws each adjacent one of said T-irons, the webs of said T-irons confronting each other, pairs of nuts, each pair being disposed on a respective screw in spaced relation, spaced arms extending from each other to embrace the web of the adjacent T-iron, other spaced arms projecting from the respective nuts in a direction opposite the first mentioned arms, and connecting members each associated with the nuts on a respective screw, each of said connecting members being fitted within the last mentioned arms of the respective nuts, and bolts passing through said arms and connecting members to secure the latter fixedly to the nuts.

---

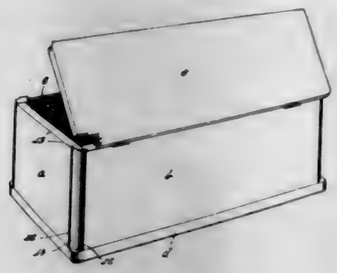
1,564,537. CHAIN TIGHTENER. PETER DELLE, Spokane, Wash. Filed Apr. 2, 1925. Serial No. 20,273. 2 Claims. (Cl. 254—72.)



1. In a chain tightener, a guide body having chain connecting means, a rack bar slidable in said body and having chain connecting means, a pawl block pivoted to oscillate in said body, a set of pawls for coaction with the teeth of said rack bar and being pivoted to said block to be actuated thereby to advance said bar, a fixed stop on said body limiting rocking movement of said block in one direction, and yielding stop normally limiting rocking movement of said block in a direction opposite to the first named direction and adapted to yield under abnormal pressure to actuate said pawls to free said rack bar.

---

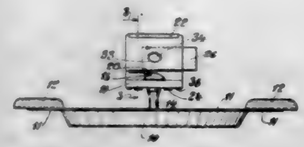
1,564,538. CORNER JOINT FOR BOXES AND METHOD OF MAKING THE SAME. LOUIS F. DETTENBORN, Hartford, Conn. Filed Mar. 12, 1925. Serial No. 15,008. 3 Claims. (Cl. 217—69.)



1. A corner joint for boxes, comprising a pair of angularly disposed boards provided with inter-engaging tenons, the exterior corner formed by said inter-engaging tenons being cut away and rounded to provide a counter sunk curved surface and the shoulders at opposite sides of the curved surface being undercut with the inner walls of such cuts providing continuations of the curved surface, and a thin curved strip seated against said curved surface and with its opposite edge portions engaging in the undercuts of said shoulders to retain the strip over the inter-engaging tenons.

---

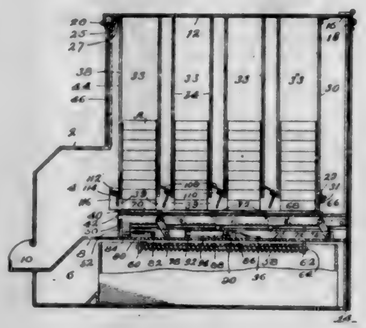
1,564,539. COMBINATION MATCH-BOX HOLDER AND CIGAR CUTTER. VINCENT DI GIGLIA, Brooklyn, N. Y. Filed Apr. 22, 1925. Serial No. 24,934. 1 Claim. (Cl. 131—66.)



A match box holder and cigar cutter comprising a metal plate bent to produce a flooring for a match box, a vertical side wall, an opposed side wall bent angularly outward and inward at an included angle of approximately ninety degrees, its upper edge being disposed substantially level with the coresponding edge of the first named wall, a plate attached to the upper edge of said angular wall and to its junction with said flooring to extend vertical therebetween, end walls formed with said vertical plate to extend coincidentally with the angular walls, the lower of said angular walls having a discharge opening and the upper of said angular walls having an opening receptive of the end of a cigar, a shear plate slidably engaged closely adjacent the inner surface of said upper angular wall, said shear plate having an opening registerable with the opening in the angular wall, and a spring co-operatively acting between said shear plate and angular wall whereby the shear plate is held normally extended and the mentioned opening in register.

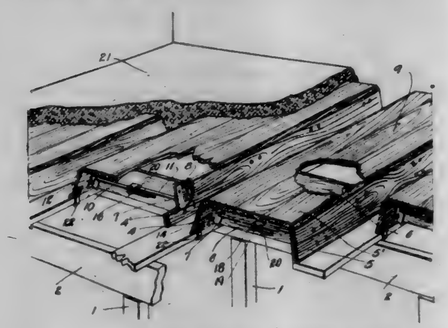
---

1,564,540. VENDING MACHINE. EDWARD N. DINWIDDIE, Kansas City, Mo. Filed Dec. 11, 1922. Serial No. 606,066. 3 Claims. (Cl. 211—8.)



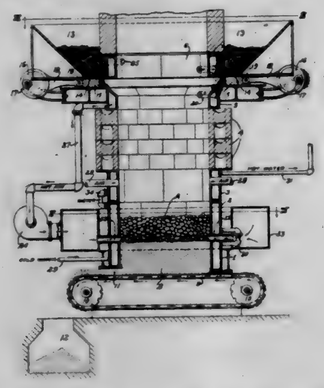
1. In a vending machine, a magazine having a series of compartments for holding articles and arranged one in advance of the other and having alined outlets at their lower portions, a slide extending beneath said outlets to support and deliver the articles and having openings equal in number to the compartments, a series of abutments pivotally connected to the slide and extending through said openings to coact with said slide in delivering the articles, a bar swingably-connected to the underside of the slide and upon which said abutments rest, spring-means for normally holding said bar in lowered postion, and means in the path of the bar for raising the same as it moves forward with the slide so that the bar in turn will raise the abutments to engage and advance the articles with the slide.

1,564,541. CONCRETE FORM. LESLIE H. DODD, Kansas City, Mo. Filed Mar. 2, 1925. Serial No. 12,722. 5 Claims. (Cl. 25—131.5.)



1. A form, comprising two side members, pairs of complementary spaced cleats on the inner face of each side member, a spacing bar, the ends of which are located between the complementary cleats of each side member holding the side members in spaced relation, top boards on the side members and the spacing bar, and a tie rod, comprising two members adjustably connected together, each member having a right angular extension passing transversely through the cleats and through the spacing bar to secure the spacing bar to complementary cleats of each pair.

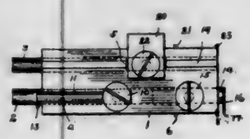
1,564,542. METHOD OF MAINTAINING COMBUSTION IN FURNACES. WILLIAM M. DUNCAN, Alton, Ill. Filed Jan. 17, 1924. Serial No. 686,763. 4 Claims. (Cl. 110—1.)



1. The method which comprises burning a bed of fuel on a bed of ashes, moving the lower portion of said bed of ashes away from the upper portion thereof, confining the fuel bed and maintaining an open space for combustion above the surface of the burning fuel, feeding fresh fuel into said open combustion space and distributing it over the surface of the burning fuel at the bottom of said space, and introducing air into the burning fuel.

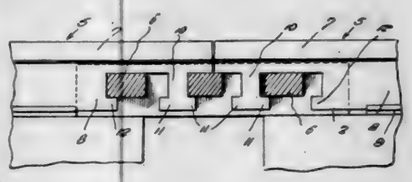
1,564,543. GAUGE. GUSTAVE O. ELLINGSON, Bemidji, Minn. Filed Dec. 10, 1924. Serial No. 754,962. 1 Claim. (Cl. 33—44.)

A carpenter's gauge of the type described comprising an elongated body portion carrying longitudinally adjustable gauge rods therein, one of said rods carrying a gauging member protruding from one side face of the body portion, another of said rods carrying a gauging



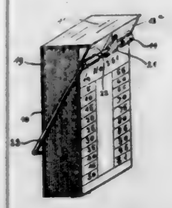
member protruding from the end face of the body portion, and a fixed gauging member intermediate of the adjustable gauging members.

1,564,544. RAIL JOINT. CHARLES ELVIN ELLIOTT, Wellsburg, W. Va. Filed May 11, 1925. Serial No. 29,440. 2 Claims. (Cl. 238—177.)



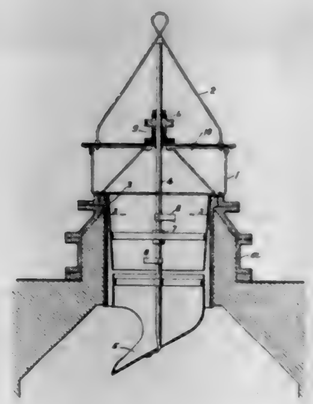
1. In a rail joint of the class described, a rail chair comprising spaced parallel vertical side plates provided with outwardly extending base flanges, longitudinally spaced connecting bridges between the side plates, a pair of complementary rail sections having extended web and ball portions, the extended web portions being fashioned to provide depending tongues, laterally extending locking lugs on the free ends of the tongues, said locking lugs being slidably cooperative with the aforementioned bridges to detachably secure the rail sections in said chair.

1,564,545. COMBINED HOLDER AND NOTCHER OR CUTTER FOR CASH TICKETS. CHARLES A. ERICKSON, Chicago, Ill. Filed May 6, 1925. Serial No. 28,393. 2 Claims. (Cl. 211—37.)



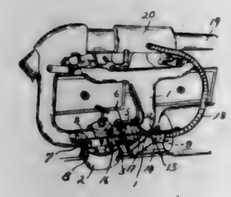
1. In a device of the class described the combination with an elongated plate having at its upper end a forward disposed top portion provided at its front part with a downwardly extended front holding part for a package of tickets, said front holding part having at its lower edge a bearing, of a link embracing said plate and journaled in said bearing and a cutter extended upwardly from said bearing and adapted to cooperate with said front holding part for forming a notch in a ticket.

1,564,546. FUEL SPREADER FOR GAS GENERATORS OR THE LIKE. OWEN B. EVANS, Philadelphia, Pa., assignor to The U. G. I. Contracting Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 28, 1921. Serial No. 465,184. 3 Claims. (Cl. 214—35.)



2. A fuel spreader for gas generators including a rotary chute arranged to discharge onto and against the side wall of the generator, thereby compelling coarse pieces of fuel to rebound from the walls to the center and fine pieces of fuel to remain at the walls.

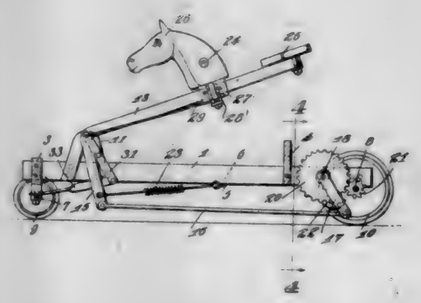
1,564,547. AUXILIARY AIR-INLET CONTROL. JOHN FARKAS, Detroit, Mich., assignor of one-half to Charles H. Grieser, Detroit, Mich. Filed Sept. 30, 1921. Serial No. 504,529. 3 Claims. (Cl. 123—119.)



1. The combination with an intake manifold and a carbureter connected thereto having a throttle valve and a choke valve, of a single air inlet valve controlling the entrance of the auxiliary air into said manifold, a rock arm for operating said valve, connections between said rock arm and said throttle valve for normally operating the former with the latter and other connections between said rock arm and said choke valve for operating the former from the latter independently of the position of said throttle valve.

1,564,548. CHILD'S WHEELED VEHICLE. JAMES W. FOND, Galesburg, Ill. Filed Dec. 14, 1923. Serial No. 680,675. 4 Claims. (Cl. 208—36.)

1. In a vehicle of the class described, a wheel supported frame, a bell crank lever fulcrumed on said frame, a seat carried by said lever, gears connected to drive one set of wheels and a rod and link connection between the

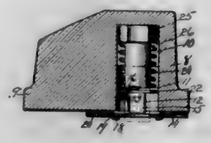


bell crank and one of the gears whereby rotary motion is imparted to the gear on the vertical movement of the seat.

1,564,549. PROCESS OF PREPARING PROPELLANT POWDERS. CHARLES R. FRANKLIN, Dover, N. J. Filed Dec. 19, 1923. Serial No. 681,629. 10 Claims. (Cl. 52—20.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

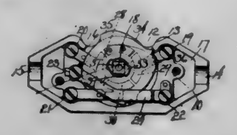
1. The process of preparing a propellant powder which includes mixing nitrocellulose of approximately 12.60% nitrogen content with a large excess of water, then adding the necessary amount of nitroglycerine with rapid agitation, then wringing out the excess of water, then adding a stabilizer and a proper amount of a flash reducing compound and mixing, then passing the material thus formed through heated pressure rolls, then seasoning for a proper period, then mixing the whole with a proper amount of a volatile solvent then again passing through heated rolls until the mass becomes a uniformly, cohering, colloided substance, then cutting and drying.

1,564,550. KNOB FOR SNAP SWITCHES. FREDERIC P. GATES, West Hartford, Conn., assignor to The Fuller-Gates Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 16, 1924. Serial No. 686,644. 10 Claims. (Cl. 200—172.)



2. A switch knob having a hole therein with a locking recess in the wall of said hole, means for attaching said knob to a switch spindle, and a plate located on the under side of said knob and surrounding the lower end of the opening and having an arm with a locking finger thereon located in said recess to secure said plate to the knob.

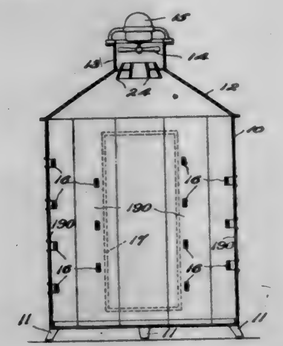
**1,564,551. ELECTRIC SWITCH.** FREDERIC P. GATES, West Hartford, Conn., assignor to The Fuller-Gates Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 2, 1925. Serial No. 90. 14 Claims. (Cl. 200—63.)



1. An electric switch including a switch blade, a thumb disc operatively connected with said blade to rotate it, and a shoulder located in the path of movement of a thumb engaged with said disc to rotate it and to limit rotation of said disc.

---

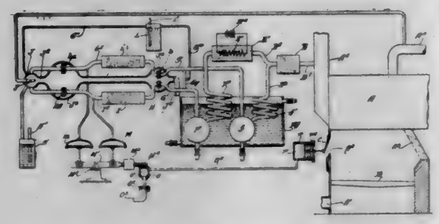
**1,564,552. APPARATUS FOR THERAPEUTIC TREATMENT.** THEODORE R. N. GERDES, New York, N. Y. Filed Oct. 17, 1921. Serial No. 508,349. 2 Claims. (Cl. 174—177.)



1. A therapeutic apparatus comprising a chamber for holding a patient, means for directing radiant heat against the patient's body while within said chamber and means for directing a stream of cooling air over the parts of the patient's body so heated.

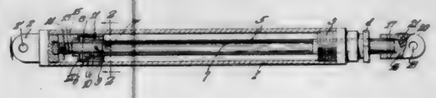
---

**1,564,553. COMBUSTION REGULATION.** GEORGE H. GIBSON, Montclair, N. J. Filed Feb. 25, 1921. Serial No. 447,904. 8 Claims. (Cl. 236—1.)



1. The combination with a furnace of means responsive to the presence of combustible constituents in the gaseous products of combustion leaving the furnace for automatically regulating the ratio between the rate at which fuel is actually burned in the furnace and the rate at which air is supplied thereto for the combustion of the fuel.

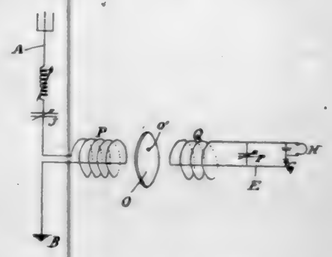
**1,564,554. CHECK DEVICE.** RICHARD T. GIFFORD, Springfield, Mass., assignor to Edward N. White, J. Lewis Wyckoff, and George R. Burkhardt, trustees, doing business as Cowan Truck Company, Holyoke, Mass. Filed July 26, 1924. Serial No. 728,415. 15 Claims. (Cl. 188—96.)



1. A liquid checking device comprising a closed cylinder adapted to be filled with liquid, a piston for reciprocatory movement in said cylinder and having a hollow piston rod movable in and out of said cylinder, a communicating port between the interior of said piston rod and said cylinder at the rear of the piston chamber whereby the interior of said rod may serve as an overflow chamber for the liquid in said cylinder displaced by said piston rod.

---

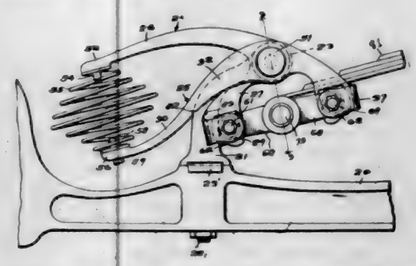
**1,564,555. VARIABLE ELECTRICAL CONTROLLING ELEMENT.** ALFRED NORTON GOLDSMITH, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed July 31, 1919. Serial No. 314,480. 13 Claims. (Cl. 171—119.)



1. A variable radio coupler comprising coaxial current carrying coupling coils and a parallel shield of conducting material in the mutual field of the coils, said coils and shield being relatively movable in a direction transverse to the axis of the coils whereby the coupling between the coils may be varied.

---

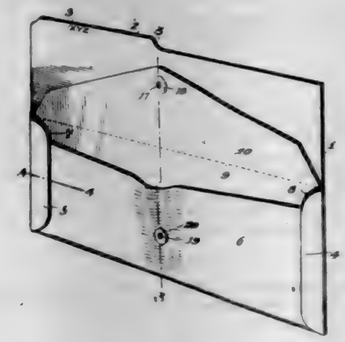
**1,564,556. SHOCK ABSORBER.** ROBERT L. GOODFELLOW, Binger, Okla. Filed Dec. 15, 1924. Serial No. 756,059. 6 Claims. (Cl. 267—17.)



1. In a shock absorber, a perch, a pair of levers pivotally mounted upon the perch between their ends and having parts which cross, a compressible coil spring held between corresponding ends of the levers, hooks formed upon the opposite ends of the levers, links having their outer ends pivotally mounted within the hooks, grease cups receiving the outer ends of the links and arranged between the links and the sides of the hooks, a pivot element connecting the inner ends of the links, and a leaf spring supported by the pivot element.

---

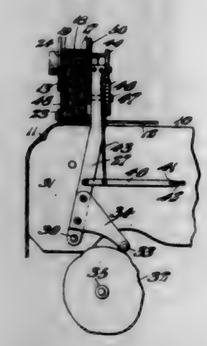
**1,564,557. FILING RECEPTACLE.** ABRAHAM S. GREENHAUS, New York, N. Y. Filed Nov. 20, 1924. Serial No. 751,089. 6 Claims. (Cl. 129—16.7.)



1. A filing receptacle for the purpose set forth, comprising an index member, and means integral therewith and secured thereto to form a closable envelope forwardly thereof, said means in connection with said member providing a compartment at the rear of the envelope.

---

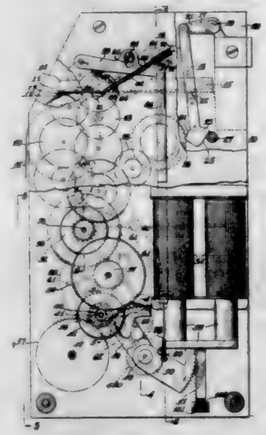
**1,564,558. RECORDING INSTRUMENT.** GEORGE W. GRISDALE, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1923. Serial No. 657,245. 6 Claims. (Cl. 234—11.)



5. In a multiple recorder of the type comprising a movable pointer, mechanism for intermittently depressing said pointer and means adjustable to bring one or another section of a transfer medium comprising a plurality of differently colored sections into record impressing relation with the pointer when the latter is depressed, the improved means for producing more differently colored records than there are colored sections of said transfer medium comprising mechanical provisions operating in timed relation with said mechanism for adjusting the first mentioned means to form record impressions in recurring series each of which comprises a plurality of successive sections of record indications and each of which sections includes one record impression for each record to be produced and said impression being so colored that the record impressions in successive sections forming a part of any one record are of the same color in the case of some, and different in color from one another in the case of others of the records produced.

---

**1,564,559. RECORDING INSTRUMENT.** GEORGE W. GRISDALE, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1923. Serial No. 671,962. 18 Claims. (Cl. 234—11.)



1. In a recording instrument, the combination with a deflecting pointer, of means for intermittently depressing said pointer comprising a rotating peripherally notched cam, a member having a tooth engaging the periphery of said cam, guiding means for a portion of said member adjacent said tooth compelling the latter to move tangentially as well as radially of said cam as it enters and leaves a peripheral notch of the latter, and guiding means for a portion of said member remote from said tooth constraining said last mentioned portion to movement along a path approximately parallel to the tangential movement of said tooth.

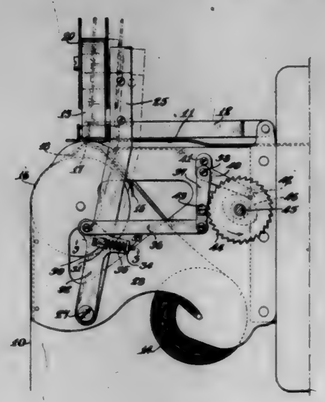
18. In a recording instrument, the combination of a recording mechanism including a chart, a colored impression ribbon, a pointer, electrical means for controlling said pointer, and a depressor bar, means including a clock mechanism for actuating said depressor bar, said chart and the feeding of said ribbon, a rotatable switch for separately connecting electrical circuits to said pointer controlling means, and means including a solenoid for intermittently operating said switch.

---

**1,564,560. RECORDING INSTRUMENT.** GEORGE W. GRISDALE, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 31, 1923. Serial No. 671,963. 13 Claims. (Cl. 234—1.)

2. In a recording instrument comprising means for supporting and advancing a record chart, a meter pointer swinging over said chart and a transfer ribbon through

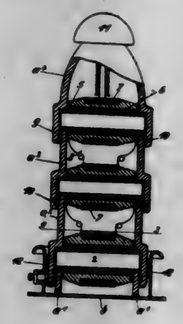
which the pointer may mark its position relative to said chart on the latter, the improvement which consists in means for intermittently shifting said ribbon relative to



said chart back and forth between an advanced recording position and a retracted position in which the record previously formed is visible.

---

1,564,561. SHELL FOR INDUCTIVE HIGH-TENSION APPARATUS CONSISTING OF ANNULAR INSULATING MEMBERS. HUGO KARL GRÜNDIG, Dresden, Germany. Filed July 6, 1925. Serial No. 41,854. 5 Claims. (Cl. 175—361.)



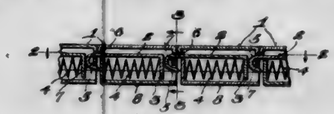
1. In an inductive high tension apparatus, particularly a high tension transformer, consisting of several inductive units of different potential, a column-like shell composed of several superposed annular insulating members and in which the transversely extending cores of the different units are arranged between the edges of two adjacent shell members.

---

1,564,562. MANUFACTURE OF FIREWORK ARTICLES. HANS GRÜNEWALD, Hanover, Germany. Filed Apr. 5, 1924. Serial No. 704,512. 8 Claims. (Cl. 102—20.)

1. The method of producing fire work articles, which consists in spacedly disposing a plurality of dried pieces of pyrotechnic composition upon an elongated cord-like unexploding carrier, and shaping the carrier with said pieces to assume different configurations.

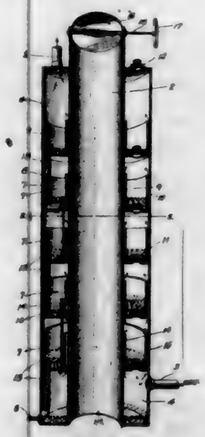
1,564,563. EXPANSIBLE BRACELET. ART HADLEY, Providence, R. I., assignor to The Hadley Company, Providence, R. I. Filed Feb. 9, 1925. Serial No. 8,027. 2 Claims. (Cl. 59—79.)



1. In an expansible bracelet, boxes having top, bottom and side walls, each box having a transverse slot extending across its bottom, and having a slot at one end and a bar extending across its opposite end, a longitudinally movable slide in each box having a right angular end and a hook-shaped end the latter projecting through the slot at the box end and being engaged with the bar of an adjacent box, and a coil spring in the box engaged with the right angular end of the slide and with the end of the box having the slot, the slots in the box bottoms being of a size to admit a means of engaging the right-angular end of the slide to hold the latter against longitudinal movement and with the hook thereof projected outwardly of the box.

---

1,564,564. DEPHLEGMATOR. JOHN W. HANCOCK, Ardmore, Okla. Filed Feb. 16, 1923. Serial No. 619,372. 4 Claims. (Cl. 257—36.)



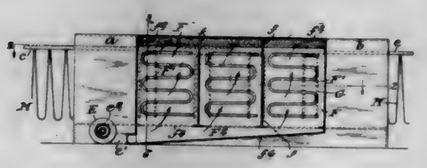
1. A dephlegmator comprising a tower adapted to be air cooled, a stack adapted to be air cooled passing through the tower, ring-shaped collectors within the tower concentric with the air stack, the walls of the collector chambers being spaced from the stack and from the tower, an inlet for the tower and an outlet pipe leading therefrom.

---

1,564,565. METHOD OF DRYING AND OXIDIZING MATERIALS IN SUSPENDED CONDITION. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Original application filed Oct. 28, 1920, Serial No. 419,052. Divided and this application filed Oct. 30, 1922. Serial No. 597,712. 11 Claims. (Cl. 34—24.)

10. In the art of drying and oxidizing materials, the process which consists in moving suspended material within a substantially closed chamber, recirculating a definite volume of a drying atmosphere by exhausting

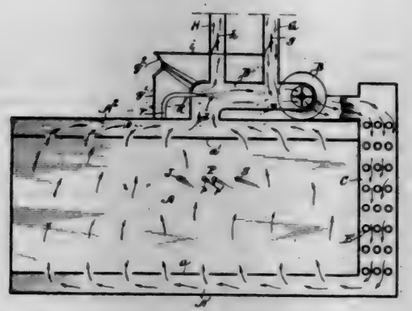
said atmosphere in a relatively humid condition from the presence of the material in said chamber, dividing the recirculated atmosphere into a plurality of streams channeling the flow of said atmosphere exteriorly to



the substantially closed chamber, separately conditioning the respective streams of the recirculated atmosphere by the admixture of fresh atmospheric air therewith and by reheating the same, and returning said atmosphere to the chamber.

---

1,564,566. ART OF DRYING MATERIALS. GORDON DON HARRIS, Freeport, N. Y., assignor to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Feb. 18, 1924. Serial No. 693,474. 18 Claims. (Cl. 34—19.)

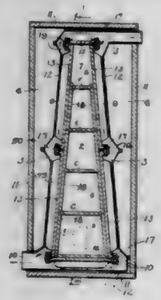


4. In the art of drying and conditioning materials, the process which consists in recirculating a drying atmosphere within a desired circulatory path, reheating the atmosphere during the recirculation thereof, controlling the periods of such reheating dependent upon changes in the temperature of the atmosphere, conditioning the atmosphere by discharging from the circulatory path a volume of the atmosphere charged with moisture and replacing with fresh air the atmosphere so discharged, and controlling the periods of such conditioning of the atmosphere dependent upon changes in the moisture content of the atmosphere itself.

---

1,564,567. AIR HEATER. BURT S. HARRISON, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1922. Serial No. 584,016. 2 Claims. (Cl. 126—99.)

1. An air heater comprising, in combination a closed air chamber having an inlet and an outlet at points in effect remote from each other along the line of travel of the air and a furnace proper contained therein including a fire box part and a combustion chamber merging therewith, said furnace being formed with upwardly convergent walls and being provided with horizontally disposed baffles spaced apart vertically, the convergence of the walls being adapted to accommodate a substantially constant velocity of the gradually cooling products of



combustion, said furnace having an inlet for the fuel in its lower part and an outlet for the gases of combustion in its upper part.

---

1,564,568. BUILDING BLOCK AND WALL. BENJAMIN F. HAYDEN, Springfield, Mo., assignor to Haydenite Brick and Machinery Company, a Corporation of Missouri. Filed Sept. 13, 1922. Serial No. 588,028. 1 Claim. (Cl. 72—39.)

A wall made up of H-shaped blocks and U-shaped blocks laid in alternating courses, and oblong blocks disposed at right angles to each other at a corner of the wall, the oblong blocks cooperating with the courses to dispose the H-shaped and U-shaped blocks of adjoining courses in break-joint order and to aline the transverse parts of the U-shaped and H-shaped blocks vertically.

---

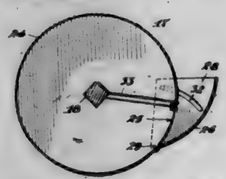
1,564,569. PISTON AND PACKING CONSTRUCTION. GEORGE N. HEIN, San Francisco, Calif. Filed Aug. 26, 1924. Serial No. 734,210. 5 Claims. (Cl. 128—219.)

4. A piston and packing construction for syringes comprising a piston having a flange extending outwardly at right angles from one end, the outer face of said flange being bevelled to afford a surface facing the end of the piston, and a tubular elastic packing of a normal

diameter less than that of the flange and stretched over the same, the end of said packing being bevelled to correspond with the bevel of the flange whereby the packing end wall will lie parallel with the end of the piston.

---

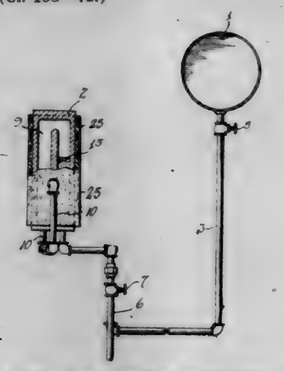
1,564,570. RIDDLE. FREDERICK HENKEL, Long Beach, Calif. Filed Aug. 4, 1924. Serial No. 730,105. 3 Claims. (Cl. 209—286.)



1. A riddle comprising a rotary tubular body closed at its ends and having a peripheral wall formed of screening, and provided with a longitudinally extending feed discharge opening, a barrier wall within said tubular body extending part way thereacross between the ends thereof adapted to trap coarse materials in the riddle and inhibit their discharge on rotating the riddle in one direction, and a panel projecting outwardly from the lower margin of said feed and discharge opening, said panel being adapted to scoop up material and deliver it to the interior of the riddle.

---

1,564,571. OIL BURNER. MATT HEROD, Michigan City, Ind. Filed Oct. 27, 1924. Serial No. 746,186. 1 Claim. (Cl. 158—71.)

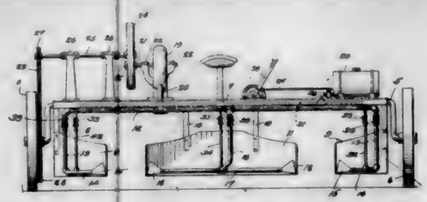


A device of the type described comprising a generator substantially rectangular in cross section and having a wide flat exterior surface, said generator having a U-shaped passageway therein, the legs of said passageway extending downwardly and being disposed in a vertical plane, means for conveying oil to said generator, and a burner in communication with said generator, said burner being positioned so as to direct the flame against the broad flat side of the generator.

---

1,564,572. COTTON SPRAYER. WILLIAM F. HESTER, O'Brien, Tex. Filed July 3, 1924. Serial No. 724,054. 1 Claim. (Cl. 299—29.)

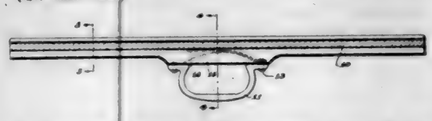
A spraying device comprising a wheel supported frame, a transversely extending horizontally disposed discharge pipe supported at the rear of the frame, pipes extending downwardly from the discharge pipe, nozzle carrying pipes communicating with the downwardly extended pipes, and arranged in parallel relation with the first mentioned pipe under the frame, nozzles carried by the ends of the last mentioned pipes, vertically disposed plates arranged in advance of said last mentioned pipes, and intersecting the horizontal plane of said pipes on



lines oblique to the axis of said pipes, each plate having one end in proximity to a nozzle, and said plates adapted to engage plants over which the machine is moving to move the plants adjacent to the nozzles.

---

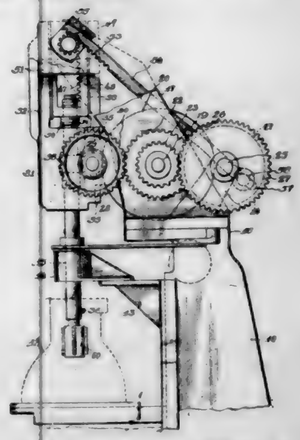
1,564,573. HANDLE FOR SLIDABLE PANELS. MATTHEW R. HULL and CLIFFORD O. WILLIAMSON, Connersville, Ind., assignors to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed July 15, 1924. Serial No. 726,222. 6 Claims. (Cl. 296—44.)



6. A handle attachment for a movable panel of glass comprising a hand grip detachably clamped to the edge of the panel and carrying a member yieldingly held in frictional contact with a face of the slide in which the panel is mounted, whereby said panel may be moved by said handle and supported in adjusted position, substantially as set forth.

---

1,564,574. MACHINE FOR LAPPING AND HONING CYLINDERS. WILSON P. HUNT, Moline, Ill., assignor to Moline Tool Company, Moline, Ill., a Corporation of Illinois. Filed July 29, 1924. Serial No. 728,942. 5 Claims. (Cl. 51—34.)

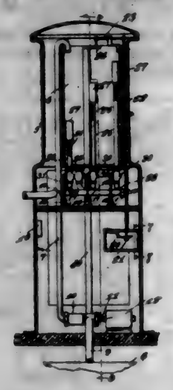


5. In a lapping machine, a plurality of rotatable spindles, reciprocable slides upon which said spindles are rotatably mounted, the central portions of said slide being open, racks upon a longitudinal edge of each opening, a rotary reciprocable shaft extending through

the openings in said slides, a long pinion on said shaft in mesh with said racks, and means for actuating said shaft, said slides being capable of being reversed with respect to the long pinion whereby certain slides may be reciprocated in a reverse direction, with respect to the other slides.

---

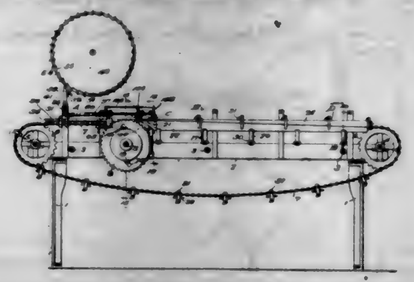
1,564,575. GASOLINE-VENDING MACHINE. JOHN WALTER JOHNSON, Bluefield, W. Va. Filed Feb. 18, 1924. Serial No. 693,610. 1 Claim. (Cl. 221—100.)



A gasoline dispensing device including a tower, a tank mounted in the upper portion of the tower, a plurality of discharge pipes within the tank, valve members for controlling the passage of fluid through the discharge pipes, switch members disposed adjacent to the valve members, valve operating arms associated with the valve members for operating the valve members, contact members carried by the arms and adapted to complete circuits through the switch members when the operating arms are in their normal positions, a motor driven pump for forcing fluid into the tank, switch members within the tower and in circuit with the motor, a vertically movable float actuated rod carrying a contact arm at its lower end adapted to complete the circuit to the motor when the rod is moved to the limit of its upward movement, to supply fluid to the tank, and said float actuated rod adapted to move to break the circuit to the motor when the fluid in the tank fills the tank.

---

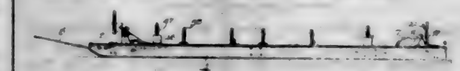
1,564,576. CLOTHESPIN MACHINE. HENRY J. KAHRS, New York, and CHRISTIAN BODRI and PETER E. SCHNEIDER, Richmond Hill, N. Y. Filed Feb. 12, 1925. Serial No. 8,684. 39 Claims. (Cl. 144—9.)



1. A clothespin machine comprising a centrally arranged saw for cutting a central kerf in clothespin blanks, a pair of stationary longitudinally extending saws for cutting reverse kerfs from the crotch of the center kerf down each leg of the clothespin, one of said pair of saws being arranged on each side of the plane of the said central saw, and a power-driven member for moving the clothespin blanks over said saws to produce the respective kerfs.

---

1,564,577. ROAD-SURFACING MACHINE. CLEMENT KELNHOFER, Medford, Wis. Filed Mar. 21, 1924. Serial No. 700,923. 5 Claims. (Cl. 37—145.)



1. A road surfacing machine comprising a frame including skid-like side members, transversely disposed brace bars arranged upon the frame, scraping blades extending diagonally and transversely of said frame, beams extending diagonally and transversely of the frame having certain of their ends hingedly connected to portions of the opposite side members of said frame and their remaining ends connected to the adjacent ends of the corresponding blades, means for effecting vertical adjustment of said blades throughout their lengths, and surface scarifying means mounted upon said frame forwardly of the blades.

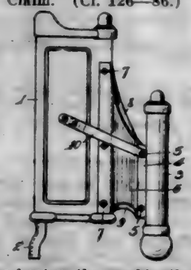
---

1,564,578. PATTERN FOR MARKING WALLS AND METHOD OF USING SAME. HENRY G. KENNEDY, Luxemburg, Mo. Filed Oct. 15, 1924. Serial No. 743,758. 8 Claims. (Cl. 25—123.)

1. A pattern for marking walls of stucco comprising upper and lower side longitudinal members, one or more intermediate longitudinal members, a plurality of cross members connecting each of said side longitudinal members intermediate its ends with one of said intermediate longitudinal members, an end member at each end of each side longitudinal member connecting said side longitudinal member with an adjacent intermediate longitudinal member, said longitudinal members and said cross members being connected to form open unobstructed spaces therebetween, the end members at the ends of each of said side longitudinal members having cross sections less than that of a whole cross member but the cross sections of the end members at the ends of one side longitudinal member being such that when put together they form a complete cross section of a cross member.

---

1,564,579. FRONT SUPPORT FOR GAS HEATERS. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 16, 1924. Serial No. 706,974. 1 Claim. (Cl. 126—86.)

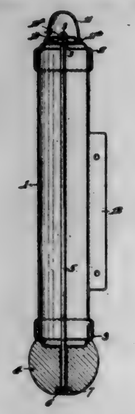


In a radiant gas heater, the combination with a heater body, of supporting pedestals located forwardly and laterally of and at a substantial distance from the front

corners of said body, said pedestals having vertical rearwardly-directed flanges, and vertically disposed sheet metal wings interposed between said pedestals and said body, each wing being bolted at one end to said flange and at its other end to the adjacent corner portion of said body, said wing having stiffening rolls formed thereon, and braces connecting said pedestals to the body and located rearwardly of and concealed by said wings, said braces relieving said wings from strain.

---

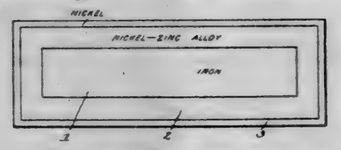
1,564,580. METALLIC POST FOR GAS HEATERS. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Apr. 17, 1924. Serial No. 707,034. 3 Claims. (Cl. 126—86.)



1. A post of the character described, comprising a tubular sheet metal body, caps mounted in seated relation to the opposite ends of said body, a ball-like foot disposed in underlying seated relation to the lower of said caps, a tie-rod directed axially through and securing the various recited members in rigidly assembled relation, and a hollow sheet-metal finishing knob having a disk-like base member threaded upon the upper end of said tie-rod.

---

1,564,581. ELECTROPLATING. WILLIS R. KING, Newark, N. J., assignor to The Hanson & Van Winkle Company, Newark, N. J., a Corporation of New Jersey. Filed May 3, 1924. Serial No. 710,796. 4 Claims. (Cl. 204—14.)

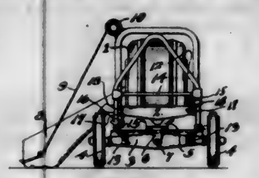


1. The method of electro-plating on corrodible metals, which comprises applying first a coating of nickel-zinc alloy and then depositing upon the latter an outside coating of nickel.

---

1,564,582. DRAFT AND BRACE MEANS FOR CONCRETE MIXERS. PHILIP A. KOEHRING, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis. Original application filed Apr. 5, 1924, Serial No. 704,454. Divided and this application filed June 8, 1925. Serial No. 35,677. 10 Claims. (Cl. 280—6.)

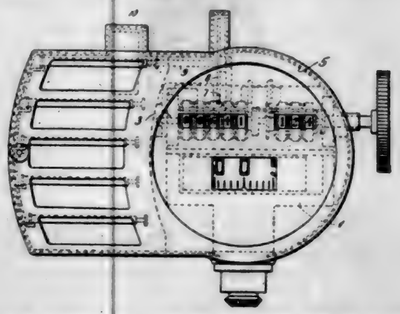
1. In a portable machine of the class described, a body frame, a supporting axle therefor, a connection between the middle of the axle and the body frame, and bracing means intermediate the body frame and the axle



comprising a bar pivoted to the axle and a stop carried by said bar and shiftable therewith into engagement with the body frame.

---

1,564,583. SIGNALING DEVICE. MICHEL V. KOUDRIAVZEFF and HIPPOLYTE ROMANOFF, New York, N. Y. Filed Jan. 24, 1920. Serial No. 358,744. 6 Claims. (Cl. 116—115.)

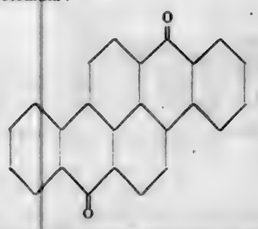


6. In combination with an odometer train, a visual signal including a movable target adapted to display or conceal said signal, means operative to move said target normally to display said signal, a spring operated catch for locking said target in position to conceal said signal, manually operable means for setting the same, and means operated by the odometer train for disengaging said catch, thereby moving said target to display said signal upon the completion of the odometer train of a predetermined mileage record.

---

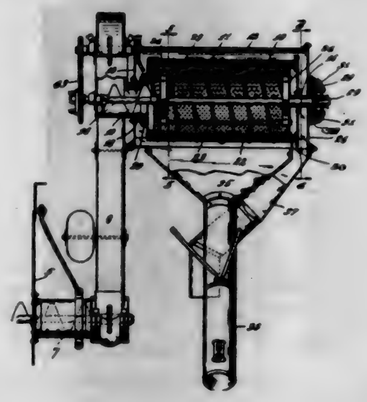
1,564,584. CONDENSATION PRODUCT OF THE ANTHRAQUINONE SERIES AND PROCESS OF MAKING SAME. GEORG KRÄNZLEIN, MARTIN CORELL, and ROBERT SEDLMAIR, Hochst-on-the-Main, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 27, 1923. Serial No. 665,225. 2 Claims. (Cl. 260—61.)

1. As new articles of manufacture the bodies possessing the general formula:



corresponding to a 3.4.8.9-dibenzopyrene-quinone, which may be substituted in any way, which bodies are by themselves valuable vat-dyestuffs and can be used as starting material for the preparation of new dyestuffs.

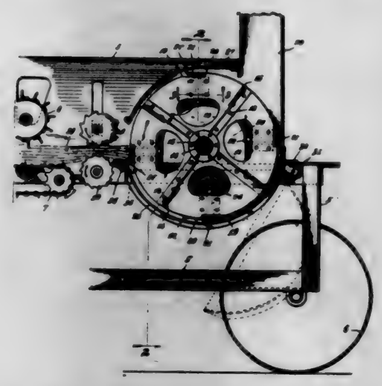
1,564,585. WEED SCREEN FOR THRASHING MACHINES. NORMAN R. KRAUSE, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed Sept. 5, 1924. Serial No. 736,161. 5 Claims. (Cl. 209—284.)



1. The combination, with an elevator, of a weed screen comprising a housing, a shaft therein extending to said elevator and having a spiral conveyor thereon extending from said elevator, an auger on said shaft co-operating with said spiral conveyor for propelling material, a screen drum surrounding said auger, and means independent of said auger for rotating said drum in a direction opposite to that of said auger.

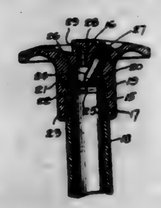
---

1,564,586. ENSILAGE CUTTER. NORMAN R. KRAUSE, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed May 16, 1925. Serial No. 30,714. 8 Claims. (Cl. 146—118.)



1. The combination, in an ensilage cutter, of a frame, material conveying mechanism associated with said frame, and a cutter comprising disks, cutting knives arranged transversely in relation to said disks, fan blades supported by said disks, a shaft upon which said cutter is mounted, and a casing enclosing said cutter and having a discharge outlet leading therefrom.

1,564,587. SPRINKLER HEAD. JOSEPH KREIZIGER, Los Angeles, Calif. Filed Nov. 26, 1924. Serial No. 752,408. 6 Claims. (Cl. 299—60.)

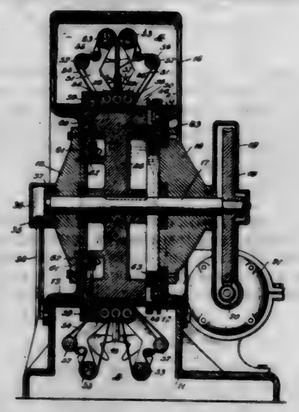


1. A sprinkler head comprising a body formed to provide a chamber, one wall of the chamber having an inlet port through which water under pressure from a source of supply enters the chamber, a discharge port communicating with the chamber and formed to project a fan shaped spray to one side of the head, and valved means adjustable in the body to control the passage of water through the inlet port in such manner that the water will be caused to strike the roof of the chamber and completely fill the latter before entering the discharge port, whereby the latter will be completely filled and project an evenly distributed spray.

5. A sprinkler head of the character described including a substantially flat head divided to form a spray section having a discharge port for projecting a fan shaped spray of water to one side of the head, and an adjusting section and valved means in said adjusting section operable from the top side of the head for controlling the discharge of water through said port so that the trajectory of the spray can be varied at will from the top side of the head while the sprinkler head is in operation.

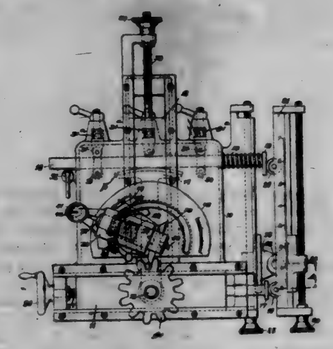
---

1,564,588. SAUSAGE-FORMING MACHINE. FERDINAND KRUSE, New York, N. Y., assignor of one-half to Henry Cohn, New York, N. Y. Filed Jan. 26, 1925. Serial No. 4,644. 16 Claims. (Cl. 17—34.)



1. In a sausage forming machine, a rotor, a crimping and twisting mechanism carried by said rotor and including a base, oppositely disposed and rockingly supported members carried by said base and movable toward and away from each other, twisting elements carried by said members, means for continuously operating said twisting elements, and coacting crimping elements also carried by said members and operable when the members are moved toward each other to crimp the sausage casing therebetween.

1,564,589. GEAR-TESTING MACHINE. JEAN LABSEMS, Arbon, Switzerland, assignor to Société Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Feb. 15, 1921. Serial No. 445,066. 48 Claims. (Cl. 73—51.)

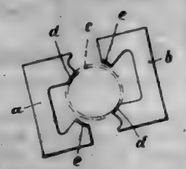


1. An apparatus for testing gears, including a support for the gear to be tested, a member having straight line back and forth movement in a plane at right angles to the axis of the gear support, a feeler carried thereby and adapted to engage a working face of a tooth of the gear held on said support, means for effecting a relative rolling movement of said feeler and said gear, and means acting on said member for holding said feeler in yielding engagement with the tooth face during said rolling movement.

1,564,590. PIE CLAMP AND JUICE RETAINER. CLARA B. LAMBERT, Pasadena, Calif. Filed June 27, 1925. Serial No. 40,005. 3 Claims. (Cl. 53—6.)

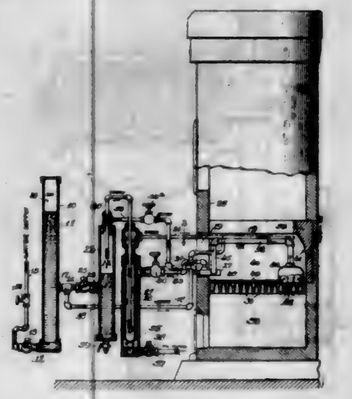
1. A device of the class described comprising a split ring having lapping ends, cross rods supported by said ring, and tubular members carried by said rods and adapted to be entered through the upper crust of a pie to permit bubbling of the juices into said tubes to prevent its overflowing.

1,564,591. METHOD OF MANUFACTURING BACK-CUT SCREW DIES MADE IN TWO PARTS WITH FOUR CHASERS OR CUTTING EDGES. ALBERT LANSCHE, Stuttgart, Germany. Filed June 9, 1924. Serial No. 718,876. 5 Claims. (Cl. 76—101.)



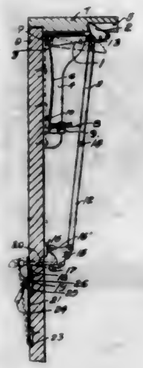
1. A method of manufacturing two part screw dies, each having a plurality of back cut chasers, consisting in the steps of simultaneously cutting a chaser of each part constituting a pair of chasers which are diametrically opposite.

1,564,592. OIL BURNER. HARRY W. LASTER, Oak Park, Ill., assignor of thirty-three and one-third per cent to John H. Byron, Chicago, Ill., and fifteen and two-thirds per cent to Michael J. Boyce, Oak Park, Ill. Filed Aug. 9, 1924. Serial No. 731,031. 25 Claims. (Cl. 158—4.5.)



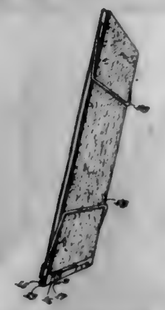
1. An oil burning apparatus including means for maintaining a column of water, air cushioning means for the water column, a nozzle, a heating coil leading from the water column to vaporize the water, a receiver also connected with said coil for maintaining a reserve supply or water, means automatically controlling the delivery of the water from the reserve supply to the heating coil, means for delivering vapor to the nozzle, means for delivering oil to the nozzle, and means for preheating the oil before it is delivered to the nozzle.

1,564,593. COMBINED LOCK AND LATCH. WILLIAM O. LAWRENCE, Spokane, Wash. Filed Mar. 22, 1924. Serial No. 700,989. 2 Claims. (Cl. 292—96.)



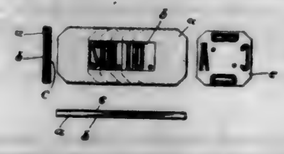
1. The combination of a casing, a normally closed spring pressed latch pivoted in the casing and operating mechanism at the inner side of a door comprising a pair of pivoted pull bars pivotally connected to the latch, a bell crank lever pivoted at one end of one of said bars, a link pivoted to said lever, an exterior pivoted hasp having a knob thereon and a shank on said hasp pivoted to said link, and means for locking said hasp.

1,564,594. BOOKREST. HAROLD M. LEE, Philadelphia, Pa. Filed Dec. 4, 1922. Serial No. 604,672. 4 Claims. (Cl. 120—28.)



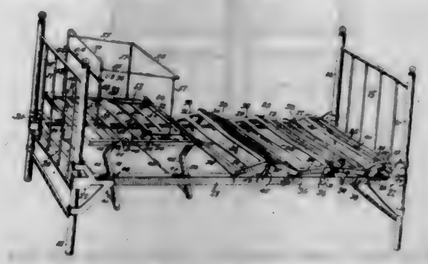
1. A folding book-rest comprising a base, a supporting flap pivotally secured to the base, a brace between the flap and base and a pivoted bail at the lower end of the flap adapted to fold and hold against the front of the flap or the back of the base.

1,564,595. ADVERTISING TABLET. EMIL LOHRER, Basel, Switzerland. Filed May 19, 1924. Serial No. 714,500. 4 Claims. (Cl. 40—28.)



1. Advertising tablet comprising an apertured envelope and a plurality of polygonal slides of equal size adapted to be removably inserted in said envelope in overlapping position and in such manner that at least two edges of each slide engage the inner walls of the envelope, said slides being provided with indications placed near their edges so as to bring the indications near the edges of two or more slides in registry with the aperture in said envelope and to expose said indications in said aperture.

1,564,596. ORTHOPEDIC BED. HORACE LO GRASSO, Perrysburg, N. Y. Filed Aug. 7, 1922. Serial No. 580,068. 5 Claims. (Cl. 5—66.)

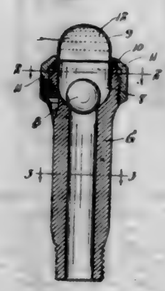


1. An orthopedic bed comprising a frame, and a floor having a plurality of sections arranged in a longitudinal row and pivotally connected with each other by transverse pivots so that the several sections form in effect the links of a chain, said frame being provided with adjusting pins, and adjusting arms extending from said pivots downwardly and each provided with a longitudinal row of hooks adapted to engage one of said pins.

1,564,597. HORSESHOE-PITCHING GAME. CARL C. P. LUND, Oakfield, Wis. Filed Aug. 25, 1925. Serial No. 52,428. 5 Claims. (Cl. 273—101.)

1. A game apparatus of the character described including a base, a supporting member mounted upon the base, a skeletonic shank extending through the supporting member and having a handle at its rear end whereby it may be retracted, a spring disposed within the hollow shank bearing at one end against the shank and at the other end against the supporting member and urging the shank outward, and a piece suporting plate mounted upon the forward extremity of the shank and having an upturned flange at its rear end and open at its front end.

1,564,598. NOZZLE FOR MILK-CAN CLEANERS. DERRICK A. MAASEM, Minneapolis, Minn. Filed Aug. 28, 1924. Serial No. 734,649. 4 Claims. (Cl. 299—144.)

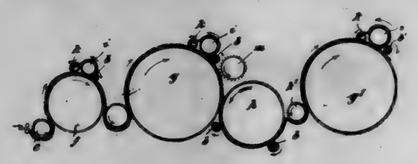


1. A nozzle having in combination, a body having a chamber in its upper end, a passage leading downwardly from said chamber, a ball loosely disposed in said chamber adapted to seat at the top of said passage and close the same, the top of said body having a downwardly and outwardly beveled surface, a hollow cylindrical spray head of thin sheet material having a semispherical top with a multiplicity of holes therethrough above said body and having an outwardly and downwardly inclined flange adapted to seat on said beveled surface, and a flanged collar threaded on said body and clamping said flange against said beveled surface.

1,564,599. PROCESS FOR PRESERVING FRUITS. JOHN G. MAGAW and ADDISON SHERMAN MAGAW, Lakewood, Ohio. Filed July 8, 1925. Serial No. 42,308. 1 Claim. (Cl. 99—8.)

A process of preserving perishable fruits and berries without the addition of extraneous water, consisting in adding to the fruits a substantial quantity of dextrose, in subjecting the mixed fruits and dextrose to a freezing temperature to freeze the mixture and in maintaining the same after it is frozen at substantialy a zero temperature until ready for use to preserve the fruits and to maintain their original color without changing their other physical characteristics.

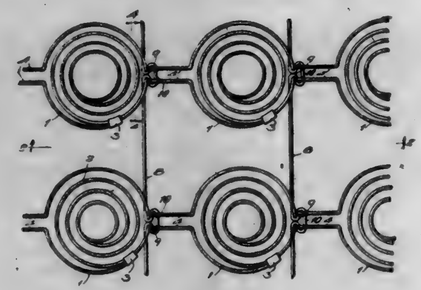
1,564,600. METHOD OF CARDING TEXTILE FIBERS AND APPARATUS THEREFOR. HERMANN MALY, Guben, Germany. Filed July 17, 1923. Serial No. 652,134. 4 Claims. (Cl. 19—100.)



1. Method of improving the product of carding engines consisting in smoothing and condensing the fibers adhering to a working roller prior to the removal of the fibers from said roller.

---

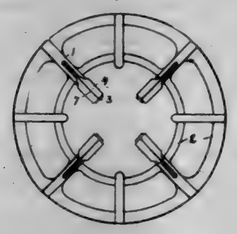
1,564,601. SPRING STRUCTURE. MICHAEL R. MANGAN, Chicago, Ill. Filed Mar. 12, 1923. Serial No. 624,425. 6 Claims. (Cl. 5—272.)



1. A spring structure comprising adjacent links, each having downwardly extending offsets at diametrically opposed ends thereof, one of said offset portions being of lesser width and depth than the other, and a tie rod interconnected with the adjacent links when said links are arranged with the smaller offset portion of one within the larger offset portion of the other so as to prevent separation of said links but permit their vertical pivoting movement.

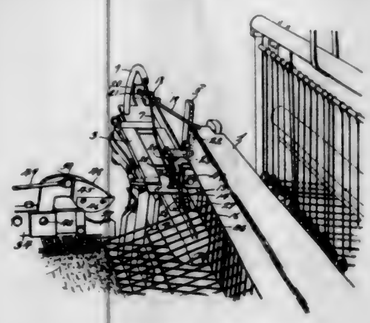
---

1,564,602. ATTACHMENT FOR STOVE-LID GRILLS. BRUNO MARTIN, Saginaw, Mich. Filed June 22, 1925. Serial No. 38,808. 1 Claim. (Cl. 126—215.)



An attachment for the fingers of stove lid grills comprising a body formed with an aperture to receive said finger, an upwardly projecting ridge extending longitudinally along said body and projecting beyond said body and above said finger, and clamping means for releasably securing said body to said finger.

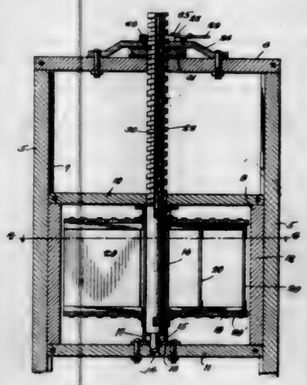
1,564,603. LOOM. JOHN GORDON MARTIN, La Porte, Ind., assignor to Kumfy Kab Company, La Porte, Ind., a Corporation of Indiana. Filed Jan. 5, 1924. Serial No. 684,586. 11 Claims. (Cl. 139—126.)



1. The combination with oppositely disposed shuttle boxes of a loom, a shuttle movable from one shuttle box to the other and adapted to grip and carry cord from one shuttle box to the other, a cord gripping device carried by the shuttle, of means carried by the shuttle boxes for normally holding the cord out of operative relation to the gripping device when the shuttle enters the boxes and in operative relation to the gripping device when the shuttle leaves the boxes, picker sticks for projecting said shuttle from one box to the other, said last named means being controlled by the picker sticks.

---

1,564,604. WATER WHEEL. MILES L. MARTIN, Bainbridge, Ga., assignor of one-third to Chas. S. Hodges and one-third to Thomas W. Jester, both of Bainbridge, Ga. Filed June 12, 1925. Serial No. 36,692. 2 Claims. (Cl. 170—117.)



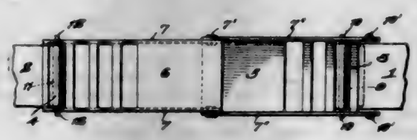
1. A water motor including a frame having side bars formed with guideways, a wheel housing having ribs adapted to move through the guideways, a shaft having a threaded portion mounted for rotation in the frame, a water wheel mounted at the lower end of the shaft, and a sectional nut adapted to be moved into engagement with the threaded portion of the shaft to cause the shaft and water wheel to move upwardly when the wheel is rotated.

1,564,605. ATTACHMENT FOR WASHING MACHINES. DALLAS R. MATTHEWS, Cincinnati, Ohio. Filed Feb. 14, 1925. Serial No. 9,171. 4 Claims. (Cl. 68—18.)

1. An attachment for cylinder type washing machines including a tub equipped with bearings, a cylinder having terminal pintles mounted in said bearings, a saddle mounted in said tub the ends of which embrace the pintles, and means movable through the bottom of the tub and engageable with said saddle for elevating the cylinder to the top of the tub.

---

1,564,606. WRIST-WATCH STRAP. CHARLES A. MEALY, Providence, R. I., assignor to The Hadley Company, Providence, R. I. Filed July 15, 1925. Serial No. 43,796. 3 Claims. (Cl. 24—71.)



3. In a wrist watch strap, a pair of straps, a pair of connector sections hinged together at their inner ends and connected to the respective straps at their outer ends, keepers on one section and a pin securing the strap of the other section thereto and formed to snap into the keepers.

---

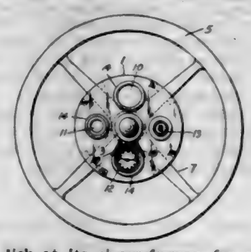
1,564,607. TOE SLIPPER. GENEVIEVE MEIER, Chicago, Ill. Filed July 2, 1923. Serial No. 649,116. 5 Claims. (Cl. 36—1.)

1. A slipper for toe dancers having a resilient toe cap for cushioning the thrust when the weight of the dancer is supported by said toe cap.

---

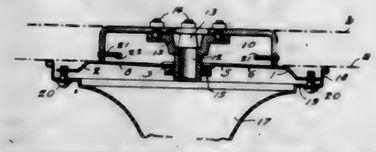
1,564,608. STEERING-WHEEL ATTACHMENT. THURSTON W. MOORE, Oakland, Calif. Filed Mar. 11, 1925. Serial No. 14,766. 5 Claims. (Cl. 224—29.)

1. In a device of the class described, a disk having a central opening adapted to be received over the head of the steering column of a vehicle for mounting the disk upon the steering wheel; and means secured to the underside of the disk at its circumference for attaching the disk to the steering wheel, the said means not being visible from the top side of the disk.



---

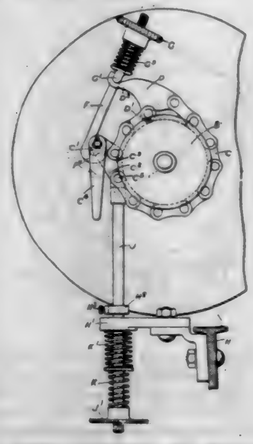
1,564,609. ADJUSTABLE FIXTURE STRAP. JOSEPH MORGENSTERN, Cleveland, Ohio. Filed Jan. 5, 1924. Serial No. 684,527. 2 Claims. (Cl. 240—85.)



1. An adjustable fixture strap comprising a receiving member and an entering member, the receiving member having flanges turned over and inwardly from its lateral edges to form channels into which the entering member is adapted to be inserted, the inner ends of the members having relatively deep notches which form an opening for a fixture stud when said members are assembled, each member having a slot beyond and in substantially axial alignment with said opening, the said members incorporating means for attaching a fixture to the strap.

---

1,564,610. TENSION MECHANISM FOR WARP BEAMS. THOMAS MOUNSEY and ROBERT BAGWELL, Preston, England. Filed Aug. 29, 1924. Serial No. 735,011. 4 Claims. (Cl. 139—100.)

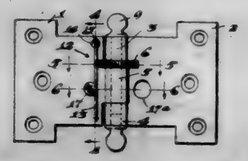


1. In a tension mechanism for the warp beams of looms, the combination of a warp beam, a friction drum on the end of the warp beam having a cylindrical bearing surface, two parallel chains wrapped around the

drum, the links of said chains having curved surfaces adapted to bear on said cylindrical surface, a bridge piece connecting the ends of said chains, a spring acting on said bridge piece and tending solely to draw the two ends of the chains together about the drum, means for varying the effective force of this spring, means for releasing the tension of the band about the drum independently of the spring-adjusting means, a rod connected at one end to some convenient point in the band, a spring interposed between the other end of the rod and some relatively stationary part of the loom, and means for varying the effective force of this spring.

---

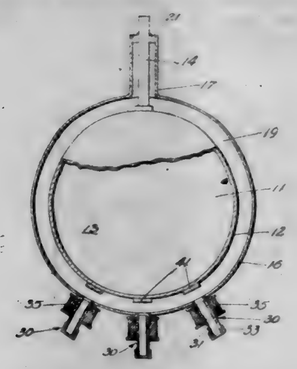
1,564,611. HINGE. HOWARD S. MOUNTFORD and ELIJAH A. OVENSHIRE, Los Angeles, Calif.; said Mountford assignor of his entire right to James Francis Hood, Los Angeles, Calif. Filed Oct. 13, 1922. Serial No. 594,353. 4 Claims. (Cl. 16—142.)



3. Two hinge leaves having bearings, a hinge pin connecting the bearings, a friction disc upon the hinge pin and rigid with one leaf, a spring connected at one end to the other leaf and engaging the disc, and a bevel-headed screw tapped into the last leaf and engaging the spring at a point spaced from the disc to vary the tension of the spring against the disc.

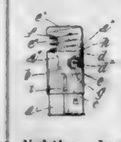
---

1,564,612. LIQUID-OXYGEN CONTAINER WITH CONTROLLED BOILING RATE. CHESTER MOTT, Los Angeles, Calif., assignor, by mesne assignments, to Purox Company, Denver, Colo., a Corporation of Colorado. Filed Nov. 18, 1924. Serial No. 750,560. 10 Claims. (Cl. 219—47.)



6. In a container for liquid gases, the combination of: an inner shell; an outer shell, said outer shell providing an evacuated insulating space around said inner shell; a plurality of units for supplying heat through said evacuated space, said units each comprising a bridge, a tube into which said bridge is arranged to rest, a solenoid coil for moving said bridge into contact with said inner shell and for heating said bridge; and means for selectively energizing said solenoid coils.

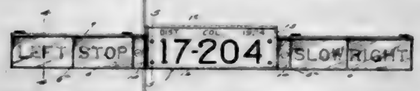
1,564,613. LIGHTING APPARATUS. LOUIS AUGUSTE NEVIÈRE, Artannes, France. Filed June 20, 1922. Serial No. 569,631. 3 Claims. (Cl. 67—7.1.)



1. An automatic lighting device comprising a two-part telescopic casing, each part having a cut-away portion at one edge adapted to provide aligned apertures when said two parts are moved one into the other, said apertures being separated when said two parts are separated, a wick located in one of said parts and ignition means for said wick adapted to be operated by the relative movements of said two parts when one of said two parts is moved into the other, the said two parts of said casing having additional openings below said wick and adapted to be aligned when the said apertures are aligned.

---

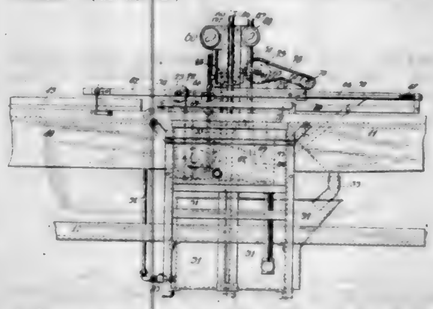
1,564,614. SIGNAL FOR MOTOR VEHICLES. THOMAS E. OGRAM, Washington, D. C. Filed Mar. 31, 1924. Serial No. 703,228. 1 Claim. (Cl. 177,329.)



In combination, an elongated bar of substantially L-shape in cross section, means for securing a license plate number to the central portion of the back wall of said bar, and front, top and partition walls carried by said L-shaped bar and forming a plurality of aligned compartments on each side of said license plate, the compartments adjacent the number plate having red translucent rear portions, and clear transparent portions facing the number plate space, the remaining compartments having their rear walls provided with colored light transmitting portions, and illuminating means in all of said compartments.

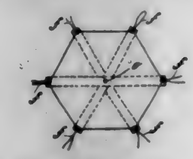
---

1,564,615. EGG-TREATING DEVICE. CARL G. OLSEN, Chicago, Ill., assignor to Victor Clairemont, Chicago, Ill. Filed Jan. 2, 1924. Serial No. 683,904. 11 Claims. (Cl. 99—2.)



1. In an egg-treating machine of the character described, the combination of walls forming an open-top treating chamber, a holder for a tray of eggs mounted to move up and down in said chamber, and means for continuously moving up and down said holder in said chamber including a member adjustable to vary the period during which the tray of eggs will remain immersed in the treating liquid.

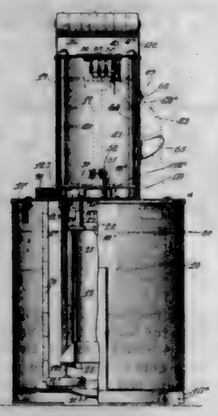
1,564,616. ASSEMBLING FRAME FOR COVERED STRUCTURES. SOPHOCLES XENOPHON PANTHOS, known as Sophocles X. Pantcheff, Kinross, England. Filed Feb. 24, 1923. Serial No. 621,063. 1 Claim. (Cl. 244—22.)



In a kite, in combination, a frame comprising a plurality of sticks adapted to have a radiating crossing relation, slits at the end of said sticks to receive a binding cord, a medial cavity at the end of said sticks to receive a knot in the binding cord, a multi-sided cover for said frame, a cord binder on the periphery of said cover exposed at the corners of the said cover, said binding cord having knots and projecting portions or ends, the said cord lying in the slots at the ends of the sticks and said knots lying in the medial cavities, said projecting portions or ends of the binding cord forming means whereby the said binding cord can be pulled over into position on the sticks.

---

1,564,617. DISPENSING APPARATUS FOR LIQUIDS. BYRON J. PEPPER, Fort Wayne, Ind., assignor to S. F. Bowser & Co., Inc., a Corporation of Indiana. Filed May 11, 1921. Serial No. 468,619. 13 Claims. (Cl. 221—80.)



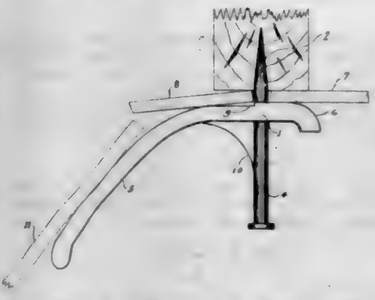
1. In a liquid dispensing apparatus, the combination with a container, of a pumping device mounted on the container, a supplemental housing for enclosing parts of the pumping device, a flexible conduit for dispensing liquids from the pumping device, a nozzle on the free end of the flexible conduit having a discharge end deflected out of the axial line of the nozzle body, there being an opening in the vertical wall of the pump housing adapted to receive the deflected end of the nozzle, and means comprising a spring clip to support the nozzle in relation to said pump housing when the dispensing apparatus is not in use.

2. In a liquid dispensing apparatus, the combination with a pump barrel and a pump piston therein, said pump barrel and piston being adapted to dispense a fixed or predetermined quantity of liquid in a fixed or predetermined cycle of movement of the piston, means for operating said piston, means actuated by said piston operating means for indicating the quantity of liquid dispensed by said apparatus, and controlling means whereby said piston will be automatically locked against any manner or sequence of movement by said operating means except in accordance with said fixed or predetermined cycle of movement thereof, and whereby accuracy of said quantity indicating means will be assured, said controlling means comprising a pivotally mounted perforated plate adapted to loosely surround a rod operably connected with the piston.

12. In a liquid dispensing apparatus, the combination with a portable liquid container of a pump barrel on the interior of the container, a piston in said pump barrel, a piston rod, means adapted to be actuated by the foot of an operator for actuating the piston rod in the downward direction, and spring means positioned on the opposite sides of said piston for actuating the piston rod in the opposite direction.

---

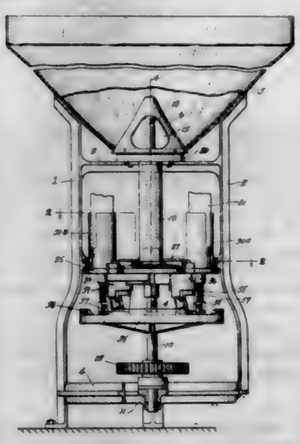
1,564,618. TOOL. ELMER L. PETSING, Buffalo, N. Y., assignor to The Beaver Products Company, Inc., a Corporation of New York. Filed Feb. 7, 1925. Serial No. 7,693. 5 Claims. (Cl. 81—3.)



1. A wall-board tool comprising a head provided with a pointed projection, a driving head diametrically opposite said projection, an arcuate guide extending from the head at substantially right angles to the driving head and a curved stop extending from the head diametrically opposite the guide.

---

1,564,619. CAP-SORTING MACHINE. HAROLD R. PINKERTON, Yakima, Wash. Filed July 31, 1923. Serial No. 654,814. Renewed May 7, 1925. 11 Claims. (Cl. 209—91.)

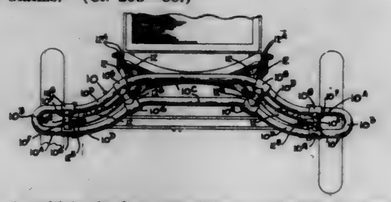


1. A cap sorting machine of the character described, comprising a receiving hopper, a transfer table, a plurality of tube holders, cap receiving tubes removably

supported in said holders, means for feeding caps from the hopper onto the transfer table, a transfer mechanism operable to advance all caps that are delivered onto the table top side up into certain of said tube holders and all caps delivered bottom side up into the other of said holders and means for advancing the caps from said holders into the said tubes.

---

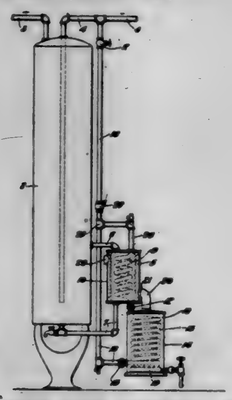
1,564,620. VEHICLE FENDER. JOHN PODMAJERSKY, Chicago, Ill. Filed July 18, 1924. Serial No. 726,715. 7 Claims. (Cl. 293—55.)



1. A vehicle fender comprising an abutment member, and resilient supports for said member, said member comprising a continuous tubular member, forming substantially a pair of parallel sections, the central or intermediate portions of said sections being bent upwardly out of lateral alignment with the end portions of said sections.

---

1,564,621. WATER HEATER. WALTER R. POWERS, Wildwood, Pa. Filed Apr. 29, 1924. Serial No. 709,895. 7 Claims. (Cl. 122—32.)

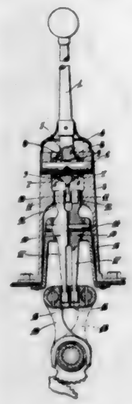


1. A water heating system comprising a heat exchanging tank having hollow side walls forming a surrounding air space, a heating coil in said tank adapted to contain a quantity of fluid, water inlet and outlet pipes communicating with the opposite ends of said tank to provide for a circulation of water through said tank, a second coil having its upper end connected to the lower end of said first named coil, suitable piping connecting the lower end of said last named coil to the upper end of said first named coil to form a closed circulating system, a casing enclosing said last named coil, a suitable source of heat within said casing adapted to heat the fluid in said last named coil, and means for conducting heated air from within said casing to said air space in the side walls of said heat exchanging tank.

---

1,564,622. GEAR-SHIFT MECHANISM. PERCY R. PROSSER, Pasadena, Calif. Filed May 20, 1925. Serial No. 31,613. 4 Claims. (Cl. 74—89.)

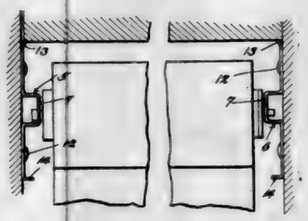
1. In a device of the class described, the combination of a casting having a pair of guide slots formed therein, an intermediate dividing partition between the said slots and having a central passage therethrough, a shift lever adapted to move in each slot and presenting a pocket



within the said slot, and a control lever adapted to be engaged in the said pocket of either of said shift levers to actuate the same.

---

1,564,623. SHADE BRACKET. WILLIAM H. RAMSEY, St. Paul, Minn. Filed July 5, 1924. Serial No. 724,448. 1 Claim. (Cl. 156—24.)



A curtain shade bracket comprising a body portion formed of a length of sheet metal having parallel side edges throughout the length thereof, the upper end of the body portion being curved outwardly to provide a stop, the lower end of said body portion extending outwardly and defining a step, and an offset central portion formed with an opening to provide a support.

---

1,564,624. BASKET-BALL VALVE. GEORGE M. RILEY, Aurora, Ill. Filed July 6, 1922. Serial No. 573,133. 1 Claim. (Cl. 251—121.)

A valve member comprising a body portion and a head, said body portion being threaded throughout its length and having a bore extending therethrough, the outer end of the bore being enlarged and threaded, the inner end of the bore, being enlarged and constructed to provide an enlarged opening, and a contracted portion, said contracted portion adapted to accommodate a ball valve in a manner to restrict lateral movement of the ball valve, a guard positioned at one end of the bore and having a central bar providing a rest for the ball valve, and means operating over the threaded portion of the body to cooperate with the head for clamping the valve body in position, and a removable plug positioned in the threaded portion of the bore.

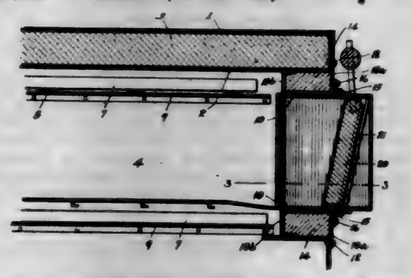
---

1,564,625. WATERPROOF PLASTER BOARD AND METHOD OF PRODUCING SAME. CARLETON P. RITCHIE, Los Angeles, Calif., assignor to Klinch-Lath Corporation, Los Angeles, Calif., a Corporation of California. Filed Jan. 9, 1924. Serial No. 685,199. 5 Claims. (Cl. 154—2.)

1. A method of producing a waterproof plaster board which comprises: preparing a paper partially saturated with a waterproof substance, one surface of said paper being initially free from said substance; preparing a plaster board in which said untreated surface is in contact with the plaster which adheres readily thereto; and thereafter treating said plaster board to cause said waterproof substance to spread through said paper.

---

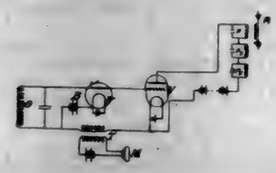
1,564,626. ELECTRIC BAKE OVEN. ALLEN R. ROSS, Seattle, Wash. Filed Sept. 10, 1924. Serial No. 736,955. 4 Claims. (Cl. 107—65.)



1. An oven of the class described having a wall opening, a door frame located in the opening and providing spaces between the frame and edges of the opening through which heating elements for the oven may be removed or inserted and closure members removably fitted in said spaces.

---

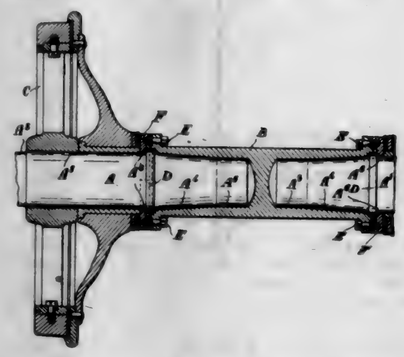
1,564,627. WIRELESS TELEGRAPH AND TELEPHONE TRANSMISSION. HENRY JOSEPH ROUND, London, England, assignor to The Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 31, 1920. Serial No. 370,174. 8 Claims. (Cl. 250—6.)



1. The method of wireless transmission which consists in applying to a thermionic valve a rapidly fluctuating voltage of square wave form and absorbing outside the device the energy developed in harmonics of the fundamental frequency.

---

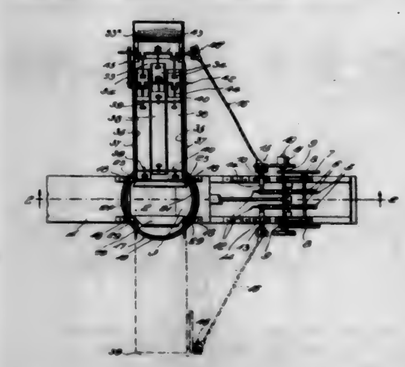
1,564,628. AXLE FOR RAILWAY AND LIKE VEHICLES. JOHN JONES ROWE, Durban, Natal, South Africa, assignor to The Rowe Wheel (Parent Syndicate) Limited, Durban, Natal, South Africa. Filed May 10, 1924. Serial No. 712,254. 1 Claim. (Cl. 295—9.)



An axle for railway and like vehicles comprising two independently rotatable portions each of said rotatable portions being tapered smaller away from the vehicle wheel for a part of its length, a fixed collar on each of said rotatable portions, a two-part flanged collar secured on the outer or wheel side of the collar on each of said rotatable portions and a sheath or coupling mounted on the inner sides of the said fixed collars on the rotatable portions and rigidly secured at each end to the said two-part flanged collars, said sheath or coupling having a reinforcing central web or partition so as to form a pocket or recess on each side of said partition adapted to receive one of the independently rotatable portions of the axle.

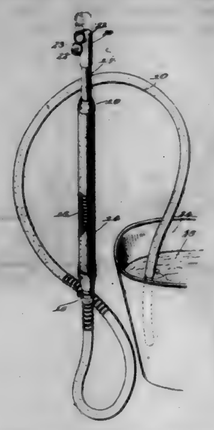
---

1,564,629. BALING-PRESS FEEDER. WILLIAM CHESTER RUTH, Gap, Pa., assignor of one-half to Howard L. Rutter, Gap, Pa. Filed Oct. 3, 1924. Serial No. 741,373. 3 Claims. (Cl. 100—25.)



3. An attachment for a baling press comprising an annular track adapted to be secured upon the inlet throat of a baling press in a horizontal position, a ring disposed slidably within said track, a feeder-carrying frame having a horizontal portion resting on said track and secured to said ring, and vertical bars at the inner side of said ring and secured with respect thereto, the lower end of said bars having lugs underlying the track to prevent upward movement of the ring.

1,564,630. SIPHON. ROBERT SAA, Vallejo, Calif. Filed Feb. 21, 1923. Serial No. 620,516. 4 Claims. (Cl. 137—20.)



1. A siphon comprising a flexible tubular member having an inlet end portion, an intermediate longitudinally distensible section, and means within said section adapted to maintain constant its interior diameter, and an outlet end discharge nozzle having a one-way flap valve adapted to form a closure for said discharge nozzle, for the purpose set forth.

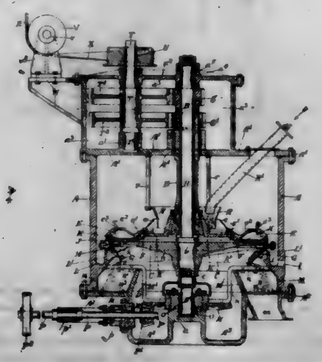
---

1,564,631. PROCESS OF MAKING DERIVATIVES OF HYPOTHETICAL IMINES INCLUDING AMINES AND THEIR SUBSTITUTION PRODUCTS. KARL FRIEDRICH SCHMIDT, Heidelberg, Germany. Filed May 8, 1925. Serial No. 28,962. 5 Claims. (Cl. 260—127.)

1. The process of making derivatives of hypothetical imines including amines and their substitution products, characterized in that organic compounds of the hydrocarbon type are treated with hydrazoic acid in the presence of concentrated mineral acids.

---

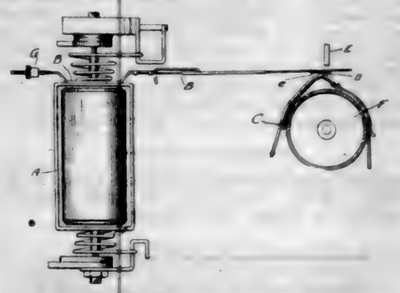
1,564,632. CENTRIFUGAL SEPARATOR. GEORGE RICHARD SCHUELER, Kingston-upon-Hull, England. Filed Sept. 27, 1923. Serial No. 665,089. 8 Claims. (Cl. 210—69.)



1. In a centrifugal separator, a rotary distributing plate, a rotary separating device arranged over the distributing plate and provided at its inner portion with a receiving chamber for the material which delivers the material onto the inner portion of the top of the distributing plate, said separating device having also an annular chamber arranged at its outer portion between its receiving chamber and its periphery and provided at its top with separating holes for liquid and having its bottom formed by the said distributing plate, said separating device having also an imperforate and downwardly projecting peripheral portion spaced apart from the periphery of the distributing plate and forming with it an annular discharge outlet for solid matter, and separate driving devices operating to rotate the said distributing plate and separating device independently of each other.

---

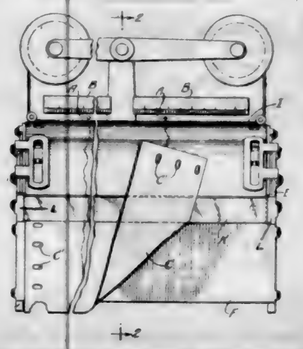
1,564,633. METER POINTER. FREDERICK W. SIDE, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1925. Serial No. 21,572. 5 Claims. (Cl. 234—5.5.)



3. A meter pointer adapted for use in a recording meter of the pointer depressing type comprising a body portion adapted to be secured to the movable element of the meter, a separate pointer part formed of aluminum and constituting the free end portion of the pointer, a spring forming a hinge connection between said body and said part, and means for damping vibrations of said hinge connection comprising a projection from said body part engaging a portion of the pointer nearer its free end than the connection between said spring and body part.

---

1,564,634. RECORDING INSTRUMENT. FREDERICK W. SIDE, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1925. Serial No. 24,072. 2 Claims. (Cl. 234—1.)

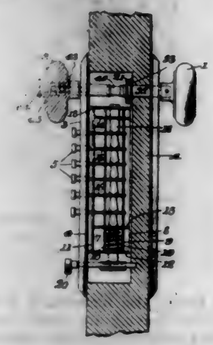


2. In a recording instrument comprising a record marker, and means for supporting a record strip and feeding it past said marker including a supporting surface in advance of said marker, the improvement which

consists in a glass bar spaced away from said surface to provide for the passage of the record strip between it and said surface and against the edge of which the portion of the record strip which has passed through said space may be pulled to sever the strip along its line of contact with said edge.

---

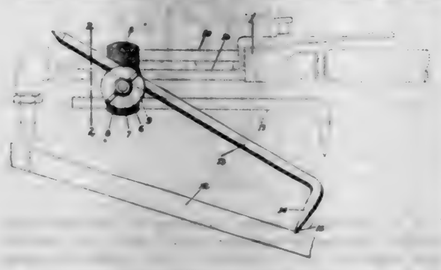
1,564,635. LOCK. HURLEY H. SMITH, Elkhart, Ind. Filed Mar. 31, 1924. Serial No. 703,173. 6 Claims. (Cl. 70—54.)



1. Locking mechanism for doors comprising an inner knob and spindle therefor, a fixed plate, a sliding plate adjacent thereto, said spindle passing through both plates, a transverse pin in said spindle, means on said sliding plate engaged by said pin when the spindle is turned, a door bolt, means connecting the fixed plate to the door bolt and pivoted to both, and means operated by the sliding plate and engaging said connecting means.

---

1,564,636. TRAMMEL FOR CUTTING TORCHES. MARSTON J. SMITH, Stockton, Calif. Filed May 16, 1925. Serial No. 30,728. 3 Claims. (Cl. 266—23.)



1. A trammel mechanism for cutting torches comprising a clamp block for attachment to a torch, one face of the block being flat, a collar turnably mounted on the block and having a transverse slot in the face thereof adjacent said block, and a centering rod to fit the slot and of a diameter greater than the depth of the slot whereby said rod will bear against the adjacent faces of the block; there being means between the collar and block for clamping the rod therebetween.

---

1,564,637. APPARATUS FOR FORMING CREAM CENTERS. CHARLES RANNEY SNYDER, Columbus, Ohio. Filed June 20, 1923. Serial No. 646,498. 8 Claims. (Cl. 107—29.)

1. In a machine for forming candy, a hopper having a perforate bottom, a press for forcing candy stock through the perforations in said bottom, a horisontal frame arranged beneath the perforate bottom, spaced electrically heated wires carried by said frame, means for effecting relative movement between said frame and said bottom so that said electrically heated wires may sever the candy stock protruding to the openings in the

bottom of said hopper, and means cooperative with said frame and said severing wires for automatically maintaining said wires in a substantially taut condition irrespective of the variable temperatures thereof.

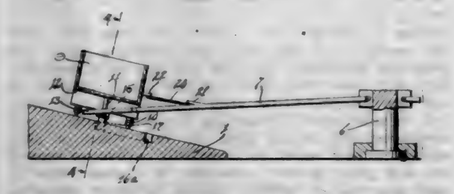
---

1,564,638. SIFTER. CHARLOTTE M. STANTON, Des Moines, Iowa; Barclay Stanton administrator of the said Charlotte M. Stanton, deceased. Filed Oct. 13, 1922. Serial No. 594,251. 3 Claims. (Cl. 209—403.)

1. An improved sifter comprising a receptacle, two screen supports each formed of wire netting and designed to be inserted in the receptacle on opposite sides thereof, means for detachably securing them to the receptacle, and a series of screens formed completely of a single piece of screen wire netting attached at one end to one of the screen supports, extended across the receptacle and attached to the other screen support, and then extended downwardly a short distance and then again across the receptacle to the first screen support and attached thereto, and so on throughout its entire length, substantially as and for the purposes stated.

---

1,564,639. AMUSEMENT DEVICE. ANTON A. STAVICK, Sioux City, Iowa. Filed Jan. 12, 1925. Serial No. 1,980. 1 Claim. (Cl. 272—44.)

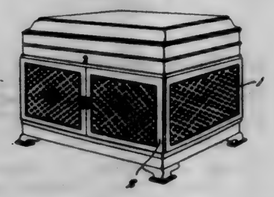


An amusement device of the character described comprising a substantially annular platform having a supporting surface, said supporting surface having gradually rising and falling portions and alternate portions inclined toward the center of the annulus and away from the center of the annulus, said supporting surface having a laterally convoluted recess extending throughout the entire circumference of the annular platform and endless, a plurality of cars disposed upon the platform and having members engaging with the recess in the platform, and means for moving the cars along the platform whereby the cars may rise and fall, incline toward the center of the annular platform alternately, and

whereby the cars are moved bodily toward and away from the center of the platform as the car is moved therealong by virtue of the convoluted surface and the recess therein.

---

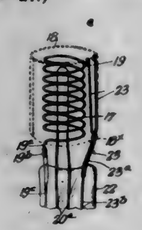
1,564,640. PHONOGRAPH HAVING A CASKET-LIKE CASING. KURT STILLE, Berlin-Zehlendorf, Germany. Filed Apr. 3, 1922. Serial No. 548,917. 1 Claim. (Cl. 274—2.)



A phonograph having all the parts thereof, including the movable parts, the tone arm and the amplifier, enclosed in a single casing having a substantially unperforated top and, the said casing being sufficiently perforated throughout the rest thereof to substantially obviate any reaction between the various sounds produced, and the walls of the said casing.

---

1,564,641. DETECTOR FOR WIRELESS SYSTEMS. ROBERT T. ST. JAMES, Chicago, Ill., assignor to Chicago Miniature Lamp Works, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1922. Serial No. 551,149. 2 Claims. (Cl. 250—27.)



1. In a detector comprising an exhausted vessel, the two main electrodes therein, and a control electrode intermediate the said main electrodes, an insulating sealing plug for said vessel containing the conductors leading to said electrodes, a short metal tube sealed with one conductor in said plug and projecting above said plug, and the control electrode having a stem depending into said metal tube, said tube providing a support for and being secured to the stem of said control electrode.

2. In a detector including an exhausted vessel, a conductor-carrying sealing plug for said vessel, a plate element in said vessel, an electrically conductive support for said plate element, consisting of a stem sealed in said plug and of laterally spaced, upwardly extending prongs attached to said plate element near its top, the plate element having a tongue formed at its bottom edge and bent about said stem.

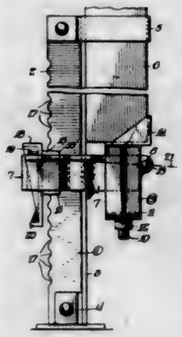
---

1,564,642. SHORE. ARTHUR H. SYMONS, Chicago, Ill., assignor to Symons Clamp & Mfg. Co., Chicago, Ill., a Corporation of Delaware. Filed July 20, 1922. Serial No. 576,218. 15 Claims. (Cl. 254—100.)

1. A shore comprising supporting means, a slide, and holding and adjusting means for said slide, said holding and adjusting means comprising means permitting the ready movement of said slide in one direction but opposing movement of said slide in the opposite direction, said holding and gripping means including screw-threaded means for adjusting the position of said slide, said holding and gripping means also including a gravity responsive wedging member having its larger portion uppermost for controlling movement in said opposite direction.

---

1,564,643. SHORE. ARTHUR H. SYMONS, Chicago, Ill. Filed Aug. 16, 1924. Serial No. 732,359. 15 Claims. (Cl. 254—100.)

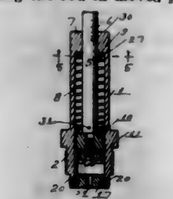


1. An extensible shore, including a structural steel member and an elongated timber, means for receiving and supporting one extremity of said timber, a carrying member for said means, and adjustment means for varying the relative positions of said carrying member and said first mentioned means, said carrying member being provided with mechanism having hanging relationship with said structural steel member and a tapered member having its smaller dimension lowermost for locking said carrying member in a predetermined angular position relative to said structural steel member.

---

1,564,644. PRESSURE GAUGE. NOLAN J. TAYLOR, Wyoming Township, Kent County, Mich. Filed Apr. 28, 1924. Serial No. 709,454. 1 Claim. (Cl. 73—111.)

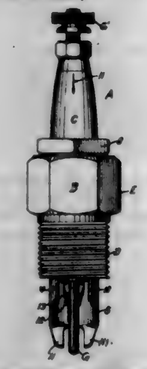
A device of the character described comprising: a hollow cylindrical body threaded at its inner end for detachable connection within the spark-plug opening in an internal-combustion engine; an indicator rod movable longitudinally in said body by pressure within the engine and extending through the outer end thereof; a spring yieldingly resisting said pressure; means within said body and intermediate its inner end and the inner end of the rod for confining the expansive fluid from said engine to move the rod outwardly; a spring for yieldingly holding the rod in moved position, surrounding



the rod and having a middle curved portion extending through an arc of at least 180 degrees bearing on the inner surface of said body and end portions bent toward the rod and then concentrically with said middle portion and bearing on the opposite sides of the rod.

---

1,564,645. SPARK PLUG. JESSE M. THOMAS, Pine Lawn, Mo., assignor of one-third to William D. Gruelle, St. Louis, Mo. Filed Nov. 30, 1923. Serial No. 677,678. 6 Claims. (Cl. 123—169.)



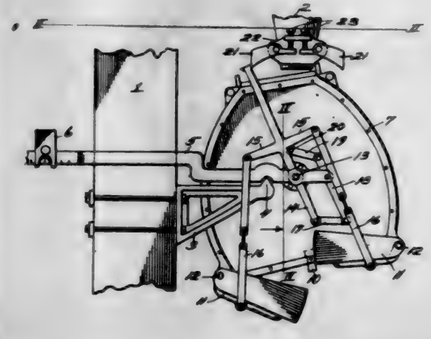
1. A spark plug comprising an exterior member adapted to be secured in a wall of an engine, an interior unit within said exterior member, said interior unit including a core, an electrode supported by said core and a shield provided with a second electrode, said shield being arranged adjacent to the lower end of said first mentioned electrode and being provided with a deflector adapted to deflect carbureted air against the firing points of said electrodes, said interior unit being rotatable axially relative to said exterior member and means whereby said interior unit may be retained in a fixed position relative to said exterior member.

---

1,564,646. BUMPER BRACKET. JAMES S. TORMEY, Los Angeles, Calif., assignor to United States Bumper Company, Inc., Los Angeles, Calif., a Corporation of California. Filed June 30, 1925. Serial No. 40,635. 4 Claims. (Cl. 293—55.)

1. A bumper bracket comprising a transverse member having a chamber adapted to receive a pin, a longitudinal arm, an inclined arm, the longitudinal arm having a plurality of apertures, and the inclined arm being apertured at its lower end.

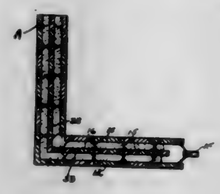
1,564,647. AUTOMATIC WEIGHING DEVICE. JAMES B. VAN DEREN, Hennessey, Okla. Filed Apr. 24, 1922. Serial No. 556,355. 12 Claims. (Cl. 249—33.)



1. In an automatic weighing device, a container having two compartments and pivotally mounted to alternately dispose the compartments in a common receiving position, wing doors hinged to the container for alternately opening and closing the bottoms of said compartments respectively, and means connecting the doors to each other and the container whereby under the gravitative force of a commodity, the operative force of the doors shall co-operate with the rotative force of the container.

---

1,564,648. BUILDING CONSTRUCTION. ELMER E. VAN WIE, Los Angeles, Calif. Filed Sept. 24, 1923. Serial No. 664,401. 12 Claims. (Cl. 72—29.)



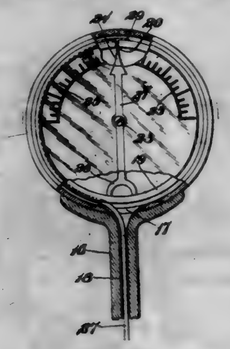
1. A building tile adapted to be placed in a wall, said tile comprising separately formed front and back portions and separately formed interlocking members arranged intermediate the front and back portions and secured thereto, said interlocking members projecting beyond the front and back portions at each end of the tile.

---

1,564,649. METER. GERHARD VINNEMEIER, Iola, Kans. Filed Feb. 28, 1925. Serial No. 12,369. 3 Claims. (Cl. 116—129.)

3. In a rotary indicator, a stationary circular outer rim having an inwardly projecting flange upon its inner surface and intermediate the side edges thereof, said flange having an annular groove formed therein, a split annulus of greater diameter than the internal diameter of the flange arranged within said groove and having a pointer extending diametrically thereof, side walls for said indicator permitting observation of said pointer, an axis for the annulus supported by said side walls and directed through said pointer, and means for rotat-

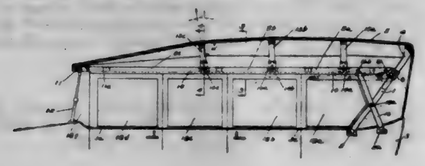
ing said annulus including a member directed through an opening in the wall of the rim and engaging the annulus to rotatably shift the same, said annulus having



its periphery spaced from the adjacent wall of the groove to thereby provide a housing space for said operating member.

---

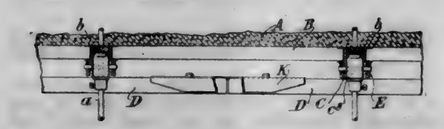
1,564,650. NONCOLLAPSIBLE VEHICLE TOP. EARL H. WADSWORTH, Cortland, N. Y., assignor to The Brewer-Titchener Corporation, Cortland, N. Y., a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,201. 6 Claims. (Cl. 296—102.)



2. In a non-collapsible top structure for a vehicle body, a pair of main standards mounted on opposite sides of the body, complementary side rails secured to the respective standards and extending forwardly therefrom over the body, a separate jamb strip for each of said side rails which strip is shaped to constitute a plurality of spaced offset stake pocket portions while the remaining intermediate spacing portions of the strip proper adjoin the side rail, and a transverse bow bridging the side rails provided with a bow clip extending beyond each of the respective leg ends of said bow and engaging certain of said stake pockets, said clips being disposed contiguous to the respective side rails and encompassed by their respective offset pocket portions of the jamb strips.

---

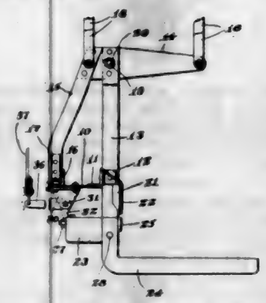
1,564,651. MOLD FOR CONCRETE. ROWLAND T. WALES, New Rochelle, N. Y. Filed June 6, 1921, Serial No. 475,340. Renewed Feb. 28, 1924. 21 Claims. (Cl. 25—131.)



5. A mold comprising a series of supports adjacent the mold space, plates between the supports and adjacent the mold space, each support comprising a channel of sheet metal with its lateral sides and web perforated with holes at intervals longitudinally of the support, locks extending through the holes in said lateral sides and holding the plates in position, a metal tie connecting said lateral sides at a substantial distance from the web, said metal tie being secured by means wholly within the lateral sides and wood between the metal tie and the mold space.

---

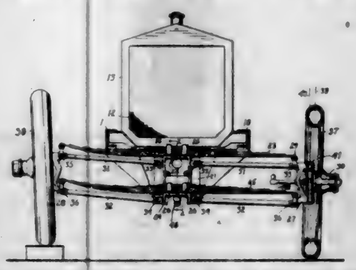
1,564,652. DUMPING FORK. WILLIAM W. WALLACE, Chicago, Ill., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1925. Serial No. 19,213. 2 Claims. (Cl. 294—63.)



2. An improved brick handling fork, comprising a plurality of horizontal extending members adapted to be disalined for loading brick thereon, means to maintain said horizontal members thus positioned, or to instantly shift same to an unloading angle to slide off the brick contained thereon.

---

1,564,653. FRONT-AXLE ASSEMBLY. CAIUS E. WEAVER, Syracuse, N. Y., assignor to Birmingham Motors, Jamestown, N. Y., a Trust. Filed July 18, 1921. Serial No. 485,597. 5 Claims. (Cl. 280—124.)

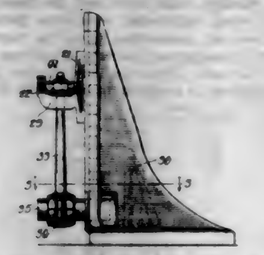


1. In combination with the frame and the front wheels of an automobile, a cross member secured to the front of the sides of the frame, and having rearwardly and upwardly extending triangular gussets along its sides and a central apron, a column plate attached to said apron and having horizontal upper and lower spring seats projecting forwardly therefrom, leaf springs centrally secured to said seats, carriers for the wheels connected to the outer ends of the springs, radius rods pivoted at their ends to the carriers and to the column plate and steering mechanism for the front wheels, including a central support pivoted to the under face of the bottom of the column plate, and links connected to the central support and to the wheel carriers.

---

1,564,654. ALIGNMENT GAUGE. IRA A. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Sept. 24, 1923. Serial No. 664,483. 1 Claim. (Cl. 33—180.)

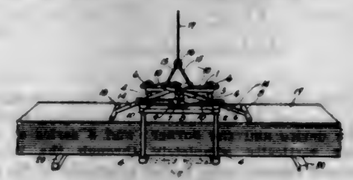
An alignment gauge having two walls spaced apart and provided with registering V-shaped recesses adapted to receive the body to be tested, said gauge having a connecting web joining said walls out of the plane bisecting said recesses to avoid interference with bodies associated



with said recesses, the side of one of said walls having a test surface exactly at right angles to a line joining the apexes of said recesses.

---

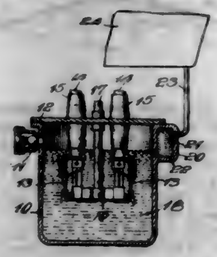
1,564,655. LUMBER-LOADING DEVICE. BERNHARD W. WESTBO, South Prairie, Wash. Filed June 23, 1924. Serial No. 721,688. 4 Claims. (Cl. 294—67.)



4. A device of the class described comprising a horizontal frame structure, a plurality of shafts fixed at their upper ends in said frame and extending downwardly therefrom, load carrying arms fixed to the lower ends of the shafts and clamping levers pivotally mounted in the frame having ends adapted for connection with a hoisting means and their opposite ends adapted to be clamped against the top of the load in opposed relation to the said supporting arms when tension is applied to the hoisting means.

---

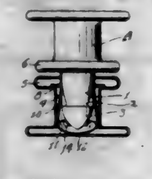
1,564,656. LIQUID-FEED SYSTEM. FAY WOODMANSEE, Maywood, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1920. Serial No. 353,252. 1 Claim. (Cl. 137—68.)



In combination, a container, a partition dividing the container into two receptacles, one of the said receptacles being comparatively larger than the other and containing liquid and gaseous matter, the other receptacle being relatively small and containing only liquid matter, means including an aperture in the said partition for connecting the said receptacles, means connecting the smaller receptacle to a liquid supply, the said aperture being normally below the surface of the liquid in the larger receptacle, means governed by the gas above the liquid in the large receptacle for causing liquid to flow from the said small receptacle through the said aperture into the large receptacle and means including a safety valve connected to the large receptacle for permitting the gas to escape therefrom whenever the pressure of the entrained gas exceeds a predetermined amount.

---

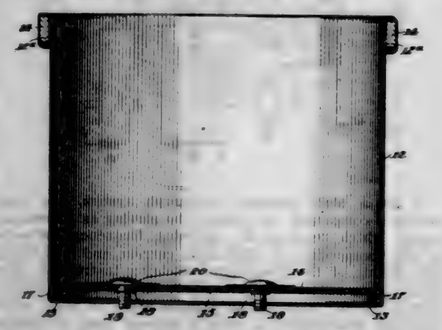
1,564,657. CUFF BUTTON. GERHARD WULLUM, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 9,586. 3 Claims. (Cl. 24—102.)



1. A cuff botton of the character described comprising a pair of cooperating parts each adapted to be secured to the cuff of the garment or the like, a tongue carried by one of said parts extending longitudinally therefrom on the axis of said part, a sleeve slidably disposed partially within the other of said parts and concentric with the axis thereof, said sleeve being expandable at its innermost end and having teeth projecting inwardly therefrom for engagement with said tongue on said first named part when said tongue is projected within said sleeve, and means associated with each of said parts for spreading said sleeve thereby moving said teeth out of engagement with said tongue when said first and second named parts are forced toward one another.

---

1,564,658. TANK. CHARLES A. XARDELL, Utica, N. Y., assignor to The Xardell Corporation, Utica, N. Y., a Corporation of New York. Filed July 3, 1923. Serial No. 649,288. 2 Claims. (Cl. 220—69.)



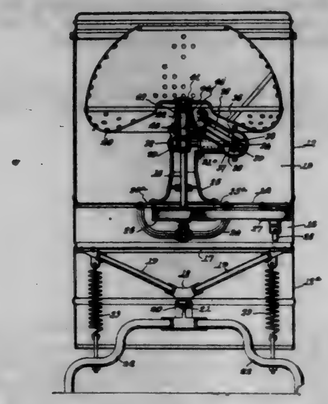
2. A tank comprising a sheet metal body having a double bottom secured to said body in such a manner as to form a water-tight joint, non-rotatable bolts fitted to said bottom, and sheet metal caps soldered so said bottom over the heads of said bolts to form water-tight joints over the heads of said bolts, said caps having outwardly extending flanges to facilitate soldering.

---

1,564,659. WASHING AND WRINGING MACHINE. CHARLES A. XARDELL, Utica, N. Y., assignor to The Xardell Corporation, Utica, N. Y., a Corporation of New York. Filed Feb. 4, 1924. Serial No. 690,398. 6 Claims. (Cl. 68—18.)

1. A washing and wringing machine comprising a tank, a fixed standard in said tank, a vertical shaft

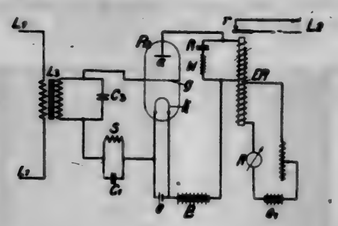
mounted in said standard, an inclined shaft supported by said standard, reducing gearing connecting said inclined shaft to said vertical shaft, a receptacle, and



means whereby said receptacle may be alternately operatively connected to said shafts for washing and wringing operations.

---

1,564,660. HIGH-FREQUENCY-CABLE TELEGRAPHY. HEINRICH FASSBENDER, Charlottenburg, and ERICH HABANN, Berlin, Germany, assignors to Deutsche Telephonwerke G. m. b. H., Berlin, Germany. Filed Aug. 22, 1921. Serial No. 494,388. 4 Claims. (178—88.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

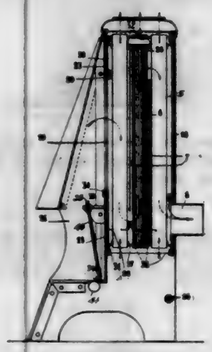


1. In a high frequency telegraph system, the combination comprising an audion-tube serving as thermionic valve, which receives the incoming frequency currents, a relay responding to continuous current and controlling the circuit of the telegraphic receiving instrument, this relay being switched in the anode circuit of the audion and a capacity arranged in parallel with the relay winding and dimensioned in such a manner that it reduces the continuous anode current which flows through the relay in the time when no communication takes place, so that by this reduction the relay responds to the incoming telegraphic signs.

---

1,564,661. GAS RADIATOR WITH HEAT RECOVERY AND CONTINUOUS VENTILATION. RENÉ FAURE, Paris, France. Filed Feb. 5, 1923. Serial No. 617,184. 1 Claim. (Cl. 126—92.)

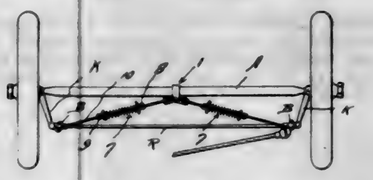
A heater, comprising a main body composed of a pair of vertical side members arranged in spaced, parallel relation, and a connecting plate therebetween; a recovery chamber consisting of a vertical shell disposed between said members and behind the connecting plate, with its front wall contacting with the rear face of said plate and hooked thereto at a plurality of different points, said shell being closed at its top and bottom; a burner disposed within the main body at a point forward of the recovery chamber, said plate and the front wall of said chamber having registering apertures forming an inlet for the gases of combustion from the burner, and said chamber also having an aperture in its rear wall forming an outlet for said gases; an incandescent heat-radiating device supported in position to be heated by the burner;



a hood attached to the main body in front of the connecting plate and its aperture and overhanging the heat-radiating device and the burner; and a series of tubes extending vertically completely through the recovery chamber and adapted to be heated externally by the gases of combustion during their passage through said chamber, said tubes opening at their opposite ends to the atmosphere so as to continuously draw in cold air at their lower ends by convection and discharge it in a heated condition at their upper ends.

---

1,564,662. STEERING-GEAR ATTACHMENT. GEORGE FLEMISTER, Rome, Ga. Filed July 28, 1924. Serial No. 728,705. 1 Claim. (Cl. 280—94.)



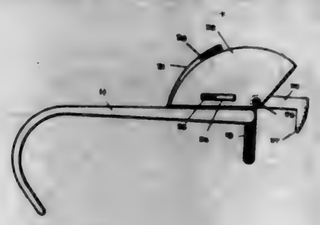
A device of the class described comprising an axle clamp composed of a substantially U-shaped member adapted to be applied to the axle, a sleeve disposed between the free ends of the arms of said U-shaped member, said sleeve being provided with horizontal diverging arms having their free outer ends upturned and apertured, a clamping bolt passing through said arms and sleeve and yieldable connectors connected to said upturned ends and having means at their outer ends for engagement with a portion of an automobile steering gear.

---

1,564,663. GLARE GUARD FOR EYEGLASSES. THOMAS F. GALLIGAN, Philadelphia, Pa. Filed Apr. 18, 1924. Serial No. 707,427. 16 Claims. (Cl. 2—14.)

1. A glare guard member to be disposed in front of the eyes and being of a width vertically to protect the eyes from light rays coming from in front of the eyes,

said member permitting of vision above and below same when disposed in front of the eyes, and means for supporting said member in front of the eyes for the bodily



upward and downward adjustment of said member to raise and lower both the upper and lower edges of said member.

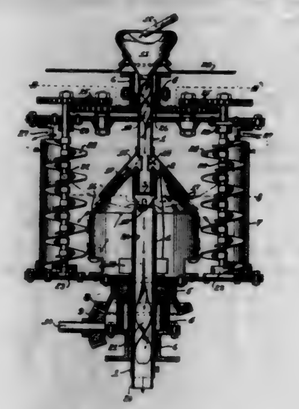
---

1,564,664. FILM-FORMING COMPOSITION. HENRY A. GARDNER, Washington, D. C. Filed Apr. 7, 1925. Serial No. 21,424. 9 Claims. (Cl. 134—79.)

1. A composition of matter comprising an organo-oxy-cellulose compound and a toluene sulfoamid-aldehyde resin.

---

1,564,665. CENTRIFUGAL SEPARATOR. LEROY G. GATES, Bakersfield, Calif. Filed July 16, 1923. Serial No. 651,757. 16 Claims. (Cl. 233—7.)

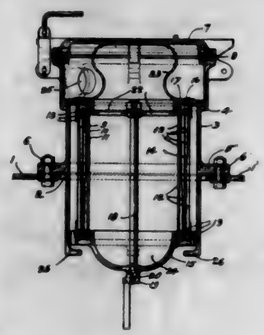


1. A centrifugal separator comprising a rotatable shell, a central hollow shaft through which the material to be separated is introduced into said shell; a spirally formed baffle within said shaft for imparting initial rotary motion to the material, said baffle having a relatively steep initial portion, and a relatively flat final portion; and means for separately removing from said shell the component parts of said material according to their respective densities.

---

1,564,666. FILTER. JOSEPH FRANCIS GRIFFIN, Brooklyn, N. Y., assignor to The Superheater Company, New York, N. Y. Filed June 20, 1923. Serial No. 646,716. 2 Claims. (Cl. 210—154.)

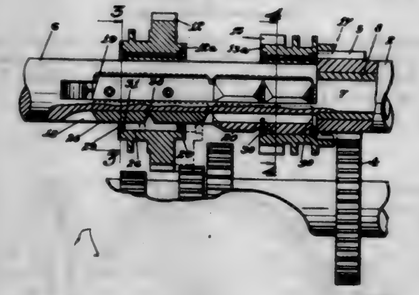
1. In apparatus of the class described, the combination of a water reservoir, a filter housing extending through and secured to the top of said reservoir and having a ledge extending around its interior near its upper end, a filter element comprising a top plate adapted to rest on said ledge, a lid secured to and closing the



upper end of the housing, and resilient means engaging the lid and the top plate and keeping the latter in engagement with the ledge.

---

1,564,667. GEARING FOR POWER TRANSMISSION. WALDO J. GUILD, Worcester, Mass. Filed Feb. 20, 1924. Serial No. 694,054. 11 Claims. (Cl. 74—67.)



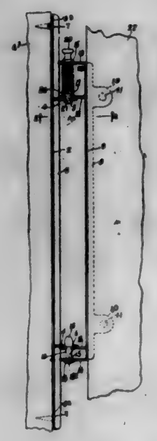
1. In a transmission gearing, the combination with a rotatable shaft having a gear member shiftable and rotatable thereon, of yieldable driving elements disposed to engage individually in one direction of rotation but grouped to engage in opposite directions and operative in one position of said gear on said shaft to automatically establish a driving connection therebetween.

---

1,564,668. DETACHABLE HINGE FOR IRONING BOARDS. HERMAN HAGEMAN, Dayton, Ohio. Filed May 2, 1924. Serial No. 710,645. 7 Claims. (Cl. 16—171.)

7. In combination, a swinging plate, a supporting plate, ears struck up from the surfaces of each of said plates at right angles thereto, said ears overlapping each other and having coinciding apertures therein for receiving pivot pins, pivot pins, outside ears turned up on said swinging plate parallel to the first-mentioned ears but spaced therefrom with coinciding apertures adapted to support the outer ends of said pivot pins, and means to yieldingly maintain one of said pins in engaging

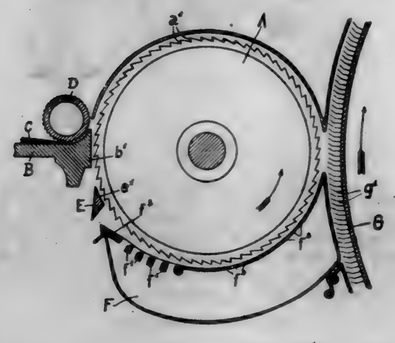
position and means to move said pin against said yielding means to permit of its detachment from the supporting plate ear whereby the other pin may be



detached from the other supporting plate ear, and ribs on said supporting plate and swinging plate turned up on the edges of said plates to strengthen them.

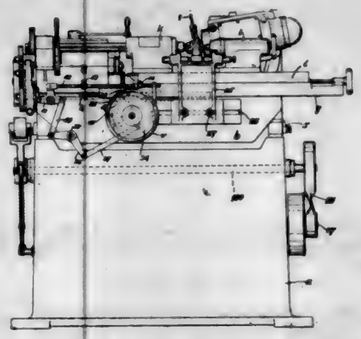
---

1,564,669. LICKER-IN DEVICE FOR CARDING ENGINES. BERNHARD HAGEMANN, Langenhorst, near Ochtrup, Germany. Filed Apr. 29, 1925. Serial No. 26,779. 2 Claims. (Cl. 19—105.)



1. A licker-in device for carding engines, comprising feeders, a rotary licker-in cylinder, and a separating member arranged beneath the cylinder and providing in part a grate and in part a screen, a knife arranged ahead of the separating member with that face next the cylinder approximately tangential to such cylinder, the grate portion of the separating member having a fiber catching bar adjacent the knife and being spaced farther from the cylinder than the screen portion of the separating member, the latter being substantially concentric with the cylinder.

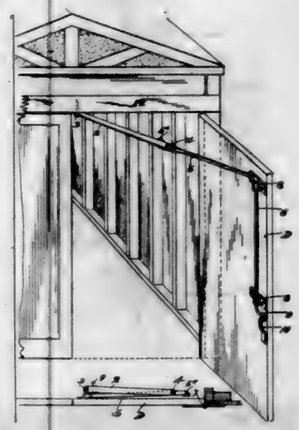
1,564,670. METAL-WORKING MACHINE. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney, executors of said Bengt M. W. Hanson, deceased. Filed Nov. 1, 1919. Serial No. 334,952. 81 Claims. (Cl. 57—95.)



1. In a machine of the character described, and in combination, a fixed bed, a grinding wheel thereon, a rocking bed fulcrumed on said fixed bed, a work holder slidably mounted on said rocking bed and having means for rotatably supporting a piece of work, and automatically operable means for rocking said bed.

---

1,564,671. GARAGE-DOOR HOLDER. LOUIS E. HEILIG, Sherman, Calif. Filed Apr. 8, 1925. Serial No. 21,596. 5 Claims. (Cl. 291—263.)



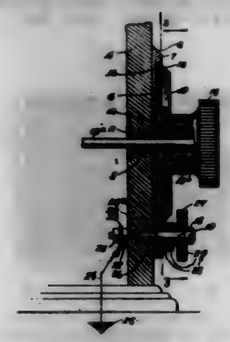
1. A hinged door holder for over-head adaption to a garage door and comprising knuckle-jointed link and arm members one of which is pivotally connectible to a door-frame header, and the other of which has a rock-shaft attachable vertically to the door in such position that as the door opens to a desired angle the link and the arm elements straighten out and pass a dead center point, said link and arm members being at the upper end of the rock-shaft.

---

1,564,672. COMBINED SHIELD PLATE, DIAL, AND VERNIER. CHARLES J. HENSCHEL, Arlington, N. J. Filed June 15, 1922. Serial No. 568,589. 6 Claims. (Cl. 250—40.)

1. A device of the character described, comprising a shield plate provided with a thickened edge and having

an indication thereon, means for grounding said shield plate, and a dial made of insulating material and revolu-



bly mounted upon said shield plate, said dial being provided with an indicator portion registering with the indication upon thickened edge of the shield plate.

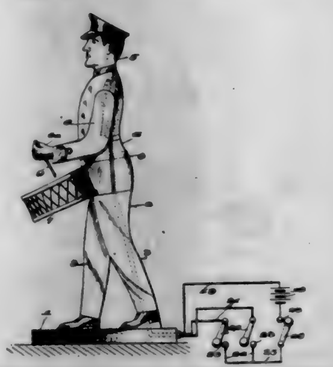
---

1,564,673. EXPANSION REAMER. CHARLES E. HOCKING, Lancaster, Pa. Filed Oct. 11, 1924. Serial No. 743,154. 1 Claim. (Cl. 77—75.5.)

An expansion reamer comprising in combination, a spindle, a plurality of longitudinal grooves in said spindle, a plurality of reamer blades longitudinally adjustable in the grooves, adjusting nuts threaded upon the spindle and disposed at opposite ends of the blades and steady rings received on the spindle and interposed between the nuts and blades, said rings being provided with notches in their outer edges adjacent the blades, each notch being beveled in the same plane as an end of a blade so as to receive the same.

---

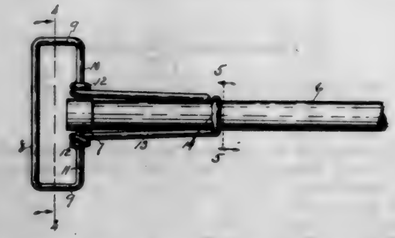
1,564,674. FIGURE TOY. HERBERT CHARLES HODGKINS, Scotia, N. Y. Filed Nov. 14, 1924. Serial No. 749,932. 1 Claim. (Cl. 46—40.)



In a figure toy, a figure representing a drummer and including a hollow body, a pair of arms, means for mounting the arms for swinging movement at the shoulders of the body and including a sleeve shaft for each arm and a central shaft for the sleeve shafts, drum sticks carried by the arms, a drum carried by the body and arranged and designed to be sounded by the drum sticks when the arms are swung back and forth, and means for swinging the arms back and forth including armatures fixed to the sleeve shafts within the hollow body, electro-magnets associated with the armatures, circuits for the magnets and selectively operable switches for the circuits.

---

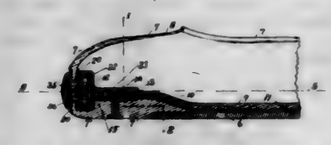
1,564,675. MOP HOLDER. FREDERICK C. HOFFMAN, West Hartford, Conn. Filed Aug. 9, 1924. Serial No. 731,029. 6 Claims. (Cl. 15—150.)



1. A mop holder comprising two frame members each of which members includes a jaw located opposite the jaw on the other frame member, an integral pivot bar and an integral pivot eye through which eye the bar on the other frame member extends, means for supporting each of said frame members, and means for actuating the jaws.

---

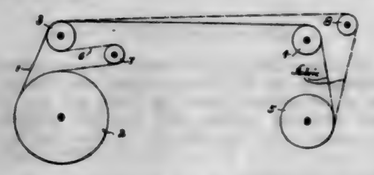
1,564,676. DANCING SLIPPER. EDWIN HOPKINS, New York, N. Y. Filed Oct. 3, 1919. Serial No. 328,174. 7 Claims. (Cl. 36—1.)



1. In a toe dancing slipper, a pivot adapted to remain at rest upon the floor, and means mounted for rotation upon said pivot including a ball bearing affixed to the slipper at the toe end thereof and arranged to receive said pivot in such a manner that the axis of the pivot is disposed in substantially parallel relation to the bottom of the slipper and with the toe and heel axis thereof.

---

1,564,677. LOOM. ALFRED JOHN, Gera-Reuss, Germany. Filed June 3, 1925. Serial No. 34,603. 2 Claims. (Cl. 139—97.)

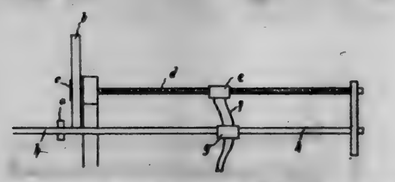


1. In a loom mechanism of the character set forth for simultaneously turning out two individual webs, two separate warps, a warp beam and a piece beam, both common to said two warps, a guide roll, a breast beam, a beam intermediate said warp beam and said roll, and a second breast beam intermediate said roll and said piece beam, one of said warps running from said warp beam over said roll and said breast beam to said piece beam, and

the respectively second warp running from said warp beam successively over said intermediate beam, said roll, said second breast beam to said piece beam, and means for relatively parallelly shifting said intermediate beam and said second breast beam in respectively opposite sense.

---

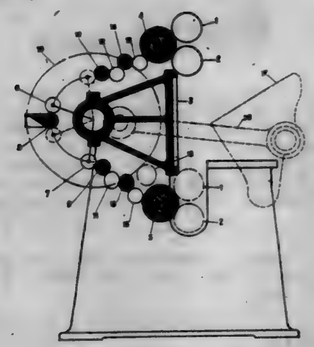
1,564,678. LOOM. ALFRED JOHN, Gera-Reuss, Germany. Filed July 3, 1925. Serial No. 41,251. 1 Claim. (Cl. 139—141.)



In a device of the character set forth, in combination with a loom frame and a lay mounted therein for swinging reciprocation, racks fixed to the lay at the two sides thereof and extending substantially in the plane of operative movement thereof, a screw spindle rotatably mounted in the machine frame, toothed wheels fixed on said screw spindle, one at each end thereof, and respectively meshing with the said racks, a slide member threading on said spindle, a curved guide arm rigidly extending from said slide member and tapering down toward its free end, a second slide member, guide rods for the latter, said curved guide arm engaging in, and being guided by, said second slide member with a certain back-lash, and means for transmitting the movement of the second said slide member to the shuttle.

---

1,564,679. INKING APPARATUS FOR PLATEN PRESSES. OTTO JOHNE, Bautsen, Germany. Filed Nov. 25, 1924. Serial No. 752,226. 3 Claims. (Cl. 101—360.)

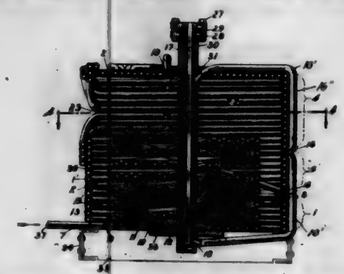


1. An inking apparatus for platen presses comprising in combination an ink cylinder above the form of the press, an ink cylinder below the form, and two inking rollers oscillating between said two ink cylinders in such a manner that they roll prior to every printing operation once over the form and ink the same completely by one single rotation.

---

1,564,680. FLASH BOILER. LESLIE C. KELLEY, Oakland, Calif. Filed Aug. 8, 1923. Serial No. 656,859. 4 Claims. (Cl. 122—250.)

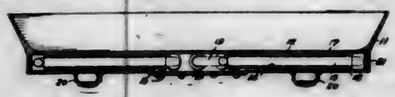
1. A flash boiler for automobiles and the like, comprising an outer shell with a closed top and a series of superimposed groups of coils within said shell and spaced from said top, the said space being the combustion chamber of the boiler, the coils of each group spaced horizontally from one another, and successive groups of coils spaced vertically, the said shell and



top consisting of contacting coils of tubing formed as a rigid drum with an open bottom, the said structure adapted to direct the gases of combustion downwards through said internal series of spaced coils and through said open bottom into the atmosphere.

---

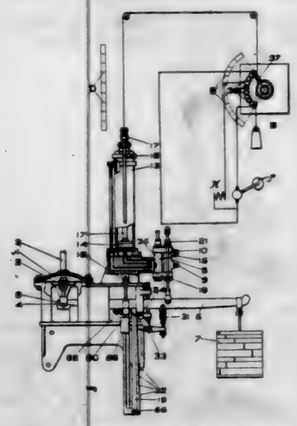
1,564,681. ELECTRICAL HEATING DEVICE. ARTHUR J. KRECHEL, Berkeley, Calif. Filed Apr. 12, 1923. Serial No. 631,497. 10 Claims. (Cl. 219—44.)



1. An electrical heating device comprising a metallic member formed by casting and conduits of insulating material imbedded therein in the formation of said member.

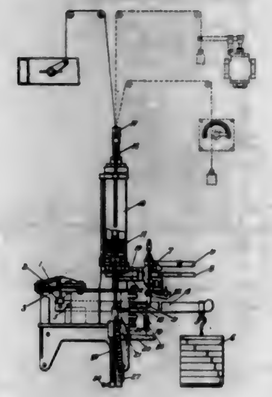
---

1,564,682. REGULATOR. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Original application filed Mar. 7, 1921. Serial No. 450,376. Divided and this application filed Oct. 23, 1923. Serial No. 670,344. 52 Claims. (Cl. 103—11.)



1. In a pressure-regulator system, the combination with a fluid system, means for controlling the pressure obtaining in said system, and a pressure device operated in accordance with the pressure obtaining in the fluid system, of a cam member operated by said device for accentuating the positions of said controlling means

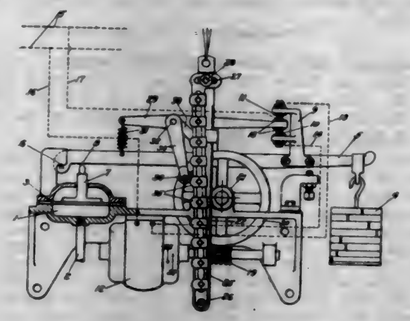
1,564,683. PRESSURE REGULATOR. JAMES L. KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem Mass., a Corporation of Massachusetts. Filed Apr. 6, 1923. Serial No. 630,289. 17 Claims. (Cl. 236—85.)



1. The combination with a fluid pressure motor and a pressure device, of means controlled by the pressure device for effecting the operation of the fluid-pressure motor, means controlled by the operation of the fluid-pressure motor, adapted to render the fluid-pressure motor ineffective at each of a plurality of positions in the operation of the fluid-pressure motor and means for adjusting the said positions.

---

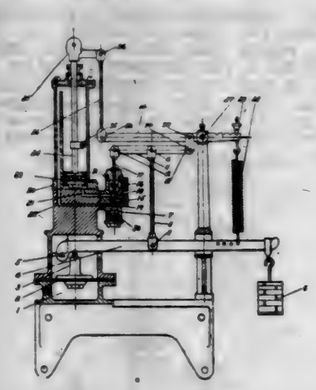
1,564,684. PRESSURE-CONTROL APPARATUS. JAMES L. KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed Apr. 19, 1923. Serial No. 633,282. 13 Claims. (Cl. 236—85.)



1. In combination with a pressure-controlling device, an electric motor for controlling said device, a pressure-responsive element, and means actuated by said element for effecting the operation of said motor and a circuit-interrupting attachment controlled by the operation of the motor adapted to render the motor inoperative at each of a plurality of predetermined pressure settings of the pressure responsive element and means to adjust said attachment to effect a greater or less pressure variation between the limits of the operation of the pressure-controlling device.

---

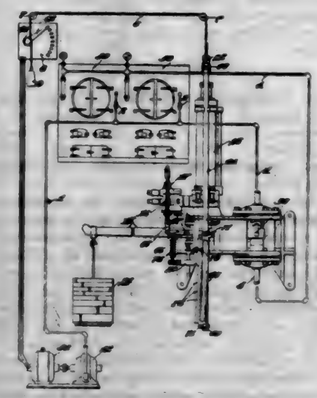
1,564,685. DAMPER REGULATOR. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed June 16, 1921. Serial No. 478,033. 24 Claims. (Cl. 236—85.)



1. The combination of a motor and a pilot valve, said pilot valve having a neutral position and two effective positions for operating the motor, a pressure device for actuating said pilot valve to either of its effective positions, means operated by the motor for returning the pilot valve to its neutral position upon the motor commencing to act, and means associated with said motor and said pressure device for maintaining an equilibrium of the pressure device during the said return movement of the pilot valve to its neutral position.

---

1,564,686. REGULATOR. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Continuation of application, Serial No. 456,148, filed Mar. 28, 1921. This application filed Nov. 14, 1924. Serial No. 749,912. 22 Claims. (Cl. 103—12.)

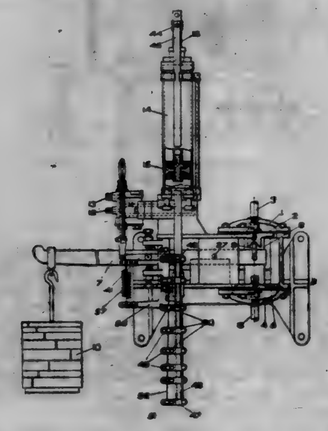


1. In a steam-generating system comprising a boiler, a pump for supplying the boiler with water, and a motor for driving the pump, means independent of the steam generated by the boiler for driving the pump motor, a motor for controlling the pump motor, and means for controlling the controlling motor, said means being con-

trolled in accordance with variations in the pressure of the steam generated by the boiler and the pressure of the water supplied by the pump.

---

1,564,687. PRESSURE-CONTROL APPARATUS FOR CONTROLLING THE OPERATION OF BOILER-FEED PUMPS FOR MAINTAINING FEED-LINE PRESSURE A PREDETERMINED VALUE IN EXCESS OF THE STEAM PRESSURE. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1924. Serial No. 691,271. 11 Claims. (Cl. 103—19.)



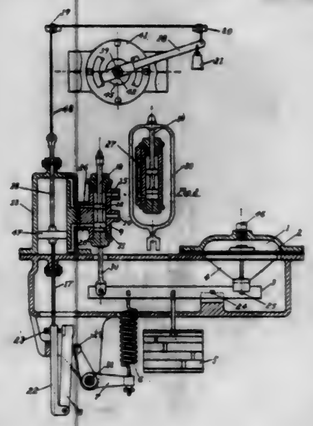
1. In apparatus for controlling boiler feed line pressure consisting of a pump for supplying the boiler with water, motive means for driving the pump, means for controlling the speed of the motive means, a motor for actuating the speed-controlling means, a pressure-responsive device controlled in accordance with the steam generated by the boiler and the pressure of water supplied by the pump, means actuated by said pressure-responsive device to controll the motor which controls the speed-controlling means, and means operated by the motor for effecting a variable speed control of the motive means.

---

1,564,688. PRESSURE-CONTROL APPARATUS. JAMES LEWIS KIMBALL, Salem, Mass., assignor to Ruggles-Klingemann Mfg. Co., Salem, Mass., a Corporation of Massachusetts. Filed May 11, 1921, Serial No. 468,684. Renewed May 13, 1925. 15 Claims. (Cl. 50—10.)

1. In a fluid-pressure system, the combination with a fluid-pressure device controlled by the pressure in the system, a valve controlled by the fluid-pressure device, a motor controlled by the valve, and an adjustable compensator controlled by the motor for counteracting the action of the fluid-pressure device, of a rotatable balanced-fluid-pressure valve automatically adjustable by the motor for controlling the pressure in the system, and means for manually adjusting the fluid-pressure valve to cause the variations in the pressure of the system transmitted to the fluid-pressure device to bear a predetermined relation to the counter action controlled by the compensator for all stages of motor travel.

12. A fluid-pressure valve having, in combination, a valve casing having an inlet opening and an outlet opening, an interiorly disposed open cage, a valve bonnet closing the cage having a stuffing box, the cage being provided with a plurality of circumferentially disposed ports, a valve tube having a plurality of circumferentially disposed ports each adapted to register with one of the cage ports, a valve stem connected to the tube extending through the stuffing box, an actuating lever, the bonnet



having guide ways for the lever concentric with the said stem, and an adjusting nut threadably mounted on the valve stem and supported by the actuating lever.

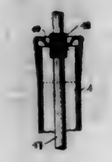
---

1,564,689. METHOD OF REDUCING THE VICOSITY CHARACTERISTICS OF NITROCELLULOSE. NEIL S. KOCHER, and VICTOR E. KIMMEL, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 25, 1925. Serial No. 11,591. 7 Claims. (Cl. 260—148.)

1. The process of treating nitrocellulosic material, which comprises acting thereon with a solution of mineral acid containing a chlorate of an alkali metal until the viscosity characteristics of the nitrocellulose are reduced, the action being stopped before denitration of the nitrocellulose reduces its nitrogen content below 9.5%.

---

1,564,690. SEAL FOR LEADING-IN WIRES. OSIAS KRUH and ERNST WOLF, Vienna, Austria. Filed Dec. 23, 1920. Serial No. 432,788. 12 Claims. (Cl. 176—35.) (Granted under the provisions of the act of Mar. 3, 1921. 41 Stat. L., 1313.)



1. A device for hermetically sealing the ends of glass tubes comprising a metal cap, the side walls of which decrease in thickness toward the edge, said side walls being fused directly to the glass tube.

---

1,564,691. LATCH FOR COVERS OR DOORS. NELSON M. LANGDON, Charlotte, Mich. Filed July 18, 1924. Serial No. 726,772. 9 Claims. (Cl. 292—114.)

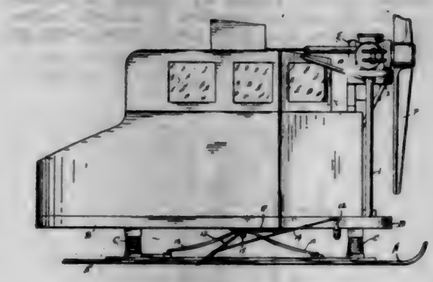
6. A latch including a bracket, an integrally connected hook, spring and stem unit having the stem thereof

screwed through said bracket rigidly and adjustably mounting the spring, and a handle carried by the hook

and operable for flexing the spring of said unit and manipulating the hook.

---

1,564,692. DIRIGIBLE SLEIGH. AUGUST LABILLIERE, Soda Springs, Idaho. Filed Mar. 21, 1925. Serial No. 17,207. 1 Claim. (Cl. 180—8.)

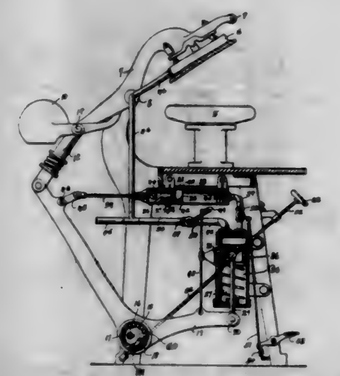


A dirigible sleigh comprising a pair of runners; a frame secured thereon; springs between said runners and said frame; an enclosed body secured on said frame; an engine base secured to the front of said body and supported by said frame; an engine pivoted on said base; a depending pivot-rod to whose upper end said engine is secured, and to whose lower end a segment gear is fastened; a steering wheel having a depending rod; a spur gear secured on and rotatable with said steering rod, with its teeth meshing with the teeth of said segment gear; a propeller secured on and operable by said engine; a brake shoe on each side of said frame adapted to engage with the earth; and means to manually operate each of said brake shoes independently of the other.

---

1,564,693. GARMENT PRESS. JAMES C. LEDERTTE, Brooklyn, N. Y., assignor, by mesne assignments to Liberty National Bank, trustee, Syracuse, N. Y. Filed Oct. 27, 1923. Serial No. 671,121. 25 Claims. (Cl. 68—9.)

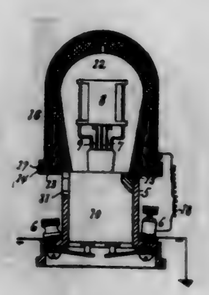
1. A pressing machine comprising in combination, co-operating press members, means to close the press manually, means to produce final pressure by the application of motor means to the closed press, and power



means for raising one press member high above the other from closed pressing position to fully opened position.

---

1,564,694. SHIELD FOR AMPLIFIER OR DETECTOR TUBES. EDWARD H. LEECHER, East Orange, N. J. Filed Oct. 10, 1922. Serial No. 593,515. 2 Claims. (Cl. 250—27.)



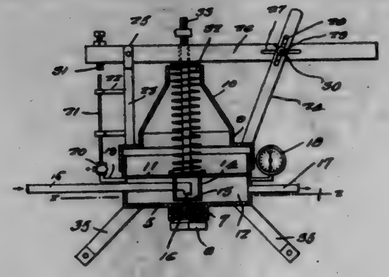
1. A shield for electron discharge tubes comprising a base provided with a socket having positive and negative conductors, an electron detector or amplifier tube mounted in the socket, a collar secured to the upper portion of the base, an inverted open bottomed cage supported on the collar to cover the top and sides of the tube so as to shield the tube from stray electromagnetic currents, means for removably locking the cage to the collar, and means for conducting the currents from the cage to the negative connection.

---

1,564,695. TIRE-GAUGE INSTRUMENT. ERNEST LETZRING and WILLIAM SKJERVEN, Park River, N. Dak. Filed Sept. 28, 1925. Serial No. 59,146. 4 Claims. (Cl. 50—12.)

1. An instrument of the class described including a container, an inlet pipe leading into the container, an outlet pipe leading from the container, a pipe section leading from the container, a release valve in the pipe section, a push rod operatively associated with the re-

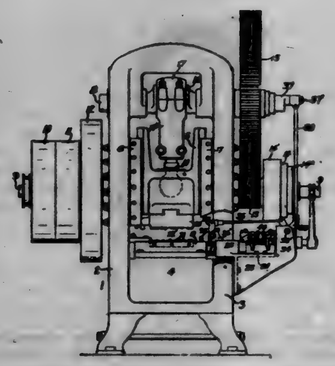
lease valve, a diaphragm controlled valve associated with the inner end of the inlet pipe, a spring associated with the diaphragm controlled valve, a lever for con-



trolling the tension of said spring, a member on the lever engageable with the push rod, and means for holding the lever in different adjusted positions.

---

1,564,696. STRIP-METAL STRAIGHTENER. SYLVANUS D. LOCKE, Bridgeport, Conn., assignor to The Locke Steel Chain Company, Bridgeport, Conn. Filed Apr. 25, 1924. Serial No. 708,900. 44 Claims. (Cl. 153—54.)

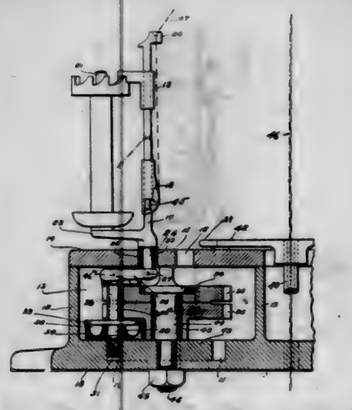


1. In combination, means for guiding a fed strip of metal, rolls for operating upon the strip, and mechanism actuated by the strip for the purpose of establishing a right-angle relation between said rolls and strip, as the strip is fed.

---

1,564,697. BRAIDING MACHINE. GEORGE F. MCCARRY, Providence, R. I., assignor to J. M. Braider, Inc., East Providence, R. I., a Corporation of Rhode Island. Filed May 21, 1924. Serial No. 714,806. 14 Claims. (Cl. 96—8.)

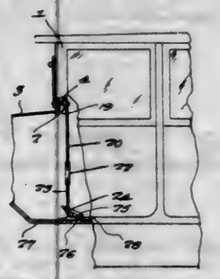
1. In a braiding machine, spaced upper and lower fixed raceway plates, the raceway in said lower plate being of a depth less than the thickness of said plate, a carrier guided in and extending through said upper plate and having its lower end guided in the raceway of said



lower plate, and a train of driving gears intermeshing with each other and operatively mounted intermediate the raceways for driving said carrier.

---

1,564,698. VEHICLE DIRECTION INDICATOR. HOWARD MCCAIN, Marion, Ky., assignor of one-third to John McCain and one-third to Mitchell Jackson, both of Marion, Ky. Filed Apr. 8, 1924. Serial No. 705,083. 1 Claim. (Cl. 116—54.)



A structure of the class described comprising a horizontal shaft adapted to be rotatably mounted upon a support, an arm secured to and extending angularly from one end of the shaft for rotation with the latter, a disc fixed to the opposite end of said shaft, an operating rod, said rod being composed of sections, said sections being adjustably connected together, and one of the sections being eccentrically connected with said disc, and manually manipulated means cooperating with the other section for effecting operation of said rod and shafts.

---

1,564,699. PACKER FOR WELLS AND THE LIKE. ROBERT L. MCCARTNEY, Houston, Tex., assignor to Layne & Bowler Company, Houston, Tex., a Corporation of Texas. Filed Mar. 11, 1922. Serial No. 542,866. 5 Claims. (Cl. 166—10.)

1. The combination with a casing a tubular support therein, a packing mounted on said support, a female

member having a contracted end adapted to wedge between said support and packing, to expand the packing, said contracted end of the female member being adapted

to grip said support but being expansible to permit the ready movement of said female member relative to the support.

---

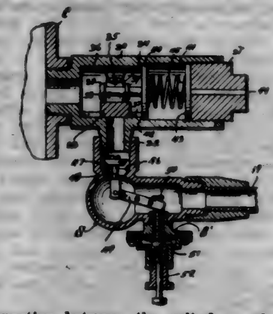
1,564,700. NUT LOCK. THOMAS FRANCIS VINCENT MCGLYNN, Philadelphia, Pa. Filed Mar. 12, 1924. Serial No. 698,625. 4 Claims. (Cl. 151—8.)

1. A nut lock comprising a threaded bolt having a slot extending longitudinally therethrough from end to end and a key adapted to interfit with and be inserted within said slot and having a threaded portion the threads of which are pitched at a slight variance with the pitch of the threads of the bolt, said bolt and key being adapted to have a nut screwed thereon.

---

1,564,701. HYDRAULIC BRAKE. CHARLES F. MATTINGLY, St. Louis, Mo., assignor to Mattingly Automatic Valve Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 13, 1924. Serial No. 699,017. 6 Claims. (Cl. 188—152.)

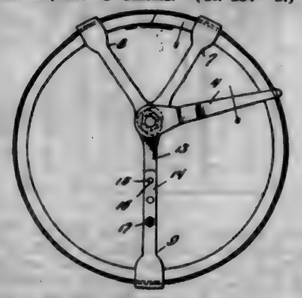
1. In combination, a plurality of braking units, a cylinder, a separate communication between the cylinder and each of the units, a piston working within said cylinder, means associated with the piston for imposing requisite pressure upon the fluid, and means interposed



in the connection between the cylinder and one of the units for normally closing the flow through such connection.

---

1,564,702. TIRE-RIM TOOL. THOMAS F. MAY and DE WITT C. PERRY, Ruth, Nev., assignors of one-third to Barton B. Walker, Ruth, Nev. Filed Apr. 21, 1925. Serial No. 24,788. 2 Claims. (Cl. 157—1.)



1. A rim tool of the class described including a noncircular bolt, discs mounted on said bolt to be disposed off center thereof, and to project in different directions, a crank for turning the bolt, and a plurality of arms having rings at their inner ends for receiving the discs.

---

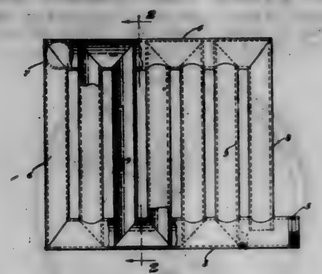
1,564,703. HOLDER. JOSEPH H. NICHOLS, Huntington, W. Va. Filed Nov. 10, 1924. Serial No. 748,905. 1 Claim. (Cl. 248—37.)

In a device for mounting a staff on an automobile bumper, a vertical staff-receiving socket of tubular form, a lower transverse jaw wherein the lower end of the

socket is securely and fixedly mounted, the socket extending but part-way through the lower jaw and the lower end of the socket being closed by the lower jaw thereby to prevent a staff in the socket from sliding downwardly through the socket and coming into contact with the ground whilst the automobile is moving, a transverse upper jaw slidable upon the socket toward and away from the lower jaw, and means for holding the upper jaw releasably on the socket in adjusted positions longitudinally of the socket and with respect to the lower jaw, the jaws being provided with transverse seats for the reception of the upper and lower edges of an automobile bumper, the seats being formed by inner shoulders and outer flanges, the flanges being shorter than the shoulders, measured vertically, whereby the upper and lower edges of an automobile bumper may clear the flanges, strike the shoulders, and be lodged in the seats, when the flanges are separated by a vertical distance, just sufficient to permit the bumper to pass between them.

---

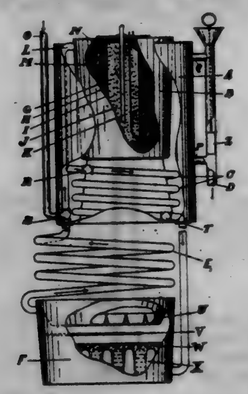
1,564,704. HEAT-EXCHANGE DEVICE. AARON F. NORTON, Los Angeles, Calif. Filed June 23, 1924. Serial No. 721,795. 2 Claims. (Cl. 257—252.)



1. A heat exchange unit of the character described comprising a pair of spaced headers, a plurality of cross conduits joining said headers, said cross conduits being bevelled at their ends, extending into said headers and being arranged so that the openings of adjacent conduits at the same ends face one another to provide a sinuous path.

---

1,564,705. REFRIGERATING APPARATUS. WILLIAM W. ODELL, Washington, D. C., and CLIFFORD W. SEIBEL, Bethesda, Md. Filed July 26, 1922. Serial No. 577,771. 26 Claims. (Cl. 62—5.)



1. In an absorption refrigeration apparatus a generator, a means to condense the refrigerant from the generator, and a means to evaporate it and return it to said generator, a heating chamber within said generator, a removable heating element within said chamber contacting substantially the entire surface of the heating chamber which latter is contacted over substantially its entire outer surface by the absorbent.

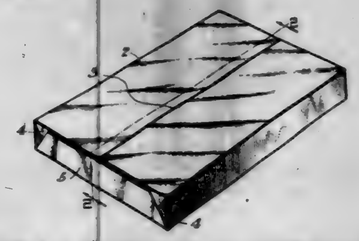
---

1,564,706. WALL-BOARD COMPOSITION. JOHN WALTER OELHAFEN, Tomahawk, Wis. Filed Sept. 4, 1924. Serial No. 735,956. 2 Claims. (Cl. 106—30.)

1. A wall board composition comprising 89% sawdust, 1% molasses, 5% sodium silicate, and 5% whiting.

---

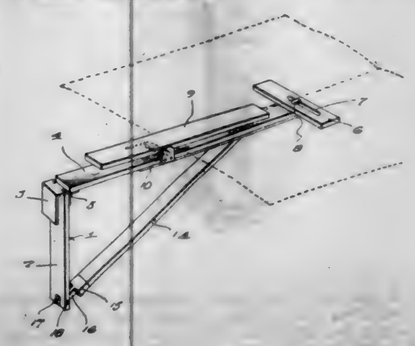
1,564,707. PACKAGE OF WRAPPED PHOTOGRAPHIC MATERIAL. VIRGIL M. PALMER and HENRY M. THOMAS, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed May 10, 1923. Serial No. 638,122. 3 Claims. (Cl. 206—46.)



1. A package having photographically sensitive film enclosed in a substantially moisture-proof wrapping, said wrapping comprising layers of fabric material and asphaltum, said wrapping being substantially free from sulfur, ammonia, and turpentine.

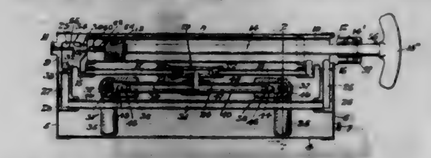
---

1,564,708. ARTICLE HOLDER. JOHN D. PAYNE, New York, N. Y. Filed Sept. 18, 1924. Serial No. 738,453. 1 Claim. (Cl. 45—59.)



An article holder of the class described comprising a belt engaging device including a part to bear against the outer face of the belt, and a clip to engage over said belt, a horizontal arm hingedly connected at its inner end to the belt engaging device, spaced guide channels secured to the under side of said arm, rack teeth formed between said channels, a cross piece adjustably connected to the free end of said arm, a spring pressed clamping finger connected with the intermediate portion of the arm, and a diagonal brace pivotally connected at its lower end to the belt engaging device and having its upper end formed with a head disposed between said channels and cooperable with said teeth.

1,564,709. FIRE EXTINGUISHER. GEORGE T. PEARSONS, New York, N. Y., assignor to Pyrene Manufacturing Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1916. Serial No. 129,981. 18 Claims. (Cl. 299—98.)



1. In a syringe the combination of a reservoir and a discharge outlet therefor at one end; a piston chamber connected at opposite ends with the reservoir and having outlets from opposite ends; a chamber at one end of the piston chamber with which the reservoir outlet and the outlets of the piston chamber are in communication; a piston; a piston rod to reciprocate the piston extending from the piston chamber at the end opposite to the other chamber; and a valve in the said other chamber operable during the reciprocation of the piston to alternately connect the outlets of the piston chamber with said other chamber for the purpose specified.

8. In a syringe the combination of a reservoir of rectangular shape in cross section; a piston chamber located adjacent the top of the reservoir having a suction inlet and an outlet to the exterior of the reservoir; a piston to reciprocate in said chamber; and an intake tube connected to the suction inlet supported to swing on an axis transversely and centrally of the reservoir with both ends of the tube lying adjacent opposite sides and adapted to assume a position adjacent the top and bottom of the reservoir and intermediate the top and bottom, substantially as and for the purpose specified.

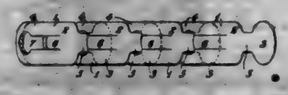
---

1,564,710. METHOD OF COATING WITH METALS AND RESULTING PRODUCTS. ARTHUR Z. PEDERSEN, West Orange, N. J., assignor, by mesne assignments, to Madsenell Corporation, New York, N. Y., a Corporation of New York. Filed May 14, 1920. Serial No. 381,435. Renewed Nov. 10, 1923. 5 Claims. (Cl. 204—7.)

1. The method of preparing metallic surfaces to receive adherent metallic coatings which comprises making the object to be coated the anode in a bath containing sulphuric acid of more than about 75% strength.

---

1,564,711. CHAIN, BELT, AND THE LIKE. ALBERT HENRY FRANKS PERL and RICHARD HEMMINGS CARTER, London, England. Filed Oct. 30, 1923. Serial No. 671,796. 3 Claims. (Cl. 74—48.)

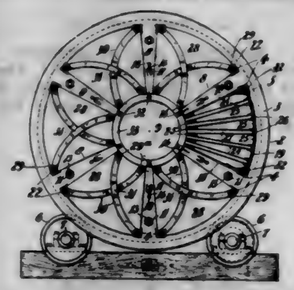


1. As a new article of manufacture, a one-piece link having the body of the link formed with a key hole slot to permit the attachment thereto of a companion link, said body being provided with means capable of movement to close a portion of said slot to prevent the separation of the companion link following its attachment.

---

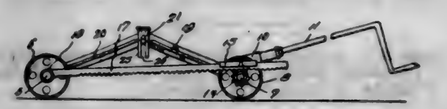
1,564,712. CENTRIFUGAL MOLDING APPARATUS. WILLIAM FARELLY RAFFERTY, Murrumbeena, and OWEN WILLIAMS, Jolimont, Australia. Filed Dec. 3, 1924. Serial No. 753,573. 10 Claims. (Cl. 25—30.)

1. A centrifugal molding apparatus comprising, a rotatably mounted frame, a series of mold-carriers removably supported within said frame, means for restraining said mold-carriers against longitudinal and lateral movement when fitted into said frame, mold-formers in said carriers, means for restraining said mold-formers against movement, means permitting the feeding of concrete mixture into said rotatable frame, and means for rotating said frame.



---

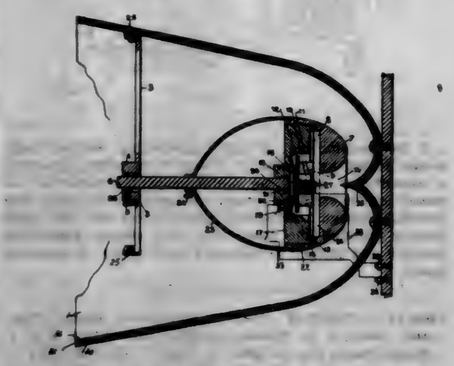
1,564,713. JACK. HARRY E. REITER, Napoleon, Ohio. Filed Aug. 3, 1925. Serial No. 47,823. 3 Claims. (Cl. 254—6.)



1. In a jack, a pair of axles, wheels journaled on the axles, a pair of rack bars having one end journaled on one axle, pinions on the other axle, guide means for holding the racks in mesh with the pinions, means for actuating the last mentioned axle, arms having their ends journaled on the axles and pivoted together, and shoes on the pivoted portions of the arms.

---

1,564,714. AUDIPHONE. DE ELBERT A. REYNOLDS, Weehawken, N. J., assignor, by mesne assignments, to Audiphone Company of America, New York, N. Y., a Corporation of Delaware. Filed June 17, 1918. Serial No. 240,418. 3 Claims. (Cl. 179—107.)

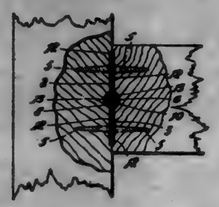


1. In an electrical device, a sound collector provided with an inner projecting portion, a transmitter disposed within said sound collector and means for adjustably mounting said transmitter relative to said projecting

portion, said mounting means comprising a member in fixed relation to said sound collector, an element secured to said transmitter and adjustable means connecting said member and said element.

---

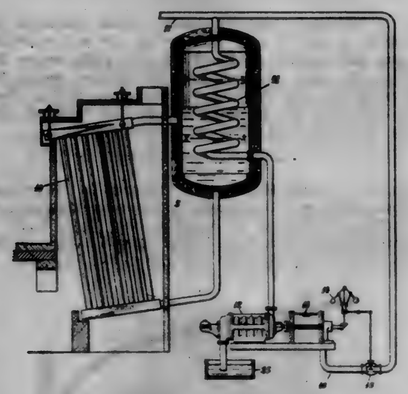
1,564,715. JOINTING AND FASTENING MEANS. GARRETT RUSSELL, Elsternwick, Victoria, Australia, assignor of one-half to Harold James Tully, Melbourne, Australia. Filed Dec. 3, 1924. Serial No. 753,590. 3 Claims. (Cl. 20—92.)



1. An improved jointing device comprising two interfitting plates, slots formed in said plates at intermediate points, projecting loops on said plates to fit through said slots, and a pin adapted to be inserted through the loops of both of the plates to detachably lock the plates in surface abutment.

---

1,564,716. STEAM GENERATION. JOHANNES RUTHS, Djursholm, Sweden. Filed Dec. 27, 1924. Serial No. 758,439. 2 Claims. (Cl. 122—4.)

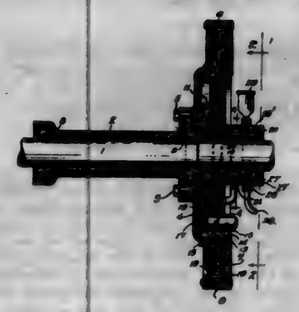


1. In combination, a steam generating element indirectly heated by means of a heat transmitting medium, a centrifugal pump, an uninterrupted connection between said centrifugal pump and said steam generating element through which said pump forces all the water passing through the pump into said stream generating element and means to maintain said pump at constant speed.

---

1,564,717. CLUTCH. HORACE F. SCRUBY, Miami, Okla., and CHARLES B. ROGERS, Joplin, Mo. Filed May 7, 1923. Serial No. 637,295. 1 Claim. (Cl. 192—88.)

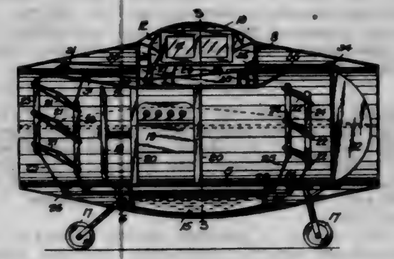
In a pneumatic clutch, a shaft, a driving member loosely mounted on said shaft, a hub keyed to said shaft, a plate extending from said hub, pins secured to said plate and arranged substantially parallel to the axis of the shaft, a pair of disks movably mounted on said pins, an air bag arranged between said disks and adapted to retain them in spaced relation when air is admitted thereto, friction linings arranged on the outer faces of

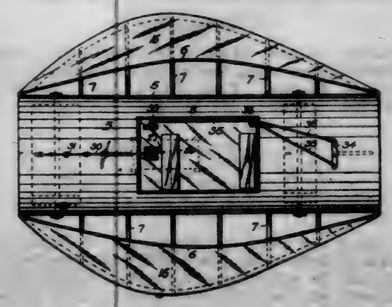


said disks, a casing carried by said driving member and surrounding said disks, and springs arranged on opposite sides of said disks to normally retain them in inoperative position.

---

1,564,718. FLYING MACHINE. WILLIAM B. SEWELL, Denver, Colo. Filed May 6, 1924. Serial No. 711,468. 7 Claims. (Cl. 244—18.)

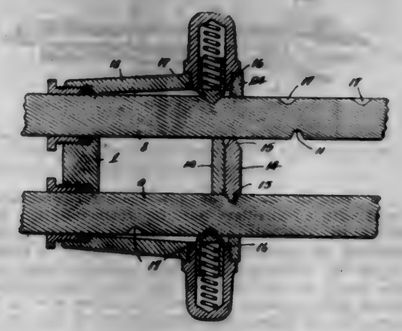




1. A flying machine comprising a body having a horizontal air-passage open at opposite ends thereof, a propeller acting on air in the passage, and longitudinal fins tapering to the ends of the body.

5. A flying machine comprising a body having a horizontal air passage, a propeller, a motor for the propeller, rudders to direct the course of the vessel, and fixed horizontal fins extending lengthwise of the body and tapering to the ends thereof.

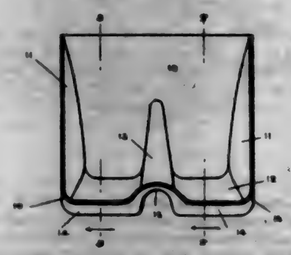
1,564,719. LOCK FOR SHIFTING RODS OF CHANGE-SPEED GEARING. GEORGE W. SPONABLE, Syracuse, N. Y., assignor to The Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Oct. 15, 1919. Serial No. 330,849. 1 Claim. (Cl. 74—89.)



In a change speed gearing, the combination of a main case, shifting rods supported in the main case and extending through a wall thereof to the outside of same and an additional casing detachably mounted on the outside of the main case and formed with passages for the rods and locking means within the additional casing and coacting with the rods, said locking means being movable between opposing surfaces of the main case and the additional casing into and out of engagement with the shifting rods and being prevented by said surfaces from endwise movement with the shifting rods.

---

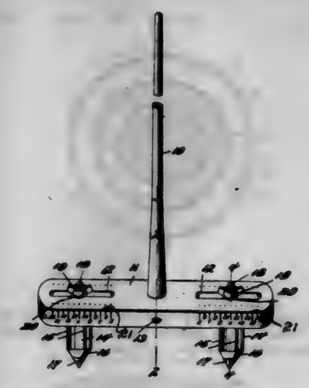
1,564,720. SHOVEL AND SCOOP BLADE. JOHN S. SURBAUGH, Vincennes, Ind. Filed June 20, 1923. Serial No. 646,704. 6 Claims. (Cl. 294—48.)



1. A sheet metal implement blade formed from a blank and having an upstruck handle-receiving roll whose rear end terminates at the rear edge portion of the blade at an angle to the body of the blade, said blade having upstanding flanges at the opposite sides of the roll forming portions of the rear edge of the blade and disposed at substantially the same angle to the body of the blade as the rear end of the roll, the adjacent end portions of said flanges merging into and being integral with the sides of the roll above the body of the blade flush with the rear end of the roll.

5. A sheet metal implement blade having an upstruck handle-receiving roll extending forwardly from its rear edge, with the rear edge portion of the blade extending upwardly at an angle across the rear end of the roll and at an angle to the crown of the roll.

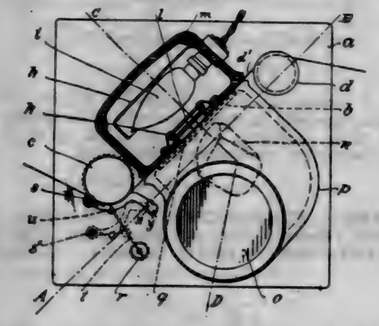
1,564,721. GARDEN SPACER. JOHN P. TALLON, Perry Point, Md. Filed July 12, 1925. Serial No. 43,170. 3 Claims. (Cl. 56—37.)



1. A garden spacer comprising two impression blocks, a support, means for adjustably securing the blocks to the support, a single handle extending from the support at a point between the blocks, the axis of the handle being parallel to the axes of the blocks.

---

1,564,722. APPARATUS FOR INSPECTING FILM BANDS. ODO D. TAUBAN and FRITZ JENNE, Freiburg, Germany, assignors to Apparatebau Freiburg G. m. b. H., Freiburg, Germany. Filed July 16, 1924. Serial No. 726,333. 3 Claims. (Cl. 88—14.)



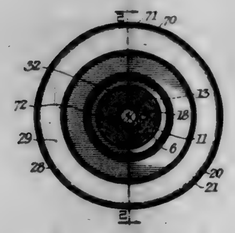
1. In an apparatus of the character set forth, in combination with a source of light, a film gate illumined by said source of light, means for traveling a film band past said gate, an enlarging viewing lens extending in a plane substantially at right angles to said film gate, and ray-deflecting means interposed between said gate and said lens for redirecting the image rays onto said viewing lens.

---

1,564,723. MOTION-PICTURE APPARATUS. JULIEN TESSIER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Feb. 12, 1923, Serial No. 618,467. Divided and this application filed July 21, 1924. Serial No. 727,102. 7 Claims. (Cl. 242—71.)

1. In motion picture apparatus, a fixed frame, a shaft fixed in position and extending from said frame, a reel with an axial opening adapted to be placed on

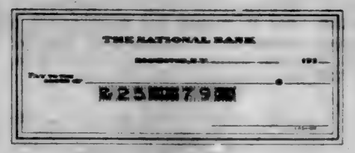
said shaft, a fastening means adapted to hold the reel on the shaft, and a containing element for said reel formed to be positioned over said reel by movement in



a direction parallel to the shaft and said fastening means or to be removed therefrom while said fastening means is operative to hold the reel on the shaft.

---

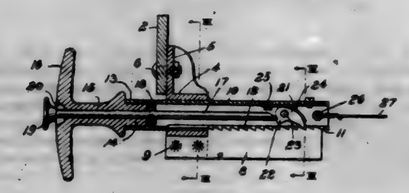
1,564,724. COMMERCIAL-PAPER INSTRUMENT. LIBANUS M. TODD and CHARLES G. TIEVEL, Rochester, N. Y., assignors to The Todd Company, Inc., Rochester, N. Y. Filed June 14, 1922. Serial No. 568,215. 8 Claims. (Cl. 283—0.)



1. A commercial paper instrument printed with a number expressed in figures and with a background for each figure comprising repetitions of the group of letters spelling the corresponding figure word.

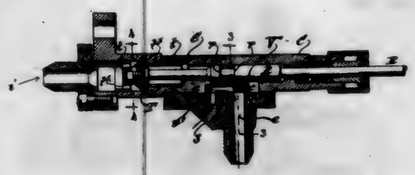
---

1,564,725. EMERGENCY-BRAKE-OPERATING DEVICE. JAMES B. TOPHAM, Pittsburgh, Pa. Filed Nov. 4, 1924. Serial No. 747,779. 3 Claims. (Cl. 74—39.)



1. An emergency brake operating device comprising a tubular body mounted for bodily sliding movement and provided with an elongated slot at one side thereof, a stationary rack member positioned in alignment with said slot, a dog mounted within the interior of the tubular body cooperating with the said rack, and an actuating rod mounted for sliding movement longitudinally of said body and projecting within the interior of the body for releasing said dog from the rack.

1,564,726. STEAM-ENGINE THROTTLE. CHARLES UEBELMESSER, New York, N. Y. Filed Apr. 4, 1925. Serial No. 20,776. 3 Claims. (Cl. 277—33.)

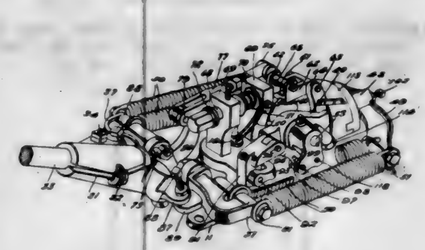


1. A throttle device of the character designated, formed with an auxiliary port for communication with the exhaust, and with a supplementary slide valve controlled by the throttle valve rod and having a by-pass channel for connection with said auxiliary port, said valve being adapted to open and close communication between said auxiliary port and the outlet port to the engine, for the purpose and substantially in the manner set forth.

3. A throttle device of the character designated formed with an outlet port connecting with the engine and an auxiliary port, a slide valve for cooperation with said ports and having a by-pass channel for connection with one of said ports or with both of them, and a throttle valve rod having spaced-apart shoulders, and the valve having a shouldered extension fitted between said shoulders.

---

1,564,727. TROLLEY RETRIEVER. ADRIAN C. VAN HOOYDONK, Monroe, Mich. Filed May 9, 1922. Serial No. 559,662. 16 Claims. (Cl. 191—70.)



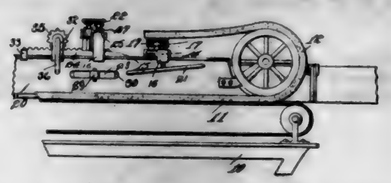
1. In a device of the character described, the combination of a supporting means, a trolley pole pivotally supported upon said means, spring means for yieldably retaining said trolley pole in an erect position, means including a latching mechanism for retaining said spring means in a tensioned condition, and a spring pressed latch rod carried by said first mentioned means and adapted to be engaged by said trolley pole to actuate said latching mechanism, thereby relieving said spring means of tension, thus permitting the trolley pole to drop to a lowered position, and a locking means for engaging the trolley pole immediately upon its being dropped to a lowered position for holding the trolley pole in a set position, as and for the purpose set forth.

---

1,564,728. PAPER-MAKING MACHINE. HARRY G. VAN ORNUM, Newton Falls, N. Y. Filed Oct. 9, 1924. Serial No. 742,610. 4 Claims. (Cl. 92—44.)

2. In a Fourdrinier machine, the combination with the longitudinally slotted deckle frame, of slices adjustable

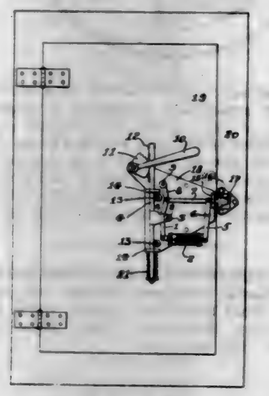
vertically and longitudinally on the frame, one of the slices having guiding and retaining means engaged through the slotted frame, a toothed member on the



frame and operatively connected with the last-named slice, and gear means for engagement with the toothed member for moving the last-named slice.

---

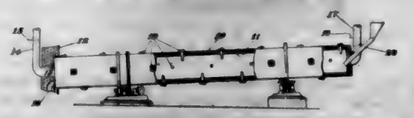
1,564,729. MECHANICAL MOVEMENT FOR DOOR-BOLTS AND THE LIKE. ARNOLD VON SCHRENK, Tuckahoe, N. Y. Filed Oct. 25, 1922. Serial No. 596,750. 5 Claims. (Cl. 292—164.)



2. A mechanical device for actuating door bolts and the like including a power-delivering element and means for applying the energy thereof to press said bolt, said means including a floating lever and a shiftable fulcrum therefor and manually operated means to control the application of said energy.

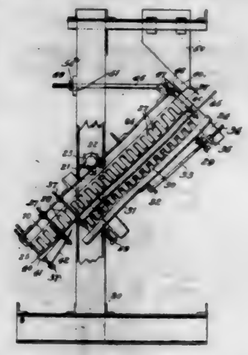
---

1,564,730. PROCESS OF CALCINING MATERIAL. ALBERT S. WALDEN, Cleveland, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 24, 1921. Serial No. 455,300. 5 Claims. (Cl. 202—8.)



1. Process of treating material capable of yielding on heating a combustible volatile portion and an oxidizable solid residue, which comprises moving a stream of the material through regions of successively increasing temperatures, the temperature at which the solid residue begins to undergo substantial oxidation being that of an intermediate region, incompletely burning the evolved gases with a deficiency of oxygen in the regions hotter than said intermediate region, and substantially completely burning the residual gases in the cooler regions.

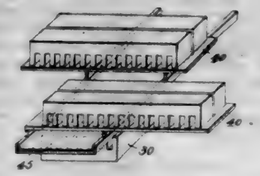
1,564,731. METHOD AND APPARATUS FOR SEPARATING ORE PARTICLES. JOSEPH WEATHERBY, New Cumberland, Pa., assignor, by direct and mesne assignments, to Weatherby Ore Separator Company, Philadelphia, Pa., a Corporation of Delaware. Filed July 21, 1922. Serial No. 576,622. 15 Claims. (Cl. 209—214.)



1. The art of electrically separating magnetically permeable particles from gangue which consists in passing a mixture of particles and gangue between a progressive multi-phase magnetic field and an induced field.

---

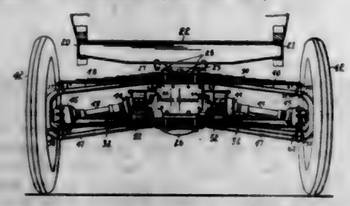
1,564,732. METHOD AND APPARATUS FOR SEPARATING ORE PARTICLES. JOSEPH WEATHERBY, Harrisburg, Pa., assignor to Weatherby Ore Separator Company, Philadelphia, Pa., a Corporation of Delaware. Original application filed July 21, 1922, Serial No. 576,622. Divided and this application filed Feb. 4, 1924. Serial No. 690,582. 15 Claims. (Cl. 209—214.)



1. The art of electrically separating permeable particles from gangue which consists in passing a mixture of particles and gangue between a progressive multi-phase magnetic field and an induced field.

---

1,564,733. REAR-AXLE ASSEMBLY. CAIUS E. WEAVER, Syracuse, N. Y., assignor to Birmingham Motors, Jamestown, N. Y., a trust. Filed July 18, 1921. Serial No. 485,598. 3 Claims. (Cl. 180—73.)

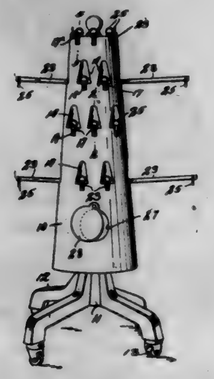


1. In an automobile rear axle assembly, a differential casing having integral solid seats at its top and bottom, springs engaged at their central portions against the seats, means to immovably connect said portions of the

springs to the seats, wheel carriers, shackle links movably connected at one end to the carriers and movably connected at their opposite ends to the outer ends of the springs so as to cause the outer ends of the springs to bear downwardly on and be movably relative to the carriers, and radius rods movably connected to the differential casing and to the carriers.

---

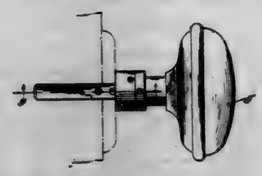
1,564,734. CLOTHES DRIER. JOSEPHINE M. WEILER, Lisbon, N. Dak. Filed May 28, 1925. Serial No. 33,517. 5 Claims. (Cl. 68—34.)



1. A clothes hanger of the character described including a hollow, metallic, upwardly tapering shell having a plurality of circumferentially arranged series of openings, the lower edge of each opening being provided with an inwardly projecting slotted member and the lower margin of each opening being slotted, the slots merging with each other, and arms, one for each opening, slipping longitudinally through said slots, the arms being formed with stops at their opposite ends, the arms when in a projected position engaging against the under face of the corresponding inwardly extending member, the tapering form of the shell permitting an upper series of arms to be disposed in a vertical position inward of a lower series of arms.

---

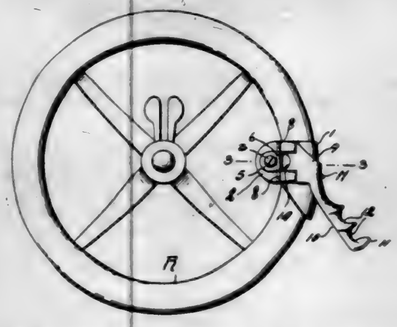
1,564,735. DOORKNOB. MARTIN W. WESSENDORF, Buchanan, Mich. Filed Apr. 27, 1923. Serial No. 634,998. 1 Claim. (Cl. 292—352.)



A knob attaching device comprising in combination with a noncircular shaft having openings passing transversely therethrough, a shank adapted to fit snugly over the shaft and having openings adapted to register with the openings in the shaft, a pin passing transversely through one of the openings in the shaft and having its end portion received in the openings of the shank, the shank being screw threaded exteriorly from one end and to a point between its ends and beyond the openings in the shank, a retaining ring internally threaded and adapted to engage the thread upon the shank and extend over the openings of the shank and with one end edge disposed at the end of the shank and a locking ring internally threaded and engaging the thread of the shank and adapted to engage at its edge against the inner edge of the retaining ring.

---

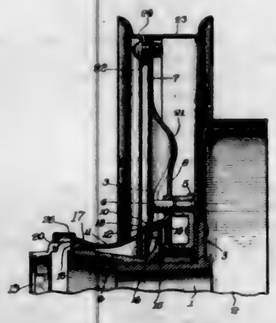
1,564,736. HAND REST. JOSEPH S. WHELAN and ROBERT P. ELLIS STARR, Concordia, Kans. Filed Dec. 23, 1924. Serial No. 757,695. 3 Claims. (Cl. 74—38.)



1. In combination with the rim of a steering wheel, a hand rest attachment comprising a member secured to said rim, a plate, means for pivotally connecting a marginal portion of the plate with the member, said plate when in one position having close contact with the member, and an outwardly inclined arm carried by the plate, said arm being disposed outwardly with respect to the rim when the plate is in contact with the member.

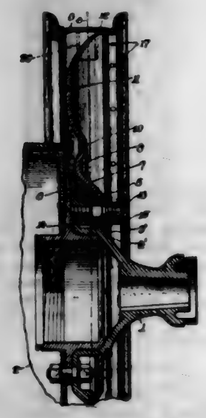
---

1,564,737. HUB DEMOUNTABLE DISK WHEEL. WILLIAM ERASTUS WILLIAMS, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed June 4, 1920. Serial No. 386,446. 6 Claims. (Cl. 301—63.)



1. The combination with a hub elongated outwardly with respect to the wheel's plane, having projections on which a wheel disk may slide transversely to its own plane but bars relative rotation of disk and hub, and further having a central, peripheral, tapered support for a hub sleeve, of an outwardly tapered hub sleeve fitting over and longitudinally adjustable with respect to said support, a disk having around its central opening a lateral flange overlapping and permanently united with the inner portion of said sleeve, and means for securing the outer end of the sleeve to the hub and forcing it longitudinally into rigid engagement with the tapered support.

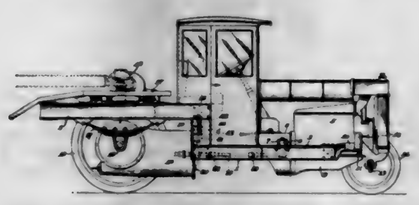
1,564,738. DISK WHEEL FOR AUTOMOBILES. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 17, 1922. Serial No. 553,666. 6 Claims. (Cl. 30—63.)



6. A wheel disk having a lateral, inwardly recessed peripheral flange, of a rim seated on said flange and having a projection extending into said recess, said flange and rim projection being fastened together at intervals and provided with interfitting indentations at the fastening points.

---

1,564,739. TRACTOR. SIDNEY B. WINN, Lapeer, Mich. Filed Aug. 11, 1924. Serial No. 731,351. 3 Claims. (Cl. 180—85.)

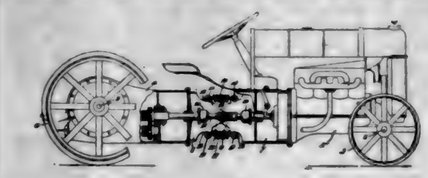


1. Means for increasing the wheel base of a Fordson tractor by separating the front axle assembly from the rear axle assembly at the connection of the transmission housing with the engine block, said means including a rear frame part over the rear axle assembly, a front frame part extending rearwardly from the front axle assembly in a plane below that of the rear frame part, a rigid connection between adjacent ends of said front and rear frame parts, an operative power connection between the tractor engine and the rear axle assembly and yieldable means supportingly disconnected transmission housing relative to said rigid connection.

---

1,564,740. TRACTOR. SIDNEY B. WINN, Lapeer, Mich. Filed Aug. 11, 1924. Serial No. 731,352. 7 Claims. (Cl. 280—106.5.)

1. Means for increasing the length of a comparatively short tractor wherein the transmission housing is separable from the engine block of the tractor, and wherein the front and rear parts of the tractor are to be flexibly connected, said means comprising interposed extensions attached respectively to the transmission housing and engine block, said extensions being coaxially of each other,



and hingedly connected members carried by said extensions and connecting said extensions at opposite sides of the axis of said extensions.

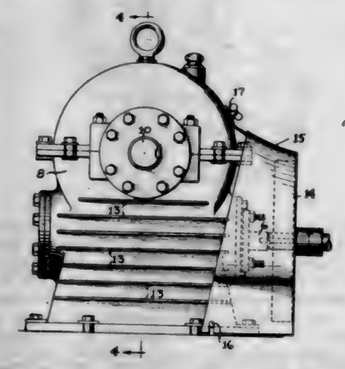
---

1,564,741. BATTERY ELECTRODE. FRANCIS J. WOLFE, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 7, 1923. Serial No. 637,328. 6 Claims. (Cl. 136—115.)

1. An electrode for the described purpose comprising a conductive pulverulent material, a perforated conductive envelope therefor, a permeable septum of nonconducting material between the pulverulent material and the envelope, said septum being impervious to the pulverulent material, and a solid conductor electrically connecting the pulverulent material and envelope.

---

1,564,742. WORM-GEAR REDUCTION UNIT. GEORGE H. ACKER, Cleveland, Ohio, assignor to The Cleveland Worm and Gear Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1923. Serial No. 669,886. 1 Claim. (Cl. 184—104.)

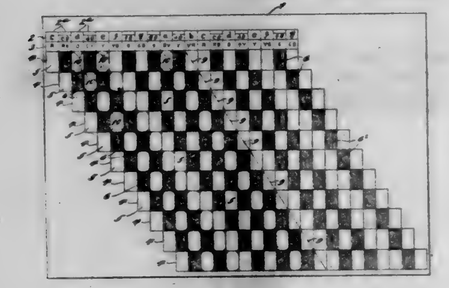


A worm gear reduction unit comprising a gear case having an oil well, a high speed shaft journaled in said case and carrying a worm operating in the oil well, a lower speed shaft journaled in the case and carrying

a gear cooperating with the worm and an air circulating fan on the extension of the high speed worm shaft outside the casing of greater diameter than the width of the casing to create flow of cooling air over the sides of the casing containing the oil well to thus dissipate heat generated by the gears through direct conduction to the air stream, thereby enabling the gear unit to carry substantially the full load of which it is mechanically capable.

---

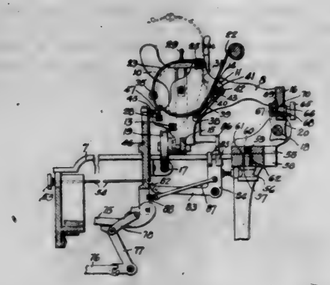
1,564,743. MEANS FOR DETERMINING COLOR COMBINATIONS. HAZEL H. ADLER, New York, N. Y. Filed June 30, 1921. Serial No. 481,607. 14 Claims. (Cl. 88—14.)



1. A color harmony device consisting of a chart having a series of color areas in alinement in spectrum order, such colors constituting a complete harmonic scale, with blank spaces in the positions of the colors of the spectrum not forming part of such harmonic scale.

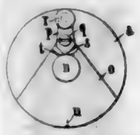
---

1,564,744. TYPEWRITING-MACHINE-CARRIAGE CONSTRUCTION. JESSE ALEXANDER, Los Angeles, Calif. Filed Dec. 26, 1923. Serial No. 682,677. 9 Claims. (Cl. 197—60.)



1. In a typewriter, a supporting frame, a transversely movable carriage mounted on said frame, a marginal stop on said carriage, a transversely extending support carried by the frame, a marginal stop on the back of said support arranged to be engaged by the marginal stop on the carriage, a flat spring secured at one end on the back of said transverse support, a projecting stop on the yielding portion of said flat spring and normally supported by said spring out of the plane of travel of the marginal stop on the carriage, and a push button engaging the yielding portion of the flat spring to push the same rearwardly and carry the stop thereon into the plane of travel of the marginal stop on the carriage.

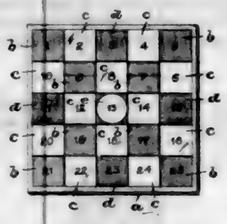
1,564,745. SIGHTING DEVICE FOR USE WITH GOLF BALLS. WHEATON LIFFEATT RALEIGH AMESBURY, London, England. Filed Apr. 23, 1923. Serial No. 634,114. 11 Claims. (Cl. 273—35.)



1. A golf indicator comprising a holder adapted to be attached to the sleeve, a gravity indicator supported by said holder and sighting devices on the indicator, whereby as the player swings round during the back or up stroke of his club, said devices come into alignment between his eye and the ball and thus constitutes an indication that the limit of the backward swing has been reached, or that the correct pivoting movement has been performed, or both.

---

1,564,746. GAME. WALTER GREEN BARNARD, Seattle, Wash., assignor to John D. Cardinell, Montclair, N. J. Filed Dec. 11, 1924. Serial No. 755,165. 6 Claims. (Cl. 273—130.)



1. A game combining with a game-board divided into rows of squares, or the like, of different colors, playing discs also of different colors adapted to be played upon said squares, and cards provided with designations to determine the first play of each player upon said squares.

---

1,564,747. SUPPORT AND LOCK DEVICE FOR CURTAIN POLES. EDWARD J. BARRETT, New York, N. Y. Filed Apr. 30, 1923. Serial No. 635,442. 7 Claims. (Cl. 156—22.)

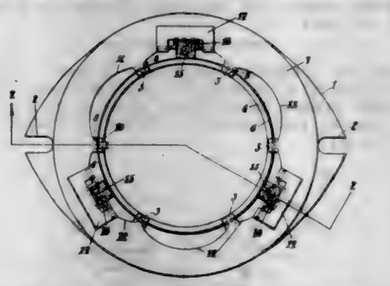
1. A device of the class described comprising a casing, a spring mounted in said casing, and a part on a rod adapted to be passed into said casing and to engage said spring, and retained against accidental displacement from said casing by said spring, said part being provided with an offset portion, and said spring with an aperture into which the offset portion is adapted to pass.

1,564,748. STERILIZING DEVICE. THOMAS C. BARRETT, Hartford, Conn. Filed Mar. 20, 1925. Serial No. 17,056. 5 Claims. (Cl. 179—185.)

1. In a device of the character described, an outer casing, a compressible bulb arranged in the bottom of said casing and adapted to contain a disinfectant, an upper holder arranged above said bulb and communicating therewith, said upper holder being movable to compress said bulb, and an absorbing member arranged in said upper holder.

---

1,564,749. RING TRAVELER AND MOUNTING THEREFOR FOR SPINNING MACHINES. FRANK D. BENNETT, Plainfield, N. J., and WILHO A. KOSKEN, Boston, Mass., assignors, by mesne assignments, to Benjamin Farnham Smith, Concord, Mass. Filed Sept. 21, 1922. Serial No. 589,579. 21 Claims. (Cl. 118—56.)



1. A ring traveler having its mass so distributed as to be in substantial rotational balance while in operation.

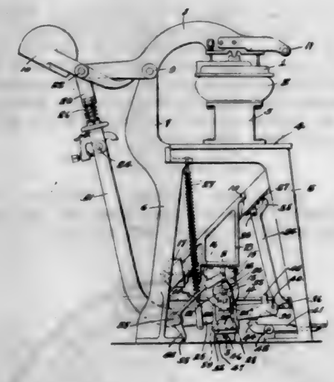
---

1,564,750. TOWEL CABINET. JOSEPH N. BORROUGHS, Oakland, Calif. Filed July 24, 1922. Serial No. 577,016. 3 Claims. (Cl. 45—82.)

3. A towel cabinet comprising a towel supply roller, an actuating roller, a second actuating roller, gears carried by each of said actuating rollers, an idler gear meshing with both of said gears, a control gear meshing with said idler gear, means whereby said control gear may be stopped after it has made one complete revolution, said means consisting of a trigger, a lip carried on the upper end thereof, a stop bar carried by said control gear and adapted to engage said lip on each complete rotation of the control gear and means whereby said lip may be moved out of engagement with said bar so as to permit of the rotation of the control gear.

---

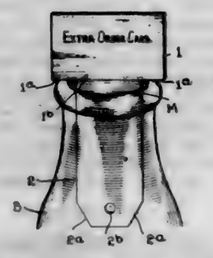
1,564,751. POWER GARMENT AND LAUNDRY PRESSING MACHINE. PHILIP N. BRAUN, Syracuse, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee. Filed Mar. 13, 1923. Serial No. 624,834. 21 Claims. (Cl. 68—9.)



1. In a pressing machine, a pair of cooperating pressing elements, one of which is movable toward and from the other and manually movable part way toward the other, a constantly moving driving member, motion transmitting means connected to the movable element, a driven member for co-acting with the constantly moving driving member, one of said members being shiftable into and out of connection with the other and being normally out of connection therewith and means controlled by the part way closing movement of the movable element for shifting the shiftable member into engagement with the other member while the driving member is in motion.

---

1,564,752. ORDER CARD. EARL A. BROWN, North Woodside, Md. Filed Sept. 19, 1925. Serial No. 57,396. 3 Claims. (Cl. 40—4.)



1. A T-shaped order-card consisting of a lower portion forming the stem of the T of less width and greater surface area than the head of the T, the lower portion of the card being adapted to extend within a container and being of less width than the mouth of the container,

the head of the card forming shoulders overhanging the lower portion, the card resting on said shoulders and being adapted to span and project beyond both sides of the orifice in the container.

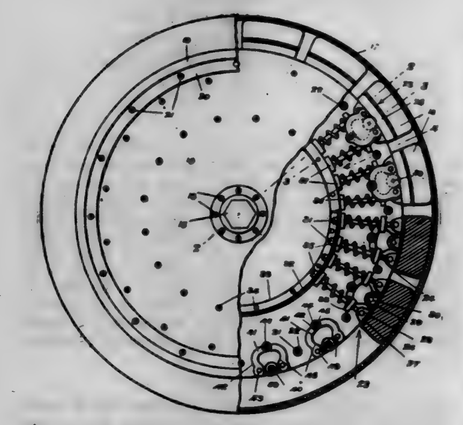
---

1,564,753. REVERSAL PROCESS. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 14, 1923. Serial No. 674,772. 11 Claims. (Cl. 95—88.)

1. In a process of making a photographic image by reversal in a light sensitive element containing a silver image and a complementary image of sensitive silver salts, the steps of submitting the element to a bath that converts the silver image into a different insensitive image without rendering the sensitive salts insensitive, exposing the element to light and developing the affected sensitive salts to a silver image.

---

1,564,754. RESILIENT WHEEL. WILLIAM ALVA CARNS, Dunn Center, N. Dak. Filed Jan. 19, 1925. Serial No. 3,868. 2 Claims. (Cl. 152—29.)

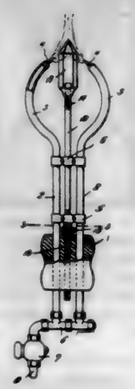


1. A wheel comprising a body, a tire composed of segments, rods slidable in the body and pivotally connected with the segments near the ends of the segments, spring means associated with said rods for moving the segments outwardly, and interengaging members carried by the body and segments between the ends of the segments to limit the longitudinal movement of the segments relatively to the body, said members of the body having portions curved about the corresponding pivots between the rods and segments and along which the members of the segments are movable when the segments swing inwardly about said pivots.

---

1,564,755. COMBINATION BLOWTORCH, SOLDERING AND BRANDING IRON. THOMAS RAYMOND CLARK, Chicago, Ill. Filed Feb. 13, 1925. Serial No. 9,023. 4 Claims. (Cl. 158—14.)

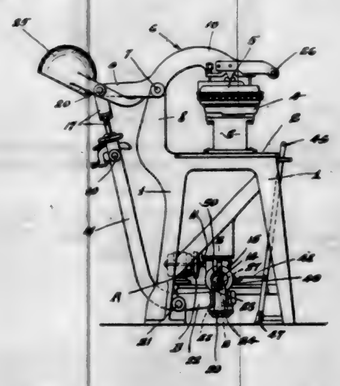
3. In a device of the class described, a handle of heat insulating material, a pair of parallel spaced pipes extending through the handle, a supply pipe extending transversely of the adjacent ends of said pipes, a valve in said supply pipe, a nipple on said valve whereby the same may be attached to a flexible hose leading from a fuel supply source, the other ends of first pipes being curved arcuately and having jets in their terminals directed so that flames shooting therefrom will cross each



other, a spindle slidable through the handle, a clamp between the first mentioned pipes, said spindle passing through said clamp, a nut threaded on the spindle between the handle and the clamp, the end of said spindle adjacent the jets being threaded for receiving an iron head.

---

1,564,756. PRESSING MACHINE. ALBERT B. CLISSON, Geddes, N. Y., assignor, by mesne assignments, to Liberty National Bank, trustee, Syracuse, N. Y. Filed Nov. 27, 1923. Serial No. 677,251. 7 Claims. (Cl. 68—9.)

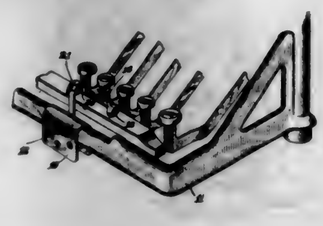


1. In a pressing machine, the combination of coacting pressing elements having relative movement one toward and from the other, and being movable manually preliminarily toward closed position, power means for actuating the movable element, motion transmitting means between the power means and the movable element, comprising an intermittently movable cam, a member with which said cam coacts, the cam being arranged to hold said member in its operative position assumed when pressure is being applied to the movable element, said member being provided with a follower for engaging the cam and being movable into position to engage the cam by the movement of said member effected by

the preliminary closing movement of the movable element, manual means for controlling the actuation of the cam, and means for moving the follower out of engagement with the cam.

---

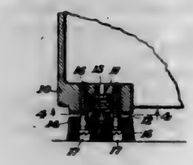
1,564,757. ATTACHMENT FOR TYPEWRITERS. EDWIN M. COOPER, San Francisco, Calif. Filed Dec. 30, 1922. Serial No. 609,980. 9 Claims. (Cl. 197—98.)



1. The combination with the frame and spacer bar of a typewriter, of an attachment for operating the spacer bar, comprising a clamp removably mounted on the frame; a lever having one arm pivoted on said clamp and having the other arm extending from the first-mentioned arm and arranged to operate the spacer bar; and an operating key mounted at the junction between said arms.

---

1,564,758. TYPEWRITING-MACHINE-CUSHIONING FOOT. MANSFIELD C. CRAWLEY, Groton, N. Y., assignor to Addograph Company, Los Angeles, Calif., a Corporation of California. Filed July 25, 1922. Serial No. 577,863. 3 Claims. (Cl. 45—137.)



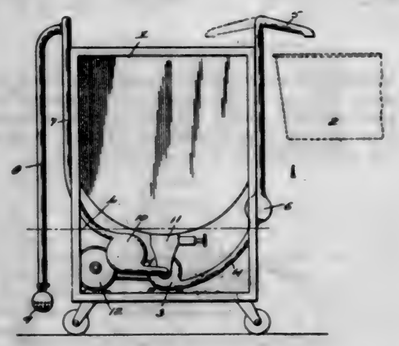
1. In a typewriting machine, in combination, a main frame having a downwardly facing recess therein and a plurality of vertical threaded passages adjacent said recess, a plurality of vertically disposed screws having their upper ends screwed into said threaded passages, a rubber supporting foot having vertical passages through which the shanks of the screws extend and recesses in its lower face in which the heads of the screws are housed, said recesses being substantially deeper than the thickness of the screw heads and the upper walls of the recesses forming cushion abutments adapted to be engaged by the screw heads to limit upward movement of the frame relatively to the foot, a metal cap attached to the upper end of the foot having a central projection in register with the recess in said frame and apertures adjacent said projection through which the screw shanks extend, and an upright coiled spring having its upper end seated in the recess in the frame and its lower end seated on the cap and surrounding the projection and normally supporting the frame above the cap with the heads of the screws above the bottom of the foot.

1,564,759. NURSING BOTTLE. FRANK J. CREQUER, Cuyahoga Falls, Ohio. Filed Apr. 8, 1924. Serial No. 704,979. 5 Claims. (Cl. 215—11.)

1. A nursing bottle provided with a neck having a vent in the wall thereof and a flexible sleeve arranged within the neck of the bottle over said vent and forming a valve for said vent.

---

1,564,760. CLOTHES-WASHING MACHINE. LEON E. CULVER, Butte, Mont. Filed Aug. 27, 1924. Serial No. 734,450. 2 Claims. (Cl. 68—37.)



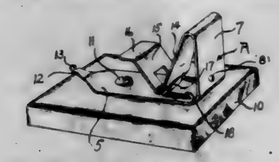
1. A clothes washing apparatus comprising a tub, a valved drain device at the bottom thereof, a centrifugal pump located beneath said drain device and in communication with the latter, a suction pipe leading to said pump, a hose carried by said suction pipe, a nozzle on the free end of said hose, a discharge pipe leading from said pump and to the top of said tub, and a second nozzle rotatably mounted on the upper end of said discharge pipe.

---

1,564,761. TERMINAL CLIP. WALTER W. DAIKER, Brooklyn, N. Y. Filed June 19, 1922. Serial No. 569,443. 4 Claims. (Cl. 173—259.)

1. A fastening device for electrical conductors formed of a single piece of flat resilient metallic ribbon comprising a base strip adapted to be secured to a base plate, an upstanding guide arm formed on the base

plate having a guide opening therein for receiving the conductor, a depending inwardly inclined resilient arm, having a tongue struck out from the lower end thereof formed on the upper end of the guide arm said



tongue adapted to frictionally engage the upper surface of the base strip for firmly forcing an electric conductor in engagement with the base strip, and a finger piece formed on said arm.

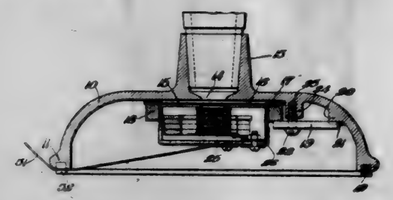
---

1,564,762. ARCH BRICK. GUY CARLETON DENNEY, Hinsdale, Ill., assignor to American Arch Company, a Corporation of Delaware. Filed June 21, 1921. Serial No. 479,237. 10 Claims. (Cl. 110—87.)

1. An arch brick having on one end a convex face and a hollow face adapted to make multiple line contact, respectively, with correlatively corresponding hollow and convex faces on one end of another brick in various reciprocally leaning angular relations of such bricks on various spans.

---

1,564,763. LOUD SPEAKER. VERNON DURBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Oct. 20, 1924. Serial No. 744,542. 4 Claims. (Cl. 179—179.)

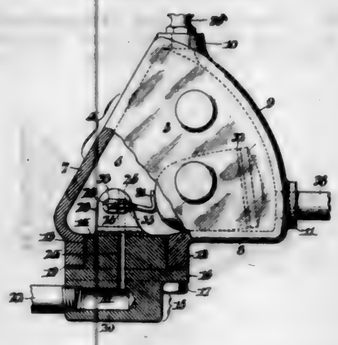


1. A loud speaker having, in combination, a bell provided with a lip at the bottom, a receiver supported on the bell having a magnet and diaphragm and provided with an adjusting arm for adjusting the position of the magnet with relation to the diaphragm, such arm extending out under the edge of the bell, and stops for engaging the arm to prevent it from being moved excessively either in the direction to limitedly adjust the magnet toward the diaphragm or in the opposite direction.

---

1,564,764. FLOAT VALVE. ARTHUR R. BARNSHAW, Wynnewood, Pa. Filed Jan. 4, 1924. Serial No. 684,329. 5 Claims. (Cl. 137—103.)

1. A float valve embodying a casing having a pair of convergent walls with provision for a supply connection, one of said walls being apertured, an insert closure for said aperture having an axial duct affording communication between an outlet cavity and a relatively small port, a cut-off shutter rockable on an extension of the closure and controlling said discharge port, said



shutter being transversely grooved whereby frictional resistance to movement is reduced to a minimum, and a float secured to the cut-off pivot pin, said closure, cut-off and float, being removable as a connected unit.

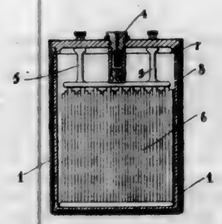
---

1,564,765. PROCESS OF REMOVING PYRIDINE FROM NITROCELLULOSIC MATERIALS. LEON W. EBERLIN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 11, 1925. Serial No. 8,575. 7 Claims. (Cl. 260—148.)

3. The process of removing pyridine from solid colloidized nitrocellulose containing the same, which comprises treating the said nitrocellulose with a chlorinating agent in the presence of a mixture of water and a penetrant until the pyridine is substantially decomposed, removing the nitrocelluose from the mixture and treating the same with an anti-chlor solution until any free chlorine is neutralized.

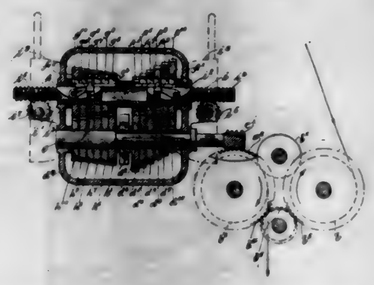
---

1,564,766. CONTAINER FOR CORROSIVE LIQUIDS. KENNETH ESSEX EDGEWORTH, London, England. Filed Aug. 11, 1924. Serial No. 731,510. 3 Claims. (Cl. 136—166.)



1. A container for corrosive liquids, comprising a member formed of ebonite or like acid-resisting rigid material in which the filling aperture is formed, a soft and flexible rubber bag, a vulcanized joint between the mouth of the bag and said member, and a casing of rigid material which is not necessarily resistant to the corrosive action of the liquid enclosing the bag and rigidly connected with the member furnished with the filling aperture.

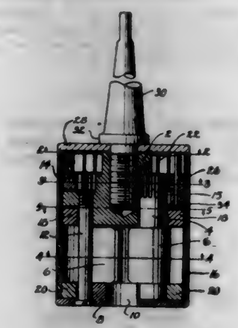
1,564,767. VARIABLE-SPEED GEARING. CARL EGGART, Arbon, Switzerland, assignor to Societe Anonyme Adolphe Saurer, Arbon, Switzerland, a Corporation of Switzerland. Filed Oct. 7, 1922. Serial No. 592,950. 1 Claim. (Cl. 74—59.)



The combination of a shaft operatively connected with mechanism to be driven, a sleeve mounted to rotate freely on said shaft, means for rotating said sleeve, a series of differential gears fast on said sleeve, a hollow shaft parallel with the first mentioned shaft, a second series of differential gears loosely mounted on said hollow shaft, each in mesh with a gear of the first series of differential gears, means for operatively connecting one or another of said gears to the hollow shaft, a third series of differential gears loosely mounted on the hollow shaft, means for operatively connecting one or another of said third series of differential gears with the hollow shaft, and a fourth series of differential gears fast on the first mentioned shaft each in mesh with a gear of said third series of differential gears, the means for operatively connecting gears of the second series with the hollow shaft being independent of the means for operatively connecting gears of the second series with said hollow shaft, and an enclosing housing having bearings for said shafts adapted to hold the several sets of differential gears against endwise movement.

---

1,564,768. CHUCK. GEORGE W. EMRICK, Brooklyn, N. Y., assignor to Eastern Tube and Tool Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 29, 1920, Serial No. 433,755. Renewed Oct. 29, 1925. 13 Claims. (Cl. 279—33.)



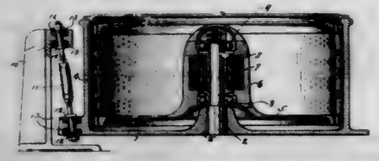
1. A chuck having in combination a head, a rotary tool clamping member, a shaft journaled in said head upon which said tool clamping member is mounted and a freely rotatable bearing ring engaging said shaft to take the lateral thrust thereof produced by the clamping of a tool.

1,564,769. DISTANCE-MEASURING DEVICE. OTTO EPPENSTEIN, Jena, Germany, assignor to Firm of Carl Zeiss, Jena, Germany. Filed May 22, 1924. Serial No. 715,229. 4 Claims. (Cl. 88—2.7.)

1. In a device for measuring distances and adjusting the same two telescopes, each containing an objective and an entrance reflector system deflecting the optical axis by about 90°, a separating prism system common to both telescopes and located behind the objectives, an ocular disposed behind the separating prism system, the separating prism system being adapted to transmit of each of the two ray pencil systems entering the two telescopes a part to the ocular, a deflecting device adapted to displace at least one of the two images, produced by the two objectives, parallelly to the plane containing the axes of the two telescopes, a distance scale and an index coacting with this scale, one of these two parts being operatively connected with the said deflecting device, a mark lying outside the image plane of the said ocular, an optical system disposed behind the said objectives and adapted to image the mark in this image plane, and a correcting reflector system, deflecting the traversing rays by about 180°, the correcting reflector system being adapted to be fixed before the telemeter and the entrance apertures of this system having about the same distance apart as the entrance apertures of the two telescopes.

---

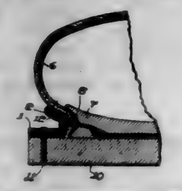
1,564,770. EXTRACTOR. HAROLD G. EYNON, Philadelphia, Pa., assignor to Fletcher Works, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1923. Serial No. 635,483. 3 Claims. (Cl. 210—72.)



1. An electrically driven extractor comprising in combination, a tub, a balancing stand for supporting the tub, a shaft extending vertically of the tub and lying wholly within the confines thereof, a basket within said tub provided with a central housing, said housing cooperating with said shaft to support the basket, and an electric motor for driving the basket lying within said housing.

---

1,564,771. WELT FOR BOOTS AND SHOES. JOSEPH E. FALLON, Boston, Mass. Filed May 17, 1924. Serial No. 713,940. 8 Claims. (Cl. 36—78.)

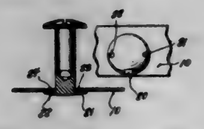


1. As an article of manufacture, a welt for use in making boots and shoes, comprising a main body portion for attachment of the outsole, an inseam portion for the attachment of the upper and insole, and a flexible hinge of less thickness than the main body portion extending

longitudinally of the welt between the body portion and the inseam portion which enables the welt to be bent longitudinally with the longitudinal edge of the inseam portion presenting a bead or cord-like finish above the main body portion of the welt.

---

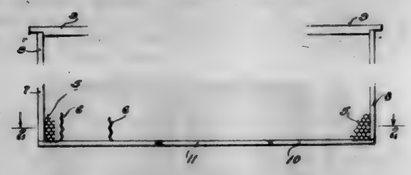
1,564,772. POST FASTENING FOR LOOSE-LEAF BINDERS. EMIL H. FISCHER, Milwaukee, Wis., assignor to H. C. Miller Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 12, 1922. Serial No. 606,407. 6 Claims. (Cl. 129—21.)



1. In a loose leaf metallic binder, a binder strip having a coupling post extending upwardly therethrough with the head of the post in engagement with said strip, the post being formed with a circumferential kerf adjacent the head, the material of the strip being stamped into said kerf, and means for preventing rotary movement of the post with respect to the strip.

---

1,564,773. BEEHIVE FRAME. GEORGE GORDON FRATER, Watertown, Wis., assignor to G. B. Lewis Company, Watertown, Wis., a Corporation of Wisconsin. Filed Aug. 4, 1922. Serial No. 579,641. 1 Claim. (Cl. 6—10.)



A device of the character described, comprising a frame including top, bottom and side bars, the bottom bar having a slot cut therein throughout the inside length of the frame and a foundation suspended from the top bar with its lower end hanging freely in the bottom bar slot, whereby expansion of the foundation is accommodated.

---

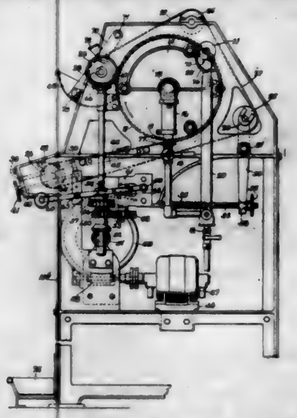
1,564,774. COMPOSITE MATERIAL FOR GEARS AND THE LIKE. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed Jan. 26, 1924. Serial No. 688,865. 2 Claims. (Cl. 154—50.)

1. A self-lubricating laminated composite material of high mechanical strength and free from fusible constituents comprising woven fabric arranged in layers and impregnated with a phenolic condensation product capable of hardening under heat and pressure, and graphite incorporated in said material, and constituting not to exceed 5 per cent of the total weight of the material.

---

1,564,775. DRYING MACHINE. CHARLES A. GREEN and HAROLD J. BRUNK, Chicago, Ill., assignors to The C. F. Pease Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 11, 1923. Serial No. 611,940. 26 Claims. (Cl. 34—4.)

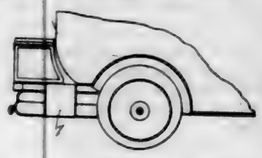
7. In a drying machine, a drum, means for heating the same, a plurality of rollers, a belt passing over the latter and around said drum, one of said rollers being mounted below and forwardly of said drum, the feed run of said belt extending from said last named roller to the drum along an upwardly inclined plane, means for



adjusting said roller, and a stationary rod associated with said roller over which the material to be dried is dragged in its passage to said belt.

---

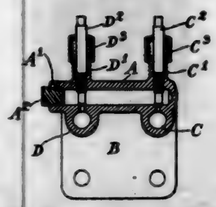
1,564,776. COMBINED LUGGAGE AND TIRE CARRIER. WALTER R. GREEN, Chicago, Ill. Filed Nov. 1, 1923. Serial No. 672,054. 2 Claims. (Cl. 224—29.)



1. In a vehicle having a chassis comprising side rails, a platform having rigid side members connected to said rails and a transverse bar also connected to said rails, a pair of brackets depending from said side members, a pair of spaced transverse members connected to said brackets, a pair of spaced transverse members connected to said side members, two sets of oppositely directed tire retaining brackets secured to said transverse members, one set of tire retaining brackets being swingable for the insertion and removing of ties.

---

1,564,777. MANIFOLD. MELVIN SOLOMON GROH, Toronto, Ontario, Canada, assignor to Joseph Mercadante, New York, N. Y. Filed Dec. 24, 1924. Serial No. 757,964. 1 Claim. (Cl. 277—50.)

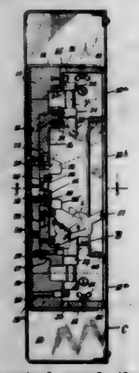


In a manifold, a cross channel permanently closed at one end, and having its other end adapted to open or close independently of the needle valves hereinafter mentioned; an intake line substantially at right angles

to said cross channel and connected to said cross channel by a substantially smaller connecting channel, said connecting channel being adapted to be opened or closed by a needle valve, and a delivery line substantially at right angles to said cross channel and connected to said cross channel by a substantially smaller connecting channel, said connecting channel being adapted to be opened or closed by a needle valve; said intake line and said delivery line each being adapted to circulate their contents independently when their respective needle valves are closed with relation to the cross channel.

---

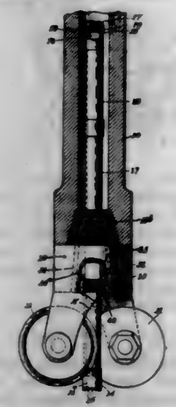
1,564,778. MULTIUNIT PANEL. BENJAMIN GROSS and ROBERT A. GOELLER, New York, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Feb. 23, 1921. Serial No. 447,280. 21 Claims. (Cl. 247—10.)



1. In an electric control panel, the combination of a subbase, a bus-bar supported thereon, a switch base detachably mounted on the base over the bus-bar, said bases having interfitting parts for preventing relative movement between them, spaced steps rising from each of the bases at adjacent ends, and fuse-supporting means on the steps.

---

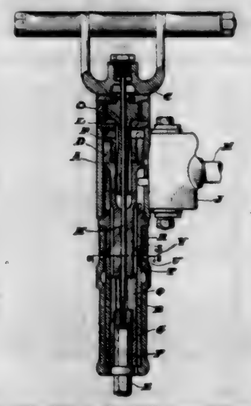
1,564,779. DEVICE FOR TAKING CORE SAMPLES IN ROTARY DRILLING. HARDY H. HAIR, Newport Beach, Calif., assignor to Floyd G. White, trustee, Los Angeles, Calif. Filed Feb. 27, 1922. Serial No. 539,392. 1 Claim. (Cl. 255—71.)



In combination with a rotary drilling bit, split longitudinally, and having a central vertical passage, a core taking barrel clamped between the bit halves in the vertical passage, the passage having a plurality of spaced recesses and the barrel having a projection adapted to register with any one of the recesses to hold the barrel at different heights in the bit.

---

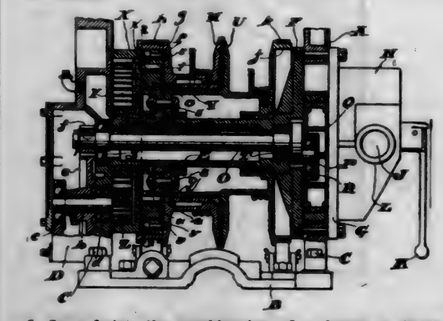
1,564,780. DUSTLESS ROCK DRILL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 12, 1924. Serial No. 749,874. 2 Claims. (Cl. 121—6.)



1. A fluid actuated rock drill comprising a cylinder, a hammer piston having a reduced forward cylindrical extension to reciprocate within the cylinder, a front head having an internal annular groove near its rearward end and a plurality of holes extending from the groove through the wall of the front head whereby said groove may communicate with the atmosphere, a front cylinder washer having a hollow bore to receive the forward extension of the hammer piston arranged within the front head, said washer having rearward and forward extensions extending within the cylinder and front head respectively, and an internal annular recess in its forward extension, and a plurality of radial grooves in the forward face of the forward extension communicating with the said internal recess and with the annular groove in the front head to permit the exhaust of leakage motive fluid to atmosphere through the side of the front head.

---

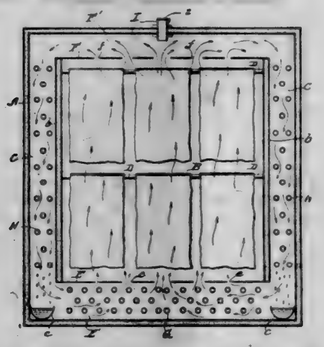
1,564,781. DOUBLE-DRUM HOIST. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 7, 1925. Serial No. 48,758. 9 Claims. (Cl. 254—185.)



1. In a hoist, the combination of a frame, a driving shaft supported by the frame, a reversible motor for rotating the driving shaft, a pair of drums rotatable about the driving shaft, drum drivers carried by the

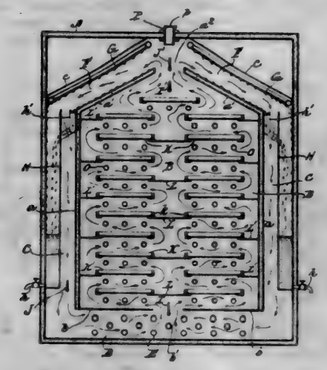
drums, a main driver connected to be rotated by the driving shaft, and means rotatable in the main driver for frictionally engaging one or the other of said drum drivers in accordance with the direction of rotation of the main driver.

1,564,782. METHOD OF AND APPARATUS FOR DRYING. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed May 6, 1921. Serial No. 467,492. 17 Claims. (Cl. 34—3.)



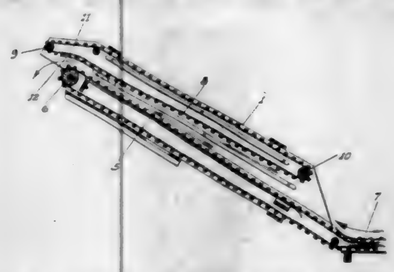
16. In the art of drying, the process which consists in expanding the atmosphere present within a closed circulatory path by heating such atmosphere until the pressure within said path exceeds the outside atmospheric air, venting said circulatory path and permitting the heated atmosphere to escape therefrom for reducing the pressure of such atmosphere within the closed path below the pressure of the outside atmospheric air, thereby attaining an attenuated or rarefied drying atmosphere within said path, and alternately chilling and heating the atmosphere within said closed path for setting up a circulation therein to the exclusion of outside atmospheric air.

1,564,783. METHOD OF AND APPARATUS FOR DRYING INCLUDING SOLVENT RECOVERY. GORDON DON HARRIS, Islip, N. Y., assignor, by mesne assignments, to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed May 6, 1921. Serial No. 467,493. 9 Claims. (Cl. 34—3.)



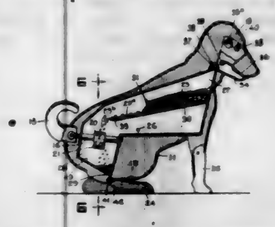
8. In a drier, a housing provided with a material containing chamber forming part of a circulatory path within which is established an attenuated atmosphere and from which path outside atmospheric air is excluded, said chamber being provided in the top thereof with a substantially central outlet, a plurality of flues leading from said outlet and establishing paths for the downflow of separate currents of the attenuated atmosphere flowing through said outlet from said chamber, a plurality of condensers positioned within said flues and adjacent to said outlet from the chamber, heating means positioned within the circulatory path adjacent to the inlet at the bottom portion of the chamber, and boosters positioned within the chamber intermediate the inlet at the bottom and the outlet at the top of said chamber.

1,564,784. OVERSHOT DRAPER FOR HEADERS. GEORGE H. HARRIS, Stockton, Calif. Filed June 5, 1923. Serial No. 643,562. 2 Claims. (Cl. 198—162.)



1. In a harvester a draper arranged to convey the grain as cut from the header to the feed house of the harvester, an auxiliary draper positioned above and in spaced relation to the main draper and extending a certain distance beyond the upper end of the same, and means for causing the overshot portion of the auxiliary draper to have a permanent downward deflection towards its front end and for preventing the same from approaching the main draper beyond a predetermined limit.

1,564,785. ANIMATED TOY. WILLIAM W. HARRIS, New York, N. Y., assignor to Mawhinney Last Co., Brockton, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1925. Serial No. 15,012. 20 Claims. (Cl. 46—40.)

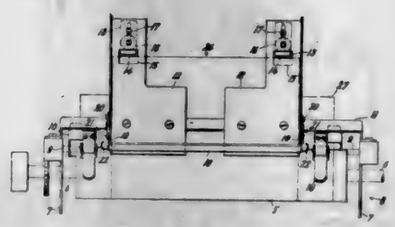


11. The combination of a hollow body representing a figure, a member movably carried by said body and representing an articulated member of the figure, comminuted material enclosed within said hollow body, means providing for restricted gravitation of said comminuted material and means disposed in the path of gravitation of said comminuted material and operated thereby for moving said articulated member.

1,564,786. COMPOSITION FOR CLEANING AND POLISHING SILVER. CATHERINE M. HEMEN, Seattle, Wash. Filed Nov. 9, 1921, Serial No. 514,018. Renewed Oct. 24, 1925. 1 Claim. (Cl. 87—5.)

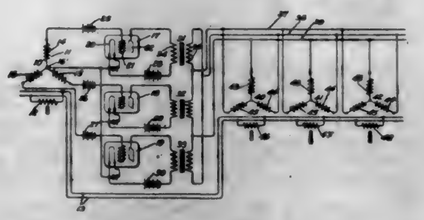
A cleansing and lacquer forming composition, consisting of four pounds of Spanish castile soap, one-half pound of oxalic acid, three-fourths pound of bicarbonate of soda, one quart of vegetable oil, nine gallons of water, and sufficient Paris white of extremely fine grade to substantially absorb the liquid content of the mass.

1,564,787. TYPEWRITING MACHINE. JULIAN S. HEXTER, Chicago, Ill., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 1, 1923. Serial No. 622,010. 12 Claims. (Cl. 197—127.)



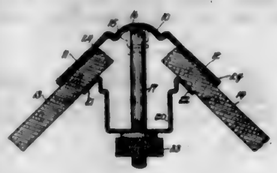
1. In a typewriting machine, the combination with a platen, of a front paper-table above the platen having openings in the upper portion thereof, L-shaped gage-members, each comprising a leg extending downward along the rear of the paper-table to one of said openings, and a forwardly-extending leg projecting through the opening with its sides in engagement with the sides of the opening, and means above the openings for securing the downwardly-extending legs of the gage-members in adjusted positions upon the back of the paper-table.

1,564,788. SYSTEM FOR THE TRANSMISSION OF ANGULAR MOTION. LEE HILDEBRAND, Cliftondale, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 16, 1922. Serial No. 568,878. 9 Claims. (Cl. 172—293.)



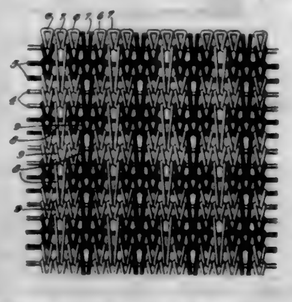
1. A system for the transmission of angular motion comprising electrical transmitting and receiving devices provided with moving elements, said devices having electromotive forces varying in accordance with the angular positions of their moving elements, and means responsive to the electromotive forces of both of said devices for supplying operating energy to said receiving device so as to cause said receiving device to reproduce the movement of said transmitting device.

1,564,789. STORE-FRONT CONSTRUCTION. FRED HIMMEL and ISIDORE HIMMEL, New Haven, Conn. Filed May 12, 1925. Serial No. 29,736. 2 Claims. (Cl. 189—78.)



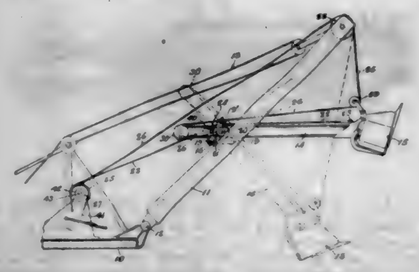
1. A store-front construction, comprising an outer strip formed with inwardly-extending spaced sockets, and bolts having ends turned at right angles and entered into said sockets.

1,564,790. KNITTED STOCKING. RALPH HINCHLIFF, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 28, 1922. Serial No. 591,088. 3 Claims. (Cl. 66—4.)



1. A knitted stocking comprising wales of plain stitches disposed in alternation with wales of alternate plain and draw stitches, said knitting being done with two yarns of different colors in such order that the two yarns appear in alternation on the face of the fabric in the plain stitch wales and one yarn appears continuously in wales of alternate plain and draw stitches.

1,564,791. ROPE-THRUSTING SHOVEL. ROGER SHERMAN HOAR, South Milwaukee, Wis., assignor to Bucyrus Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 3, 1923. Serial No. 616,688. 10 Claims. (Cl. 214—135.)

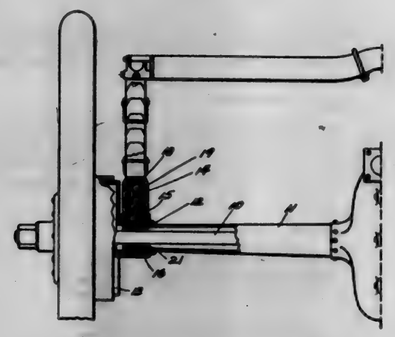


1. In a power shovel, the combination of a support, a dipper and dipper handle mounted thereon for swinging and shifting movements, a dipper hoisting cable hav-

ing a portion associated with said dipper handle at a fixed point thereof, to shift said handle, said portion extending substantially the entire length of said dipper handle in all its positions and being arranged to swing with said dipper handle about the pivotal axis thereof as a center and means for controlling such shifting movement.

---

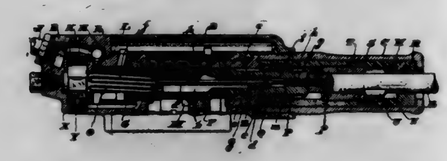
1,546,792. SPRING SUPPORT FOR MOTOR VEHICLES. WILLIAM F. HUDSON, Philadelphia, Pa. Filed Apr. 30, 1921. Serial No. 465,767. 2 Claims. (Cl. 180—88.)



1. In a construction of the character stated a relatively light rear axle including an automobile wheel and its complemental brake-head, an anti-friction bearing arranged immediately adjacent said brake-head and in which bearing said axle is rotatable, a relatively light housing for said axle, an elongated sleeve extended from said break-head and secured to said axle housing said sleeve extending well over said antifriction bearing in concentric relation therewith, a spring support secured to said brake-head sleeve immediately adjacent said brake-head, and a side spring connected to said support so as to be positioned substantially above said bearing and in immediately juxtaposed relation with said wheel.

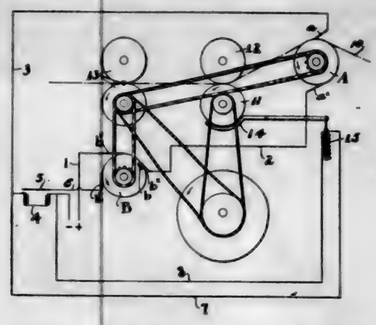
---

1,564,793. WATER-TUBE GUIDE. GEORGE W. HULSHIZER, Stewartsville, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 30, 1924. Serial No. 740,700. 2 Claims. (Cl. 121—6.)



1. In a fluid actuated rock drill, the combination of a cylinder with a back head, a water tube secured at one end within the back head and extending through the piston, a guide fitted into the piston to reciprocate therewith and embracing the water tube to prevent vibration of said tube, said guide having perforations throughout its length for admitting pressure fluid to a drill steel when the piston nears the end of its forward stroke.

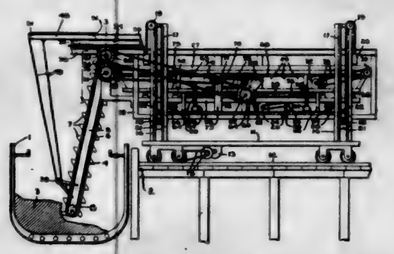
1,564,794. FEEDING DEVICE FOR WEBS OF PAPER AND OTHER MATERIAL. HARRY HUMPHREYS, Ballamona, Davenport, England, assignor to Union Bag & Paper Corporation, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1923. Serial No. 678,533. 12 Claims. (Cl. 271—2.6.)



1. A method for the purposes and of the kind described comprising retarding or increasing the relative rate of feed or delivery of the material according to whether a perforation in the material arrives early or late in respect to a predetermined normal moment of arrival at a stationary detector or detectors and in respect to the arrival at a certain point of a moving element removed from the material and timed constantly to arrive at that point in synchronism with the operations of the severing or other device.

---

1,564,795. APPARATUS FOR UNLOADING SHIPS. THOMAS LEVASSEUR, Old Town, Me. Filed May 1, 1924. Serial No. 710,859. 9 Claims. (Cl. 198—88.)



1. In a ship unloading device, the combination with a carriage, of an elevator mounted thereon and adapted to elevate material from the hold of a vessel, a conveyer to take material from the elevator, said elevator being turnable about a vertical axis, and means to shift the position of a conveyer thereby to place it properly to receive material from the elevator in any position of the latter.

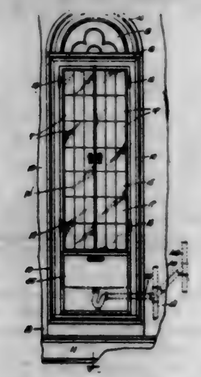
4. In a device of the class described, the combination with a supporting frame, of a turntable thereon, an elevator depending from the turntable and adapted to elevate material from the hold of a vessel, a conveyer onto which the elevator discharges, and means operated by the movement of the turntable to shift the position of the conveyer.

---

1,564,796. FOLDING RECEPTACLE. JACOB L. SHROYER, Oak Park, Ill., assignor of one-half to Charles O. Hard, Scotia, N. Y. Filed Nov. 19, 1923. Serial No. 675,647. 2 Claims. (Cl. 4—168.)

1. A device of the character described comprising a cabinet divided into three vertically consecutive minor

cabinets; a bowl located in the intermediate cabinet and arranged to swing outwardly therefrom; a pair of



swinging doors to close the two upper cabinets and a sliding door to close the lower cabinet movable to open position when the swinging doors are open.

---

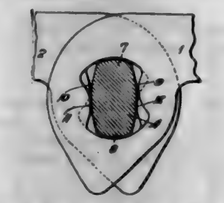
1,564,797. WATERPROOF INSULATING COVERING. JUNIUS H. STONE, Port Washington, N. Y. Filed Apr. 13, 1922. Serial No. 552,211. 6 Claims. (Cl. 106—18.)

1. A plastic composition adapted to form a lagging for refrigerating pipes and the like comprising six to twenty-four parts granulated cork, one to four parts loose fibre, and one to four parts rubber dissolved in a solvent.

6. A plastic composition adapted to form a lagging for refrigerating pipes and the like comprising six to twenty-four parts granulated cork, one to four parts loose hair and one to four parts rubber dissolved in benzol.

---

1,564,798. POWER-TRANSMISSION CHAIN. HAROLD E. STURTEVANT, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Feb. 28, 1924. Serial No. 694,530. 14 Claims. (Cl. 74—32.)

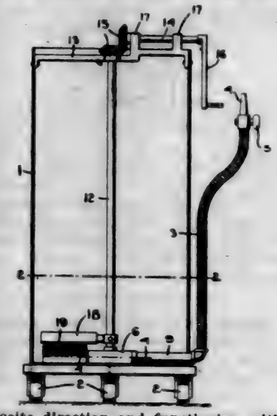


1. In a chain of the silent link type, a joint between adjacent pitches comprising a pin having an oblong cross section, with convex sides, the openings of the links being symmetrical and having walls engaging the sides of said pin and forming rolling contacts therewith.

---

1,564,799. DISPENSING APPARATUS. ROY A. THORNTON, North Weymouth, Mass. Filed Sept. 13, 1924. Serial No. 737,551. 5 Claims. (Cl. 103—83.)

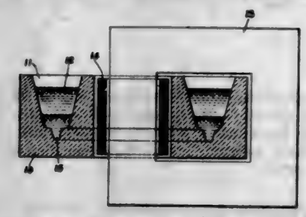
1. In a dispensing apparatus for dispensing semi-solid material, the combination with a container, of a delivery pipe through which the material is dispensed, a gear pump in the container for feeding material to the delivery pipe, said pump having an inlet adjacent the bottom of the container, a deflector plate secured to the bottom adjacent said inlet, and a rotatable blade movable in a plane immediately above the deflector plate, said rotatable blade having its front face inclined in a direction to force material downwardly toward the deflector plate, and the deflector plate being inclined



in the opposite direction and functioning with the movable blade to maintain a supply of material at the pump inlet.

---

1,564,800. ELECTRIC FURNACE. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 12, 1924. Serial No. 698,806. 5 Claims. (Cl. 204—64.)



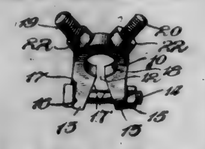
1. An electric furnace comprising a crucible providing a relatively wide channel in which the charge is heated by current passed therethrough, said channel including a relatively deep narrow groove at the bottom for increasing the hydrostatic head of molten metal.

---

1,564,801. FOUNTAIN PEN. JOHN J. VANDERE, Cleveland, Ohio. Filed Mar. 18, 1925. Serial No. 16,386. 7 Claims. (Cl. 120—46.)

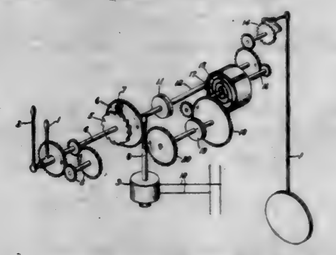
1. A fountain pen comprising a barrel, a pen, an ink reservoir removably arranged in the barrel, a filling bulb fixed to the reservoir and removable therewith, and means for holding the bulb and reservoir in fixed relation to the barrel.

1,564,802. END-SCREW TERMINAL. HERBERT E. WALKER, Chicago, Ill. Filed Mar. 19, 1923. Serial No. 626,951. 1 Claim. (Cl. 173—259.)



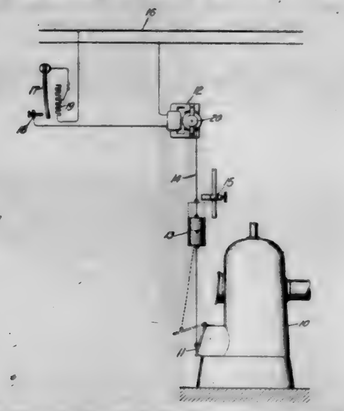
An end connector screw terminal for storage battery posts comprising a body having means to detachably fit it to a battery post and to connect it in current carrying engagement with said post, and a plurality of outstanding terminal plug lugs permanently spaced and integral with said body and of different diameters and having standard external screw threads adapted to standard, internally threaded terminal plugs.

1,564,803. CLOCK. HENRY E. WARREN, Ashland, Mass., assignor to Warren Clock Company, Ashland, Mass., a Corporation of Maine. Filed Jan. 13, 1923. Serial No. 612,487. 11 Claims. (Cl. 58—26.)



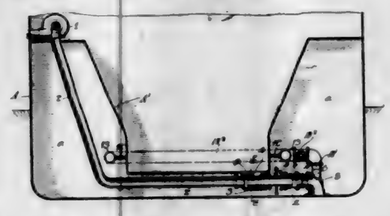
1. In combination, a time indicator, a pair of motors connected to directly operate said indicator, one of said motors being electrical, and means whereby said electric motor is caused to store potential energy for operating said other motor.

1,564,804. TEMPERATURE-CONTROL DEVICE. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 10, 1925. Serial No. 23,690. 7 Claims. (Cl. 236—68.)



1. In combination a heater, means for regulating said heater, a motor for operating said regulator, a thermostat for controlling said motor and an auxiliary heating element in close proximity to said thermostat and controlled thereby for modifying its controlling function.

1,564,805. HYDRAULIC CONVEYER ADAPTED FOR UNLOADING SHIPS. CHARLES C. WEST, Manitowoc, Wis., assignor to Manitowoc Ship Building Corporation, Manitowoc, Wis., a Corporation of Wisconsin. Filed May 6, 1921. Serial No. 467,871. 4 Claims. (Cl. 302—14.)

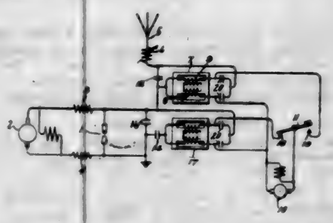


1. In a cargo carrying ship, the combination of the hull of the ship, a hopper therein forming the cargo space of the ship, a conveyer adapted for discharging sand and other granular material contained in said hopper, comprising a fitting which communicates with said hopper, a pump, a conveyer pipe which connects said fitting with said pump, a sea-cock installed in the hold of the ship below the water line under all conditions of loading, valve controlled pipe connections from said sea-cock to said fitting, comprising a pipe section supported so as to be movable endwise in position to register with the admission end of the conveyer pipe, said pipe section and conveyer pipe being provided with opposed valve seats adapted for engagement and disengagement by endwise movement of said pipe section to cut off or establish communication between said pipe section and fitting and forming means, when said valve seats are in contact, for connecting the conveyer pipe with the sea-cock, providing priming means for the pump, and pipe connections adapted for flushing the hopper to render the granular contents thereof fluid.

1,564,806. LIP STENCIL. SAMUEL WIEDER, New Kensington, Pa. Filed Jan. 24, 1925. Serial No. 4,469. 5 Claims. (Cl. 132—1.)

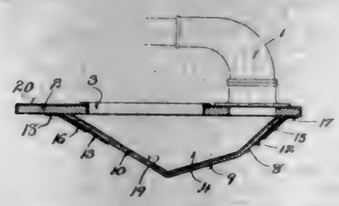
1. A lip stencil comprising a bendable plate having finger-holds thereon, and a lip-shaped stencil edge on the plate.

1,564,807. RADIO SIGNALING SYSTEM. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 4, 1918. Serial No. 232,589. 29 Claims. (Cl. 250—19.)



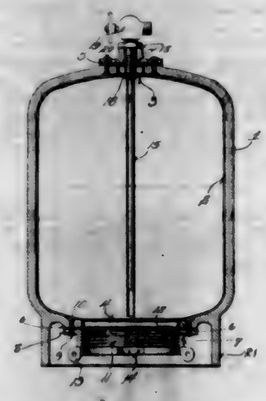
1. The combination in a radio signaling system of an antenna circuit supplied by a source of continuous radio frequency current and a control system associated with said antenna circuit, said control system comprising an inductance which is variable by magnetic saturation and means for varying the inductance to produce a substantial change in the effective resistance of the control system and at the same time maintain its resultant reaction substantially constant.

1,564,808. PHONOGRAPH-CASE CONSTRUCTION. DONALD T. ALLEN, Milwaukee, Wis., assignor to Prime Mfg. Co., Milwaukee, Wis. Filed Aug. 29, 1925. Serial No. 53,354. 2 Claims. (Cl. 274—2.)



2. In a phonograph, the combination of a top, a sound arm opening downwardly therethrough, said top having a delivery opening, a sound box positioned below said top, and connecting said tone arm and said delivery opening, said sound box having a pair of flat sides provided with angular bottom edges, a bottom secured to said angular bottom edges and sharply bent at the ends of each of said edges, fabric strips glued to said sides and having inwardly turned projecting ends overlapping said bottom, end strips glued to said bottom and overlapping the said inwardly turned ends, each of said strips having outwardly projecting flaps glued to the under side of the said top, said sound box having one of the angular faces of its bottom positioned directly below said tone arm.

1,564,809. CARBONATED-MILK TANK. JOSEPH E. AMEND, Appleton, Wis. Filed Sept. 12, 1924. Serial No. 737,842. 2 Claims. (Cl. 220—63.)

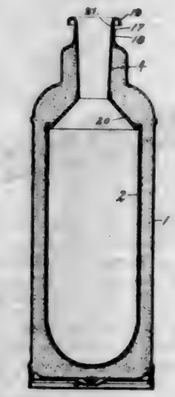


1. A device for handling carbonated milk comprising a tank having a relatively large bottom opening adapted to permit the ready cleaning of the interior of said tank and the entrance of an operator's hand, a block tin lining completely covering the interior of said tank and projecting through said opening and folded outwardly over the portions of said tank adjacent the margins of said opening, an internally threaded collar having a flange in contact with the folded portion of said block tin, rivets passing through said flange and the adjacent portion of said tank and having their inner heads located within the tank and counter-sunk and covered by the block tin lining within the tank, a relatively large threaded plug removably screwed into said collar, and a block tin lining for the upper face of said plug.

1,564,810. METHOD OF MAKING HANDMADE MISSION-ROOF TILES. REDUCINDO F. ANGULO, Santa Barbara, Calif. Filed Mar. 4, 1922. Serial No. 541,192. 1 Claim. (Cl. 25—22.)

The method of producing a hand-made ancient appearing roof tile which consists in molding a slab of plastic clay upon a sheet supported by a surface, moving said slab and sheet from said surface to a pallet having a curved back, molding said slab to the back of the pallet by means of the hand to form a plastic tile, supporting the edges of the plastic tile and removing the pallet preparatory to drying and burning the tile.

1,564,811. HEAT-INSULATED RECEPTACLE. GEORGE C. ANTHON, New York, N. Y., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Aug. 11, 1919. Serial No. 316,829. 4 Claims. (Cl. 220—10.)

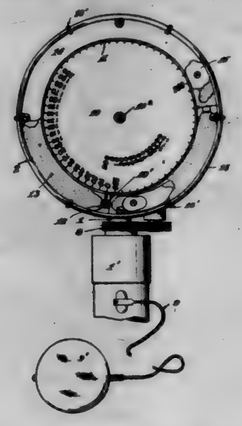


2. A heat insulated receptacle comprising an outer shell having a bead at the mouth thereof, a shoulder in the neck portion below said bead and an annular enlargement beneath said shoulder, an inner shell and a neck-piece connecting the inner and outer shells and seated in the annular enlargement aforesaid.

1,564,812. GOLF MACHINE AND ATTACHMENT THEREFOR. GEORGE D. BABCOCK, Peoria, Ill. Filed Sept. 18, 1922. Serial No. 588,995. 22 Claims. (Cl. 235—22.)

1. A machine for the purposes named including, in combination, a scaled chart reproducing in miniature the ground layout of an outdoor game course including a representation of the physical characteristics of ground surface of said course, or part thereof, and an indicator or pointer therefor, mechanism adapted for imparting move-

ment to one of the described parts with respect to the other, a captive ball tethered to said mechanism adapted in flight to impart movement to the movable part and



speed reducing gearing included in said mechanism arranged whereby the actual distance of travel of a ball upon the course is indicated at said chart in accordance with the scale upon which the latter is produced.

---

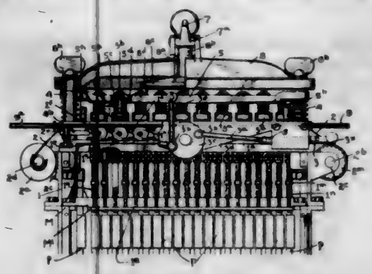
1,564,813. STOKER GRATE. ARTHUR O. BABENDREIER, Baltimore, Md., assignor to Patterson Hand Stoker Corporation, a Corporation of Maryland. Filed Nov. 15, 1922. Serial No. 601,032. 3 Claims. (Cl. 110—38.)

1. In a furnace grate, the combination with a series of reciprocating stoker-bars arranged in rows with the rear edge of each bar except the rearmost bar normally held from dropping downwardly by resting upon and having sliding contact on the front upper surface of the next bar at its rear, of means for reciprocating each stoker bar with respect to the bar next at its rear which supports it and means at the forward portion of each stoker-bar for limiting the downward tilting movement of the rear end of the same bar and to hold said rear end up sufficiently in case it is withdrawn from the support of the bar next at the rear to enable said rear end of the front bar to clear the front edge of the bar at its rear when making a rearward stroke.

---

1,564,814. RECORDING MECHANISM FOR VOTING AND THE LIKE MACHINES. JOHN S. BAKER, Los Angeles, Calif. Filed Apr. 14, 1924. Serial No. 706,396. 24 Claims. (Cl. 235—50.)

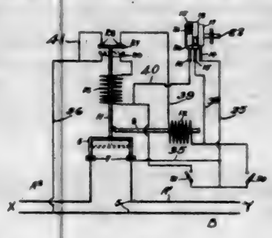
1. For voting machines and the like having a plurality of members adapted to be individually actuated once for each vote registered in the machine for the respective candidates; a recording mechanism comprising a frame adapted to be mounted upon said machine; a counter for each of said members having type wheels, said counters being arranged in rows; means whereby every actuation of a member will cause its related counter to register one unit; an inking ribbon for the counters in each row; means for positioning a record sheet above the inking ribbons; a plunger frame reciprocably mounted opposite said inking means; means for normally holding said plunger frame in retracted position; a plurality of plungers mounted on said plunger frame, one



plunger opposite each counter; and means for moving said plunger frame to cause said plungers to press said record sheet against said counters to take impressions therefrom.

---

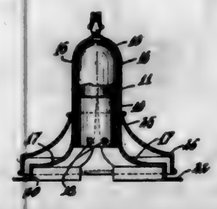
1,564,815. TIME SWITCH FOR ELECTRIC CIRCUITS. ARTHUR BARRY BALLANCE, Kogarah West, near Sydney, and WILLIAM THOMAS ANDERSON, Sans Souci, near Sydney, New South Wales, Australia. Filed Dec. 16, 1922. Serial No. 607,439. 10 Claims. (Cl. 161—1.)



1. In a time switch, means for operating the switch comprising an electro-magnetic device, a member adapted to be withdrawn by said device to open the switch, means for holding said member in the withdrawn position comprising a detent adapted to be operated mechanically in one direction and magnetically in the reverse direction, mechanically operated timing means for controlling the action of the electro-magnetic device, and means for operating the switch independently of the timing means.

---

1,564,816. SHADE HOLDER FOR ELECTRIC-LIGHT FIXTURES. JACOB B. BANDER, New York, N. Y. Filed Oct. 8, 1924. Serial No. 742,284. 4 Claims. (Cl. 240—133.)

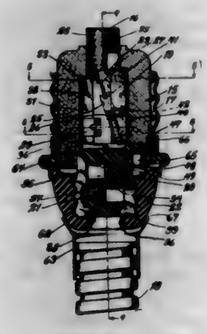


1. In combination an inner member forming a covering adapted to fit on an electric light socket, a pair of shade gripping members pivoted each at an individual pair of oppositely disposed alined points to the lower end of the inner member, and a shell engaging the shade

gripping members and retaining them in the shade gripping position, said shade gripping members comprising portions normally covering the top of the inner member and outwardly flared lower portions.

---

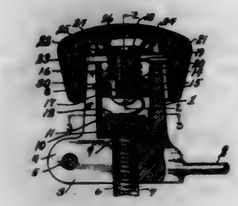
1,564,817. ATTACHMENT PLUG. REUBEN B. BENJAMIN, Chicago, and CHESTER E. WARNER, Berwyn, Ill., assignors to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1920. Serial No. 380,108. 6 Claims. (Cl. 200—51.)



5. A switch plug comprising an insulating base, a shell contact mounted thereon, a center contact member mounted thereon to slide longitudinally thereof, and a switch mechanism for controlling the plug circuit comprising a switch blade located substantially within said shell contact and oscillatable back and forth, a spring shiftable back and forth past a dead center to cause quick action of the switch blade, and a spring shifting member operated by said slidable contact member.

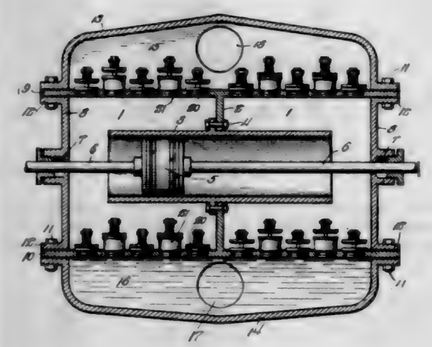
---

1,564,818. SWITCH. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 1, 1923. Serial No. 672,060. 13 Claims. (Cl. 200—159.)



1. In a switch, a socket having a contact at the base thereof, a sub-assembly designed to be removably inserted in said socket, a cap shaped tiltable push button surmounting said assembly, said assembly comprising connecting members, a post for supporting said push button, and a contact at its inner end for engagement with said contact at the base of said socket.

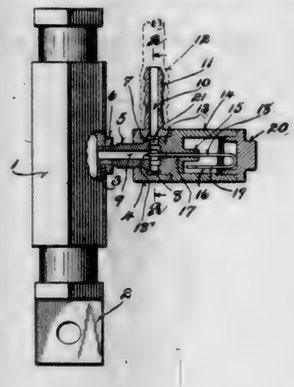
1,564,819. PUMP. WILLIAM T. BIRCH, Chicago, Ill. Filed May 12, 1924. Serial No. 712,611. 3 Claims. (Cl. 103—175.)



1. A pump having a common valve deck, and a plurality of valves alternately discharging in the same direction at different levels above the valve deck.

---

1,564,820. AUTOMATIC LUBRICATOR FOR AIR TOOLS. ARTHUR N. BLANCHARD, Milwaukee, Wis. Filed Nov. 24, 1924. Serial No. 751,956. 5 Claims. (Cl. 184—18.)



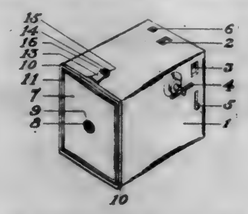
1. The combination of an air tool, a supply pipe therefor, and a lubricating device having a body portion connected with said supply pipe and having a projecting tubular member swivelly joined to said body portion and rigidly joined to said air tool, said device having a reservoir for the lubricant and having capillary means for feeding such lubricant into the air stream.

---

1,564,821. BOX CAMERA. CARL BORNMANN, Binghamton, N. Y., assignor, by mesne assignments, to Ansco Photoproducts, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 31, 1922. Serial No. 598,140. 1 Claim. (Cl. 95—11.)

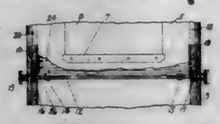
In combination with a camera, a box, a one piece removable back for said box including flanges for embrac-

ing the edges of said box, a light excluding rib formed adjacent each edge of said back, resilient securing fingers formed integral with said back, each finger being pro-



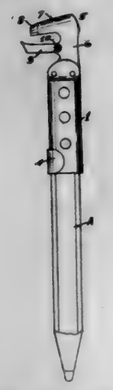
vided with an opening and an upturned end for easy manipulation, and means on said box engaging in said opening whereby said back is securely held on said box.

1,564,822. RISING FRONT FOR CAMERAS. CARL BORNMANN, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 23, 1925. Serial No. 32,432. 5 Claims. (Cl. 95—51.)



1. A rising front for cameras comprising a slidable member, a shaft carried thereby provided with pinions, stationary racks with which said pinions engage whereby said member may be raised or lowered, and means on said member for locking the same in adjusted position.

1,564,823. RACE CUTTER. JOHN BRADEN, Rices Landing, Pa. Filed Feb. 26, 1925. Serial No. 11,842. 1 Claim. (Cl. 145—1.)



In combination, a race cutter comprising an elongated hollow body portion constituting a clamp member adapted to be attached to the end of a pencil, the forward side of the said body portion formed with a longitudinally extending open slot to set up a resilient clamping action to rigidly secure the said body portion to the end of the pencil, the inner end of one side of said body portion provided with an ear overlapping said open slot and engaging the opposed side of said body portion for augmenting said clamping action, a blade consisting of a horizontally disposed portion and a vertically disposed portion, the latter having its lower end fixed to the outer end of said body portion, said horizontally disposed portion inclined downwardly toward its forward end and substantially U-shaped in transverse cross section, the forward end of said horizontally disposed portion provided with a U-shaped cutting edge, and a shield member pivotally connected to said vertical blade portion and shiftable to cover said cutting edge, substantially as described and for the purpose set forth.

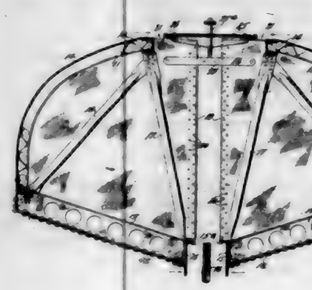
1,564,824. PROCESS FOR VULCANIZING RUBBER AND PRODUCTS OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed May 15, 1922. Serial No. 561,022. 32 Claims. (Cl. 18—53.)

1. A process for vulcanizing rubber which comprises combining a vulcanizing agent with rubber and a thioaldehyde, and vulcanizing the rubber.

1,564,825. PROCESS FOR VULCANIZING RUBBER AND PRODUCTS OBTAINED THEREBY. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Original application filed May 15, 1922, Serial No. 561,022. Divided and this application filed Aug. 6, 1925. Serial No. 48,664. 14 Claims. (Cl. 18—53.)

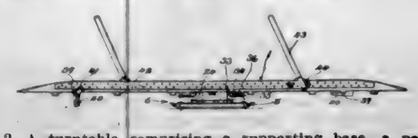
1. A process for vulcanizing rubber which comprises combining a vulcanizing agent with rubber and an arylated thioaldehyde, and vulcanizing the rubber.

1,564,826. FLOAT STRUCTURE. ROLAND CHILTON and FRANK A. HAYES, Keyport, N. J., assignors to Aeromarine Plane & Motor Company, Inc., a Corporation of New York. Filed Mar. 16, 1925. Serial No. 15,985. 21 Claims. (Cl. 244—2.)



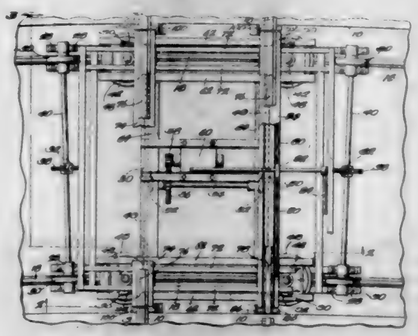
1. In a float, deck plates on either side of central longitudinal openings, a hollow keelson including two side members, floor plates and beams secured to respective keelson sides, means for securing the keelson sides together and means for covering the deck openings.

1,564,827. TURNTABLE. JAMES SPEAKMAN CLAY, Racine, Wis., assignor to Freeman Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Aug. 7, 1925. Serial No. 48,729. 5 Claims. (Cl. 104—44.)



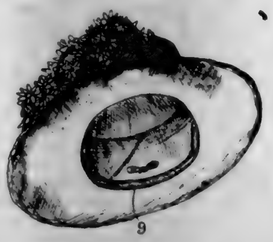
2. A turntable comprising a supporting base, a pair of transverse beams positioned above said base, rotatable means interposed between said beams and base for permitting relative turning motion of said beams with reference to said base, a pair of longitudinally extending runways for the reception of the wheels of a truck, yielding means for normally supporting said runways out of contact with said transverse beams, and friction latches carried by said runways and adapted to yieldingly retain said runways in a tilted position.

1,564,828. DROP-PIT MECHANISM FOR UNWHEELING LOCOMOTIVES. OSCAR L. COFFEY, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Jan. 10, 1925. Serial No. 1,518. 7 Claims. (Cl. 104—32.)



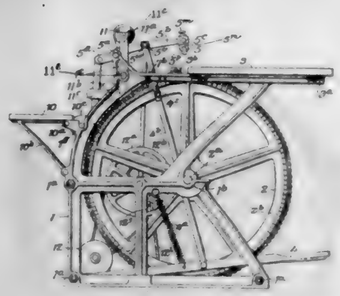
1. In mechanism of the class described, in combination with means passing a wheeled vehicle over the ground, and a pit below it, having a multiplicity of separated wheel tables each equipped with means detachably latching it across said pit, a track in the bottom of the pit passing under said tables, a trolley travelable along said trck, table elevating means on and reciprocal vertically above the trolley, movable between a position where it engages and lifts a table which it may be under, high enough so its latching mechanism may be released, and a position low enough so that the trolley with said table and a wheel load thereon may move along said track under one or more other such wheel tables.

1,564,829. DETACHABLE HAT PAD. LEON COHEN, St. Louis, Mo., assignor to De Leon Bandeaux Co., St. Louis, Mo., a Corporation of Missouri. Filed May 28, 1923. Serial No. 641,864. 9 Claims. (Cl. 2—183.)



1. A detachable hat pad comprising a flexible spring metal strip, prongs carried thereby and projecting from the outer surface of said strip, a body of relatively thick fibrous material placed against the inner face of said metallic strip, and a body of fabric passed around said metal strip and said body of fibrous material, and the edges of the fabric united together by stitching and having the prongs extended therethrough.

1,564,830. ADDRESSING MACHINE. PAUL FLEMMING COX, Chicago, Ill. Filed Jan. 19, 1925. Serial No. 3,403. 26 Claims. (Cl. 101—62.)

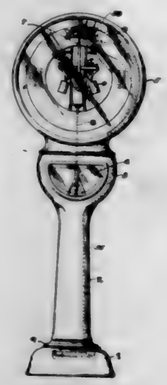


1. In an addressing machine a frame having open bearings for a rotatable galley; and a rotatable galley carrying a peripheral series of address slugs removably journaled in said bearings and bodily removable from and replaceable in the said bearings.

20. In a machine as set forth galley advancing means comprising ratchets on said galley each having a tooth opposite each address slug; a pivoted member having its outer end overlying said ratchet teeth; a stud on said member adjacent its lower end; a link pivoted on the frame and having a recess for the reception of said stud, and a spring in said recess engaging said stud for normally urging the member into contact with said teeth; whereby each actuation of the arm will operate said member to advance the drum one ratchet tooth.

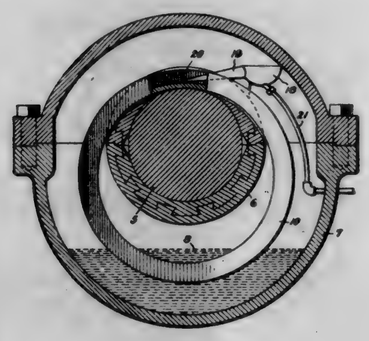
24. In a machine as set forth a platen comprising a block having a slot, a platen strip in said slot; opposed slidable wedges interposed between said strip and the base of said slot; and means for adjusting the wedges to adjust the contact strip.

1,564,831. ADVERTISING SCALE. SAMUEL G. CRANE, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,683. 4 Claims. (Cl. 40—52.)



1. In a device of the class described, in combination, weighing mechanism, a platform independently relatively movable with respect to said weighing mechanism, an advertising device, and electric means actuated by such movement of said platform to operate said device.

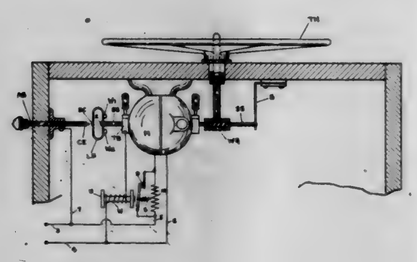
1,564,832. LUBRICATION OF BEARINGS. DUNCAN DANA, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1922. Serial No. 576,369. 3 Claims. (Cl. 308—128.)



2. The combination with a shaft and a bearing having a groove, and an oil ring which runs on the shaft in said groove and conveys oil directly to the bearing for lubricating it, of a chamber located above the bearing, means for directing excess oil from the ring to said chamber, and a conduit for conveying oil from said chamber to other parts to be lubricated, whereby the excess oil carried up by the ring may be utilized for lubricating purposes.

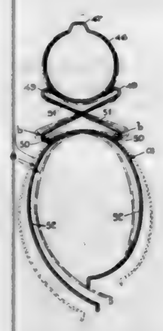
---

1,564,833. PHONOGRAPH-CONTROLLING MECHANISM. WILLIAM W. DEAN, Lowell, Mass., assignor to The Efficiency Electric Corporation, New York, N. Y., a Corporation of New York. Original application filed June 20, 1919, Serial No. 305,527. Divided and this application filed Feb. 25, 1922. Serial No. 539,323. 5 Claims. (Cl. 200—80.)



1. In an electric governing switch for controlling the speed of an electric motor, a pair of speed controlling switch contacts, a motor shaft carried loop reed spring carrying one of the said contacts substantially in line with the axis of rotation of the motor shaft, said spring being secured at a single point in said axial line and weight members secured to said loop spring in alignment with said shaft center, said one contact being movable outwardly from beyond the shaft end upon an increase of shaft rotational speed, the other contact being stationary and adapted to be engaged by said one contact.

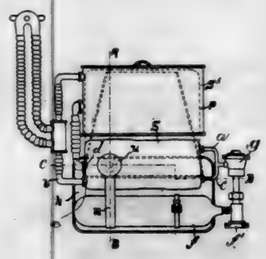
1,564,834. SPRING CLAMP MECHANISM. FRANCIS J. DOWLING, New York, N. Y. Filed Nov. 30, 1923. Serial No. 677,623. 8 Claims. (Cl. 24—81.)



1. The herein described clamp mechanism comprising a pair of clamps located end to end and in substantially the same plane, each clamp having arms at the sides thereof, the diagonally opposite arms of both clamps consisting of unitary structures movable relatively to each other and crossing each other so that when either clamp is compressed the other is opened, said structures having extending portions between the clamps comprising loops crossing each other.

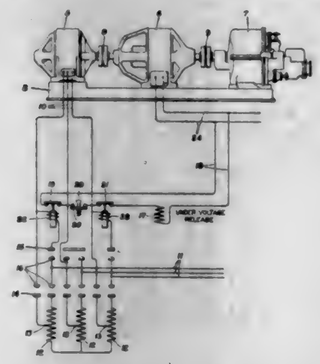
---

1,564,835. SELF-CONTAINED LUNG-POWER BREATHING DEVICE. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed Aug. 30, 1923. Serial No. 660,250. 5 Claims. (Cl. 128—191.)



1. In a self-contained lung-power breathing device of the kind described, the combination of a breathing bag, an oxygen self-closing stop valve mounted directly in said breathing bag, controlling mechanism mounted directly in said breathing bag for controlling said stop valve, an air release valve carried by said bag for permitting the escape of surplus air from said breathing bag and a stationary stop on said device located in the path of said release valve with which the latter is brought into engagement as the inflation of the breathing bag exceeds a predetermined degree and the air release valve is thereby automatically opened to relieve said excess inflation.

1,564,836. CONTROL SYSTEM FOR THREE-UNIT TURBINE EXCITER SETS. ELDRIDGE G. DUDLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 10, 1923. Serial No. 674,066. 5 Claims. (Cl. 290—7.)



1. The combination with a three unit exciter set comprising a motor, a generator and a prime mover, of means for disconnecting the motor from a supply source of electric energy when the generator voltage falls below a certain subnormal value.

---

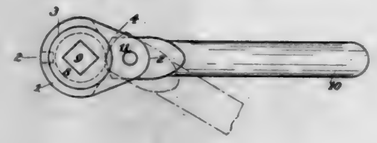
1,564,837. HOSE CLAMP. JOHAN AUGUST EDEBORG, Eskilstuna, Sweden. Filed Apr. 20, 1923. Serial No. 633,396. 7 Claims. (Cl. 24—19.)

5. In a hose clamp the combination of a buckle comprising a link and a lever journalled at one end of said link, a flexible metal band having means at one end for attaching the band to one arm of said lever and having a hook at the other end for attachment to said link, a number of distance pieces movable in said link and adapted to be interposed in different numbers between said link and said hook on said band, said lever having a slot, a knob rotatably secured to said band and adapted to project through said slot and to be turned across the same, said knob having at least one recess in its under face, and a spring secured to said lever alongside of said slot in the same and adapted to engage said recess in said knob.

---

1,564,838. RATCHET WRENCH. CARL L. ERICSON, Longmeadow, and WILLIAM ROBERTS, Springfield, Mass.; said Ericson assignor to American Saw and Manufacturing Company, Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1924. Serial No. 738,429. 5 Claims. (Cl. 81—58.)

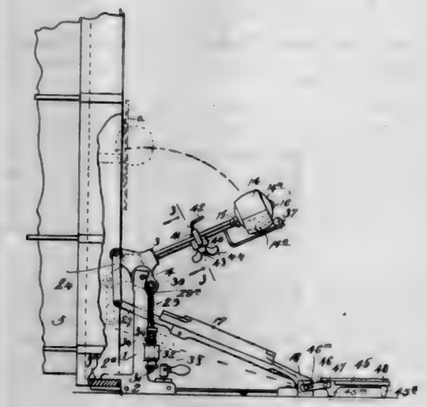
1. As an improved article of manufacture, a ratchet wrench comprising a perforated head provided with lugs which are spaced apart, the perforation or opening in said head and the space between said lugs being in communication, a work-holder rotatable in said opening, means between the outer parallel surfaces of said head and work-holder to retain the latter in said opening, and a handle having a cam-surface and pivotally connected adjacent to said cam-surface with said lugs, with said



cam-surface in operative position relative to said work-holder, the center of the arc of said cam-surface being back of the axis of the handle pivot toward the free end of the handle, and the distance between said axis and either end of said arc being sufficient to cause said cam-surface to grip and carry with it said work-holder, when said handle is swung in either direction.

---

1,564,839. DRUM AND CYMBAL APPARATUS. WILLIAM CHARLES L. EVANS, New York, N. Y. Filed June 14, 1923. Serial No. 645,257. 9 Claims. (Cl. 84—422.)



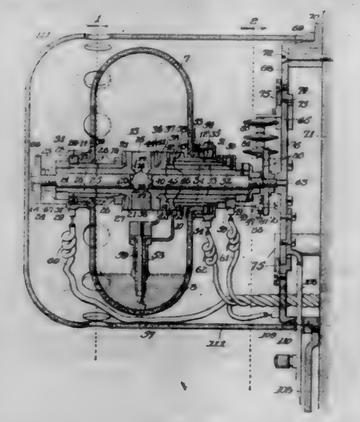
1. An apparatus of the class described comprising a base having a standard, a beater member pivotally carried by the standard, a pedal, means operatively connecting the pedal with said member, a foldable extension pivotally connected at one end with the base and pivotally connected at its outer end with the pedal, said extension having an intermediate hinge between the base and the pedal whereby the extension may fold between the pedal and the standard when the pedal extends along the latter.

---

1,564,840. ELECTRICAL CONTACT. GUY S. FABER, Chicago, Ill. Filed Mar. 28, 1924. Serial No. 702,573. 12 Claims. (Cl. 200—152.)

1. In a contact-making-and-breaking device, the combination of a rock-member, a glass receptacle having an opening therein and provided at said opening with an

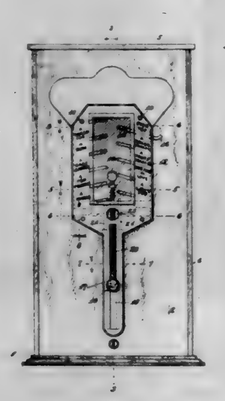
outwardly extending boss, a flowable mass of current-conducting material in said receptacle, a rock-member extending into said boss, means hermetically sealing the



joint between said boss and rock-member, and a contact device on, and movable with, said rock-member into and out of engagement with said mass.

---

1,564,841. AMUSEMENT DEVICE. CHARLES FLEISCHER, Brooklyn, N. Y. Filed Feb. 19, 1925. Serial No. 10,394. 6 Claims. (Cl. 273—95.)

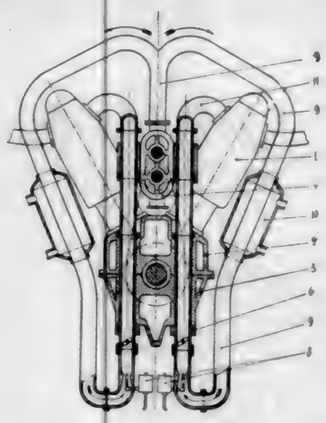


1. An amusement device, comprising a casing having a plurality of lateral coin outlets, and a movable member adapted to balance a coin and move it between said series of outlets to a desired station.

---

1,564,842. SUPERFEED SYSTEM FOR INTERNAL-COMBUSTION ENGINES. GUIDO FORNACA, Turin, Italy. Filed Dec. 18, 1924. Serial No. 756,763. 3 Claims. (Cl. 123—55.)

1. An internal combustion engine of the V-type, comprising a crank-case formed of separate superposed parts, cylinders mounted on the crank-case, fuel supply-pipes constituting connecting means for said crank-case parts



communicating with the cylinders and extending through the crank case, and means on the pipes for clamping the parts of the crank-case together.

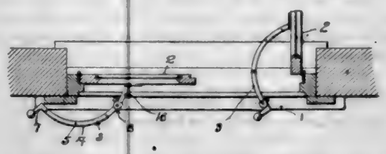
---

1,564,843. STACKING MACHINE. MORRIS M. FULTON, Chicago, Ill., assignor to Jefferson Electric Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1924. Serial No. 737,958. 26 Claims. (Cl. 29—84.)

1. In a machine of the class described, the combination of means for supporting a stack of core pieces, means for supporting a coil adjacent said stack and means for moving the core pieces successively from said stack into assembled position in the coil.

---

1,564,844. SASH ADJUSTER AND FASTENER. JOHN D. GARDNER, Phoenix, Ariz. Filed Aug. 6, 1923. Serial No. 656,083. 1 Claim. (Cl. 292—341.)

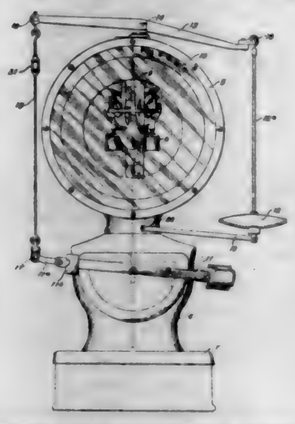


In a device of the character described an arcuate and relatively flat metal arm having suitably spaced openings therein, a sash attaching flange integral with one end thereof, a handle on the inner end of the arm, the flange being connected to a sash so that the arm and

handle thereof lie to one side of the main frame when the sash is closed, a combined guide and fastener on the sill of the frame, including a channeled keeper for slidably receiving the arm, a laterally disposed and upright lug integral with one side thereof, a catch in the form of a finger piece the reduced inner end of which is pivoted to the lug, a stud depending from the inner face of the finger piece and engageable with one of the openings in the arm when the finger piece is swung over the channeled keeper for releasably securing the arm and the keeper coacting with the handle to form a stop.

---

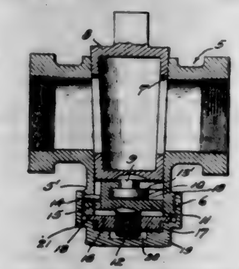
1,564,845. COUNTING SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 10, 1923. Serial No. 661,788. 5 Claims. (Cl. 265—62.)



1. A counting scale having a platform, weight-offsetting mechanism actuated therefrom including a beam, an upright housing supporting said beam and containing automatic indicating mechanism, said upright housing having a convex upper surface, an additional counterbalancing mechanism acting against said weight-offsetting mechanism and including a lever mounted adjacent the highest point on the convex upper surface of said housing, connections between the lever and the beam, and a ratio pan carried by the beam.

---

1,564,846. VALVE. HARVEY L. HARBAUGH, Seattle, Wash., assignor of one-half to Frank Harwood, Seattle, Wash. Filed May 4, 1925. Serial No. 27,686. 3 Claims. (Cl. 251—91.)

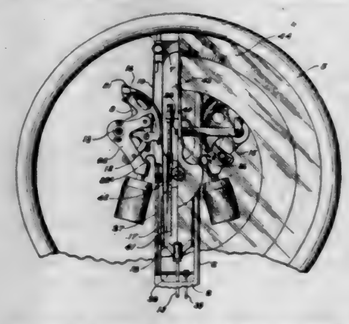


1. In combination, a valve casing having an externally screw threaded boss, said casing being provided with a conical bore, a cock for said bore, a regulator comprising a slotted head element and a screw threaded stud element, means provided on the cock and engageable in the slot of said head for connecting the cock to the regulator for relative rotary movement, means provided in the casing to prevent rotary movement of the regulator and permitting axial movement of the same, a nut engaging the screw threads of the regulator stud, and a cap nut engageable with the threads of said boss for clamping the first named nut between the cap nut and the outer extremity of the casing boss.

2. In a valve of the character described, the combination with the casing, the cock, a regulator connected to the cock for relative rotary movement, said regulator being provided with a screw threaded stud element, a nut for said regulator stud, and means connected to said casing for clamping the nut thereto in an adjusted rotary position.

---

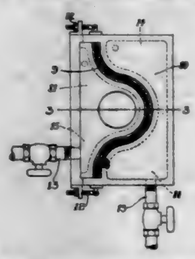
1,564,847. WEIGHING SCALE. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 10, 1923. Serial No. 661,831. 7 Claims. (Cl. 265—62.)



1. In weighing scales, a dial, a pointer movable thereover, means for moving the pointer during the weighing operation including a pendulum having a weight, a fulcrum sector carried thereby and rigid with said weight and a power sector adjustably mounted on the pendulum and movable relatively to said weight to vary the position of the pointer relatively to the graduations on the dial without altering the zero position of the weight.

---

1,564,848. PROCESS FOR FORMING AND APPLYING BENT-VENEER WORK. WALTER J. HERSCHEDE and WALTER EBERHARDT, Cincinnati, Ohio, assignors to The Herschede Hall Clock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 19, 1923. Serial No. 652,490. 2 Claims. (Cl. 144—309.)

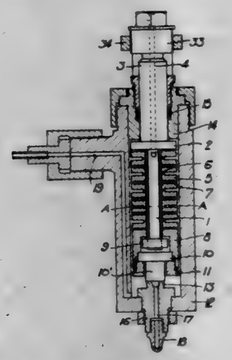


1. The process of forming cabinets and the like having laminated curved portions comprising applying a bonding substance to the laminations and to the joints of the cabinet to be formed, placing the component parts in position between a pair of complementary molds, clamping and heating the molds sufficiently to permit the bonding substance to permeate the pores of the wood and

then chilling the molds thereby causing the bonding substance to set whereupon the cabinet may be removed from the molds completely assembled.

---

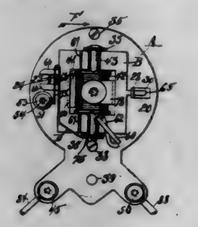
1,564,849. VALVE-CONTROLLING MEANS. KNUT JONAS ELIAS HESSELMAN, Saltsjo-Storangen, Sweden. Filed Aug. 22, 1924. Serial No. 733,597. 5 Claims. (Cl. 137—156.)



1. In a fluid pressure operated valve controlling device, a set of annular flexible disks loosely engaging each other to form a longitudinally flexible hollow column, a carrier for said disks, a rigid end piece on said carrier at one end of the set of disks, an adjustable end piece on said carrier at the opposite end of said set of disks, and means carried by one end piece and engaging the other end piece to hold said parts together so as to cause them to form a unitary structure containing a closed chamber communicating with the atmosphere through a passage in one of said end pieces.

---

1,564,850. ELECTRIC BELL. GUSTAV ADOLPH HUBER, Landing, N. J. Filed June 7, 1922. Serial No. 566,623. 4 Claims. (Cl. 177—7.)

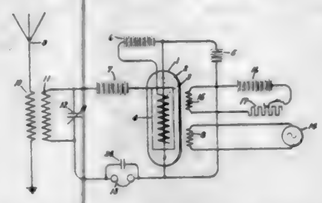


1. In an electric bell the combination of a frame, an electro-magnet supported on the frame and spaced therefrom and magnetically insulated from said frame, an armature member with a clapper, slidably supported on the frame, a U-shaped member with upturned ends of one piece of magnetic material carried by the armature member, said upturned ends coacting with the core of the electro-magnet to be attracted thereby and means to move the armature member away from said core.

---

1,564,851. DYNATRON SYNCHRONOUS DETECTOR. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 13, 1920, Serial No. 423,952. Renewed Feb. 3, 1925. 14 Claims. (Cl. 250—27.)

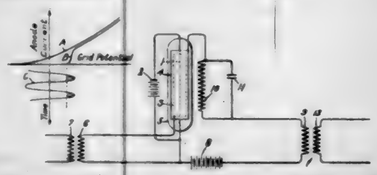
1. The combination in a system for detecting frequency signaling currents of an electron discharge device having an electron emitting cathode, an anode, and a third electrode enclosed in an evacuated envelope, an electric circuit between cathode and third electrode, sources of potential applied to the electrodes of said device in such a way that the current in said circuit will increase and decrease inversely as the potential between cathode and third electrode, a magnetizing coil associated with said device for producing a magnetic field in the space between cathode and third electrode, a second circuit associated with said magnetizing coil, means for producing locally high frequency oscillations of a frequency different from that of the signaling currents to be detected, means for supplying the locally produced high frequency oscillations to one of said circuits, and means for supplying signaling currents to the other circuit.



12. The combination in a system for detecting high frequency signaling currents of an electron discharge device having a plurality of electrodes and a plurality of circuits associated with said device, one of said circuits which is connected between two of the electrodes of said device having a negative resistance included therein, a second of said circuits including means for varying the value of the negative resistance of the first, means for impressing signaling currents upon one of the circuits associated with said device, and means for producing local oscillations in another of said circuits of a frequency differing from that of the signaling currents.

---

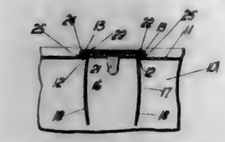
1,564,852. ELECTRON-DISCHARGE APPARATUS. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 8, 1921. Serial No. 499,293. 43 Claims. (Cl. 250—27.)



2. The combination with an electron discharge device having a cathode, an anode and a controlling grid, said electrodes being arranged in substantially circular symmetry with respect to one another, of a circuit between cathode and anode, means for varying the potential of said grid, and means for producing by current flowing in the circuit between cathode and anode a magnetic field in the space between said electrodes, the strength of the magnetic field being so adjusted as to greatly increase over a predetermined operating range the slope of the curve showing the relation between grid voltage and anode current over its slope in the absence of such magnetic field.

42. The method of operating an electron discharge device having a cathode, an anode and a controlling grid which consists in producing a flow of electrons between cathode and anode, impressing an alternating potential upon the grid and producing in the space between the electrons by means of current carried by the electron stream a magnetic field of sufficient strength to greatly shorten the time in each cycle of grid potential during which current will flow to the anode.

1,564,853. POURING DEVICE FOR CONTAINERS. SHERMAN JACKSON, Akron, Ohio, assignor of one-half to Lawrence B. Trowbridge, Akron, Ohio. Filed Oct. 16, 1924. Serial No. 743,964. 4 Claims. (Cl. 221—11.)



4. A pouring device for containers, comprising a trough movable through an opening in the top of the container and a slide movable over the trough to retain the latter in closed position, said top and said slide having interengaging means thereon for locking said trough in its closed position and sealing said container.

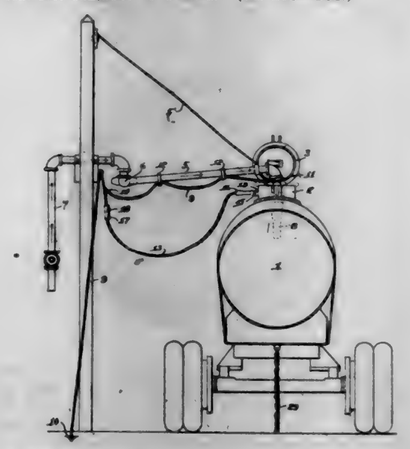
---

1,564,854. CLOSURE FOR DRY GASOMETERS. KONRAD JAGSCHITZ, Mainz, Germany, assignor to Machinenfabrik Augsburg-Nurnberg, A. G., Nurnberg, Germany, a Corporation of Germany. Filed Sept. 24, 1924. Serial No. 739,537. 3 Claims. (Cl. 48—176.)

1. In a dry gasometer, the combination of a tank, a floating closure for sealing said tank and adapted to rise and fall therein, means for guiding said closure in its vertical movements in said tank and bracing means for stiffening said closure combined therewith in a manner to locate the center of gravity of said closure below the center of buoyancy thereof.

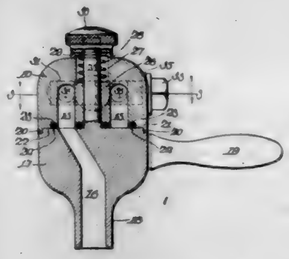
---

1,564,855. APPARATUS FOR GROUNDING CONTAINERS IN THE DISTRIBUTION OF PETROLEUM PRODUCTS. LOUIS D. JURS, Oakland, Calif., assignor to Associated Oil Company, San Francisco, Calif., a Corporation of California. Filed Jan. 15, 1923. Serial No. 612,830. 7 Claims. (Cl. 175—264.)



7. The combination with a vehicle tank having a filling opening, a closure for said opening, and a lock preventing removal of the closure, of a grounding device the application of which to the tank frees the closure of said filling opening from the lock.

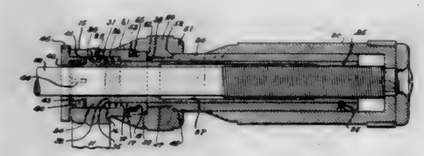
1,564,856. FAUCET. EUGENE S. KARLSEN, Chicago, Ill. Filed Aug. 31, 1925. Serial No. 53,535. 1 Claim. (Cl. 277—69.)



In a faucet, the combination with a two-way supply fixture, of a head having two spaced ways deflected downwardly and extended therethrough in communication at one of their ends with the discharging ends of the first named ways mounted thereon, a member having a vertically disposed stem extended through an opening in said head and mounted for rotation on the bottom of the same and having a vertically disposed channel in alternate communication with the discharging ends of said ways of the head, and a bolt valve transversely journaled in said head and intersecting transversely the two ways of said head.

---

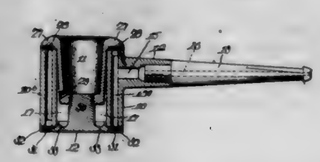
1,564,857. MICROMETER. OSCAR V. KARLSSON, Arlington, N. J. Filed Feb. 5, 1924. Serial No. 690,786. 13 Claims. (Cl. 33—166.)



1. In an instrument of the character described and provided with a measuring spindle, the combination with said spindle, of a primary member and element adapted to register rotative movement of said spindle, and a secondary member and element independent of said first named member and spindle capable of recording axial motion imparted to the said spindle while the latter is held against rotation.

---

1,564,858. SMOKING PIPE. HERMAN W. KLOPPMAN, Chicago, Ill. Filed Apr. 1, 1925. Serial No. 19,809. 6 Claims. (Cl. 131—12.)



5. A smoking pipe comprising walls forming a casing having a hollow interior, a fire pot readily insertable into and removable from one end of said casing and opening thereinto, a readily removable closure for the end of said casing opposite the end into which the fire

pot is insertable, cooperative interengaging means carried by said closure and by said fire pot for simultaneously holding the fire pot and the closure in their respective operative positions, a hollow stem extending from the casing, the casing walls having a plurality of longitudinal channels side by side and connected in series and forming a passageway leading from the hollow interior of the casing to the hollow interior of the stem.

---

1,564,859. MANUFACTURE OF NEO-ARSPHENAMINE. PHILIP A. KOBER, Hastings-upon-Hudson, N. Y. Filed Apr. 12, 1920. Serial No. 373,284. 6 Claims. (Cl. 260—15.)

1. In a method of producing neo-arsphenamine wherein arsphenamine base is converted in a formaldehyde-sulfoxylate derivative, and the latter is precipitated and filtered off from the reaction mixture, the step of mixing the precipitate with a strong sodium carbonate solution while avoiding excess of free alkali, and evaporating the resulting solution under a vacuum of from about 2 to 10 mm. of mercury, absolute pressure.

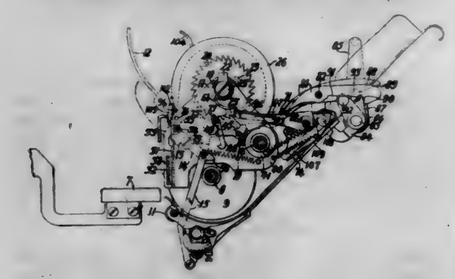
---

1,564,860. MANUFACTURE OF HYDROCHLORIDES OF 3-3'-DIAMINO-4-4'-DIOXYARSENOBENZENE. PHILIP A. KOBER, Hastings-upon-Hudson, N. Y. Filed Apr. 12, 1920. Serial No. 373,286. 6 Claims. (Cl. 260—15.)

1. The method of producing a hydrochloride of 3-3'-diamino-4-4'-dioxyarsenobenzene, which comprises dissolving a purified 3-3'-diamino-4-4'-dioxyarsenobenzene in hydrochloric acid, using such an amount of hydrochloric acid that no free uncombined hydrochloric acid remains, and evaporating the resulting solution to dryness under a vacuum of from about 2 to 10 mm. of mercury absolute pressure.

---

1,564,861. TYPEWRITING MACHINE. ALFRED G. F. KUBOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 19, 1922. Serial No. 589,064. 53 Claims. (Cl. 197—153.)

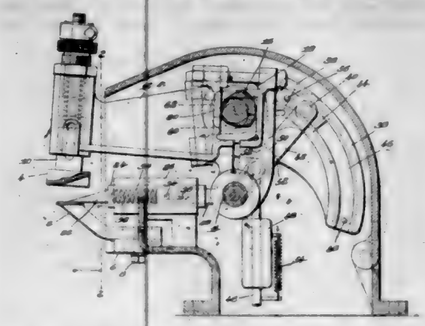


1. In a typewriting machine, a ribbon for writing upon an outside sheet, an auxiliary ribbon for writing upon an inside sheet, means for maintaining the auxiliary ribbon in operative or inoperative position during writing operations, a paper-releasing handle, and means operating as an incident of the movement of the paper-releasing handle for moving the auxiliary ribbon to operative position.

---

1,564,862. MACHINE FOR OPERATING ON WELTING. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 15, 1921. Serial No. 461,558. 32 Claims. (Cl. 12—67.2.)

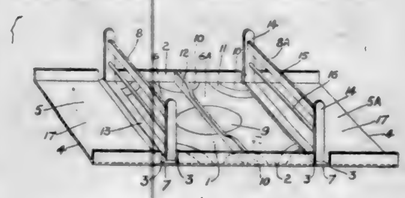
1. A welt beating machine having, in combination, an anvil, a reciprocating hammer to cooperate with the anvil to beat out a welt, and means moved into engagement with the welt while the hammer is in engagement



with the welt to stretch the outer edge portion of the welt.

---

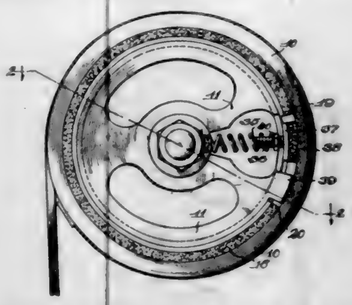
1,564,863. TABLE GAME. GEORGE W. LAING, Vancouver, British Columbia, Canada. Filed Nov. 6, 1924. Serial No. 748,231. 3 Claims. (Cl. 273—95.)



1. A table game comprising a pair of playing courts and a pair of inner courts separated by barriers past which a playing media is adapted to be projected to score on either of the inner courts, and a fence separating the inner courts one from the other.

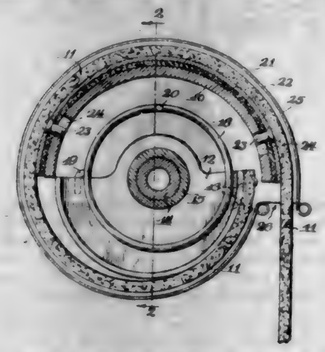
---

1,564,864. SHOCK ABSORBER. EDWARD L. LEINBACH, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,980. 18 Claims. (Cl. 267—10.)



1. A shock absorbing device including two members relatively movable one with relation to the other and spaced from each other, a floating friction creating element interposed between said members and free for bodily forward and backward movement, said members having a free relative movement in one direction, and means responsive to the relative movement of the said members in the opposite direction for causing said friction creating element to retard the relative movement of the said members in the last recited direction.

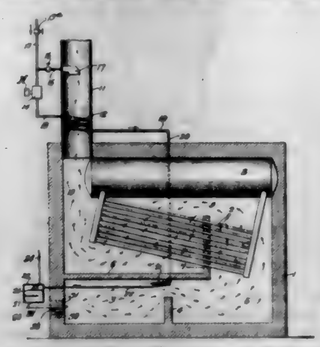
1,564,865. SHOCK ABSORBER. EDWARD L. LEINBACH, Chicago, Ill. Filed Feb. 7, 1925. Serial No. 7,496. 6 Claims. (Cl. 267—10.)



1. A shock absorber including a pivotally mounted member, a belt secured at one of its ends to the said member and adapted to move the member in one direction about its pivot, a stationary surface over which the belt moves, means for moving the said member in one direction about its pivot, a floating friction creating element interposed between the said surface and the adjacent portion of the said belt and having contact with both, whereby said element may be freely oscillated by the belt over the surface, and means for arresting the bodily movement of the said element to cause a relative movement of the belt and the said element one with relation to the other.

---

1,564,866. HEAT GENERATION FROM LIQUID FUEL. EDWARD A. LESLIE, Brooklyn, N. Y. Filed Nov. 19, 1923. Serial No. 675,770. 6 Claims. (Cl. 158—4.)



4. In a fuel oil burning apparatus, a boiler setting, a stack mounted thereon, an air intake, a suction blower receiving air from said intake, a bleeder pipe to receive waste gaseous products of combustion from said stack and deliver them to said suction blower, a primary heater to receive the gaseous mixture from said blower, an exterior carburetor, a fuel oil intake for said carburetor, and a pipe connecting said primary heater and said carburetor and located partially in the path of the hot products of combustion and partially exterior to said boiler setting.

---

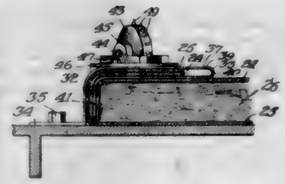
1,564,867. VEHICLE WHEEL. JOHN M. LINDMARK, Seattle, Wash. Filed Mar. 2, 1925. Serial No. 12,539. 4 Claims. (Cl. 301—23.)

1. In a disk wheel, a pair of felly members, each having a tapering inner peripheral surface and a curved outer peripheral surface, a disk having a peripheral flange formed upon its outer circumference with oppositely tapering seating surfaces for the respective felly members, one of said felly members being rigidly secured to said

disk flange, means for removably securing the other of said felly members upon the disk flange, and a rim adapted to seat upon said curved surfaces of both of the felly members.

---

1,564,868. MATTRESS MACHINE. HARVEY B. LINDSAY, Oakland, Calif., assignor to Dry Zero Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 14, 1925. Serial No. 30,393. 17 Claims. (Cl. 112—3.)



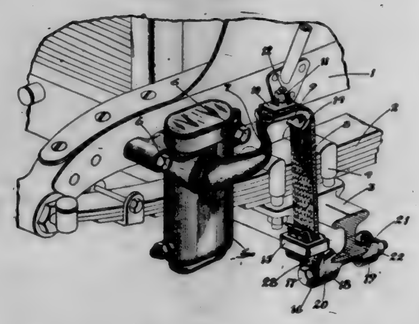
13. In a machine of the character set forth, the combination with a former in which filling material extends between spaced sheets of casing material and is fed therethrough, of means for folding the opposed edge-portions of said sheets beyond said filling at each side of the latter, into a position in which they flatwise oppose each other and lap one of said sheets, comprising guide-members each formed of spaced apart inner and outer guide forming plates of angle shape presenting an angular channel therebetween, portions of each of said plates extending along the adjacent edge of said filling and other portions extending along the upper surface of said filling at its edge-portions, said portion of said outer plate extending along the upper surface of said filling containing an opening and the opening portion of said inner plate containing a depressed portion presenting an upwardly-opening recess directly below said opening, and a spiked wheel revolubly mounted on said outer plate to extend downwardly through said opening therein and at its spikes into said recess, the axes of said wheels diverging in the direction of movement of said filling and sheets.

---

1,564,869. SHOCK-ABSORBER CONNECTION. RALPH M. LOVEJOY, Meredith, N. H. Filed June 5, 1922. Serial No. 565,884. 6 Claims. (Cl. 267—10.)

1. A shock absorber connection for connecting an oscillating shock absorber arm to a relatively movable mem-

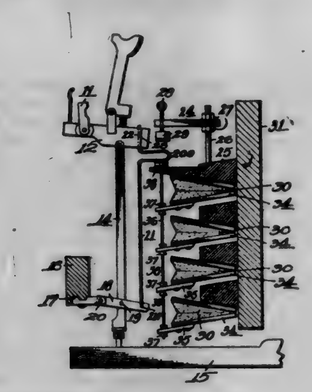
ber of a vehicle comprising an anchoring member, connected to said relatively movable member, having an aperture presenting a pair of walls converging toward said arm, a strap connected at one end to said arm, a wedge-shaped member having faces complementary to the converging walls of said aperture and having one of its faces permanently secured to said strap with the edge



of the wedge extending in the direction of the adjacent end of the strap, whereby the end of the strap, with the wedge thereto attached, will pass through the narrow end of said aperture, and when reversed, to bend said strap around the base of the wedge, and the wedge again entered into the aperture, will clamp said strap firmly against the converging walls of the aperture.

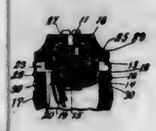
---

1,564,870. MANUALLY OR MECHANICALLY OPERATED PIANO. FRANK G. LYNDE, Newark, N. J., assignor to Auto Pneumatic Action Company, a Corporation of New York. Filed Oct. 27, 1919, Serial No. 333,574. Renewed Oct. 3, 1925. 1 Claim. (Cl. 84—68.)



In a manually or mechanically operated piano, the combination of the piano action, rods pivoted to the links thereof and having their ends loosely extending through holes in the wippens, projections formed by loops in said rods below the wippens of the piano action, a series of pneumatics, strikers extending upwardly from said pneumatics, a guide board in which said strikers are fitted to slide, and heads on the upper ends of said strikers set in position to engage the loops on the rods.

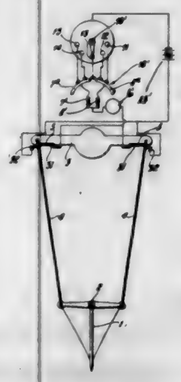
1,564,871. ELECTRICAL CONNECTER DEVICE. STANLEY MCCLATCHIE, Cambridge, Mass., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1920. Serial No. 351,820. 4 Claims. (Cl. 173—359.)



1. A swivel attachment plug comprising a swivel contact, having an inwardly extending annular flange at its entering end, a two-part insulating base, the parts having portions located on opposite sides of the flange respectively, for positioning the contact with respect to the base and binding terminal members and a center contact supported by said base, said center contact construction comprising a screw, the wire for the shell contact being clamped between the parts of the base by the action of said center contact screw.

---

1,564,872. AIRCRAFT CONTROL. WILLIAM H. MCMULLEN, Hempstead, N. Y. Filed Dec. 19, 1922. Serial No. 607,918. 9 Claims. (Cl. 172—8.)

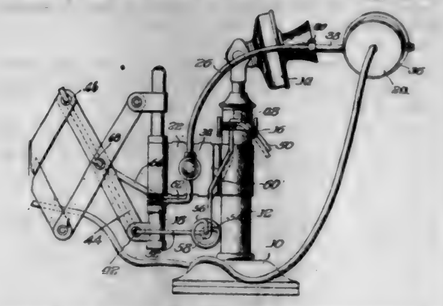


5. In a control system for aircraft the combination with an aircraft control element to be actuated to any one of a multiplicity of positions on either side of a neutral position, of an electric power motor for actuating said element in either direction, a circuit for said motor, a hand control member and a control member operated by the element for energizing said motor and selecting a position to which the element is to be actuated and there arrested, a device for actuating the element directly and independently of the power motor, a switch member also disposed in the control circuit and so associated with said device that the latter cannot be operated directly without breaking the motor circuit through the switch, the arrangement being such that upon the release of the direct acting device and its cooperative switch the aircraft element is automatically returned by the power motor to the selected position corresponding to that occupied by the hand control member.

---

1,564,873. SUPPORT. ALEXANDER C. MABEE, Villa Park, and DONALD H. SWEET, Evanston, Ill. Filed Aug. 23, 1923. Serial No. 658,865. 5 Claims. (Cl. 179—150.)

5. In combination, a telephone desk stand including a transmitter, a receiver and a switch hook, a horizontally extensible support for said desk stand, and means controlled by the movement of said extensible support for



raising and lowering the switch hook independently of said receiver.

---

1,564,874. FOOTGEAR. MARK F. MADDEN, Chicago, Ill. Filed Oct. 4, 1921. Serial No. 505,267. 3 Claims. (Cl. 128—165.)

1. In a foot gear, a structure adapted to be applied to, and to extend at opposite sides of the foot comprising a body of padding material internally contoured to fit the sides of the foot, the edges of said body spaced apart at the instep and at the bottom portions for purposes of ventilation, said body having an external form of regular outline adapted to contact substantially uniformly with a supporting surface, whereby pressure of support of the reclining foot shall be substantially uniform over its lower surface, and means to secure the gear upon the foot.

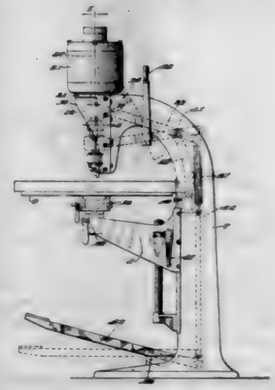
---

1,564,875. FIRE ARCH FOR LOCOMOTIVE BOILERS. ELI R. MANOR, St. Paul, Minn. Filed June 18, 1924. Serial No. 720,786. 1 Claim. (Cl. 110—76.)

A boiler of the locomotive type provided with arch tubes extended through the fire box thereof from the surrounding water space, in combination with arch-forming blocks supported on said arch tubes with their ends abutting above said tubes and provided with aligned air passages extended transversely through the arch and delivering into the combustion chamber, and intake tubes extended directly through the sides of the boiler and projecting into the aligned air passages and assisting and supporting adjacent blocks, said air intake tubes being provided on both sides of the fire box, each transverse row of arch forming blocks having the transverse air passages noted, and there being one air intake tube injected into each end of each of the transverse air passages of the arch formed by said blocks.

---

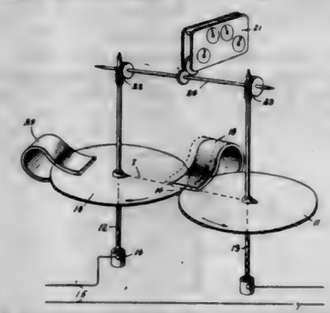
1,564,876. BORING MACHINE. JUDSON H. MANSFIELD, Rockford, Ill., assignor to Greenlee Bros. & Co., Rockford, Ill., a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,679. 2 Claims. (Cl. 77—6.)



1. In a boring machine of the character described, the combination of a work table, a standard overhanging the table and having vertical ways on its front face and an opening between said ways, a motor-supporting bracket secured to said standard and having vertically disposed portions providing ways complemental to those on the standard and a horizontally disposed top portion providing a motor-supporting part, a motor rigidly mounted on said part on a vertical axis, a spindle-bearing slide reciprocable upon and between said ways, a spindle journaled at its tool-carrying end on said slide and telescoping within the motor, a driving connection between the motor and spindle, and means reaching through said opening in the frame for reciprocating the spindle-bearing slide.

---

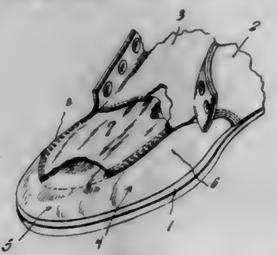
1,564,877. COMMUTATION DEVICE FOR METERS. FREDERICK S. MARCELLUS, Amsterdam, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 2, 1923. Serial No. 672,440. 4 Claims. (Cl. 171—34.)



1. A meter motor having a rotative system comprising a pair of continuous conducting discs mechanically connected for simultaneous rotation, said mechanical connection comprising an electrical connection between said

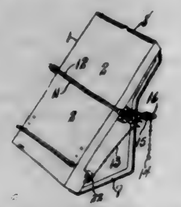
discs, means for electrically connecting said discs in an external circuit through said mechanical connection in such a manner that current flowing in said circuit is caused to flow along radial lines in said discs, a stationary field for producing flux through said discs embracing the path of the circuit current, and a drag magnet embracing an otherwise elctrical inactive portion of one of said discs.

1,564,878. SHOE. BERNARD A. MASON, Chippewa Falls, Wis. Filed Mar. 23, 1925. Serial No. 17,646. 2 Claims. (Cl. 36—45.)



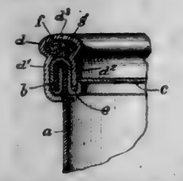
1. In a shoe provided with a plain toe, a gusset, and a single piece of flexible water proof material attached to said toe and overlying the vamp and a portion of the tip and connected thereto and to the gusset.

1,564,879. COPY-HOLDING POINTOGRAPH. LOUIS THOMAS MATHEWS, San Antonio, Tex., assignor to Point-O-Graph Machine Co., Dover, Del., a Corporation of Delaware. Filed Aug. 21, 1922. Serial No. 583,307. 4 Claims. (Cl. 120—34.)



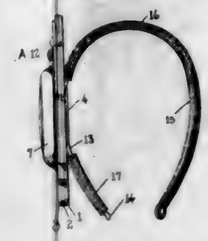
1. A copy-holding pointograph comprising a frame, shafts journaled longitudinally in said frame, a yoke movable on said shafts, a line spacing band carried by said yoke and transversely disposed on the face of said frame and an indicator carried by said band, and gearing for causing said yoke to move step by step longitudinally on said shafts.

1,564,880. RESILIENT REENFORCING RING FOR CONTAINERS. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Oct. 24, 1924. Serial No. 745,542. 6 Claims. (Cl. 220—73.)



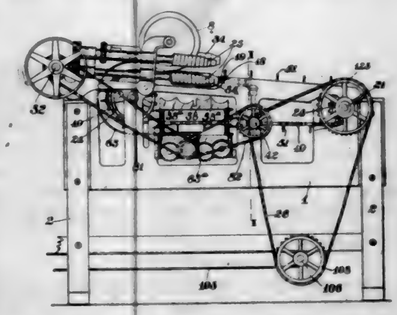
1. A container having end and side walls and a connecting joint therebetween, a resilient ring encasing and extending outwardly beyond said joint to leave a space between said ring and joint and form a cushion or shock absorber for said container, one of the walls of said container being provided with an abutment against which the outer face of one edge of said ring is engaged, to anchor said ring in position and prevent opening thereof under the influence of shocks or blows.

1,564,881. ARTICLE CARRIER. EARL AMBERT MONTGOMERY, Pasadena, Calif. Filed July 21, 1924. Serial No. 727,297. 2 Claims. (Cl. 224—4.)



1. An article carrier comprising a body formed with slits therein, a substantially elliptical spring metal retaining member having spaced terminals adapted to be detachably mounted on the body and insertable through the slits with the spaced terminals directed laterally of the body, a two-part inherently resilient tubular protective covering for the retaining ember and closely engaging the same to resist displacement or removal, the parts of said covering being of unequal lengths, and an end of each of the respective parts of the protective covering being fitted close to the points of entry of the retaining member into the slits whereby to prevent dislodgment of the retaining member from the body or slipping of the same from its normal position with respect thereto.

1,564,882. GREEN-CORN-HUSKING MACHINE. WILLIAM W. MORRAL, Morral, Ohio. Filed Jan. 16, 1922. Serial No. 529,633. 10 Claims. (Cl. 130—5.)



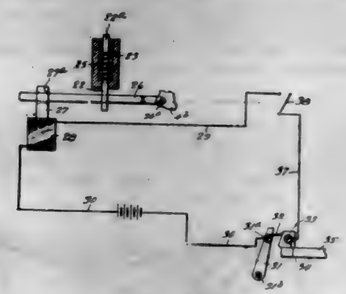
1. In a machine for husking an ear of corn, the combination with butt removing means, and a belt for carrying the ears to be husked to and beyond said butt removing means, a pair of husking rolls lying transversely of the direction of motion of said belt, and in a plane intersecting the plane of the belt, and a belt provided with flights, said last named belt extending around the lower reach of the first named belt for moving the ear along said husking rolls, said husking rolls lying under the lower reach of the second named belt.

1,564,883. CYLINDER LOCK. JAMES A. MUZZIO, Cleveland, Ohio. Filed May 25, 1923. Serial No. 641,893. 6 Claims. (Cl. 70—46.)

3. A cylinder lock, comprising relatively rotatable cylinder and plug members, circumferentially spaced longitudinally extending locking levers lying and movable in radial slots of the plug, and a series of springs lying in the plug, one between each circumferentially spaced

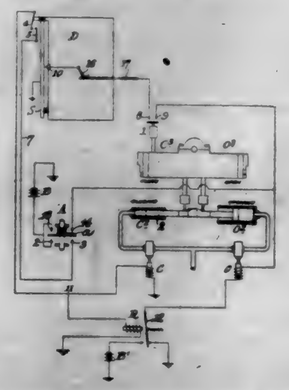
pair of levers, each spring having two oppositely extending arms each engaging a lever, said springs each extending less than 180° around the plug axis.

1,564,884. TARGET TRAP. PAUL NORTH, Lakewood, Ohio. Filed Feb. 16, 1925. Serial No. 9,476. 10 Claims. (Cl. 124—6.)



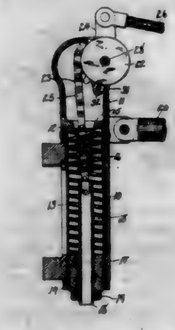
1. In a target trap, the combination, with a throwing spring, a throwing arm operatively connected with said spring, a pull rod for said spring and a pulling lever connected with said rod, of a trigger for holding the arm in throwing position, electrical means for operating said trigger to release said arm, and a circuit-closing device carried by and movable with the pulling lever for operating the said means.

1,564,885. DOOR-MOTOR CONTROL. GEORGE E. OAKLEY, Albany, N. Y., assignor to Consolidated Car-Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Sept. 14, 1920. Serial No. 410,206. 15 Claims. (Cl. 268—8.)



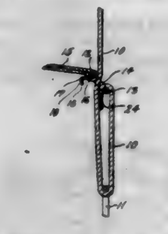
1. A door control system comprising door closing control means, door opening control means capable of dominating the door closing control means, and emergency means for causing the door opening control means to temporarily dominate the door closing control means.

1,564,886. SUSPENSION DEVICE FOR ELECTRIC LAMPS. THOMAS F. O'NEILL, New Haven, Conn. Filed June 13, 1925. Serial No. 36,826. 5 Claims. (Cl. 240—67.)



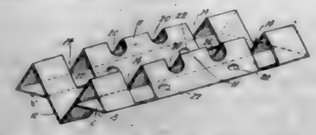
1. A lamp-support, comprising a supporting-bracket, a head swiveled thereon, a plate pivotally mounted in the head and formed with an arm, a spring in the bracket connected to said plate, a lamp-bar pivotally connected with the head, and a stay-rod connected with the said arm and with the said lamp-bar, whereby the spring tends to lift the outer end of the lamp-bar.

1,564,887. BUCKLE. ALBERT OPPENHEIM, New York, N. Y., assignor to The Connecticut Web & Buckle Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 6, 1924. Serial No. 697,179. 11 Claims. (Cl. 24—184.)



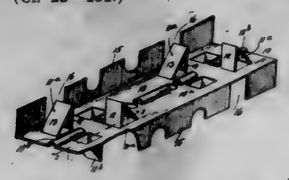
1. A buckle comprising a frame having spaced front and back portions, said back portion having a pair of spaced offsets adjacent the opposite ends thereof extending toward the front portion, and a lever hinged to the front portion and provided with a tongue having a plain free edge adapted to pass through the frame and clamp a web against the intermediate portion of the back and the opposed sides of the offsets.

1,564,888. CONCRETE-FORM TIE AND SPACER. HARRY A. ORLOPP, Venice, and DAVID BAKER SMITH, Los Angeles, Calif.; said Orlopp assignor to said Smith. Filed Nov. 6, 1923. Serial No. 673,061. 10 Claims. (Cl. 25—131.)



6. In a tie for concrete or like forms, the combination of a flat metal plate, a longitudinally extending hollow ridge on the plate, the plate closing the bottom of the ridge, the ridge having form board engaging shoulders and openings to pass reinforcing rods.

1,564,889. FORM TIE AND SPACER CONSTRUCTION. HARRY A. ORLOPP, Venice, and DAVID BAKER SMITH, Los Angeles, Calif.; said Orlopp assignor to said Smith. Filed Nov. 6, 1923. Serial No. 673,062. 4 Claims. (Cl. 25—131.)



3. A tie and spacer device for concrete or like forms, comprising a flat metal plate with flanges at its opposite edges, such flanges having form board receiving notches therein, and form board engaging shoulders struck up from the plate with a board engaging part substantially perpendicular to the plate and a diagonal brace part behind the board engaging part.

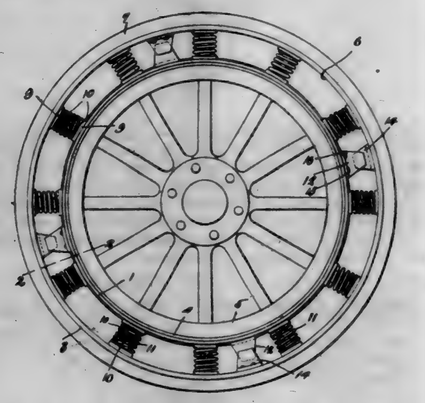
---

1,564,890. BRIQUETTE. ALEXIS D. PARKER, Villanova, Pa., assignor to American Briquet Company, a Corporation of Delaware. Filed Jan. 8, 1925. Serial No. 1,169. 3 Claims. (Cl. 44—16.)

1. The method which consists in mixing starch with borax in water, then adding thereto a relatively large quantity of water and bringing the same to high boiling point, then adding and stirring therewith hot asphaltum to form an emulsion, and then mixing the emulsion with culm or the like and forming the same into briquettes and drying the same.

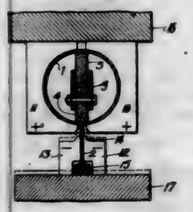
---

1,564,891. DEMOUNTABLE TIRE. SAMUEL N. PARKER, New Orleans, La., assignor of one-half to Arthur O'Shaughnessy, New Orleans, La. Filed Nov. 2, 1923, Serial No. 672,419. Renewed Sept. 24, 1925. 1 Claim. (Cl. 152—23.)



In a device of the class described, an inner rim, an outer rim, springs interposed between the rims, angle members of like construction, comprising transverse flanges secured to the rims and outstanding flanges constituting projections on the rims, some of the projections on the inner rim overlapping one side of the corresponding projections on the outer rim, and others of the projections on the inner rim overlapping the corresponding projections of the outer rim on the opposite side thereof, to hold the outer rim for movement in a plane parallel to the inner rim, but against lateral movement with respect to the inner rim.

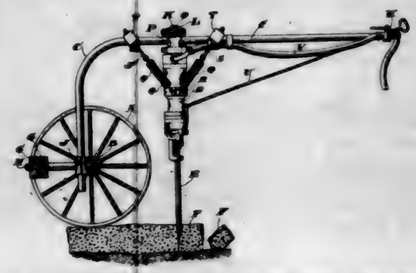
1,564,892. ELECTRIC WELDING APPARATUS. GEORGE H. PHELPS, Warehouse Point, Conn., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Jan. 2, 1925. Serial No. 82. 6 Claims. (Cl. 219—4.)



1. An apparatus of the character described comprising an electrode in two parts adapted to embrace a tube, with a gap at a determined point and a second electrode adapted to be clamped to a projecting member with its edge inserted in said gap against the tube.

---

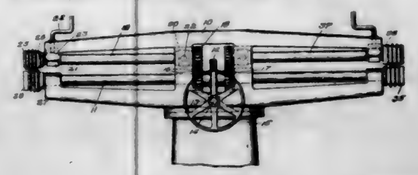
1,564,893. MOUNTING FOR CONCRETE BREAKERS. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 21, 1924. Serial No. 751,208. 4 Claims. (Cl. 262—16.)



1. A concrete breaker comprising a pair of wheels, an axle for the wheels, a pair of rearwardly extending handles attached to the axle, a pneumatic hammer mounted pivotally on the handles, and a drill steel in the hammer to receive the blows of said hammer.

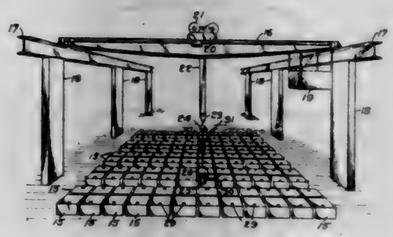
---

1,564,894. MACHINE FOR MAKING PIPE ELBOWS. LEMUEL H. PURNELL, Chicago, Ill., assignor of one-half to Henry G. Goelitz and one-half to Enoch Purnell, both of Oak Park, Ill. Filed Oct. 30, 1922. Serial No. 597,873. 4 Claims. (Cl. 113—36.)



1. Mechanism for making pipe elbows from straight lengths of pipe comprising a templet adapted to be secured to said pipe, a track carried by said templet and rotary cutters adapted to be guided by said track for cutting said pipe, said cutters being reversely beveled for simultaneously turning one edge outwardly and the other inwardly as they are severed, so that the outwardly turned edge may be inserted within the inwardly turned edge whereby the sections may be rotated with respect to each other.

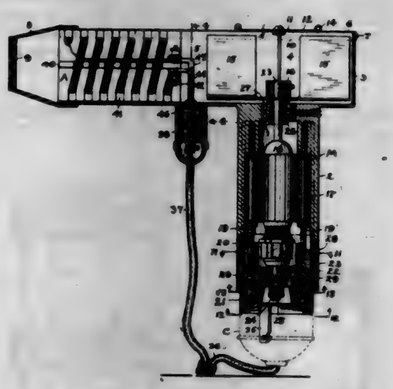
1,564,895. POURING-LADLE EQUALIZER. WILLIAM C. ENGERT, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Apr. 27, 1925. Serial No. 26,126. 10 Claims. (Cl. 22—79.)



1. The combination with a crane and a ladle suspended therefrom, of means in the connection between said crane and said ladle whereby said ladle is automatically raised when the level of the contents of said ladle is lowered.

---

1,564,896. COMBINED ELECTRICAL HEATER AND BLOWER. S. TRUMAN RINKER and ERVIN J. RUST, Cleveland, Ohio. Filed May 3, 1923. Serial No. 636,353. 4 Claims. (Cl. 219—39.)

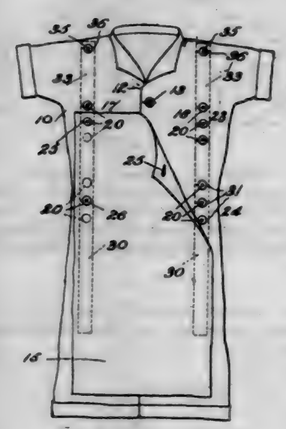


2. A combined heater and blower, comprising a casing having at one end a fan and at the other a discharge passage, a hollow handle having open communication with the fan end of the casing and provided with air-intake openings at its lower end, an electric heater within the discharge end of said casing, and an electric motor within said handle in driving connection with said fan.

---

1,564,897. GARMENT. MARY E. SANBORN, New York, N. Y. Filed Mar. 28, 1923. Serial No. 628,190. 2 Claims. (Cl. 2—48.)

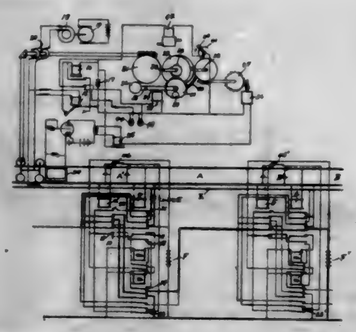
1. The combination of a garment comprising a body portion having a plurality of longitudinally spaced openings toward each side of the front thereof, a longitudinally disposed strip toward each side beneath said openings, fastening devices carried by said strips and extending through said openings, and a detachable front for said garment having fastening devices toward each side thereof spaced correspondingly to the first mentioned



fastening devices for cooperation therewith to permit said detachable front to be removably secured in a plurality of adjusted positions.

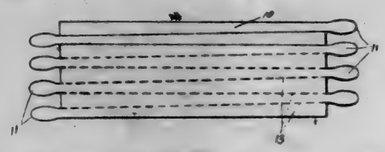
---

1,564,898. AUTOMATIC VEHICLE-CONTROLLING SYSTEM. EDWARD C. SABNETT, Washington, D. C. Filed Apr. 10, 1923. Serial No. 631,115. 14 Claims. (Cl. 246—63.)



4. In an automatic system for controlling vehicles, a track divided into block sections, a vehicle traveling on said track, a source of electrical energy carried by said vehicle, connections for transmitting said energy to the track rails of a preceeding block, said connections including a circuit interrupter opening and closing in accordance with the travel of the vehicle, a translating device on the vehicle responsive to energy transmitted through the track rails, a step-by-step mechanism operated by said translating device, and vehicle controlling means actuated by said step-by-step mechanism.

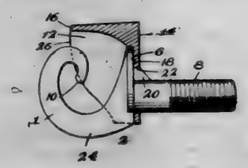
1,564,899. OPHTHALMIC TEMPLE AND PROCESS FOR MAKING THE SAME. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed July 30, 1924. Serial No. 729,087. 2 Claims. (Cl. 18—55.)



1. The process of forming ophthalmic mounting temples consisting in forming a master blank having a plurality of staggered projections at its ends and then dividing the master blank into single blanks, shaping and polishing the single blanks and then bending them into form.

---

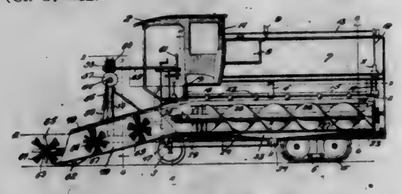
1,564,900. SAFETY HOOK. JESSE SCHWARTZ, Kansas City, Mo. Filed Sept. 15, 1924. Serial No. 737,896. 3 Claims. (Cl. 24—231.)



1. A device of the character described consisting of a base, a rim projecting from said base, a hook partially surrounded by said rim, a base fixed to said hook and removably seated in the first-mentioned base, and a threaded shank projecting from the second base through a hole in the first base.

---

1,564,901. SNOW REMOVING AND DESTROYING APPARATUS. ROBERT H. SCROGGINS, Upper Darby, Pa. Filed Apr. 3, 1925. Serial No. 20,411. 6 Claims. (Cl. 37—12.)

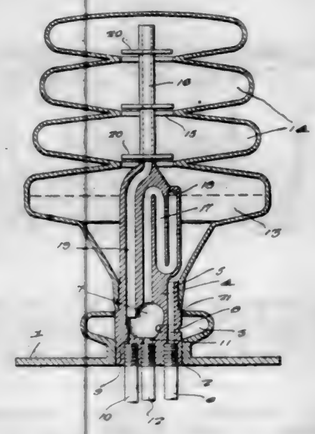


1. A snow removing and destroying apparatus comprising a vehicle, triturating mechanism therein, including a grinding screw having a mutilating paddle at the receiving end thereof, an apertured trough in which the same is journaled, a gutter below the trough having lateral outlets, a valve controlling the passage from the gutter to either of said outlets and means for revolving the triturating device.

---

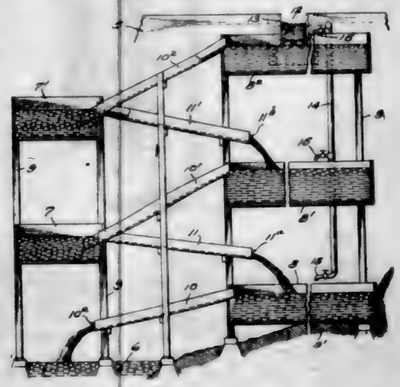
1,564,902. OIL BURNER. WILL G. SHERMAN, Chicago, Ill. Filed Jan. 22, 1925. Serial No. 4,069. 3 Claims. (Cl. 158—73.)

3. An oil burner of the class described comprising a body member provided with an oil inlet, and a mixing chamber in communication therewith, a burner head associated with the body member, and having communication with the mixing chamber, a water boiling chamber associated with the body member, said body member having means provided therein for admitting water to said chamber, superimposed superheating system chambers arranged above the boiling chamber having communication with the latter and further communicating with each other, a superheated steam delivery conduit extending upwardly through the superimposed steam chamber communicating at its lower end with the mixing chamber, and baffles on said conduit adjacent the inlet of each of the superimposed steam chambers.



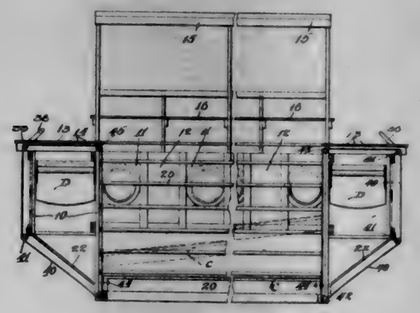
---

1,564,903. FISHWAY. DANIEL R. B. SHEPHARD, Seattle, Wash. Filed Aug. 28, 1924. Serial No. 734,594. 5 Claims. (Cl. 61—21.)



2. In apparatus of the character described, a plurality of fishways disposed in vertically spaced relation each of said fishways having a feeding basin, and a water-carrying trough extending downwardly therefrom, certain of the fishways having a fish resting basin into which extends the outlet end of the respective trough, and an inclined water-carrying trough extending downwardly from a resting basin and having its lower end terminate above the feeding basin of the fishway next below.

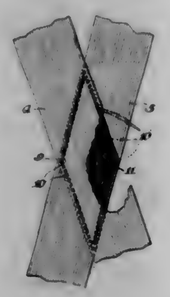
1,564,904. FLOATING-POOL STRUCTURE FOR BATHING. ERNEST G. SHINNER, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 11,943. 4 Claims. (Cl. 4—171.)



1. A floating bathing pool structure comprising a plurality of open, latticed, vertical frame member sections detachably joined at their ends to form a pool enclosure; a float to support each member; means to detachably secure the sections together and a detachable floor in said enclosure.

---

1,564,905. SUSPENDERS. FREDERICK C. SIMMONS, Highland Park, Pa., assignor to Pioneer Suspender Company, a Corporation of Pennsylvania. Filed May 27, 1924. Serial No. 716,118. 1 Claim. (Cl. 241—19.)

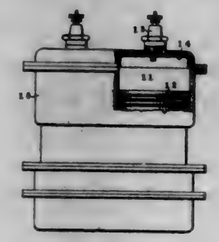


In suspenders, the combination of two shoulder straps of continuous elastic webbing, crossing at the back, and a reinforcing layer of non-elastic material interposed between said straps having an area and shape corresponding substantially with the area of the crossing portions of the elastic webbing and having its margins within the margins of said webbing, said crossing portions of the webbing and said reinforcing layer stitched together on lines adjacent their respective margins.

---

1,564,906. INTERNAL-COMBUSTION ENGINE. EDWARD SOKAL, New York, N. Y., assignor to American Katalite Corporation. Filed Oct. 18, 1920. Serial No. 416,736. 7 Claims. (Cl. 123—143.)

1. In an internal combustion engine, in combination, a combustion chamber for the fuel charge including means to ignite the charge, and an accelerating catalyzer functionally independent of said igniting means



fixedly disposed in said combustion chamber to promote the combustion of the otherwise ignited charge.

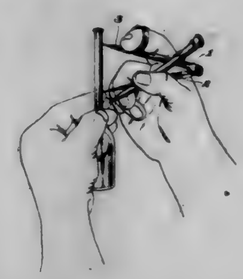
---

1,564,907. PROCESS FOR PRODUCING ENAMELS AND GLAZES. FRITZ SOMMER, Berlin-Charlottenburg, and MAX GROTH, Berlin-Oranienburg, Germany, assignors to the Firm Chemische Werke vormals Auergesellschaft m. b. H. Kommanditgesellschaft, Berlin, Germany, a Corporation of Germany. Filed May 17, 1923. Serial No. 639,714. 6 Claims. (Cl. 106—36.2.)

1. The process of improving enameling and glazing compositions, which comprises incorporating both unburnt clay and burnt clay in the enamel.

---

1,564,908. COMBINED DIVIDERS AND PENCIL. FRANK L. SORENSEN, Sioux City, Iowa. Filed Sept. 5, 1924. Serial No. 736,052. 5 Claims. (Cl. 7—1.)



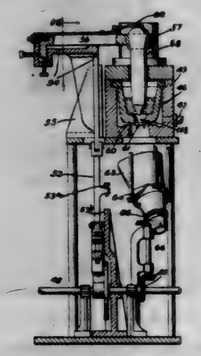
1. In a device of the class described, the combination with dividers having relatively movable legs, of a marking device, and means cooperating with said dividers and marking device to cause a forward extension of the marking device when the divider legs are moved toward each other and to cause a rearward movement of the marking device when the divider legs are spread apart.

---

1,564,909. GLASS-FEEDING MECHANISM. THEODORE C. STEIMER, deceased, late of Pittsburgh, Pa., by Charles M. Steimer, executor, Zanesville, Ohio, assignor, by mesne assignments, to Hartford-Empire Company, a Corporation of Delaware. Original application filed Feb. 12, 1910, Serial No. 543,582. Divided and this application filed Dec. 31, 1924. Serial No. 759,172. 6 Claims. (Cl. 49—55.)

1. Apparatus for separating molten glass into mold charges, including a container for the glass having an outlet, an implement projecting into the glass toward the

outlet and mounted for movement toward and from the outlet, means for periodically moving said implement



toward and from the outlet and means for adjusting the nearest position of said implement to the outlet without changing its position remote from such outlet.

---

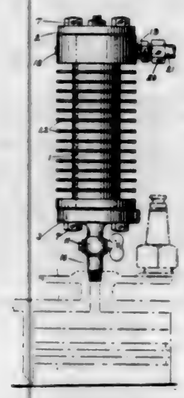
1,564,910. AUTOMATICALLY-THREADING SHUTTLE. WALLACE I. STIMPSON, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 10, 1925. Serial No. 42,753. 11 Claims. (Cl. 139—223.)

1. In an automatically threading shuttle for looms, the combination of the shuttle body having a longitudinally extending thread passage and side delivery eye, a bridge over which the thread passes to the side delivery eye and constituting the ballooning center for the thread in the thread passage during weaving when the shuttle is completely threaded, a thread director frontward of the side delivery eye and having a thread catch constituting the ballooning center for the thread during weaving when the shuttle is only partially threaded.

---

1,564,911. RECIPROCATING PUMP. ROBERT S. STRIEFLING, Detroit, Mich. Filed Jan. 10, 1924. Serial No. 685,326. 2 Claims. (Cl. 230—27.)

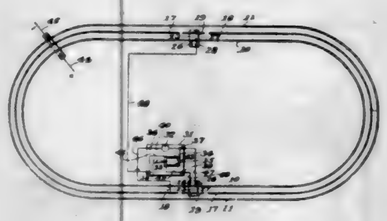
1. In a reciprocating pump, a cylinder, a shaft extending centrally thru said cylinder, a piston adapted, to reciprocate on said shaft and within the cylinder, a duct connecting to a gas engine and extending longitudinally into one end of the shaft, a valve from said duct to the adjacent end of the cylinder, an opening to the duct thru



the shaft, inlet and outlet valves spaced from the opposite end, whereby the reciprocations of the piston are prevented from extending to the ends of the cylinder.

---

1,564,912. TOY-RAILWAY SIGNALING SYSTEM. WILLIAM E. THORN, Bridgeport, Conn., assignor to The Ives Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed July 2, 1924. Serial No. 723,639. 5 Claims. (Cl. 246—81.)



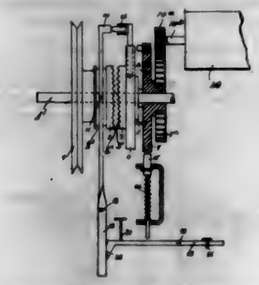
1. A track section for electric toy railway systems, comprising spaced wheel bearing rails, a central power rail including a non-current-carrying section insulated from said wheel bearing rails, and adapted to be engaged by the contact device of the train, terminal connections for a signal device, and means electrically connecting said terminal connections to said non-current-carrying rail section and one of said wheel bearing rails, whereby the circuit to said terminal connections is completed as the contact device simultaneously contacts with and electrically connects the power rail and said non-current-carrying section.

---

1,564,913. MECHANISM FOR MOVING AND ADJUSTING FORMS IN TYPEWRITERS. HUBERTUS VAN DUYL, Amsterdam, Netherlands, assignor to Naamlooze Vennootschap Kamatec, Amsterdam, Netherlands. Filed Apr. 13, 1923. Serial No. 631,951. 6 Claims. (Cl. 197—133.)

1. A device for positioning forms fed in tape form to a typewriter comprising, a roller for conveying forms, a

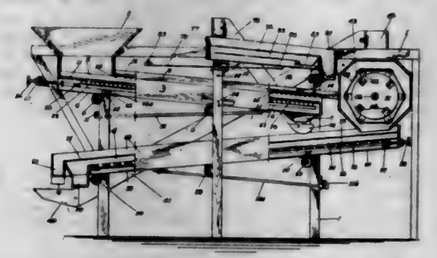
shaft, a driving means and a driven means loosely mounted on the shaft, a roller connector loosely mounted on the shaft, means causing the roller connector and the roller



to move together, a clutch for connecting the driving and driven means, and a pin and groove connection between the roller connector and the driven means.

---

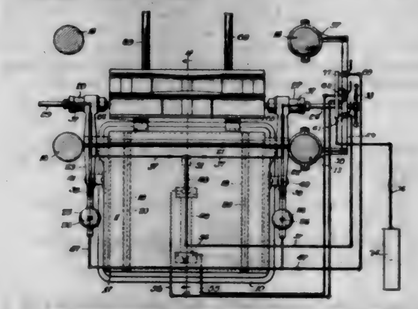
1,564,914. ALMOND HULLING AND SEPARATING MACHINE. LOUIS K. VAUGHAN, Woodland, Calif. Filed Nov. 3, 1923. Serial No. 672,455. 11 Claims. (Cl. 83—36.)



1. In an almond huller, a longitudinally reciprocating grate structure, a stationary cover mounted above the grate, bars projecting from the under side of the cover and disposed transversely of the grate, in spaced relation thereto, adjustable means supporting the cover spaced from the grate, spring means forcing said cover toward the grate but allowing movement of the cover away from the grate, and means for adjusting the tension of the springs irrespective of the cover adjustment means.

---

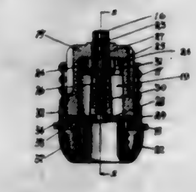
1,564,915. AXLE-FORGING APPARATUS. CHRISTOPHER WEATHERSON, Chicago, Ill.; said Sarah J. Weatherson executrix of said Christopher Weatherson, deceased. Filed Oct. 1, 1919. Serial No. 327,633. 11 Claims. (Cl. 78—99.)



1. In combination, a forging press having upper and lower dies, the manipulating mechanism comprising a movable frame, means mounted upon the frame for holding the work piece in position during the forging operation and moving it to different positions during the said operation, the said means also being adapted to hold the work piece suspended between the upper and lower dies when the force of the upper die is removed from the said work piece.

---

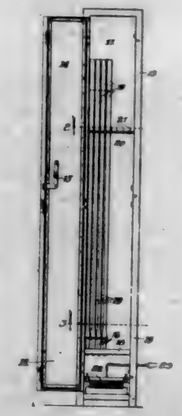
1,564,916. ATTACHMENT PLUG. GRABLE B. WEBER, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1920. Serial No. 384,864. 6 Claims. (Cl. 200—51.)



2. An attachment plug comprising a body portion, a disc thereon having an opening therein, a plunger extending through said body portion, a center contact on said plunger having a shank thereon guided in said opening, and a contact finger supported by said disc, and means whereby said contact finger is controlled by said plunger.

---

1,564,917. MEANS FOR PRESERVING GOLF-CLUB SHAFTS. JAMES S. WHITE, Chicago, Ill. Filed June 12, 1925. Serial No. 36,767. 1 Claim. (Cl. 84—19.)



In combination, an upright cabinet, a plate at the bottom of said cabinet having openings, adapted to receive the ends of golf club shafts, means for keeping said clubs in parallel arrangement, means for heating the air in the bottom of said cabinet beneath said plate, and intermediate openings in said plate for passing hot air upwardly between said shafts.

---

1,564,918. INSULATOR CLAMP. JOSEPH THOMAS WILLIAMS, Syracuse, N. Y. Filed Aug. 5, 1921. Serial No. 490,029. 1 Claim. (Cl. 173—313.)

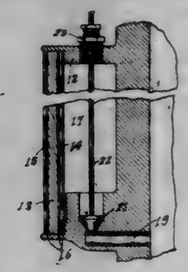
A device of the class described comprising two members hinged together at their ends and provided with clamping means at their free ends, said members having curved opposed clamping jaws adjacent the hinged ends thereof adapted to clamp a cable, and curved opposed

clamping jaws adjacent the free ends thereof adapted to engage an insulator, said cable clamping jaws being relatively small, and said members between the cable

clamping jaws and the insulator clamping jaws being spaced whereby the cable may be snugly clamped by the jaws engaging the same, said cable serving to keep said members in spaced relation.

---

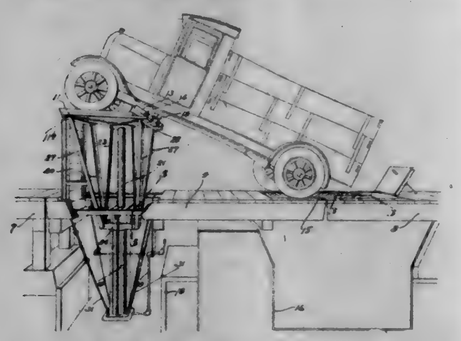
1,564,919. COMBINED RADIATOR AND HUMIDIFIER. SAMUEL C. WILSON, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,648. 3 Claims. (Cl. 237—78.)



1. A humidifying device comprising steam coils, a chamber formed integrally with said steam coils and having fluid connection with the interior of said coils and a porous medium forming a part of one wall of said chamber exposed to the atmosphere on one side and to fluids within said chamber on the other side.

---

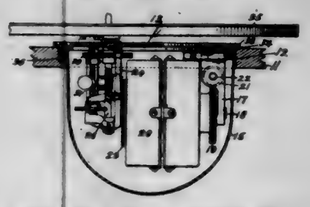
1,564,920. VEHICLE DUMP. AUGUST P. WINTER, Minneapolis, Minn., assignor to Samuel C. Clow, Minneapolis, Minn. Filed Apr. 17, 1925. Serial No. 23,909. 14 Claims. (Cl. 214—46.5.)



9. In a vehicle-dumping device, a vertically movable elevating platform and a normal support therefor, in combination with a cylinder anchored below said platform, a piston working in said cylinder, means for controlling a motive fluid to operate said piston, a lifting cradle guided at its lower end by said cylinder, and hangers connecting the lower portion of said cradle to the upper portion of said piston, the upper portion of said cradle being normally out of engagement with said platform but arranged to pick up said platform and raise the same bodily when said piston is raised.

---

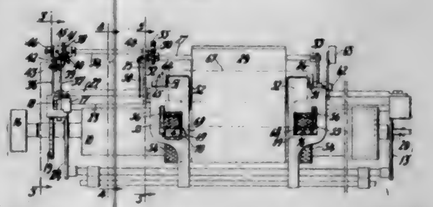
1,564,921. MOUNTING FOR PHONOGRAPH MOTORS. CLINTON E. WOODS, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 1, 1920. Serial No. 378,033. 2 Claims. (Cl. 185—37.)



1. In a phonograph, and in combination, a base plate having a portion for seating on top of a cabinet shelf to suspend the motor unit therefrom, a bearing bracket depending from said base plate, a motor housing, a turntable spindle and a governor shaft having bearings in said bracket, a driving connection between the motor and the spindle, a winding connection at the opposite side of the motor housing, and a bearing bracket depending from the base plate and supporting said winding connection, the motor housing being supported between the two brackets.

---

1,564,922. TYPEWRITING MACHINE. ALVIN E. ZUGELTER, Cincinnati, Ohio, assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 6, 1923. Serial No. 617,253. 12 Claims. (Cl. 197—135.)



1. In a stencil-cutting machine, a platen having a limited range of movement, card-feeding means co-operating with the platen to grip a stencil-card along its margins and feed it, a ribbon passing around the platen behind the stencil-card to mark impressions on the stencil material, and means on the ends of the platen, located outside the zone of the platen traversed by the ribbon, for engaging the lower edge of the card to align and locate it with reference to the platen.

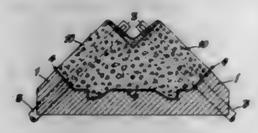
---

1,564,923. HAIR CURLER. DOLLETTA MAY ACKERMAN, Long Beach, Calif. Filed June 27, 1925. Serial No. 40,020. 1 Claim. (Cl. 132—43.)

A hair curler comprising a flat metal strip having a longitudinally extending clamping finger secured at one end to one face thereof and provided with means for detachably securing the free end of said finger, one edge of said metal strip being wider than the remainder thereof, and a metal band slidable on said curler to secure the free end of the clamping finger.

---

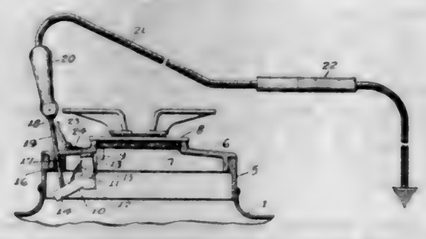
1,564,924. MANUFACTURE OF MOLDS FOR MAKING CONCRETE OR LIKE BEAMS, BLOCKS, COLUMNS, AND THE LIKE. LUIS ALWIN, London, England. Filed Mar. 10, 1923. Serial No. 624,263. 8 Claims. (Cl. 25—155.)



1. The herein described method of making sectional molds for the formation of columns or bodies, consisting in providing a mold matrix of a shape to accurately mold a particular section of the completed mold, and providing said matrix with a metal face to form the molding face of the mold section, and molding the section in said matrix to utilize said plate as a facing for said section when removed from the matrix.

---

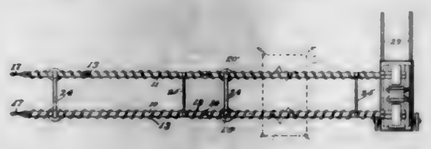
1,564,925. STATIC ELIMINATOR FOR VEHICLE TANKS. CHARLES C. ANTHONY, San Francisco, Calif., assignor, by mesne assignments, to Associated Oil Company, San Francisco, Calif., a Corporation of California. Filed Sept. 25, 1922. Serial No. 590,279. 2 Claims. (Cl. 175—264.)



1. A vehicle tank having a filling opening and a socket adjacent thereto, a screw cap for the filling opening, a lug on the under part of the cap and an interfering lever on an adjacent portion of the tank, in combination with a grounding cable terminating in a plug adapted to be inserted in said socket in electrical contact with the tank to act upon the interfering lever so as to cause its displacement from the interfering position.

---

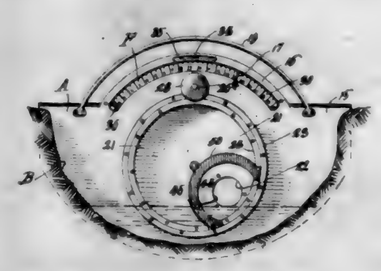
1,564,926. SCREW CONVEYER. JOHN J. ARMSTRONG, and ROBERT S. WOODFORD, Crockett, Calif. Filed Oct. 30, 1923. Serial No. 671,657. 11 Claims. (Cl. 198—213.)



2. A conveyer structure comprising a pair of complementary conveying devices each comprising a plurality of screw conveyers disposed end to end and articulately connected.

---

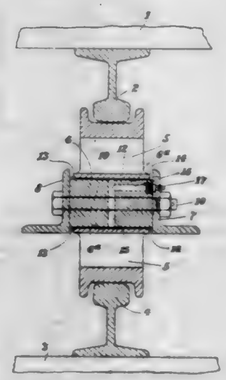
1,564,927. IRRIGATION REGULATOR. HOWARD A. BALLARD, Sacramento, Calif. Filed Dec. 21, 1922. Serial No. 608,279. Renewed Sept. 18, 1925. 10 Claims. (Cl. 61—29.)



1. A regulator for irrigation ditches comprising a flat sheet metal body adapted to be placed transversely of the ditch, and a rotatable plate associated with the body having a water way therethrough.

---

1,564,928. ROLLER BEARING FOR TURNTABLES. HUBERT OSWALD BEDGOOD, Glasgow, Scotland, assignor to Lobnitz & Company Limited, Renfrew, Scotland. Filed May 22, 1924. Serial No. 715,185. 2 Claims. (Cl. 308—220.)



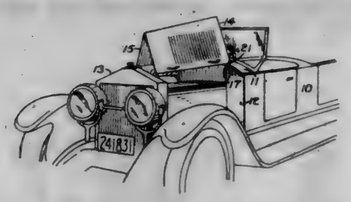
1. A roller bearing for a revolving crane turntable, or the like comprising, in combination, an outer cylindrical retaining ring; an inner cylindrical retaining ring; distance pieces extending between the two rings, said distance pieces being disposed at spaced intervals around the rings; two spaced rod members extending through the rings and distance pieces to rigidly secure them together and hold the distance pieces against rotation, and rollers rotatably mounted one on each of said distance pieces.

---

1,564,929. HOOD SUPPORT. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 18, 1924. Serial No. 726,872. 2 Claims. (Cl. 180—69.)

1. In combination with an automobile having a hood provided with an inwardly turned lower edge, a support to receive the lower edge of said hood when in raised position, said support comprising a substantially flat

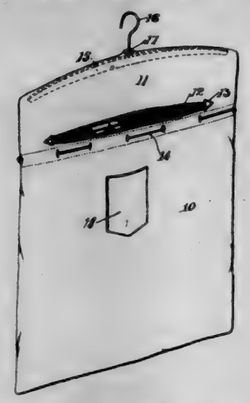
portion and projections extending upwardly therefrom, one of said projections having an inturned edge to en-



gage the lower turned edge of said hood to prevent the same from moving out of said support and further toward the center line of said automobile.

---

1,564,930. LAUNDRY BAG. ESTELLA BOYES, New York, N. Y., assignor to J. H. Hunt, San Francisco, Calif. Filed Feb. 12, 1923, Serial No. 618,563. Renewed Sept. 3, 1925. 3 Claims. (Cl. 150—1.)



1. The combination with a rigid hanger of a laundry bag having a closed extension or cap piece at its upper end, a horizontal slot in one side of the bag adjacent said closed extension, said slot permitting the hanger to be inserted or removed, and a hook on the hanger to extend up through an opening in the top of the bag when the hanger is in position beneath said extension, said hanger serving to support the bag and maintain the same spread out so that articles may be quickly inserted through the said slot.

---

1,564,931. MEANS FOR THE UTILIZATION OF THE ENERGY OF THE EXHAUST GASES OF INTERNAL-COMBUSTION ENGINES BY THE STRIKING OF SAID GASES. FRIEDRICH AUGUST BOYSEN, Leipzig, Germany. Filed Aug. 26, 1921. Serial No. 495,800. 3 Claims. (Cl. 137—160.)

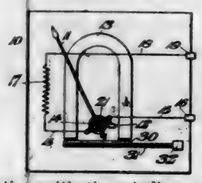
1. In a muffler of the class described, a spherical body, inlet pipes entering said body from opposite sides and in alinement, an exhaust neck extending from the body at right angles to said inlet pipes, and vanes in said exhaust neck providing helical passages therethrough.

1,564,932. MEANS TO ASSIST IN PURGING PAPERS. LEWIS H. BROWN, Chicago, Ill., assignor to Montgomery Ward & Co., Inc., Chicago, Ill. Filed Apr. 12, 1923. Serial No. 631,488. 11 Claims. (Cl. 283—1.)

1. A purging system for files comprising in combination a succession of sets of wrappers, each adapted to be folded over and enclose the top edge of a file, designs comprising solid color, vertical stripes, oblique stripes and dots, applied to said sets of said wrappers across the line of fold therein, whereby from an inspection of the top of a file drawer, all files containing a particular design may be readily purged.

---

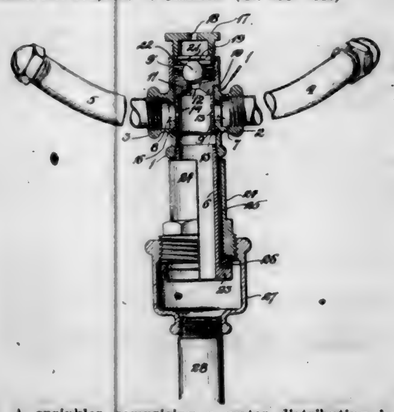
1,564,933. TEMPERATURE-COMPENSATED ELECTRICAL MEASURING INSTRUMENT. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1922. Serial No. 538,113. 1 Claim. (Cl. 73—32.)



The combination with the winding, pointer and scale of an electric pyrometer, of thermostatically actuated means for relatively adjusting said pointer and scale in response to changes in the temperature surrounding the meter, and separate thermostatically actuated means for adjusting said meter to compensate for the tendency of variations in said temperature to vary the extent of movement of said pointer along said scale occurring when a given electromotive force is impressed on said winding.

---

1,564,934. SPRINKLER. GUADALUPE BUELNA and HENRI EUGENE JEREMIE VACHER, Santa Barbara, Calif.; said Buelna assignor to said Vacher. Filed Oct. 29, 1923. Serial No. 671,339. 6 Claims. (Cl. 299—69.)

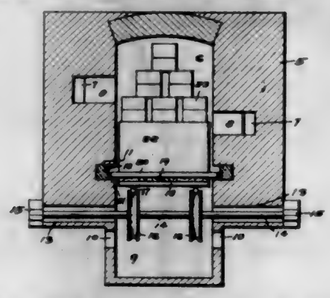


1. A sprinkler comprising a water distributing head, a water supply stand pipe, a means for associating said distributing head with said stand pipe to have rotatory

movement relative to said stand pipe, said distributing head having lateral branches and reduced passageways communicating with said branches, sprinkler arms adjustably carried in said branches and disposed with respect thereto to effect rotation of said sprinkler head, a tubular valve member within and connected with said sprinkler head said valve member movable with and independently of said head to control the supply of water to said sprinkler arms said tubular valve member formed with a vertical passageway and a valve housing, a valve within said housing and a water nozzle adjustable in said housing to control the supply of water to said nozzle.

---

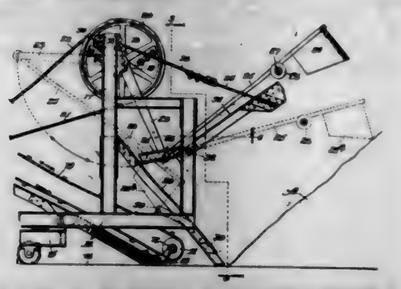
1,564,935. TRAVELING SUPPORT FOR KILNS. WILSON L. BURLEY, Crooksville, Ohio. Filed Jan. 15, 1925. Serial No. 2,672. 1 Claim. (Cl. 25—142.)



A kiln chamber provided in its side walls with longitudinal grooves, the kiln chamber being continuous from points above and below the grooves, the bottom of the chamber continuing in a pit, said pit having side walls provided with air circulating openings and the chamber having transverse openings above the air circulating openings and beneath said grooves, said transverse openings leading into the pit and adapted to receive cooling air therefrom, transverse shafts extending through the transverse openings, wheels carried by the transverse shafts, a table arranged beneath the transverse grooves and above the wheels, rails secured to the lower surface of the table and engaging the wheels, a refractory slab mounted upon and insulated from the table and projecting outwardly beyond the same and entering the grooves, and heat insulating material within the grooves, the grooves and slab forming seals.

---

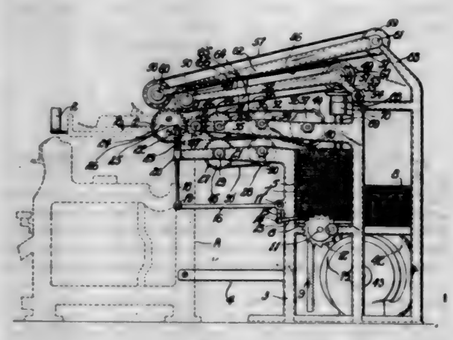
1,564,936. LOADING MECHANISM FOR CONVEYERS AND THE LIKE. WILFRED C. CADWELL, Anaconda, Mont. Filed July 26, 1922. Serial No. 577,552. 3 Claims. (Cl. 198—10.)



1. A loading mechanism for conveyers comprising a plate adapted to overlie a portion of the conveyer, a shaft adjacent the conveyer, a rocker arm secured to said shaft, a scraper hingedly connected to said rocker arm, a track at the side of said scraper inclined inwardly and upwardly, and a roller on the outer end of said scraper, said roller following said track to cause the scraper to be raised at the outer end of its stroke.

---

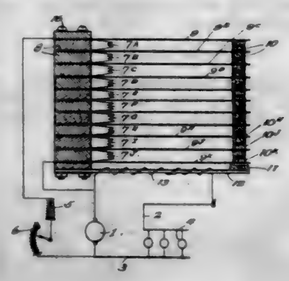
1,564,937. ENVELOPE FEED AND DELIVERY ATTACHMENT FOR TYPEWRITERS. LUCIUS M. CAMPBELL, St. Louis, Mo. Filed Jan. 26, 1925. Serial No. 4,733. 8 Claims. (Cl. 197—130.)



1. In a device for feeding envelopes to a typewriter and delivering them therefrom, the combination with the platen of the typewriter, of a frame structure embodying a supply receptacle and a receiving receptacle, means actuated by manually rotating the platen for elevating a stack of unaddressed envelopes a predetermined distance, means for advancing the top envelope of the stack to and between opposed conveyor belts for conveying the envelope to the platen and means for receiving the addressed envelopes as it is discharged from the platen and conveying it to a receiving receptacle.

---

1,564,938. FIELD REGULATOR. PIERRE I. CHANDEYSSON, St. Louis, Mo., assignor to Marshall Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 29, 1922. Serial No. 557,373. 1 Claim. (Cl. 201—48.)

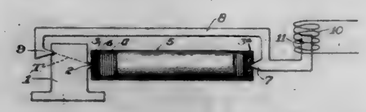


In a regulator, a resistance including a series of spaced spring fingers, a series of coiled resistance units interposed in the spaces between the respective fingers and having intermediate coils and tips engaged with adjacent fingers, insulating blocks interposed in the spaces between adjacent fingers and engaged with the tips of the resistance units, the tips being of such length so as to sup-

port the coils by and from their tips and close to the adjacent fingers so as to be housed by the latter, a button carried by each finger, and means to connect the fingers and the tips of the units to the blocks.

---

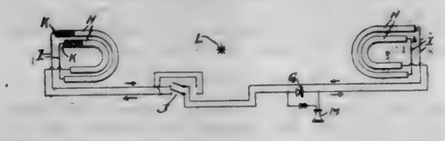
1,564,939. CARBON-PILE SUPPORT. PIERRE I. CHANDEYSSON, St. Louis, Mo., assignor to Marshall Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 13, 1922. Serial No. 594,387. 14 Claims. (Cl. 201—50.)



6. The combination with a compressible resistance medium whose rate of resistance variations is substantially a hyperbolic function of the compressing pressure applied to the resistance medium, of thrust means engaging one end of the resistance medium to resist a bodily movement of the said medium, a compressing member movably mounted with respect to the thrust means, and actuating means operatively connected to the compressing member for moving the latter at a rate which is also a hyperbolic function of the compressing pressure applied to the resistance through the compressing member by the movement of the latter.

---

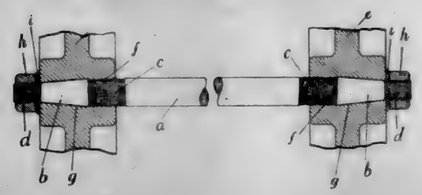
1,564,940. METHOD OF DETECTING THE PRESENCE AND APPROXIMATE LOCATION OF METALLIC MASSES. FRANK SPENCER CHAPMAN, Greensburg, Ind. Filed Nov. 12, 1919. Serial No. 337,481. 5 Claims. (Cl. 250—1.)



3. The method of decreasing undesirable reception of radio waves in an antenna having a loop circuit, which consists in substantially balancing the said circuit against the said reception, and shielding the said circuit by a radio-reflecting member.

---

1,564,941. MEANS OF MOUNTING WHEELS OR PULLEYS ON AXLES OR SHAFTS. CHARLES HENRY CLARK, Salford, England. Filed Sept. 18, 1924. Serial No. 738,510. 1 Claim. (Cl. 287—53.)



In a wheel and axle mounting, an axle, a tapered portion on said axles, oppositely directed screw threaded portions of different diameters on each side of said tapered portion, a wheel hub having a screw threaded engagement with said screw threaded portion of larger diameter, a tapered portion on the hub engaging the tapered portion of the axle, and a nut engaging the screw threaded portion of less diameter.

---

1,564,942. METHOD OF MAKING REENFORCING CORNER BRACKETS. CHARLES M. CLARKE, Sewickley, Pa. Filed Feb. 12, 1925. Serial No. 8,665. 3 Claims. (Cl. 76—113.)

3. In the manufacture of reenforcing brackets for D-handles of the class described from tubes, the steps consisting in first removing portions of a tubular section to provide an integral terminal ring and an extended side piece, and then bending the side piece to operative position against the ring.

---

1,564,943. COTTON FABRIC HAVING A LINENLIKE FINISH RESISTANT TO WEAR AND WASHING. EDGAR RAYMOND CLARK, Pittsburgh, Pa., assignor to Milton S. Erlanger, New York, N. Y. Filed Mar. 1, 1923. Serial No. 622,223. 14 Claims. (Cl. 91—68.)

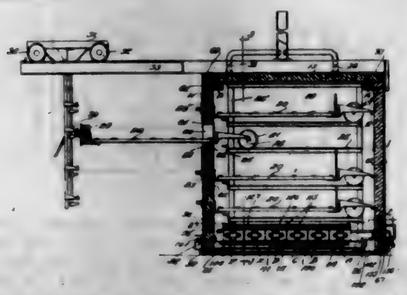
1. The method of treating cotton fabrics, which comprises impregnating the fabric with a viscose solution of low alkalinity, removing the excess solution and precipitating the cellulose from the viscose by treatment with a precipitating bath.

---

1,564,944. ATTACHMENT TERMINAL AND METHOD OF MAKING SAME. ALLAN B. COLBY, Providence, R. I., assignor to Rau Fastener Company, Providence, R. I., a Corporation of Rhode Island. Filed May 19, 1924. Serial No. 714,375. 5 Claims. (Cl. 113—116.)

1. An attachment terminal comprising a tubular structure having a relatively large portion at one end and a relatively small portion at the other, one of said portions being flattened and having a part thereof removed to form an open portion adapted to receive a binding post.

1,564,945. ELECTRIC CORE OVEN. FREDERICK A. COLEMAN, Cleveland, Ohio, assignor, by mesne assignments, to Carl W. Schaefer, Cleveland, Ohio. Filed Apr. 28, 1923. Serial No. 635,378. 10 Claims. (Cl. 219—35.)



1. In an electrically heated core oven, an electric heating element, wall, ceiling and floor members formed of heat resisting material and a contiguous outer metal skeleton individually supporting each of said members.

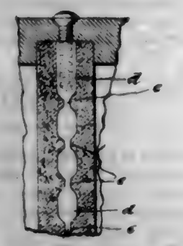
---

1,564,946. DUMPING GRATE. FREDERICK A. COLEMAN, Cleveland, Ohio, assignor, by mesne assignments, to Carl W. Schaefer, Cleveland, Ohio. Filed June 11, 1923. Serial No. 644,728. 2 Claims. (Cl. 126—162.)

2. In a furnace, frame members disposed at either side of the ash opening, pivotal supports therefor, a pair of links carried by the frame members, a grate movably supported at one end by the links and at the other pivotally supported on a stationary axis and means comprising projections carried by the links engaging the frame members when swung past the critical line of support whereby the grate is held in raised position.

---

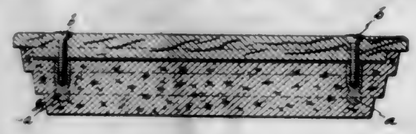
1,564,947. BUSHING CONSTRUCTION. LLOYD G. COPEMAN, Flint, Mich. Filed June 25, 1923. Serial No. 647,602. 1 Claim. (Cl. 72—105.)



In an article of the class specified, the combination of a moulded section of cementitious or frangible material, an anchor for fixtures or adjoining parts comprising a relatively thin gauge tube having a portion of its interior threaded and having a portion beyond such threaded interior flattened out so that the two walls are substantially doubled upon each other to increase the strength of the flattened portion and extended materially beyond the diameter of the threaded portion of the tube to materially increase the resistance against either a turning movement of the anchor or an extraction of the anchor from the moulded section by draft, and a screw or bolt turning into said thread section of the bushing to secure the fixture or adjoining part in place.

---

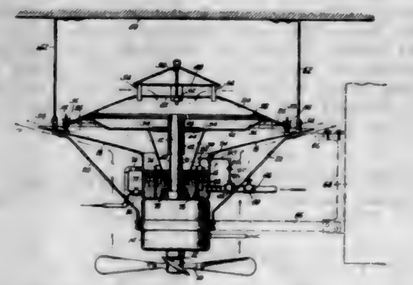
1,564,948. REFRIGERATOR DOOR. LLOYD G. COPEMAN, Flint, Mich. Filed Mar. 6, 1924. Serial No. 697,215. 2 Claims. (Cl. 20—35.)



1. A door, having an outer panel and an inner lining comprising a solid block of moulded heat insulating material secured to the panel and serving as the sole means of heat insulation for the door structure.

---

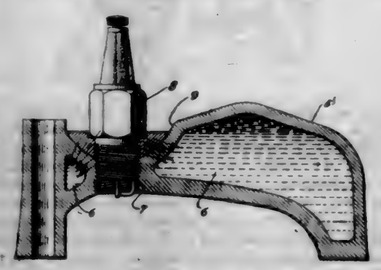
1,564,949. HUMIDIFIER. STUART W. CRAMER, Cramerton, N. C. Filed Dec. 13, 1924. Serial No. 755,662. 25 Claims. (Cl. 183—22.)



1. A method of humidifying an atmosphere, which comprises forming a mist of water and a slowly moving current of air and then conveying and throwing said air and mist to and into another separately produced and more rapidly moving draught of normally conditioned air.

---

1,564,950. SPARK-PLUG-COOLING DEVICE. EDWARD T. CURRAN, Detroit, Mich. Filed July 18, 1921. Serial No. 485,459. 4 Claims. (Cl. 123—169.)

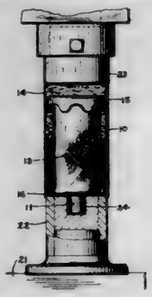


1. A spark plug cooling device embodying a conducting member one side of which is shaped complementarily to the depression in a cylinder head from the base of which

depression a tapped spark plug hole of the cylinder head extends, said member being provided with an opening substantially equal to the diameter of said tapped hole, whereby the threaded shank of the spark plug may be passed through said opening and screwed into the tapped hole in the cylinder head to bring the plug to a seat on said member and simultaneously force said member to a seat in said recess.

---

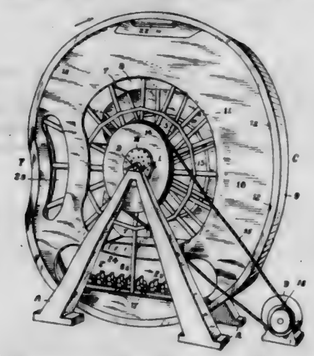
1,564,951. MANUFACTURE OF DRY CELLS. HAROLD DE OLANETA, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed May 7, 1920. Serial No. 379,514. 12 Claims. (Cl. 136—175.)



1. The method of making a dry cell having a containing cup, a cartridge, and a flexible washer positioned above the cartridge, which comprises introducing a measured quantity of paste into the bottom of the cup, then squeezing the cartridge into the paste, and utilizing the flexible washer to arrest the displacement of the paste, by positioning such washer against the upper end of the cartridge while the squeezing operation takes place.

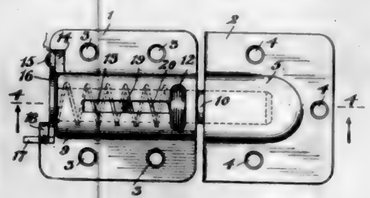
---

1,564,952. ROTARY AMUSEMENT DEVICE. JOHN A. FISHER, Sandusky, Ohio. Filed June 11, 1924. Serial No. 719,296. 27 Claims. (Cl. 104—77.)



1. In an amusement device, the combination of a structure mounted to revolve on a horizontal axis and provided with a vertically disposed and continuous internal track revolving with the structure, a traveling element mounted on said track and tending normally to occupy the low point of the latter, the friction between the track and the travelling element imparting an oscillation to the latter in relation to the low point of the former, and inter-engaging clutch mechanism carried by the track and the car whereby the track intermittently picks up the travelling element and carries it upwardly for a limited distance and a variable oscillation of the element is thus obtained.

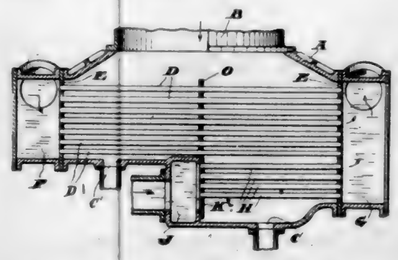
1,564,953. LOCK. ABRAHAM E. GERTSFELD, New York, N. Y. Filed July 7, 1925. Serial No. 41,942. 3 Claims. (Cl. 292—145.)



1. An article of the class described comprising a lock casing, a spring pressed bolt therein, said bolt being capable of having its rear end moved out of the back of the casing, a hinged member adapted to act as an abutment against the rear end of the bolt to prevent such movement, said bolt being provided with a transverse slot into which the hinged member may be positioned when a portion of the bolt has been projected out of the casing.

---

1,564,954. SURFACE CONDENSER. JOHN E. GOODWILLIE, Brooklyn, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 11, 1925. Serial No. 22,250. 3 Claims. (Cl. 257—43.)



1. A surface condenser, comprising a steam inlet and an outlet for condensate, longitudinal water tubes extending through the casing transverse to the direction of flow of the steam, and means for increasing the steam condensing capacity of the warmer end of the condenser to substantially equal the steam condensing capacity of the cooler end.

---

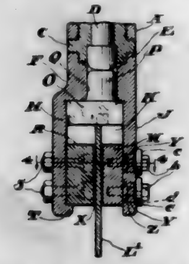
1,564,955. PROCESS FOR THE MANUFACTURE OF SOLUBLE-STARCH PRODUCTS. ROBERT HALLER, Grossenhain, Germany, assignor to Chemische Fabrik Pyrgos, Radebeul-Dresden, Germany, a Corporation of Germany. Filed Feb. 24, 1925. Serial No. 11,345. 17 Claims. (Cl. 127—33.)

1. The process of rendering starch soluble, said process comprising acting upon starch with a chloramide.

---

1,564,956. PILE-DRIVER ATTACHMENT FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 7, 1925. Serial No. 48,760. 3 Claims. (Cl. 61—73.)

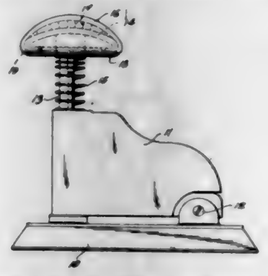
1. In a pile driver attachment for a fluid actuated rock drill of the hammer type, having a cylinder and a reciprocatory hammer piston in the cylinder, the combination of a front head adapted to be secured to the cylinder having a pair of parallel walls, a rectangular driving block in the front head slidable between the walls, a projection on the driving block to receive the blows of the hammer piston and for preventing endwise movement of the driving block, a cheek plate for preventing ejection of the



driving block from the front head and for engaging a pile, and a flange on one of the walls for supporting the cheek plate.

---

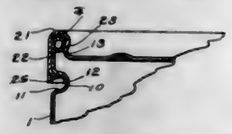
1,564,957. CUSHION CAP FOR STAPLING MACHINES AND THE LIKE. ROMAN H. HEYN, Westport, Conn., assignor to The E. H. Hotchkiss Company, Norwalk, Conn., a Corporation of Connecticut. Filed Dec. 10, 1924. Serial No. 754,960. 2 Claims. (Cl. 1—2.1.)



2. A cushion cap for stapling machines and the like comprising an integral one-piece dome shaped member of flexible resilient material having spaced, solid, flexible cushioning lugs projecting inwardly from the inner surface thereof and gradually decreasing in height from the center toward the side edges of the cap, said lugs being of such dimensions as to support the cap under a blow and to return the cap to normal position immediately after the pressure is relieved, and an inwardly extending flexible rubber securing flange on the under side of said cap for securing it to the operating head of a stapling machine and the like.

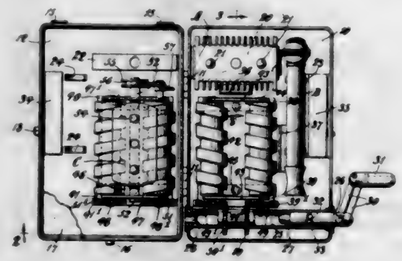
---

1,564,958. CAN CLOSURE. EDWARD HILDEBRANDT and HAROLD HILDEBRANDT, Tacoma, Wash. Filed Dec. 27, 1923. Serial No. 682,967. 1 Claim. (Cl. 220—42.)



A can having a downwardly directed ledge and an adjacent upwardly directed ledge near one end, a flanged friction cap fitting upon this end, the edge of the cap flange having a pair of adjacent cuts defining a lug whose edge is substantially continuous with the flange edge, said flange edge, when the cap is in place, lying between said ledges, and the lug being bent beneath the downwardly directed ledge.

1,564,959. CONTAINER FOR DOUBLE-EDGED SAFETY RAZORS. JOHN HOLTZMAN, New York, N. Y. Filed Dec. 2, 1921. Serial No. 519,338. 15 Claims. (Cl. 51—84.)



1. A safety razor sharpener comprising a hollow body, having a hollow cover hingedly engaged therewith, cushion surfaced spring mounted rolls arranged in pairs in said body and cover to hold a razor blade, means to prevent said rolls from rotating when said cover is raised, and means of rotating said rolls when said cover is closed.

10. A safety razor blade sharpener comprising a pair of hollow bodies hingedly engaged with each other, a bracket secured in each of said bodies, springs supporting the ends of each bracket, a pair of sharpening rolls revolvably mounted in each bracket, a spur gear secured to each of the rolls so when said hollow bodies are closed the pair of rolls are brought into close proximity, said gears being out of mesh when said bodies are opened, means on the ends of said springs to automatically engage said gears upon separating the bodies a blade holder supported intermediate said rolls and having blade positioning members for causing both edges of the blade held thereby to be exposed to said sharpening rolls, and means extending outside of the body to operate said rolls, said rolls being effective when operated in one direction only.

---

1,564,960. TOOL. WILLIAM HORSMAN, Detroit, Mich. Filed Nov. 19, 1928. Serial No. 675,530. 1 Claim. (Cl. 81—5.1.)

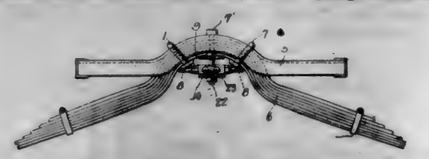
A tool of the class described, comprising a handle; a pair of arcuate jaws relatively movable and adapted for engaging each other at an edge, each of said jaws, on its outer surface, adjacent the meeting edge, being provided with a flat, each of said jaws having a plurality of semi-circular notches formed in said edge, each notch in one of said jaws forming with a co-operating notch in the other jaw, a circular opening, the several notches in each jaw being of various sizes, said jaws extending transversely of said handles, and projecting outwardly at opposite sides thereof.

---

1,564,961. TRAILER DRAFT GEAR FOR AUTOMOBILES. FRANK B. KANE, Reddick, Ill. Filed Apr. 7, 1924. Serial No. 704,563. 4 Claims. (Cl. 280—33.9.)

1. A trailer draft gear for automobiles, comprising, in combination, a generally rectangular yoke adapted for attachment to and beneath the rear transverse spring

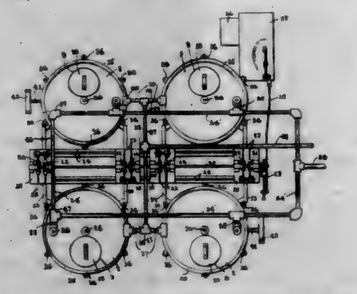
of an automobile, a draw-bar slidably mounted in the front and rear limbs of said yoke, a spring encircling



said draw-bar and abutting at one end against said yoke, and means fast on said draw-bar forming an abutment for the other end of said draw-bar spring.

---

1,564,962. HOLDER FOR PASTEURIZING MILK, CREAM, AND OTHER LIQUIDS. FRANK W. KELLY and ALEX H. LUEDICKE, Milwaukee, Wis. Filed Jan. 27, 1923. Serial No. 615,404. 9 Claims. (Cl. 137—21.)



2. A pasteurizing apparatus, comprising one or more jacketed tanks, and means for each tank operative to fill and empty each tank at predetermined intervals and in a predetermined sequence, said means permitting the adding of additional tanks to the apparatus.

---

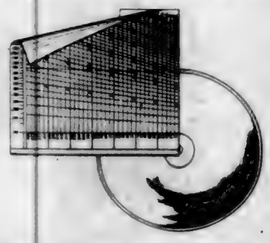
1,564,963. SELF CLEANING SPRAY HEAD. JOHN F. KIRGAN, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 3, 1923. Serial No. 655,390. 1 Claim. (Cl. 299—59.)

A spray head for spraying liquids, comprising a divided body having a tortuous passage therethrough and having an inlet end adapted to be connected to a liquid discharge line, said body including a relatively stationary section and an opposite separate movable section in the form of a leaf pivoted to the stationary section, semi-circular lips having smooth surfaces formed on said sections in position to define a semi-circular outlet opening across an end of the spray head in a plane of the axis of said inlet, and means for adjusting the movable section whereby to vary the size of the outlet opening.

---

1,564,964. FILM MEASURING CHART. CHARLES A. KNIBLING, Cleveland, Ohio. Filed Aug. 6, 1923. Serial No. 655,863. 2 Claims. (Cl. 33—1.)

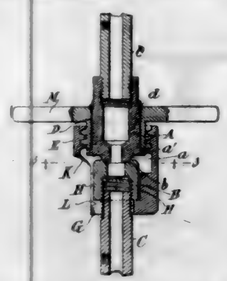
1. A scale for the purpose described comprising a rule member having distinctive series of graduations formed along the marginal edges thereof, each series corresponding to selected rates of film projection in feet per minute and which when directly compared to the depth of film on a reel as measured radially from the circumference



of the hub to the outside circumference of the film on the reel indicates directly in minutes, the total time required to project the film on the reel at a selected rate of projection.

---

1,564,965. PIPE COUPLING. HENRY PHILLIP KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A. Darr executors of the will of Henry P. Kraft, deceased. Filed Apr. 21, 1923. Serial No. 633,707. 2 Claims. (Cl. 285—148.)



1. In a coupling, two complemental members having co-operating seating faces adapted for limited relative longitudinal movement, a housing carried by one of the members adapted to laterally receive through its side the other member, the internal wall of the housing and the external wall of the second member having co-operating surfaces for preventing relative rotation between the housing and said second member when the complemental members are moved longitudinally with respect to one another, and means on the housing adapted to co-operate with both members to cause such relative longitudinal movement, said means comprising a sleeve swiveled to the first member and having a screw-threaded connection with the housing.

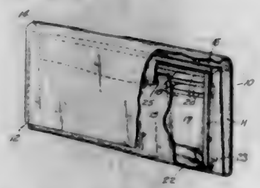
---

1,564,966. HAND BAG. ABRAHAM KULICK, New York, N. Y. Filed Dec. 18, 1924. Serial No. 756,659. 3 Claims. (Cl. 150—28.)

1. A hand bag, having a body portion of one piece of material forming the front, back and cover portions, an internal partition comprising a pocket composed of adjacent strips of material stitched along their opposite edges to the body of the bag, one of said strips being longer than the other to form a flap to engage over the front of the bag, both strips being folded to close the mouth of the pocket along a line short of the end of the shorter strip.

---

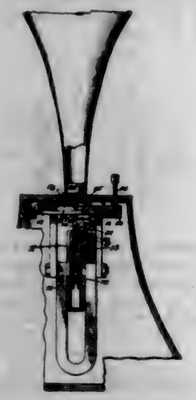
1,564,967. HAND BAG. ABRAHAM KULICK, New York, N. Y. Filed Jan. 9, 1925. Serial No. 1,392. 5 Claims. (Cl. 150—28.)



1. In a bag of the character described, the combination of a withdrawable bill folder normally coincident with one entire wall of the bag, and a collapsible strip of flexible material coincident in width with the folder for connecting the folder to the bag, said folder having separate compartments so arranged as to become successively accessible as the strip is uncollapsed.

---

1,564,968. SOUND-REPRODUCING DEVICE. NATHAN A. KURMAN, New York, N. Y. Filed Dec. 2, 1922. Serial No. 604,632. 13 Claims. (Cl. 179—108.)

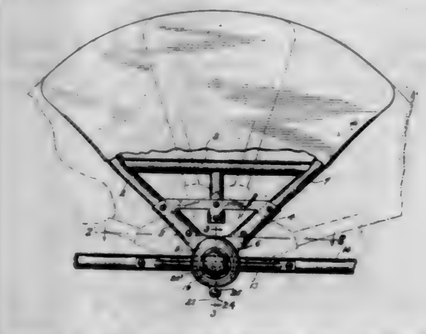


1. An apparatus of the character described, comprising a sound-responsive member, a diaphragm, and means acting on said member to counterbalance the magnetic forces acting thereon; said diaphragm when inactive being unstressed, substantially as specified.

---

1,564,969. VEHICLE-HOOD FIXTURE. MARSHALL B. LLOYD, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 4, 1921. Serial No. 512,760. 1 Claim. (Cl. 296—110.)

A device of the kind described embodying therein a supporting rod, a body fixture including a flat face portion having oppositely disposed bifurcated arms adapted to straddle said rod and an extension, a hood fixture element also having a flat face portion coacting with the similar portion on the body fixture element, a concavo-convex tension member engaging at its edges with said hood fixture element and having an extension in line with the extension on said body fixture element, one of said extensions having a notch therein, a member fixed in the other extension and extending into the notch in the first extension to hold the tension member against



rotation, a bolt operatively engaged with the rod and extending through said elements and tension member and a nut threaded on said bolt for adjusting the tension of said tension member.

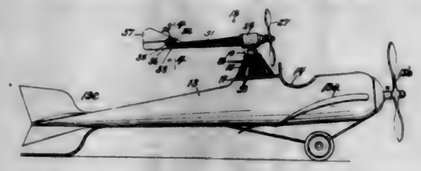
---

1,564,970. ADHESIVE. WILLIAM R. LONG, St. Louis, Mo. Original application filed Sept. 24, 1924, Serial No. 739,707. Divided and this application filed Feb. 28, 1925. Serial No. 12,451. 2 Claims. (Cl. 127—38.)

1. A method of treating cornstarch which consists in adding hydrochloric acid and water to cornstarch and permitting it to remain thus for a period ranging between twenty-four and forty-eight hours, then placing it in a converter in which it is agitated, subjected to heat and to steam pressure.

---

1,564,971. STABILIZER FOR AEROPLANES. MARTIN PEARSON, Los Angeles, Calif. Filed Mar. 16, 1925. Serial No. 15,980. 5 Claims. (Cl. 244—25.)



1. The stabilizer for aeroplanes set forth comprising a support adapted to be secured to an aeroplane; a spindle carried by said support; a housing secured to said spindle; a tail secured to said housing; a cage at the tip end of said tail; electrical contacts in said cage; a ball in said cage for causing said contacts to engage; a motor in said housing; a propeller secured to the shaft of said motor; and means for actuating said motor when said contacts are engaged.

---

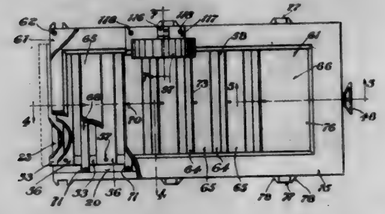
1,564,972. AIRCRAFT. MARTIN PEARSON, Los Angeles, Calif. Filed Apr. 27, 1925. Serial No. 26,216. 6 Claims. (Cl. 244—19.)

1. The aircraft set forth comprising a frame; supports arranged around and attached to said frame; guide wheels carried by said supports; inner and outer floating

gears arranged in the same plane that are supported by said guide wheels; means for rotating said gears around a common axis; and propeller means attached to said gears for lifting said aircraft when said gears are driven.

---

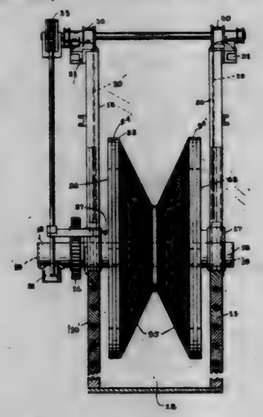
1,564,973. ASSORTING MACHINE. JOSEPH B. PERRY, Providence, R. I., assignor of one-half to Harry Fowler, Providence, R. I. Filed July 17, 1925. Serial No. 44,253. 7 Claims. (Cl. 209—98.)



1. In an assorting machine, an open bed frame, a frame slidably supportedton the bed frame, cross bars on the slidable frame, a stationary plate supported by the bed frame, cross bars on the stationary plate, shoulders on the second cross bars projecting intermediate the first cross bars, and an operating screw connecting the two frames.

---

1,564,974. WASHER CYLINDER FOR PAPER-PULP MACHINES. EMIL A. PETERSON, Appleton, Wis. Filed Aug. 16, 1922. Serial No. 582,236. 4 Claims. (Cl. 141—12.)

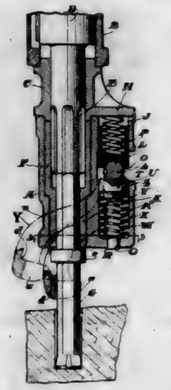


1. A pulp working apparatus comprising a support, a hollow shaft mounted in said support, a foraminous cylinder formed from a plurality of segments, triangular in cross section rotatably mounted on said shaft and provided with a circumferential groove about its periphery, means for rotating said cylinder, and means for transferring water passing to the interior of said cylinder to said hollow shaft.

---

1,564,975. STEEL RETAINER. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 11, 1923. Serial No. 662,035. 3 Claims. (Cl. 121—32.)

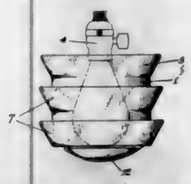
1. In a steel retainer for rock drills, the combination of a front head having a single forward recess and a single rearward recess, a drill steel supported by the front head, a yoke pivoted on one side of the front head for retaining the steel within the front head, said yoke being provided with a single cross piece, connecting the sides of the yoke, a grooved bearing head arranged slid-



ably within the forward recess to support the yoke, a plurality of springs to support the bearing head, and a spring pressed plunger having a concave face cooperating with the cross piece to hold the yoke in retaining and releasing position.

---

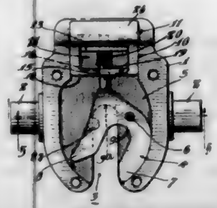
1,564,976. VERMIN TRAP. LOUIS A. SAUER, Willows, Calif. Filed Oct. 29, 1921. Serial No. 511,474. 7 Claims. (Cl. 43—113.)



1. A trap including with a source of artificial light and heat, a casing surrounding said source, and formed of a translucent and heat-conducting material, said casing being closed at its upper end and open at the bottom, vertically disposed trapping pockets provided with the casing on the outside thereof, an inverted reflector and trapping bowl mounted at the lower end of the casing and of lesser periphery than the latter, and an upwardly inclined flange on the inside of the casing just above the bowl and overhanging the same.

---

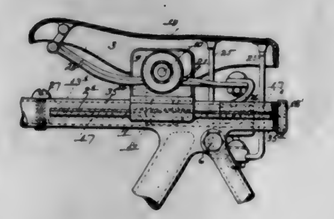
1,564,977. ELEVATOR. WILLIAM P. SCHLINGER, Oxnard, Calif. Filed June 16, 1923. Serial No. 645,804. 4 Claims. (Cl. 294—91.)



2. A rod elevator comprising a body having a receiving way, a closure member for the way, a dog, spring means yieldingly urging the dog against the closure member, and a control member for withdrawing the dog from the closure member, said member being shiftable in a direction tending to pull the elevator away from the rod.

---

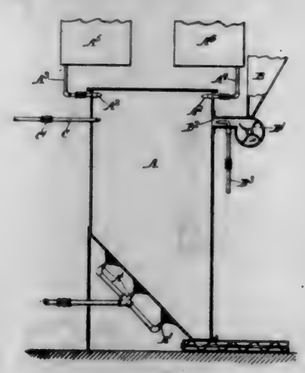
1,564,978. CYCLE SADDLE. JOHANNES T. SENTROP, Jr., Grand Rapids, Mich. Filed Sept. 25, 1922. Serial No. 590,541. 5 Claims. (Cl. 208—61.)



1. In a vehicle of the character described: a frame; a carrier supported by, and having a reciprocatory movement on, the frame in its longitudinal direction; a saddle supported on the carrier turnable in a vertical plane parallel with said direction.

---

1,564,979. PROCESS OF MANUFACTURING STARCH PRODUCTS. PHILIP A. SINGER, Milwaukee, Wis. Filed Jan. 31, 1917. Serial No. 145,600. 11 Claims. (Cl. 127—38.)

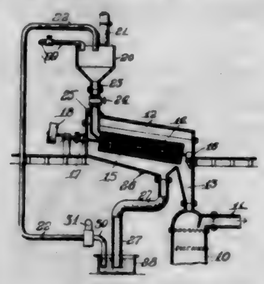


3. The process of treating starch which includes projecting a liquid spray which contains starch into a highly heated reaction chamber in the presence of a reagent, and allowing the reagent to act upon the starch, while the minute starch bodies are suspended in a gaseous medium within the reaction chamber.

---

1,564,980. METHOD AND MEANS FOR INTRODUCING MATERIAL INTO A CHAMBER. PHILIP A. SINGER, Glen Ellyn, Ill. Filed Sept. 22, 1922. Serial No. 589,955. 14 Claims. (Cl. 214—17.)

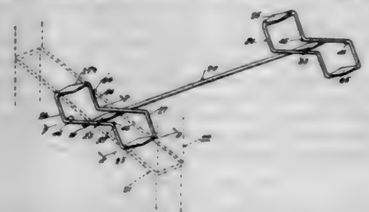
1. The method of introducing solid material of the character described from the outer air into the treating portion of a treating chamber while maintaining the chamber substantially free of outer air introduced with the material which comprises simultaneously introducing into a separating portion of the chamber the material to be introduced into the treating portion thereof and also a body of liquid in which the material is carried into the chamber, separating the solid material from the liquid before the solid material is introduced into the



treating portion of the chamber, and then introducing the solid material into the treating portion of the chamber.

---

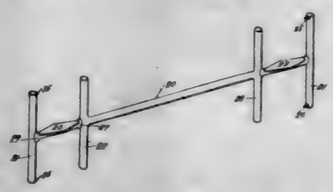
1,564,981. CONCRETE-FORM TIE AND SPACER. DAVID BAKER SMITH, Los Angeles, Calif. Filed Apr. 4, 1925. Serial No. 20,756. 18 Claims. (Cl. 25—131.)



1. A device of the character described, embodying a tension rod, and a board engaging loop carried at the end of the rod, there being in the loop formation at the end of the rod two spaced portions adapted to pass between adjacent edges of form boards or the like.

---

1,564,982. CONCRETE-FORM TIE AND SPACER. DAVID BAKER SMITH, Los Angeles, Calif. Filed Apr. 4, 1925. Serial No. 20,757. 7 Claims. (Cl. 25—131.)



1. A device of the character described, comprising a tension rod adapted to extend across a concrete form and having at its end a flat part adapted to pass between adjacent edges of abutting form boards, a board engaging head formation extending on opposite sides of the plane of said flat, and means at the ends of said head formation adapted to pierce and engage a form board to prevent displacement of the device, as described.

---

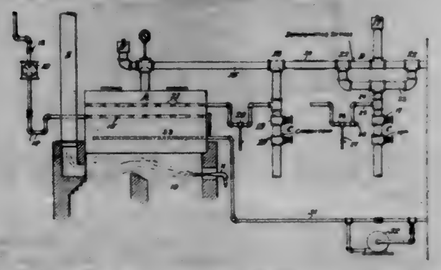
1,564,983. SURGICAL CATGUT THREAD. ANGELO L. SOMMI, New York, N. Y. Filed Nov. 15, 1921. Serial No. 515,339. 4 Claims. (Cl. 128—335.5.)

1. The method of preparing catgut for surgical use which consists in artificially coloring the catgut to a relatively dark color by means of a fast, non-poisonous,

non-irritating dye, and then sterilizing the dyed catgut by subjecting the same to a temperature of less than 90° C. so that the sterilized and dyed catgut will retain its natural resiliency undiminished.

---

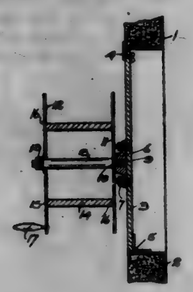
1,564,984. APPARATUS FOR REFINING PETROLEUM. WILLIAM H. STILSON, New York, N. Y., assignor to Stilson Process Corporation, Dover, Del., a Corporation of Delaware. Filed Jan. 20, 1920. Serial No. 352,756. 4 Claims. (Cl. 196—138.)



3. A means for collecting condensates in petroleum refining aparatus, comprising in combination, a vapor line, a dephlegmating by-pass associated therewith comprising a pair of T's disposed in said vapor line in spaced relation, a branch connection below the vapor line connecting said T's, a pipe depending from said branch connection, a carbon trap in said pipe having a plurality of valves adapted to be manipulated to permit the withdrawal of the carbon, and a connection above the carbon trap for withdrawing the condensate collected.

---

1,564,985. HOSE-REEL DEVICE. JOHN A. N. STOMBERG, Detroit, Mich. Filed June 29, 1925. Serial No. 40,188. 3 Claims. (Cl. 242—86.)

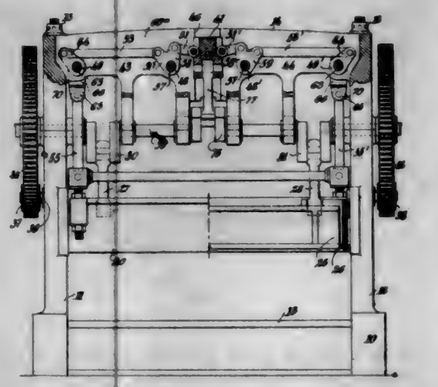


1. A hose reel device comprising a frame adapted to be built into a wall of a building, a door-like member pivotally mounted in said frame, and a hose reel so mounted on said member that when the latter is in closed position the hose reel may be rotated substantially vertically within the building, and when the said member is in open position the hose reel may be rotated substantially horizontally and is disposed partly outside the building.

---

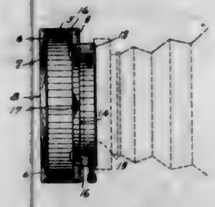
1,564,986. DRAWING PRESS. GUSTAVE R. THOMPSON, New York, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of West Virginia. Filed Mar. 22, 1923. Serial No. 626,849. 9 Claims. (Cl. 113—38.)

1. A drawing press comprising a crank-shaft, a blank-holder or die slide, said means comprising rocking parts at each side of the press turning on axes transverse of said crank-shaft, toggles between said rocking parts and said blank-holder slide, a second rocking part mounted the middle of the press turning on an axis parallel with those of said first-named rocking parts, connections between said first and second-named rocking parts for transmitting movement from the latter to the former, and means connected to an intermediate part of said crank-shaft for rocking said second rocking part.



---

1,564,987. LENS SHADE FOR CAMERAS. JAMES A. TURNER, Seattle, Wash. Filed Sept. 27, 1923. Serial No. 665,116. 4 Claims. (Cl. 88—1.)



1. The combination with a camera lens, of a lens shade embodying a drum of larger diameter than the camera lens and relatively short as compared to its diameter and having an inwardly directed flange at each end, each flange having a centrally arranged circular opening, the width of the front flange being substantially equal to the length of said drum and the distance between said flanges being less than the length of said drum to prevent reflection of light from the interior of said drum into the camera lens.

---

1,564,988. AEROPLANE. FRANK L. WATSON, Flagler, Colo., assignor of one-twentieth to David V. Rowden, Flagler, Colo., and one-twentieth to Harry Beason, Lincoln, Nebr. Filed Apr. 28, 1925. Serial No. 26,447. 4 Claims. (Cl. 244—15.)
